We can furnish you 2, 3, or 5-Ply Panels in Quartered Oak, Mahogany, Plain Oak, Ash, Elm, Birch, Maple or Basswood, and guarantee same in every respect. We use high-grade Glue in our work, and our Veneers are thoroughly dry and our Machinery up-to-date.

We manufacture high-class Panels for Commode and Dresser tops, Commode and Dresser end Panels, Drawer bottoms, glass backs, case backs, foot and head board panels for beds, etc.

If you wish to buy Panels that are **Right and Will Stay Right**, give us a chance to figure with you and submit samples and prices.

THE CORHAM BROS. CO.
MT. PLEASANT, MICH.

We do not claim to be lower in price, but we do claim our PANELS are cheaper in the long run as they

will not come to pieces after they are in the furniture

Do you see the point 
Submit your wants and let us make you happy

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also price—and is free.

Advertising copy must be received five days in advance of publication date. Advertising rates on application.

General Market Conditions.

There is evidence on all hands that there is a gradual resumption of operations and demand over a wide area. The feeling that hardwood values have not yet struck bottom has disappeared and the trade has awakened to the fact that prices are on the rebound; although there are still buyers who are seeking to secure "snaps," the average man is willing to pay present asking prices.

The advice tendered by the HARDWOOD RECORD in its issue of a month ago holds good—if a buyer seeks to purchase hardwood lumber at the best price obtainable, he will place his orders at once. The time to buy hardwood lumber is right now, because it is doubtful if the present low range of values will ever be duplicated.

Reports from all leading commercial centers indicate increased demand with some strengthening of values on nearly every variety of hardwood. Poplar, which has not deteriorated in price materially during the prevailing slow trade period, is in very good demand, and prices are held strong. Oak values, with increased demand, are improving. The call for northern woods, such as maple, birch and basswood, is reasonably active. Ash, rock elm and hickory are in good demand and prices are correspondingly firm. The outlook for increased call and higher values as the season advances is bright.

Status of the Furniture Trade.

Lumbermen are eager observers of the situation in the furniture industry inasmuch as they are always, to greater or less degree, dependent upon it for a live or dull trade in their own line. The history of the furniture trade the past year has not been entirely satisfactory to those engaged in it. Even up to Oct. 1, 1907, it was only fairly good, and since that time the business, in common with everything else, has suffered from the general financial depression and consequent decline in prices.

This latter evil, however, has not been a marked feature of the

situation, for furniture producers, like manufacturers of lumber and other lines of lumber products, have had the foresight and good sense to pursue an exceedingly conservative policy with regard to manufacture, and have not flooded the market with surplus stock, with the certainty of ultimately producing a widespread and serious demoralization of prices.

When the first signs of financial trouble appeared on the horizon they commenced to curtail their output, not locally or temporarily, but systematically and universally, so that ever since last fall furniture production has been only about sixty per cent of normal.

The wisdom of this policy is now becoming apparent, and it promises to bear good fruits, for aside from considerable complaint of dull trade in a few sections of the country, notably the Northwest, general conditions throughout the industry seem to be much improved. The great semi-annual furniture exhibitions are now in full swing at Chicago and Grand Rapids; even the first few days they were remarkably well attended and started off with a rush; buyers are showing a decided disposition to make purchases promptly and there seems little tendency to purchase only the cheaper grades of furniture rather than high-grade stock, pleading "hard times."

During the opening days of the exhibition eastern buyers were especially in evidence, a sign which exhibitors regard as very encouraging for the future of the general market, inasmuch as the East seemed to feel the recent business depression more strongly than other parts of the country, and consequently might naturally be expected to contribute a much lighter proportion of orders than usual.

Prospects for the maintenance of prices are excellent and owing to the general curtailment policy, they have suffered little depreciation, not as much as would ordinarily be looked for in times when overhead charges go on just the same; and they are of course felt considerably more when production is only about sixty per cent of normal than when it is up to standard.

A striking feature and keynote of the sales exhibitions which should contribute much to a good buying season is the assurance and even certainty of manufacturers of lumber and lumber products that prices will not show a further decline, but that they have positively reached their minimum. As an evidence of good faith and confidence in the future of the market, the manufacturers of furniture, both inside and outside of associations, but particularly those represented by the National Dining Table Bureau and the National Case Goods Manufacturers' Association—the latter producers of fine bedroom and other high-grade stock—have entered into an agreement to guarantee prevailing prices during the present season, or until Jan. 1, 1909. In other words, should a lower range of values go into force later on, buyers making purchases on the present basis will be given the privilege of a rebate at that time.

This move has already given an added stability to the market, and moreover the obligation under which it places the manufacturer will prove an added stimulus to his efforts on behalf of maintaining a just range of prices. Those industries in which wholesale slashing of prices for the mere purpose of getting orders has prevailed have not profited thereby; notably, the steel plate makers are unanimous in declaring that the cut has not brought any appreciable increase in business and that consumers have continued to buy only what was absolutely needed.

Along this line the furniture trade is particularly strong in that

for months past retailers have been depleting their stocks steadily, purchasing a considerably less amount of goods than they have sold; so that with the growing demand, the small stocks which they hold in consequence of this policy, and the unusually small amount of goods in first hands, the outlook for a gradual resumption of business all along the line by the last of July is excellent. Moreover, if goods are to be sold by the retailer, they must be ordered soon and placed in stock in the early fall. Good crops, which are now assured, invariably have a powerful effect in stimulating trade, so that take it all in all, the outlook for a good furniture season—which means a good boost to the hardwood lumber trade—is far better than even the optimistic would have predicted some months ago, and all the signs point to the probability that furniture factories will soon become heavy purchasers of hardwood lumber.

Returning Prosperity.

Every condition throughout the country points to an era of renewed prosperity. Bank clearances and railroad earnings are below those of a year ago, but the gap is steadily narrowing. There are fewer empty cars on side-tracks than there were at the beginning of June. July interest and dividend payments in New York will be \$177,000,000, as compared with \$184,000,000 in July, 1907. This shows much less falling off than was expected.

The rates for money are about the same as they have been in midsummer for some years, and while there is a little lowering of gold holdings of the banks, it does not disturb anyone, as the country can get as much as it needs from the outside world at any time. The Department of Agriculture announces that the crop outlook is better on the whole than it ever was before at this time of year. It estimates the value of the country's farm products of 1908 will reach the \$8,000,000,000 mark! This will leave all records far behind and is more than double the value of the farm yield of 1900.

"Re-employment days" are becoming universal. St. Louis had one on June 1, when 1,500 unemployed were put to work. On a far larger scale the Pittsburg district has just put one into effect, when every plant of the United States Steel Corporation, the largest industrial concern in the world, resumed full operations. All the independent steel concerns of the Pittsburg district, it is announced, will be at work full force by August 1. July 1 has been termed "Re-employment Day" not only in Chicago but throughout almost the entire middle West. The prosperity movement is being backed by hundreds of big manufacturers who realize that renewed prosperity is sweeping over the country after the financial depression of the winter. The Illinois Central railroad has re-employed 5,500 men in their several shops, after an idleness of eight months. The International Harvester Company has re-employed all of its hands and many of the departments are working on night and day shifts, although this is usually the dull time of year for the manufacturer of agricultural machinery. The clothing trade reports business above normal, while the mail order houses also report a heavy increase.

On the whole the outlook is bright and there is no gainsaying the fact that the year will surely close with a volume of business a good way above normal.

The New Code of Ethics.

While it is improbable that all lumbermen will ever entirely agree upon a set of principles for their strict guidance in the conduct of their business, the conference of lumber trade associations held at Minneapolis last month, for the purpose of establishing a reasonable code of trade ethics, certainly took great strides in the right direction and adopted a "platform" embracing many conditions which may well be treated with unanimity by shippers of lumber the country over, and will undoubtedly generally be pleasing to the individual associations, when presented by their respective delegates for action.

The code represents a vast amount of thought and hard work on the part of these delegates, comprising many of the ablest men in the trade, and they are to be congratulated upon their success in evolving so conservative and sensible a document, considering the wide range of territory and the great variety of interests repre-

sented. The organizations invited to be represented include manufacturers, wholesalers and retailers of all kinds of lumber and lumber products, from the Pacific to the Atlantic coast—pine and hardwoods, cooperage, shingles, veneer, flooring, etc.—and those who represented constituted a thoroughly representative body.

The matter of transfer of title was not covered by agreement, inasmuch as the attitude of the shipper—that delivery is made when lumber is turned over to the railroad and its receipt mailed to the buyer—and the contention of the retailer that lumber is not his property until it reaches him—are apparently both reasonable enough to be irreconcilable, and will doubtless remain so. On other points of contention the rules laid down appear to be as reasonable and just to all as any it is possible to promulgate. However, it is understood that no association is bound to accept them without amendment and discussion, and that the officers of the conference were continued so that they may, if desired, call a future conference, which should be empowered to pledge the various organizations to a final code.

Public Protest Too Strong.

Recent inquiries have elicited no definite announcement of the present attitude of the railroads toward their late proposition to enforce a general increase in freight rates, which was discussed with considerable feeling on both sides at the conference called by the Illinois Manufacturers' Association at Chicago in May.

However, it seems to be pretty well understood that any decided action will not be taken by the various companies until October at least, and probably not until January. It is even possible that their threat will not be put into execution at all, but will gradually "fade away," and that the project will not again be thrust upon shippers in such a peremptory and uncompromising manner.

This change of front, for the time being at least, is doubtless due to several reasons: First, the present public enthusiasm in regard to restoring and improving the waterways of the country, which, incidentally, the roads pretend to sanction; for it is a well-known fact that efficient waterways between the great markets are the best possible rate regulators. Second, the many decisions lately handed down by the Interstate Commerce Commission unfavorable to existing and proposed railroad tariffs, which though subject to lengthy legislation, nevertheless have a powerful effect upon public opinion and upon shippers in stimulating them to push their claims, thus bringing down upon the roads no end of controversy, expense and unfavorable comment—always with an excellent chance, too, that they will lose in the end. Third, the meetings held not only in Chicago, but all over the United States, by shippers in all lines, voicing loud and logical protests against the unfair treatment which the roads proposed to foist upon them willy-nilly in these particularly unseasonable times.

The Future of the Forester.

A comparatively new calling in the United States is that of the professional forester. For years in Great Britain and the continental countries this profession has been a distinguished and profitable one, but in the United States it stands in about the same position that electrical engineering did fifteen or twenty years ago. To the uninitiated the opportunities for an electrical engineer and the possibility of his securing steady and remunerative employment were conjectural. Today there are two positions for every electrical engineer of repute, and the field of work is constantly widening. The same situation will prevail within a very few years for the professional forester, and in fact today the demand of the government and railroads for them exceeds the supply. The time is near at hand when the timber owner cannot afford to get along without the services of an expert in this line, and the remuneration will be very handsome. With forestry, as with everything else, it is those who "get in on the ground floor" who come out ahead in the end.

The story in this issue of the RECORD concerning Dr. C. A. Schenck of Biltmore, N. C., should be interesting reading for any young man, especially for sons of lumbermen who have not yet definitely determined upon their life's vocation. Dr. Schenck is doing a lot of good work in instructing young men in the secrets and possibilities of the forest.

Pert, Pertinent and Impertinent.

You Never Can Tell.

The bold waves trespassed on the sands,
No one was agh;
And we were playing holding hands,
Just she and I.

'Twas just a summer's hour. I had
Not known her long;
I had the short flirtation fad
And had it strong.

Of course there was a summer's sun
And zephyr breezes.
And she was just the only one
Because it pleases.

And so I played the lover's part
With some acuteness,
And she responded with an art
Of deep astuteness.

One never knows upon life's stage
Of farce and drama
If one be playing fool or sage—
Fate's panorama!

But when I resurrect that day
I grow despondent,
For Destiny since made me play
The co-respondent!

—C. E. Nettleton in Judge.

The Information Bureau.

Dear Editor: I wish to ask
A question, not impertinent,
Though I admit it is a task
To take your time to some extent.
Yet I am sure you will consent,
Nor at the obligation fret.
Indeed, it's not inconsequent.
I ask it to decide a bet.

Who was it wore the Iron mask?
Each year abroad how much is spent?
What came of old Mambrino's casque,
And who, please tell us, was that gen?
Is birth indeed an accident?
Is ebony as black as jet?
What persons pay the highest rent?
I ask to decide a bet.

What makes an alligator bask?
Who longest was in prison pent?
Did Caesar use a pocket flask?
What things did Edison invent?
Will trees grow as the twig is bent?
Who introduced the cigarette?
And is Kentucky shortened "Kent"?
I ask to decide a bet.

L'ENVOI.

There is a rumor prevalent
That editors are all in debt.
Pray, are they? No offense is meant.
I ask to decide a bet.

A Query Answered.

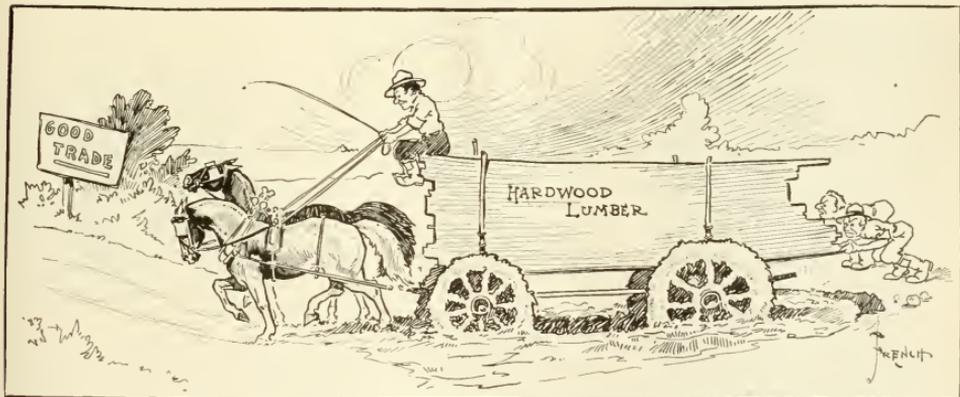

Tell me, dear reader, are you one
Of those that think that it is fun
To buy a little stack of chips,
Put a cigar between your lips,
And play and play and play and play
Until the night has merged to day—
To wake until Aurora's blush
In vain attempts to fill a flush—
To chip away your precious board
At something you cannot afford?
And can you find true pleasure in
That drawing, drawing *ad infinitum*?
Is there enjoyment to be found
In quitting with "another round"?
— All this and worse—Oh, are you one
That thinks such foolishness is fun—
To fool away th' entire night?
You are? Dear reader, you are right.

—Franklin P. Adams.

Explained.

If on the theme I pause to think,
There are four reasons why I drink—
Good wine, a friend, because I'm dry—
Or any other reason why!

Now, All Together.

One good lift, and we're out of the mire!

Definite.

The merchant sent his Swede clerk out to collect some old bills. The latter returned jubilant.

"Well," said the boss, "did you have any luck?"

"Yass, Smith he pay, and Yones he say he pay in January."

"Are you sure he will? He never made any promise before."

"Well, I tank so; he say it bane a dam col' day when you get dot money, an' I tank dat bane in January."

Nothing Important.

"Moving?" inquired the suburbanite as a dray stopped in front of the next house. "Oh no," said the neighbor, "a friend is just borrowing our collection of souvenir post-cards."

The New Era.

Prospective Employer—You may come ready for work, at ten tomorrow, if you like.

Cook—O'd sooner come at eight, mum. Thin if Ol don't loike the place Ol can lave in tolme for the matiny, mum.

A Study in Ads.

Recently we picked up a magazine and made an appalling discovery which puts ordinary folks in a very embarrassing position. According to the ads in this magazine nobody can afford to be without fourteen different kinds of automobiles; nobody can afford to be without a set of never-wear-out underwear at \$15; nobody can afford to be without a \$25 camera; nobody can afford to be without eight different kinds of bicycle tires, a \$42 shotgun, a \$15 fishing rod, a \$100 dress suit, and an \$80 extension bookcase; nobody can be well dressed without a \$100 diamond ring; no house is well built without a \$300 parquetry floor; no table is well set without a \$250 set of silverware; nobody can keep their hair without a \$5 hair tonic; nobody is really well "finished" until they have traveled abroad; nobody can retain their health without a \$35 exerciser—and as we figure it out, nobody can really afford to be without \$41,673.50 worth of things!

Rose to the Occasion.

A woman bather at Atlantic City got beyond her depth, and in her struggles her new false "puffs" became detached. "Oh, save my hair!" she cried to a gallant rescuer. "Madam," he gasped, "I may be a life-saver, but I am not a hair restorer!"

In Memoriam.

Whereas, a belated but good and all wise fashion has decreed the death of the Merry Widow hat, and

Whereas, the Merry Widow hat has been an all 'round confounded nuisance, inasmuch as it has gouged out eyes, stopped trains, cut holes in men's faces and pocket books, and

Whereas, it has performed other and divers deeds of wanton cruelty,

Be it resolved, that we are darned well pleased and will dance at the funeral.

Some Important Foreign Woods.

ARTICLE II.

Teak.

Tectona grandis

Teak, "the oak of the Indian forests," resembles that wood in some particulars, although it has a more uniform structure and is not so heavy. A cubic foot weighs approximately fifty pounds seasoned. The wood known as African teak, *Olaficidia africana*, is of another family and is marketed both as African mahogany and as African oak. Teak, in the accepted meaning, refers to the East

clairs and cabinets of this handsome wood. For ship-building teak is one of the very finest materials that can be had, as it is also for railroad sleepers, timbers, etc., although in this country it is chiefly known in its ornamental capacity. It does not alter its shape when seasoned, and seems almost imperishable in many climates. Thus it combines the highest excellence in decorative qualities with all the attributes necessary to the stoutest and most durable construction work.

The wood has a strong aromatic odor; it burns well, with a vigorous, large flame and noisy crackling. Its color varies with different trees, and according to its location, from very dark brown to almost yellow. The Siam wood is generally conceded to be the lightest.

Teak trees are found either composing the great bulk of the forest, enveloped and interlaced by clinging tropical vines, or singly, along rivers. They require much moisture, although they do not thrive on land which is overflowed, or which is generally damp.

In its early life the tree shoots up rapidly, but it is not mature for felling until about fifty years old. Its maximum height is said to be 230 feet. The trunk is slender, seldom reaching a diameter of more than two and a half feet at the age of eighty years, or possibly three feet when past the century mark.

Logs over forty feet in length are rare. A small proportion of a Javanese shipment, for instance, will run from sixteen to thirty feet. However, the majority measure from ten feet or less up to sixteen or eighteen.

Depths and widths of rough hewn logs run from ten to thirty-six inches, with an average of only about fifteen inches. The very short lengths are not shipped out but are used as sleepers or for furniture in native markets.

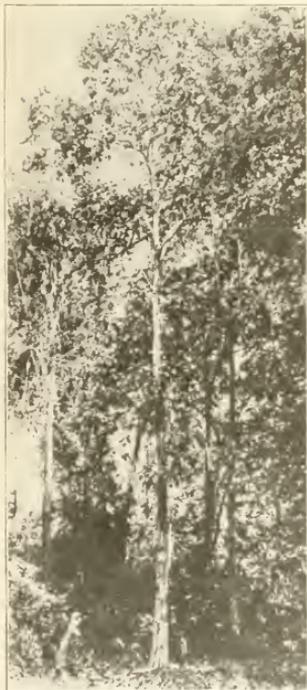

Before felling teak trees are girdled. This of course causes them to die, but if not practiced the tree does not receive its full quota of strength and resistance to the elements, as the process seems to facilitate secretion of the natural oil, to which it owes no small proportion of these qualities.

In Burma teak is being scientifically lumbered and replaced, and in India and Java it is being planted extensively according to approved afforestation methods, but in Siam the plan of the government seems to be to get as much out of its forests as possible, with the least expenditure, so that within a few years that country will be out of the teak market, unless this policy is altered. All the good territory in Siam is already held by foreign concessionaires—large English, Danish and French companies, and in Java and Burma conditions are similar. Teak is the second most valuable export of Siam,

so that the country's wasteful policy in regard to it is extraordinary.

It is said that from 1902 to 1905 six German shipbuilding concerns used about 200,000 cubic feet of teak, while one car concern annually uses about 70,000. At Wilhelmshafen teak has lately brought as high as \$2 a cubic foot.

Methods of lumbering and transportation, as practiced in Siam, are interesting. The trees are dragged from the forest to the nearest stream and slowly floated down to a port or mill for export. The banks of the river at Rangoon, for instance, are strewn with these logs, many of which have been a dozen years or more in reaching destination from the time they were felled. They are bound into large rafts, and upon the rafts many woodsmen build their huts, living in them sometimes for years, steering and watching them until they reach port. Once arrived at the sawmill they are squared off and sent on to the quays, where they are neatly piled by trained elephants. It is an exceed-

SPECIMEN FOREST GROWTH OF TEAK.

Indian wood, which is native to Burma, Siam, Ceylon and Java.

Teak is moderately hard and very strong and durable. The pores secrete an oil which repels the attacks of borers and preserves metal fixtures. This secretion gives a dull finish to the wood and renders it cool and peculiar to the touch. The grain is even and remarkably straight, and the wood is smooth and easily worked—characteristics that peculiarly fit it for carving. Many restaurants and other public buildings are furnished with elaborately carved imported tables,

FOLIAGE AND FRUIT OF TEAK.

ingly interesting spectacle for a foreigner to see the huge animals patiently and cleverly balancing each great timber between tusks and trunk, and placing it evenly on the growing piles. When a log is too heavy they turn it end by end until it is placed at the proper angle on the pile. Sometimes they push the logs along, at the same time dragging other pieces by traces. A fully-grown elephant, untrained, is valued at about \$2,500, and though they are not trained until about twenty-five years old, and are extremely delicate in some respects, so that the mortality of a herd is great, they are of such value in their work that one of the great timber companies of Burma employs more than 2,000 of them in various parts of the country, breeding and purchasing them continually.

The Dutch government is pursuing a most admirable policy with regard to the forests of Java, particularly the immense tracts of virgin teak growth which occupy the heart of the island, and also towards the other valuable tropical timbers which abound there,

C. A. SCHENCK, PH. D.

BILTMORE, N. C.

A HUGE TEAK LOG.

although but little has been done toward marketing the latter. The teak industry is flourishing, however, and in addition to the immense amount of woods work done in the forests in getting out rough hewn timbers for sleepers and other purposes which do not require sawmill work, many mills have been built and are now operated successfully. The government intends not only to derive immediate recompense from teak lumber operations, but to put them on a permanent basis. This it is doing by means of strict laws regarding reforestation and felling, which are positively enforced by a forestry department. This policy is in marked contrast to that of Siam, and will insure the continuance of Java as an important teak

market indefinitely. In 1905 the Dutch government showed a net profit of approximately \$700,000 on the year's work. The bulk of export stock finds a market in Germany, Austria, British India, Holland and England, and a considerable amount is used on South African railroads.

In cultivating new forests the ground is first thoroughly cleared, the seeds sown in groups of three about eight inches apart, and over three feet between groups. Germination occurs about the fortieth day under good conditions. After ten years the trees ordinarily show a diameter of eight or more inches, and are then thinned out, which process is repeated every ten years, until the remaining ones are of mature size. The trees

are felled from platforms at a distance of two to four feet above the ground, on account of the spreading of trunks near the roots and the fact that the butts of Java teak are frequently rotten inside. In the forests few saws are used, the axe being the favored instrument, and in the hands of the natives it turns out wonderfully neat work. The hewn stock is usually hauled from the forests to railways or streams by Java buffaloes, thence delivered to mills or ports. The logs felled by the government are usually auctioned off at some point convenient to transportation. The concessions for lumbering often embraces 1,000 acres, and are auctioned off to the highest bidder, who must leave the land in good shape for replanting when he is through with it, and must make a report on the number of trees felled annually. Usually he is taxed a certain royalty per number of cubic feet taken out.

There is said to be some prejudice regarding Java teak in foreign markets, and while undoubtedly inferior to some other varieties, this is due to the fact that formerly little discrimination was used in the selection of logs—those which were decidedly imperfect or of very small size being shipped along with the most desirable ones—which tended to prejudice buyers against the wood in general, for European markets are notoriously insistent upon having only the best grades and largest dimensions of imported stock. With the revival of the massive styles of furniture and hand-carving, the demand for fine specimens of the so-called "fancy" woods, among which teak may be numbered, is increasing. Nowadays none but fine logs are sent out of Java, the rest being converted into domestic uses.

The accompanying illustrations are from the Timber Trades Journal of London and Snow's book on "The Principal Species of Wood."

BUILDERS OF LUMBER HISTORY.

NUMBER LXXI.

C. A. Schenck, Ph. D.

(See Portrait Supplement.)

The subject of this sketch and of the accompanying portrait, C. A. Schenck, Ph. D., of Biltmore, N. C., was born in Germany forty years ago in March last. He is a tall, youthful-looking, athletic chap who has devoted his early manhood to an analysis of the timber growth of the United States, to a logical and practical means of reforestation, to scientific lumbering, and to imparting a knowledge of forestry pursuits based on world-wide experience to young men whom he has gathered about him in the Biltmore Forest School.

Personally Dr. C. A. Schenck is one of the most charming of men. He is cordial; he is frank; he is enthusiastic over his work, and full of the very joy of living. He is thoroughly lovable, and his boy students fairly adore him. But above all, he is practical. He

has never allowed old-world theories to interfere with practical forestry sense as applied to the handling of timber problems which have developed in the United States.

Without in any wise disparaging the talents of any other individual or cult of forestry, Dr. Schenck undeniably stands as the foremost figure and authority on this subject in this country. He was graduated from the College of Darmstadt, and later studied at polytechnic schools and at the Universities of Tübingen and Gießen from 1886 to 1890. At Gießen, following his father's wish, he passed the government examinations in law and soon after in forestry. By dint of innate ability and hard work he passed with the highest marks that had ever been given to any forestry student at Gießen. In consequence he immediately secured a position with Sir Dietrich Brandis, famous as "the father of English and Indian forestry." As his assistant, and later as the assistant of Dr. Wil-

liam Schlich, author of Schlich's "Manual," and late inspector general of forests in India, Dr. Schenck traversed the European woods from end to end repeatedly, gaining a most thorough practical knowledge of them. In this great school of nature he acquired a knowledge absolutely unobtainable in college or university.

In 1903 Dr. Schenck was appointed a forest assessor for the German government, after passing another very trying examination, and upon the basis of a thesis entitled "The Financial Issue Involved in Raising Oak Forests," the degree of Doctor of Philosophy was conferred upon him. This work has become a standard textbook and is found in every leading library.

In 1895, on the recommendation of Sir Dietrich Brandis, Dr. Schenck came to this country to take charge of the Pisgah mountain forest estate of George W. Vanderbilt, near Asheville, N. C. At that time this partially

denuded timber area on the upper watershed of the French Broad river, and rising to the top of Pisgah mountain, embraced about 100,000 acres. Mr. Vanderbilt originally purchased about 10,000 acres of very badly denuded mountain land near Asheville, which he named Biltmore, and which has since been transformed into a magnificent gentleman's estate. A splendid castle adorns the mountainside and surrounding it in all directions are artificial lakes, fire roadways, flowers, and one of the most marvelous collections of ornamental trees, gathered from all parts of the world, in existence.

The Pisgah mountain estate, now embracing about 130,000 acres distinct from the Biltmore property, represents an attempt on the part of Mr. Vanderbilt under the direction of Dr. Schenck, to practically demonstrate the commercial possibilities of reforestation on semi-denuded, badly fire-scalded timber growth on lands unfit for agricultural pursuits, and only adapted to timber growth.

In carrying out this magnificent plan of reforestation Dr. Schenck has encountered difficulties that would have seemed unsurmountable to any man with less knowledge of his subject, less enthusiasm in his calling and less energy and vitality to carry on the enterprise. The building of a forest is like unto the building of a nation—not a thing of a day, of a year, or even of a generation. Thus, the success of this great enterprise may therefore still seem conjectural to many, but to its promoters and to practical foresters the work is now regarded as an accomplished fact, so far beyond the theoretical viewpoint has it passed.

As already related, Dr. Schenck came into this old yet new and wild country—this great mountain slope of the lower Appalachians—equipped with a scientific knowledge backed by practical training in old-world methods. He found European forestry systems entirely inadequate for the handling of the great proposition placed in his hands, and was obliged to adopt many new methods which he found better adapted to the conditions at hand. With the acute sense of humor which marks his utterances, he likes to relate some of his early experiences in handling the Pisgah mountain estate. The first responsibility thrust upon him was the presidency of the Biltmore Band-Mill—this in spite of the fact that he had never seen a band mill before in his life! He does not pride himself upon the success of his first venture in North Carolina. The logging operations in the mountain, of which he had charge during that first year, necessitated the building of splash dams, and he confesses that his knowledge of splash dams was as thoroughly inadequate as was his knowledge of the idiomatic English "pyrotechnic" which he often felt constrained to apply to them. His splash dams, built in the unreliable mountain streams, were not a success, and the small quantity of logs he finally delivered at the mill by his system, was not enough to keep operations running a month at a time!

After "acquiring this experience at his

employer's expense, as most people do," to quote Dr. Schenck's words in telling the story, he gave up the plan of attempting to supply a large band mill with logs "splashed" down streams that were flush with water only when he did not want it, or being over-flush, staved his booms to pieces—and since that time he has done what other modest lumbermen of his district do, and employed portable circular mills, bringing his plants as close to his timber as possible, instead of attempting to bring the logs long distances to the mill.

He has adopted a very conservative policy in his lumbering operations and is simply culling the forest, taking out the mature and hyper-mature trees and leaving the growing trees for further development. He says that the price of poplar lumber in 1896—the first he sold—was \$21 for firsts and seconds, on rigid New York inspection, and today under modern inspection it is worth f. o. b. cars mill, from \$45 to \$58. He sententiously observes: "I am now glad for every poplar tree I have left standing, and sorry for every poplar tree I have cut."

The establishment of the tannic acid industry using chestnut wood for raw material, has been an ally to successful forestry work in western North Carolina. This market makes it possible to sell the offal of chestnut timber, which cannot be used as lumber, since it is replete with worm-holes, and Dr. Schenck early recognized an element of "saving" the hardwood forests of that region in this industry. He alleges that they can be "saved" only when the stumpage commands a high price, and when the offal and even the debris left by lumbermen has a value. He alleges that the greatest enemy of conservative forestry, aside from fire and taxation, is low-priced stumpage and low-priced lumber.

To no great extent does Dr. Schenck practice replanting. He contends that this necessarily expensive plan is not practical on extensive areas of comparatively cheap land in this country. He further contends that if a given area be protected from fires and degradation Nature with very little assistance will do her own replanting and supply a growth best adapted to the soil and environment. Beyond question he is working at the reforestation problems of the Pisgah mountain estate in a practical way that will eventually secure to its owner a very handsome profit on both the investment and the cost of management and maintenance.

In 1895 Dr. Schenck established the Biltmore Forest School for the education of young men in practical forestry. Anyone who has kept at all in touch with the work of this school need not be told that primarily it is eminently practical. It acquaints young men not only with the lumber business, but with silviculture, surveying, cruising, lumber inspection, etc. The school has as its workroom Mr. Vanderbilt's 130,000 acres of woodland in the southern Appalachians, on which grow the greatest variety of both hard and soft woods in the known world. On the various levels all kinds of southern pines

abound, and doubtless more than a hundred varieties of hardwoods are found there; on the high elevations flourish the spruces, balsams, hemlocks, white pine and other conifers of the northern forests. Hence the Biltmore Forest School, with this great natural laboratory, is far the superior of any other in the country.

In connection with some of the graduates of this school, in 1903 Dr. Schenck formed the firm of C. A. Schenck & Co., timber experts and cruisers, and up to this time there is not a state east of the Mississippi in which this house has not done work—notably in estimating stumpage and stumpage valuation, solving silvicultural problems, making maps, or serving as court experts in matters pertaining to timber and timber disputes.

During the open season the school makes headquarters in the woods, where an old-fashioned country schoolhouse affords a lecture room for Dr. Schenck and his assistants, and the whole great mountain-side a theater for practical demonstration. During the summer the boys find shelter at night in the homes of settlers scattered here and there throughout the woods, or they may if they like, roll up in their blankets and sleep under the stars. Here these earnest students live practically out of doors, in an incomparable climate, acquiring not only a knowledge of road-building, logging and all the other practical features that go to make up a competent and authoritative knowledge of timber and lumber affairs, but the fresh air and healthy exercise which make a strong and wholesome body. In the winter the students are transferred to the handsome school building at the Biltmore estate, and there work out problems based on the practical experience of the summer spent in the open.

Admission to the Biltmore Forest School is restricted to earnest and intelligent young men who seek to become experts in forestry and lumber pursuits. Shirkers are not allowed to remain very long, for Dr. Schenck wants only those who are willing to work, and to "rough it." He has the love and respect of every student that ever entered his school, and it is surely a great work that he is carrying on for young men who are ambitious to acquire this sort of an education. There are no molly-coddles in the school, but active, healthy young chaps who learn to love work for work's sake, and in emulating the indomitable energy of their chief grow to be boys who are worth while, boys who will amount to something in the lumber world.

These youths are largely from the various colleges and universities and they bring with them to Biltmore certain of their college ways. It is an inspiring sight to see a bunch of them starting out for a long cruise astride their mountain ponies, in forester's garb, their packs on their shoulders, and singing at the top of their voices—

Who is the man that is riding along,
Humming the tune of an old German song,
Telling the boys that the road is run wrong?
'Tis the man that looks like the Kaiser!

Who is the man on the old bay steed,
Riding along at a terrible speed,

In his little green cap and his suit of gray tweed?
'Tis the man that looks like the Kaiser!

Who is the man that corrects our "exams"—
Tells us our papers are not worth two d—ns—
Saying our answers are nothing but shams?
'Tis the man that looks like the Kaiser!

Conference on Trade Ethics.

On June 19, 1908, at the Hotel Plaza, Minneapolis, was held a remarkable conference of all branches of the lumber trade of this country for the purpose of considering the various conditions now prevailing in the industry and a discussion of relations of manufacturers and shippers with each other and with their customers. The gathering had as its definite object the adoption of a provisional set of rules of lumber trade ethics which should be presented by the accredited delegates to their respective associations for consideration and action.

The call which inaugurated the movement, and which was sent out to the manufacturers', retailers' and wholesalers' associations, as well as to special organizations embracing various distinct branches of the industry, was as follows:

To all Lumbermen's Associations in the United States:

Pursuant to instructions and authorization of joint conference of lumber manufacturers, wholesalers and retailers held at Tacoma, Wash., March 2, 1908, whose partial recommendations for the guidance of the trade were formulated, we, the undersigned, do hereby call a national conference to be held at Minneapolis, Minn., June 19-20, 1908. These dates immediately follow the adjournment of the convention of the National Lumber Manufacturers' Association, which is to be held at Minneapolis at the place of meeting in Minneapolis will be announced later.

The purpose of this gathering is to secure such an expression of opinion of the trade on the questions discussed as shall constitute a code practicable for universal adoption.

It is proposed that subjects for consideration shall be set forth in the shape of resolutions, which when indorsed by the conference shall appear in such form as to be suitable for consideration of all trade organizations with a view to their acceptance and use in general practice. Your association is cordially invited to send three accredited delegates to this conference, who may participate in its proceedings and who will report the results of the labors of this gathering to your organization for approval.

Please advise the secretary as to your decision. Your truly,

GEORGE E. MERRILL,
Chairman.

A. B. WASTELL,
Secretary.

Secretary of Tacoma Conference.

Portland, Ore., April 14, 1908.

N. B.—It should be understood that this conference is to be provisional in character, and its findings will be subject to indorsement or amendment by the organizations represented.

Messrs. Merrill and Wastell were selected as temporary chairman and secretary respectively. Representatives of thirty associations attended the conference, as did also a special agent of the United States Bureau of Corporations, by invitation; and great enthusiasm and harmony characterized it throughout. After three sessions, and a large amount of earnest, conscientious work both in committees and on the floor, the following code was adopted for presentation to the various organizations represented:

1. (a) All orders taken by personal solicitation should be in writing and should be signed or acknowledged by both the buyer and the seller or by the authorized agent of each. (b) All oral or telephone orders or conversations relative to such orders, should be promptly ac-

Who is the man on the horse named Punch,
Riding along at the head of the bunch,
Don't give us time to eat any lunch?
'Tis the man that looks like the Kaiser!

Who is the man that rides so well—
Who he is going you never can tell,
And if you ask him, it's straight to—well,
'Tis the man that looks like the Kaiser!

knowledgeed or confirmed, otherwise there will be no evidence to hold either party. (c) With mail or telegraph orders the original order received from a buyer should be considered the contract and all settlements should be made upon the basis of the same, unless the buyer permits the seller to make certain changes which may be requested in acknowledging the order. If shipment is made before the buyer grants such permission, or is able to instruct the mills, settlement should be made on the basis of the buyer's original order, or such amendments or additions as may have been made. (d) Any changes or additions should be agreeable to both buyer and seller.

2. All orders should be complete, explicit and should specify the grades, terms and conditions of sale.

3. An order or contract should be considered binding when the same has been duly signed by both buyer and seller or legally authorized agents of either party or acknowledged by the same. Such acknowledgment should be sent to the buyer immediately upon receipt of order and in due course of mail. Failure to send such acknowledgment should release the buyer from his order obligation.

4. No commission man, unless specially authorized, should be regarded as having the authority to bind any seller on orders taken by him, and all such orders should not be regarded as binding upon the sellers until the same have been acknowledged by them as duly accepted orders.

5. The latest grade names adopted by the different lumber associations should always be used in writing up each and every order or contract. Where the latest grades names are not used, or improper abbreviations are used, or any omissions cause a misunderstanding resulting in loss, it should be held that the party first writing up the order should be responsible and should sustain any loss incurred by reason of such errors or omissions.

6. In cases where the terms or conditions of the sale are not specified on the face of the order the following terms should govern: The consignee to pay freight, balance net cash, 60 days from date of invoice. Providing the buyer desires to discount he may deduct 2 per cent from the net amount after arrival of cash as shown by expense bill. No discount should be allowed after 30 days from date of invoice. Non-arrival of goods within 30 days is no excuse for failure to remit. If buyer wishes to take discount, freight can be estimated and reasonable deduction made for probable shortage or improper grades. Should any shipment upon which cash has been advanced, or discount has been taken, on arrival at destination, not be acceptable for legitimate reasons to buyers, or satisfactory adjustment cannot be made as to the acceptance of the stock, buyer should have a right to demand return of such money as he has paid, before allowing the shipment to be moved or disposed of elsewhere. The term of sale should be considered as much a part of the contract as the price at which the stock is purchased.

7. The seller should not be held responsible for delays incident to transportation beyond his control, unless otherwise specifically agreed.

8. The time of shipment is specified, failure to ship within said time should permit the buyer to cancel the order by wire.

9. Where definite date of shipment is not specified on the order, the buyer should not be entitled to cancel such orders inside of 30 days from the date of the order, without the consent of the seller.

10. The seller should be protected in all cases where special stock has been manufactured, or worked to apply on the order, providing the buyer is notified promptly what such charge or loss will be on the part of the seller, if not allowed to ship out such portions as may have been worked to apply on the order, with the further understanding that shipment can be made within 3 days, but the buyer should not be bound to accept the shipment if it cannot be loaded within the 3 days, regardless of the circumstances which may prevent the seller from so doing.

11. No order should be cancelled after the same is loaded on the car, provided, however, that it has been filled in accordance with the contract between buyer and seller, except as to date of shipment.

12. Unless the buyer is rated and in good standing as shown by the well known credit agencies, the order should be binding upon a seller until such credit and good standing shall have been satisfactorily proved to the seller.

13. Transit and storage shipments should be subject to the rules applying to direct shipments, except as otherwise stated and agreed to at the time of giving and accepting the order. Invoices for transit cars should bear the date of diversion. Where a specific carload is ordered no other car should be substituted without consent of the buyer. It should be the duty of the buyer to advise the buyer at the time the order for the transit car is accepted as to whether shipment is actually in transit or in storage at some intermediate point between original shipping point and ultimate destination, and to give the purchaser all the information in his possession regarding the present location and movement of the shipment in order to avoid misunderstanding.

ARBITRATION.

14. Except when inspection is provided for by association inspection bureaus, claims on grades, also differences regarding contracts, should be settled by arbitration on request of the parties interested.

Whenever a case for arbitration arises one referee should be appointed by the president of the retailers' association in whose territory the claimant resides, and a second referee should be appointed by the manufacturers' or the wholesalers' association having the district in which the shipment originated. Said referees as appointed should have the option to appoint a third referee and all referees should be appointed with due consideration to convenience and expense. The expense of such arbitration should be paid pro rata as the fault may appear. Arbitration methods should be employed wherever possible in the settlement of all matters in dispute.

A written statement of the findings in each case should be made by the referees, and their findings should be final. Copies should be sent to the secretaries of each of the organizations through which the referees were appointed.

15. In the matter of costs of inspections made by association inspection bureaus on lumber, the grade or measurement of which has been complained of, if reinspection shows the grade of the total amount of item complained of to be within 7 per cent of grade involved, the expense should be borne by complainant; if otherwise by the shipper.

16. It should be the duty of the manufacturer and wholesaler to take an active interest in the marketing of their products through regular channels only.

17. It is the sense of the conference that the widest possible publicity be given for the purpose of making known irresponsible, irregular and unscrupulous dealers and manufacturers.

Utilization of Hardwoods.

ARTICLE VIII.

Wagons-

wood, red gum or tupelo; box cleats of yellow poplar, cottonwood or rock elm; box beds of longleaf pine, birch or oak; bed cleats, brake bars and hounds of oak or rock elm; axles of hickory or maple; bolsters and sand boards of oak or hickory; poles, reaches and spokes of oak; standards of oak, rock elm or hickory; rims and felloes of oak and sometimes osage orange; hubs of white, red and willow oak, black and yellow birch; doubletrees of hickory, rock elm or oak; singletrees and neckyokes of hickory or rock elm.

As every lumberman well knows, habit and prejudice have a great deal to do with the choice of woods in making of wagons, as with all kinds of articles. For example, the prejudice against red hickory is generally known. But recent government tests have shown conclusively that a large proportion of gear parts made of red hickory should by rights be included in the higher grades, because of their strength and thickness. Lumbermen have believed this for a long time, and the result of the government tests was merely a confirmation of general knowledge. As hickory is much employed in wagon building, and still more in the construction of carriages and automobiles, and as the present rate of cutting may cause the disappearance of this wood within fifteen to twenty years, it is to be hoped that the red hickory will soon come into its own. Many suggested substitutes for hickory have not yet been tested; some of them are foreign timbers.

Hickory is the great wood for axles. For carriage axles it is practically the only timber used, but for wagon axles, as outlined, there is a considerable demand for maple. This wood finds greater favor with the northern trade, while in the South hickory is preferred. The government tests, which investigated the relative value of these

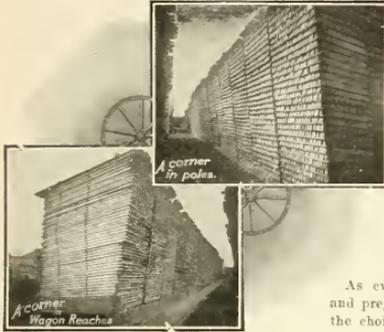

woods as axle stock, found hickory the superior in toughness and resistance. The steel axle is sometimes used for heavy vehicles, but it lacks the resilience of wood.

The chief timber for hubs was formerly white oak, but its excessive checking, coupled with the high market price, has led to the substitution of willow oak, red oak and black and yellow birch. Some manufacturers of great prominence make no secret of the fact that they prefer black birch.

White ash was formerly much used for wagon poles, but the increase in the price of ash is leading to its gradual disuse for this purpose, and white or red oak are the principal timbers utilized, with the occasional employment of Douglas fir and longleaf pine. The great test of a wagon pole occurs when the front wheels are blocked and the team turns sidewise. Strength, stiffness and elasticity are required, and select oak appears to be on the whole the best material.

The preponderance of oak in the gearing parts of a wagon is due to the comparative commonness of this timber among the hardwoods and also to its well-known strength.

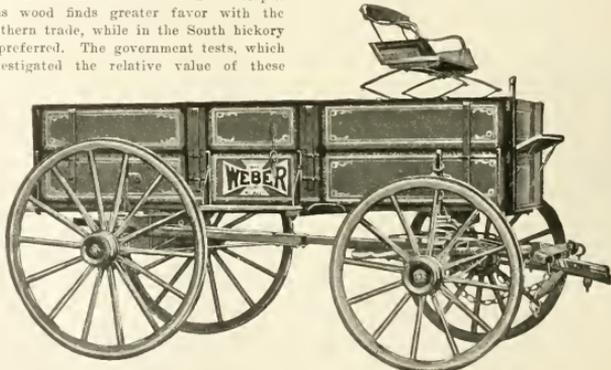

For wagon-box woods the preference is decidedly yellow poplar for the sides and longleaf pine for the bottom. For the sides there is demanded a timber that will not warp or split and is easily worked. Resistance to abrasion is important, but durability is not considered. The conditions required are fulfilled by yellow poplar, but cottonwood is also largely utilized. Red gum, tupelo, Douglas fir, eypress, western yellow pine, western spruce and redwood have been used, all to a limited extent except red gum, which occupies third place in the favor of some makers. All these timbers have been

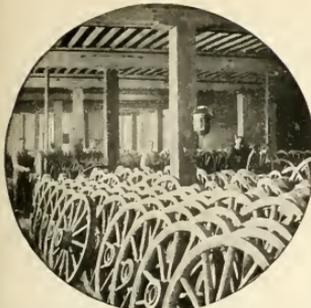

The cart is of ancient origin. The wheel, however, is older still, for of necessity it had to be invented before the cart was possible. The idea of the wheel may have come to primitive man from seeing a log roll down hill. At any rate we know that the first wheels were solid, and in fact vehicles with solid wheels are still used in Burma, China and Japan, and even in parts of the western world; an English writer says it is still seen in parts of Ireland. The spoked wheel is also of great antiquity. That the Egyptians, who were vastly more civilized than we moderns are willing to believe, used spoked wheels 2,800 years ago, we are certain, and doubtless long before that time. In Europe we find them in the prehistoric lake dwellings.

To come down to modern vehicles—astonishing is the variety of forms into which the rude cart of early man has developed. There is the wheelbarrow, which may have been the first type; the two-wheeled cart, carriages, coaches and wagons, with their many shapes and uses; automobiles, railway and street cars of various kinds, steam and traction engines, bicycles; sleighs and sleds, which may have grown up independently of the cart but are alike as regards the box; and at least one more—the roller skate! One might strain a point and add all wheel-propelled and screw-propelled boats; but these are combinations of the canoe, the wheel and the oar—for the function of the oar taught civilized man that he could apply the wheel principle to water locomotion.

The wheel has had a tremendous influence upon the arts and crafts of civilization—witness the millwheel, the circular saw, machinery of all kinds, and a thousand and one other things. But we are directly interested only in the wooden wheel which has to do with vehicles. The woods commonly used number about a dozen. Box boards are usually of yellow poplar, cotton-

MODERN FARM WAGON OF THE BEST TYPE

FINE STOCK OF WHEELS READY FOR STRIPPING

found to give complete satisfaction when proper attention has been directed to the overcoming of small difficulties.

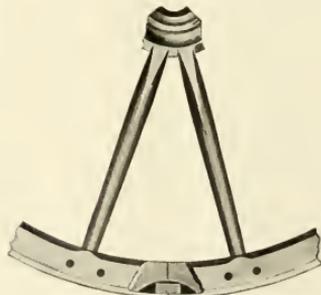

Sides of farm wagons consist, to outward view, of two boards, one above the other; but the lower board, which is often sixteen inches high, may be of two planks securely joined by dovetail or other fastening, and in fact beards made of several such planks are on the market and are said to be a success. For a sixteen-inch board seventeen-inch lumber is necessary, and this is hard to get, therefore the production of the joined-up boards by some makers. When well done the joining is so perfect that the outer surfaces appear as one board, and the strength of this compounded board is very great.

The box-bed or bottom board of a wagon is generally longleaf pine. This wood is strong, and its strength is reinforced not only by hardwood cleats but by tongue-and-groove construction. The separate boards are three to five inches wide. Longleaf pine is not used for the sides because it is said to be too heavy and does not hold paint well. Poplar, on the other hand, would be too light for the bottom.

It will be noted that heavy woods are not

necessary for box cleats. In general hardwood is avoided in the making of wagon boxes because lightness is a requisite, although on account of the fact that a great strain must be withstood by the bottom board the cleats are generally of hardwood, as already said, and sometimes the bed itself is of birch or oak.

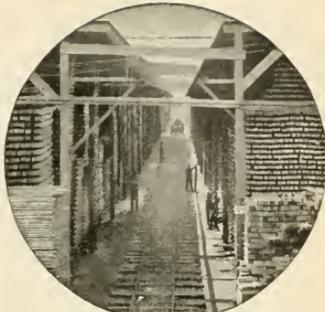

The crux of wagon-making is the wheel. It seems a simple enough contrivance: hub, spokes, rim. But all the science of wagon-making is centered here. Do all lumbermen know that the spokes in a wagon wheel are not set at exact right angles to the rim and hub? Do they all know that the wheel itself does not usually stand quite erect—that is, a plumb dropped from the highest point in the rim would not touch its lowest point? The spokes are made to incline inward from the rim, so that the plane of the center of the rim does not coincide with the plane of the center of the hub. The result is what is called the "dishing" of a wheel, the term "dish" being chosen because the completed wheel roughly resembles a dish, bowl or saucer. This arrangement is necessary if a wheel is to do

SECTION OF WHEEL JOINT SHOWING FELLOE JOINT

good service. As a wagon jogs along the tendency is for the load to be thrust outward on the axles, first to one side and then to the other. This shock and strain upon the hubs would turn the wheel inside out unless properly provided against. This is accomplished by the inward inclination of the spokes. How great this dish should be is a question that is differently answered by various makers, and will doubtless always be a subject of experiment. It varies from three-fourths of an inch upward.

From the cabinet-making standpoint the dishing of a wheel is a very important matter. The hub should be properly mortised to give the wheel the proper dish. Some makers, it is said, do not devote due attention to this. Another part of the process of establishing the dish is attended to when the rim is put on. The scheme employed by a number of high-grade establishments is to saw one rim-joint a trifle V-shaped. When the tire is shrunk on, the V-shaped opening

THERE ARE 225,000 AXLES STORED IN THESE TWO SHEDS

closes up, drawing spokes and rim into the exact dish required. The size of the dish and of the V-shaped opening is supposed to be ascertained by arithmetical calculations.

The making of hubs is also an important and interesting process, but it cannot be described in detail here. It is now customary to treat hubs with a preservative. The manner in which spokes are driven into the hub is highly important. They should never pierce quite to the metal boxing that holds the "skein" or metal covering for the end of the axle. The weight should be sustained by the shoulder of the spoke, which generally rests on the outside of the hub, but may be partly imbedded within it. The "tenons" or parts wholly inside the hub and rim are narrower than the part that is exposed to the air. Spokes are bent when quarter-sawn, as the grain then runs from rim to hub—an obvious advantage.

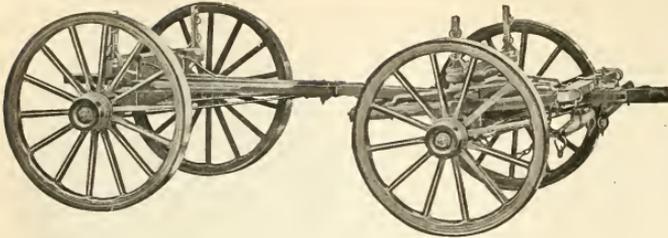

There is some confusion in the use of the terms "rim" and "felloe." Properly speaking, the rim is the circle of wood to which the tire is attached, and the felloes are the individual parts of that circle. Whether bent or sawed, rims are of at least two pieces. A bent rim consists commonly of two pieces or felloes, a sawed rim ordi-

FELLOE AND AXLE STOCK

ASSEMBLING THE GEARS

HEAVY GEAR MADE OF HIGH-GRADE STOCK

narly of six or seven pieces. The bent rims, I understand, are generally preferred, because they contain fewer joints. In wagons, carriages, and similar four-wheel conveyances the hind pair of wheels are larger than the front pair—a fact due to certain causes that will be apparent on a little thought and need not be entered into in an article the object of which is to consider the wagon from a wood standpoint. Wagon poles may be either bent or straight, and the same is true of the “hounds” or device holding the inner end of the pole rigid.

Wagon timber passes through a number of severe inspection tests when it is in the hands of a reliable maker. It is generally cut into dimension stock at the mill and then allowed to air-dry in the yards of the manufacturer for a period of from one to three years, according to size and thickness—and, it may be added, according to the business principles of the maker. From the lumber yards it goes to the dry room.

After all the parts are assembled the painters commence their work, and the well-informed buyer knows that the painting of a vehicle is a matter of prime importance. Wagon painting is not the interminable process employed in the manufacture of carriages and automobiles. Applying four

coats to the box and three to the gearing is a common practice in high-grade work, while it is known that many wagons are simply dipped. Box bottoms are painted by good makers with the same care that they expend on the sides. Not only the top but the bottom of the box bed is painted, and the tongues and grooves likewise pass through the painters' hands. So carefully is the good wagon or carriage painted that the tyro cannot tell where wood leaves off and metal begins. The paint and varnish form a preservative material, protecting the wood and metal from contact with the elements. Why the box of a farm wagon is always painted green, and the gearing red, is a question to which the only answer given is “Custom.”

This brief description applies in a general way to farm wagons, dump wagons and carts, hand-carts, trucks, vans, delivery wagons, etc., etc., but of course the different uses require considerable variation as to construction. When we consider the high-class delivery wagon, such as is used by the more exclusive department stores of our great cities, we have a vehicle that in details of painting, of design, and general construction, more closely resembles the carriage than the wagon. Carriages will be treated in another article.

CHARLES KLAUBER.

Jake Willett's Railroad Bandmill.

When Jake Willett was getting out a contract for several trainloads of oak lumber in Ducktown last fall his bandmill went up in smoke. After the incident was over the only thing that was left in the vicinity was a log railroad and a thirty-six-inch band saw that was stored in a shed three minutes' walk from the conflagration.

But Jake did not feel blue. No, he did not even try to damage his person with a firearm. He just lit up his countenance with a smile and with the aid of several employes moved the old band saw to the side of the railroad.

Leaving them to rig up the apparatus he invited the remainder of the employes to take a trip with him on the log road and directed the locomotive engineer to back the train, consisting of fourteen cars, into the log locality. The engineer did as directed, but thought

Jake somewhat under the weather mentally. He whistled his way along the route until he reached the backwoods. Then he paused in the journey.

Jake was the first to jump off the train, and as he did so he requested his employes to pile oak logs on each car and to fix and adjust them just as though each car were a log carriage. He cautioned them to fix each one securely so it would not drop off and fall on people's feet and hurt them.

“The sorrow over losing his property has damaged his think locality,” said the foreman; “I feel sorry; let us weep to show him that we are perfectly sincere in our thoughts.”

“All right,” said the inspector. So both cried copiously until the train was ready to return to civilization. Then wiping their eyes upon some cotton waste, piled on

to the loaded rolling stock. They went back to the cremated mill with the rest of the employes and Jake. Just as they got within sight of the band saw rigged up beside the track Jake took his megaphone and carried on a conversation with the employes who were at work upon it.

“Look out,” he said, “we are coming, and don't want to run onto you without a word of warning.”

“LOOK OUT, WE ARE COMING”

Then getting off the rolling stock he ran ahead on foot to see how his plan would operate. Then he motioned the engineer to pull the train hither. The engineer, in compliance with his request, pulled wide the throttle in his place of business. The locomotive at this made a lot of boisterous remarks and labored swiftly up to the band saw.

HE RAN AHEAD TO SEE HOW HIS PLAN WOULD WORK

When the first log car passed said saw it did not ignore same. No, it leaned out in such a manner that the log which was reposing on the car bed had its side sliced off. It was sliced off in just the same manner as it would have been had it been traveling on a carriage.

But the engineer in the meantime was carrying on his vocation in the cab, with the result that almost in less time than it takes to tell it the second, third, fourth and following cars of logs were treated in the same way.

When the last or fourteenth car was reached Jake said: "Slow down, and back over the route you have just come, engineer; trace and retrace your locomotive footsteps past the band saw until you have exhausted your material. Meanwhile I will go and get a drink."

These instructions were complied with, and all morning they worked, stopping only once

to allow the engine to quench its thirst, and for one of the workmen to brush the sawdust and cull boards off the right of way.

The contract for the oak specified that the job be completed within two weeks. But the employes were so tickled with the new way of laboring that they sawed up all that was needed in a week. The rest of the time they spent in sulking because there was no more rush work for them to enjoy just then.

With the proceeds from the contract and some insurance coin Jake rebuilt his plant, putting in an automatic sprinkler for the building and ice water for his employes.

GUIDO D. JENES.

Hardwood Grooved Cable Wheels.

With the extension of rope driving systems the demand for grooved wheels has increased. They are used not only for the ropes, but for the block and tackle. There are grooved wheels employed in several other lines of mechanical work in shops and mills. These grooved wheels are made chiefly from hardwoods, although there are metal forms, some compressed from wood and paper pulp and others manufactured from patented compositions.

The grooved wheel has been in use many years and no doubt will be employed for many more. Fig. 1 shows a popular form.

runs through the groove without properly gripping the sides at times, resulting in slipping. Hence this form of groove is not so popular. When used, the ropes must be tight, otherwise they are liable to slip.

Then there is the full-open hardwood groove as shown in Fig. 3. The bearing of the rope depends chiefly upon the contacting point at E. There is practically no opportunity for the rope to bind on the sides. However, for generally light work, this style of groove is used. There is not so much wear and tear on the cable as in the V-form of groove.

There are also sectional hardwood wheels put up with the pieces made as in Fig. 5. The sections are built up on a hub and bolted in a flange. Then after they are properly fastened, the process of grooving is begun and the grooves are turned. One of the hardwood grooved sectional wheels with bolted flanges is shown in Fig. 6.

Still another type of hardwood grooved wheel is shown in Fig. 7. This is one-half of the wheel. The object is to furnish a grooved cable wheel from wood which can be clamped and unclamped from a shaft like the split pulley of common style. Hence it is possible to put the two sides of the hardwood grooved wheel over the line of shaft, and belt the same securely there with bolts passing through the row of bores shown in the cut. The heads of the bolts are sunken into the surface of the wheel far enough to clear the ropes.

Fig. 8 is another form of hardwood grooved wheel, arranged for a system of grooves. When the wheels are turned from a single block, the wheel is necessarily limited as to size. It is not possible to get blocks large enough in perfect condition for turning a wheel. Hence only the small sizes for light work are turned complete.

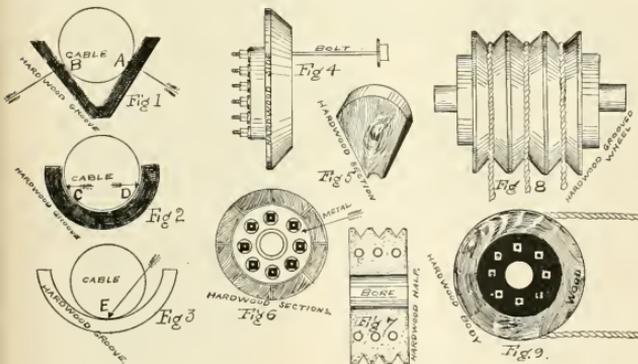

Then there are wheels made from a solid hardwood body as in Fig. 9 and clamped on either side with the metal flanges represented by the dark portion in the cut. Usually the wheel is built up regularly and carefully. Then the grooves are cut and trued. Manufacturers of hardwood grooved wheels say that business has greatly increased in recent years.

GEORGE RICE.

Request for Cooperation.

At the time it became necessary to enter complaint before the Interstate Commerce Commission to force the western railroads into a readjustment of the rate on hardwood lumber to the Pacific coast, a Hardwood Lumber Rate Association was formed with an executive committee consisting of George D. Burgess, J. W. Thompson, James E. Stark and W. R. Barksdale, all of Memphis. George D. Burgess was selected chairman; A. S. Foster, secretary and treasurer, and W. A. Percy, general counsel. Suit was filed June 26, 1907, and shippers are now at liberty to file claims for overcharge on all shipments made to the West since that date.

When this suit was filed about thirty firms constituted themselves not only plaintiffs, but guaranteed the costs of it. However, since that time seven of these firms have either failed or gone out of business. This has resulted in the committee's being short about \$700 on the original amount guaranteed for the expenses of conducting the suit. The financial situation of this committee now is that it must raise something over \$1,000 to clean up the costs involved in the case. There are so many leading hardwood operators who are vitally interested in this transaction that it is certain they will take pleasure in making a reasonable contribution to the committee to assist them in straightening up this shortage. The suit was not brought on behalf of the original parties to it alone, but has been of such manifest advantage to the hardwood trade at large that there should be no delay in relieving Mr. Burgess and his associates of this burden of cost. As a matter of fact, the total expense thus far has laid entirely on Memphis lumbermen and a few Wisconsin operators. Contributions, which the Record believes will be prompt and generous, may be made either to Mr. Burgess or to A. L. Foster, secretary and treasurer, at Memphis.

The wheel body is turned down in the usual manner in a turning lathe and then the cutting of the groove is begun. There are three principal forms of grooves. The one in the first illustration is used frequently. In this shape of hardwood groove the cable presses on the sides of the grooves as at A and B. The greater the strain upon the cable, the greater the gripping power of the cable on the interior edges of the groove. Hence this form is used very frequently. However, some of the grooves are turned out in half circle form, as shown in Fig. 2. In this type the rope rests evenly and easily in the space with contacting sides as at C and D.

The cable has no opportunity to bind, and

Some manufacturers construct the combinations in sides as shown in Fig. 4. Here is exhibited one-half of the groove. The dividing line is at the lowest point of the V-form. By making a series of disks with the tapering edges for forming the grooves, the set may be bolted and a very substantial wheel obtained. It is possible to make the disks from specially-selected pieces of stock, which would not be the case if the grooved wheel were turned from a single piece. The outside disk is turned with the proper flange and hub, whereas the interior sections are made flat and bolted. The pattern of the bolts used for clamping is shown in the cut.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

Wants Machine for Making Yardsticks.

NASHVILLE, TENN., June 24.—Editor HARDWOOD RECORD: Can you put us in touch with manufacturers of a machine with which we could make yardsticks for advertising purposes? We are not certain, but are of the opinion that machines for this purpose are made to order. Any information along this line you can give us will be greatly appreciated and will be pleased to have an opportunity to reciprocate.

COMPANY.

The correspondent is doubtless right about these machines being made to order, but if any reader chances to know where they may

be had he will confer a favor by sending the address to this office.—EDITOR.

Maple Mangle Roller Blocks.

HAMBURG, June 15.—Editor HARDWOOD RECORD: A well-known lumber company of Bay City, Mich., gave me your esteemed address, and today I beg to ask whether you could let me know the best mills for supplying octagon cut maple mangle roller blocks, cut from rock or hard maple wood. Undoubtedly you are in a position to furnish me with the best addresses. You will understand these are blocks which are afterward turned into rollers for mangle machines. Esteeming the favor of your kind reply, ——— & Co.

The correspondent has been informed that the RECORD will attempt to find out who is in position to furnish this stock, and that he will be duly advised. Anyone interested may have his address on application.—EDITOR.

News Miscellany.

Henry Maley.

Henry Maley is dead. This was the sad news which went out from Edinburg, Ind., the evening of July 6, bearing a message of grief and a sense of personal loss to many a lumberman throughout the length and breadth of the land, and even across the water.

Henry Maley was a young man, in spite of his three-score and seven years, for when a man's heart is young—when he loves his joke and loves his work and his friends—he is never old. He was the dean of hardwood lumbermen. There used to be a saying that Henry Maley was the father and Indiana the mother of the hardwood

tensive holdings in rich timberlands, notably in the South. Mr. Maley's prosperity may be attributed to his thorough mastery of all phases of the hardwood lumber business. What he did not know about purchasing timber and about manufacturing and grading lumber no man ever knew. However, it was as a manufacturer of Indiana quartered white oak that he was best known to the trade, for certain it is that whatever other excellent products he may have placed upon the market, it was his quartered oak which made him famous. If not the very first, he was among those who introduced it to the world, and it has remained his specialty during all these years.

Upon those of the lumber fraternity who did not know him—and they are few indeed—no eulogy of Mr. Maley could leave the impression that did his happy, gentle nature. To those who knew him and loved him—and they are legion—words are not needed to remind them that the world has lost a noble character—a man great in his very simplicity of life and thought and manner, a man with a great soul and a great, kindly heart. Said one who knew him well: "Henry Maley was an honest man, but he made no parade of his integrity. He was honest simply because he never knew how to be anything else. He belonged to the ranks of the old-time Indiana lumbermen who are fast disappearing from the earth and can no more be replaced than can the splendid white oak giants of their native state. Such men and such trees come but once in history."

Japanese Forestry Work.

A recent Japanese publication contains an article relating to the progress now being made by the government of that country in acquiring information for the development of forestry. It states that lately an official in the department of agriculture and commerce was sent to the United States and others to Europe for the inspection of the timber trade and forestry administration. A commission was also sent to India for the same purpose. A specialist on forestry in the same department is to be sent to South America shortly on a similar errand. The latter will thoroughly study the rubber plantations, and, if possible, bring back roots or seeds for planting on the Bonins and Luchu groups.

The department of agriculture and commerce, which established a sawmill in Akita prefecture in 1906, making a grant of \$100,000 in that year and \$150,000 in 1907 to develop the busi-

ness, has obtained a vote of \$150,000 toward the fund for the extension of the lumber business, and now government mills are to be established in Nagano and Aomori prefectures. Before the end of this year there will be nine timber mills in all in Akita, Aomori, Miyagi, and Kanamoto prefectures, all worked by the government. The director of the forest bureau admits that Japan is the only country in the world which takes upon itself the working of the lumber business. In many forests reserved by the government there is an almost inexhaustible supply of timber, but these forests are remote from railways, rivers, or seaports, and much expenditure is necessary for opening roads or constructing other means of transport in order to make such timber available. District forestry offices will, however, not work mills regardless of profit, as strong competition is going on among them. It is stated that the government mills will only supply their products to merchants in Japan, and the works are not yet progressed to such a stage that the government can export direct. So far, the export of timber by the government mills has been confined to supplying sleepers to the South Manchurian Railway Company.

Obituary.

The demise of Samuel Disston, on June 27, so soon after retirement from his long connection with Henry Disston & Sons, Inc., the famous saw manufacturers of Philadelphia, came as a startling and grievous news to his many friends. Only a few weeks ago he was tendered a dinner at the Bellevue-Stratford by his business associates as a testimonial of their warm friendship and high esteem. After fifty-seven years of efficient service he had thrown off the cloak of responsibility and was about to cease from his labors when the silent reaper came unexpectedly

HENRY MALEY OF EDINBURG, IND., WHO DIED JULY 6.

lumber business, for in his career he saw it spring from a tiny nucleus down where he first started his own operations, to a great industry which has penetrated every section of the country where such timber can be found.

In the many years which Mr. Maley devoted to the lumber trade he prospered. From a very small beginning his business grew steadily until today it may be classed among the half dozen largest of the kind in the country. It embraces the ownership of nine sawmills, a furniture factory and several other enterprises, besides ex-

SAUEL DISSTON, LATE OF HENRY DISSTON & SONS, PHILADELPHIA.

and bore him away for the rest which is eternal. "Sam" Disston possessed the rare gift of unflinching loyalty to those he cared for. In manner he seemed somewhat brusque at times, but his friendship once gained it never failed, though tested to the utmost.

Samuel Disston was born in England in 1838. While but a boy his family emigrated to the United States. With his brother Henry he learned the business of saw-making. The brothers started in a small way, employing but a few men, while today their house has a force of employees numbering about 3,500. Samuel Disston learned every phase of the trade thoroughly

and assisted in building up the business until it was known from one end of the world to the other, and the name of Disston had become a synonym for the acme of excellence in saws.

Later Mr. Disston represented the company as salesman and built up a personal acquaintance with the hardware trade of the entire country. In 1894 he was made secretary and general manager—duties which he consented to resign to others but a few weeks ago.

A widow and two sons and two daughters survive Mr. Disston; the children are Henry C. S. Horace, Mrs. Charles Colledge Allen and Miss Edna Disston. The funeral was held June 30 from the family residence, 1609 North Broad street, Philadelphia, and interment was at Laurel Hill.

W. B. Mershon Relates Experiences in Tree Planting.

W. B. Mershon of Saginaw, Mich., who is aiding the movement to reforest a large tract in the northern part of the state, recently gave out an interesting interview for publication, in which he said:

"I was first went into it as a matter of sentiment, but are now governed by the commercial side, with the added satisfaction of knowing we are benefiting the public at large. A good many years ago fifteen or twenty of us bought the Wingleton property, about 1,700 acres of land west of Ludington, where W. D. Wing has been conducting a lumber operation for years. We bought it for the trout streams. About all the timber

A Continuous Feed Glue Jointer.

The J. A. Fay & Egan Company, 414-434 West Front street, Cincinnati, Ohio, after long and costly experiment have produced a continuous feed glue jointer that has proven a wonder, because of its excellence of work, ease and quickness of adjustment, and rapidity of feed.

The frame is cast in one piece, absolutely rigid, and is constructed so that the entire mechanism is completely enclosed. A very important feature in its construction is that all the bearings are oiled from the outside without stopping the machine.

The feed consists of a traveling chain, composed of detachable links, which is provided with a gib running full length—not part way only—insuring perfect alignment. The chain runs over two octagon wheels, one at each end of the machine with finished faces, and flanged at lower edge to support the chain.

The feed is driven by a three-step clutch cone operated by a lever close at hand, and the power is transmitted by large bronze worm wheel running in oil, with ball bearings at end thrust, absolutely noiseless.

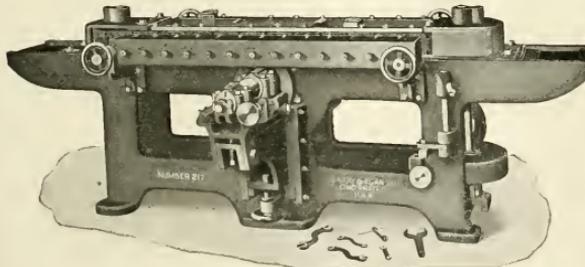

There is a hand wheel on each end. They adjust the housing to various thicknesses of stock. On the housing are nuts, the full length. These nuts hold in place as many steel rollers which give pressure to the stock being worked. The rollers are each mounted on independent

THOMAS R. MARTIN, MANAGER H. B. SMITH MACHINE CO.'S CHICAGO BUSINESS.

The H. B. Smith Machine Company are specialists in the production of woodworking machinery for the sash, door, blind and furniture trades, but in addition make a complete equipment of planing mill machinery.

A picture of the new store is herewith shown, as well as a photograph of the popular Chicago manager, Thomas R. Martin. Mr. Martin has been engaged in the woodworking machinery business for so many years that he has the personal acquaintance of practically every user of woodworking tools in the middle West. Beyond this, he has a personal popularity that is almost country-wide. He will be pleased to receive calls from his friends at the new address, or to have them say "Hello" to him over phone "Main 1190."

NO. 217 CONTINUOUS FEED GLUE JOINTER. MANUFACTURED BY J. A. FAY & EGAN CO., CINCINNATI.

that was worth anything at that time had been taken off; a few young pines were growing around the little lakes and on the plains so-called scrub oak or red oak was growing, but not of much size.

"Had we at the time planted the land with Norway pine the property would have been worth \$100,000 today, for the scrub oaks in the eighteen or twenty years we have owned the property have become of good size, big enough to make railroad ties, and the little pines that were around the lakes have now become practically merchantable timber, and forest growth has developed to such an extent that a photograph taken of the locality shows a wonderful improvement over one taken of the same place years ago.

"Three years ago we put out 5,000 Norway and white pine on this property, and two years ago we put out 15,000 more. The Norways are hard to get, but white pines are easily obtained. This year another planting was made, so that our total now for three years is 51,800. Those planted two years ago have grown well. This is forestry undertaken by a few gentlemen who have chipped in, so to speak, to defray the expense."

housings and backed up by tempered springs, holding the stock firmly in place.

The cutter heads are located in the center of the machine lengthwise one on either side. They are mounted in heavy housings having vertical, horizontal and angular adjustments.

For detailed information, write the manufacturers.

Removal of Headquarters.

The H. B. Smith Machine Company, large manufacturers of woodworking machinery, who have maintained an extensive branch establishment on Canal street, Chicago, for many years, have just removed their local headquarters to a very handsome four-story double store at 63 and 65 West Washington street, and in addition employ the basement of 67 West Washington street.

The new establishment, which has been fitted up with admirable taste, also affords general office headquarters for the Chicago manager, Thomas R. Martin, and gives room on the various floors for the display of a comparatively full line of the woodworking tools manufactured by the company.

CHICAGO BRANCH OF H. B. SMITH MACHINE CO.

Death of W. G. Van Auken.

W. G. Van Auken, of the well-known lumber and flooring manufacturing house of Bliss & Van Auken, Saginaw, Mich., died at Tawas Beach, Mich., on June 23. The immediate cause of his death was a paralytic stroke; he suffered from similar attacks about three years ago.

Mr. Van Auken's health commenced to decline in 1905 as a result of overwork, but he manfully struggled along with his various business enterprises until a very recent date. Accompanied by his family he went from his home

follow in the order named, while glass manufacturers, baking powder companies, liquor distillers, and candy, tobacco and cheese packers are big users of barrels. The demand for barrels for molasses, oil, lard and pork is also enormous, while dry paint, glue, snuff, oatmeal, screws, castings and general hardware articles annually increase the demand on the cooperage supply.

While the amount of expenditure for barrels can be quite closely estimated for a given year, it is not possible to say how many barrels are in actual use. The life of a barrel is put down at one year by the trade, but this is far from true. A majority of barrels are used many times. They begin as sugar or flour barrels, and are then sold to the farmer for shipping his produce to the market. It may be that they are returned to him several times, carrying potatoes to the market on the first trip, and tobacco or lettuce on the next, each cargo being lighter in weight than the previous one, owing to the weakened condition of the barrel. Finally the barrel may serve out its life work as a refuse receptacle, and in the end can be used for fuel. Thus, it may be said that a barrel has as useful a career as almost any other manufactured article, and its life is much longer than a season.

The demand for barrels is steadily growing because modern machinery has made it possible to make them for the trade cheaper than at almost any other form of durable package. That it is the most convenient form of package has long been acknowledged. The timber used in tight barrels has to be selected with care, as it must not only be water tight, but barrels for the oil, whiskey and paint trades in addition must be capable of resisting high internal pressure. The lumber used for this work must be carefully selected, that cured by slow air drying under shelter being the most satisfactory.

Railroads and Wood Preservation.

The recent action by the board of directors of the American Railway Engineering and Maintenance of Way Association in appointing a committee of seventeen to investigate and report upon the subject of wood preservation has shown that the practical railroad men of the country recognize the importance of taking steps to conserve the rapidly diminishing timber supply of the United States.

Timber is one of the principal materials purchased by the railroads and its economical use is a subject of far reaching importance. More than 100,000,000 cross ties are used annually by the different railroad companies, and their average life in this country is not more than six or seven years. From a study of European methods, and the knowledge of wood preservation under conditions in this country, timber testing engineers say it is reasonably certain that an average life of from fifteen to twenty years may be secured by treating the tie with a good preservative and the use of improved devices for the prevention of mechanical abrasion, thus to a large degree diminishing the drain upon the timber supply.

While the quantity of timber used for ties is very great and the problem of a future supply is a serious one, yet this class of timber is not the only one which should receive consideration. A greater length of service from timber now used by railroads for bridges, trestles, piles, fences and transmission poles is greatly to be desired.

L. Kuehn, engineer of track and roadways, Cleveland; C. H. Melnitz, Chicago & St. Louis railway, is chairman of this special wood preservation committee and C. G. Crawford, specialist in wood preservation, United States Forest Service, is its secretary. The first meeting was held in Chicago, the early part of last month for the purpose of organizing and deciding upon a plan of work. The committee was divided into four sub-committees to take up the following

lines of work: Statistics and economics, O. Chaunte, consulting engineer, Chicago, Ill., chairman; preservatives and specifications, H. von Schrenk, consulting timber engineer, St. Louis, Mo., chairman; adaptability of woods and their preparation, W. K. Hatt, civil engineer, Forest Service, Lafayette, Ind., chairman; treating processes, C. G. Crawford, specialist in wood preservation, Forest Service, Washington, D. C., chairman.

This American Railway Engineering and Maintenance of Way Association now consists of about 900 members representing 200,000 miles of railroad track and including among its membership the leading railroad engineers of the country. The object of the association is the advancement of knowledge pertaining to the scientific and economical construction, operation and maintenance of railroads. The method employed to obtain this information is through standing committees appointed by a board of directors. Each committee is appointed to investigate a special subject and to report at each annual meeting, presenting the results of its investigation, followed by recommendations which are published in "The Manual of Recommended Practice," after they have been adopted by the association.

Lumber Production in the Lake States.

The lake states, one of the greatest forest regions that ever contributed to the lumbering activities of any country, are rapidly falling behind in timber production, according to a statement just issued by the Bureau of the Census.

Statistics concerning the annual output of forest products, collected by the bureau in cooperation with the United States Forest Service, from more than 2,100 saw-mill operators in Michigan, Wisconsin and Minnesota—the big three—have shown that the cut last year was only 5,559,000,000 feet of lumber, a big pile, yet twelve per cent less than the cut of the preceding year.

The heavy inroads made by the exploitation of the timber resources of the large lumber states on the Great Lakes have been too much for the forests and the amount available for cutting is getting lower each year. The decadence of the lumbering industry in this region is forcefully illustrated in the drop in the white pine cut during the past ten years. Michigan's forests of this valuable tree were the richest in the world and were often said to be inexhaustible. The folly of such a statement is shown by the report that the cut of white pine in Michigan last year was only one-fourth of what it was in 1899, only eight years before.

In lumbering the forests no thought was given to anything but immediate money returns, and consequently the countless fires running over the land, after the timber was stripped, have killed young growth over wide areas and greatly impoverished the soil. Now, 6,000,000 acres, or nearly one-sixth of the state of Michigan, known as the "pine barrens," have been thrown on the delinquent tax list and are a burden to the people. Under proper forest management this land would have been producing timber today. Between 1899 and last year the white pine production fell off nearly as much in Wisconsin as in Michigan. In Minnesota, the state which now contains the largest amount of virgin white pine, the decrease in the same period was nearly one-third.

Taking the three states together, pine constituted nearly forty-six per cent of the total lumber production in 1907, hemlock a little more than twenty-seven per cent and maple ten per cent, the balance being made up mostly of basswood, birch, tamarack, elm, beech, oak, spruce, ash, and cedar, in the order given. The pine is mostly white and norway which are grouped together under the general trade term

THE LATE W. G. VAN AUKEN OF SAGINAW, MICH.

to Tawas Beach a few weeks ago, and apparently his condition was much improved; it was hoped by his friends that a long rest would completely restore his health.

The death of Mr. Van Auken causes wide-spread regret not only in the Saginaw Valley but throughout a large portion of the lumber world, in which he was well known. "Van," as he was affectionately called by his hosts of friends, was not only a man of marked ability in lumber affairs, but in applied mechanics as well. He had a most charming personality and perhaps a wider circle of fast friends than any other lumberman in the state of Michigan.

The writer must needs quote in loving remembrance the words of "Good-bye": "Just a word, ere you go, old friend, Just a word, ere the oarsmen bend, And your boat speeds out on the unknown sea.

Whose farther shore is Etruria,
Turn once more, dear glorified head,
Before the last faint light has died,
Turn and give us the brave old smile—
That warmed and nourished our hearts erst-
while;
The night is closing, our eyes are wet,
But see!" There's time for a signal yet—
"Quick! Ere they bark both left the sand
Give us a wave of your cheery hand;
And back to our answer, winging back:
Far o'er the waters cold and bleak
Straight to the foot of the great white throne
Where the Master waits to claim his own;
Christ! Be good to him to the end,
For he was a friend—a friend—a friend!"

Consumption of Barrels.

Upwards of 150,000,000 barrels and circular packages are manufactured in the United States annually. Few people realize the extensiveness of the cooperage industry in this country.

The heaviest demand comes from the cement business. The floor business ranks next, closely followed by sugar. Containers for fence staples, bolts, nuts, nails, and packages for roasted coffee, spices, crackers, fruits and vegetables,

of "northern pine." Pine made up over nine-tenths of the lumber produced in Minnesota, one-third of that produced in Wisconsin, and less than two-fifths of the total cut of Michigan.

Along with this great decrease in pine, there have been relatively heavy decreases in the valuable hardwoods, oak, elm and ash. Little more than one-fifth as much oak was cut in the lake states last year, for instance, as in 1909, while the cut of elm and ash was but half of that of eight years earlier. As is always the case, the decreasing supplies of the more valuable woods have caused those considered of little or no value to be drawn upon heavily. This has been particularly true with hemlock, so that now more hemlock than pine lumber is manufactured in Wisconsin, and twice as much hemlock as pine cut in Michigan. There have been heavy increases in the use of maple, birch and beech within the past few years, but the maximum cut of these species is probably near at hand; taking all of the hardwoods together, there has been no little falling off since 1899.

Oak Flooring Association.

The National Oak Flooring Manufacturers' Association is sounding its war cry and is already getting excellent results, although organized only a few months ago. Its motto appears on all its envelopes in large letters: "Oak Flooring for Heavy Duty and Hard Service Beats All Other Woods." This scheme constitutes excellent advertising for the product, and it is from this sort of uniform and persistent "plugging" that the association expects to secure excellent results.

After the summer vacation period, about the first of September, a meeting will be called and the regular work of the association taken up with renewed vigor; among other measures a campaign of education among the architects of the country is contemplated. Oak flooring is a worthy product and if advertised in a worthy manner should meet with even greater popularity than it has had up to the present time.

Government Operating on Wisconsin Hardwoods.

A new departure has been inaugurated by the government in the timber operations on Menominee Indian reservation, Shawano county, Wisconsin. By an act passed two years ago, through the efforts of Senator LaFollette, the cutting of "dead and down" timber on the reservation was authorized, portable mills to be used. Several million feet of elm, basswood, birch, maple, pine and hemlock were cut. The government is now erecting an \$80,000 mill at Norway, which will cut into lumber 25,000,000 feet of the 40,000,000 feet already logged. The mill will be operated under the direction of the forestry department, and after the timber injured in the great wind storm a few years ago is cut, the matured timber will be picked out carefully and the logging is expected to continue indefinitely. One of the finest bunches of standing hardwood left in the country is within the reservation, and is bisected by the Wisconsin and Northern railroad, which is being built north to Cranston.

Building Operations for June.

Official building reports from some fifty leading cities of the country for the month of June, received by the American Contractor, Chicago, show quite distinctly that building operations are improving, the loss as compared with June, 1907, being only 15 per cent. Substantially the same cities reported a loss of 37 per cent for March, 33 for April and 19 for May of the present year as compared with the corresponding months of last year. New York showed a loss of only 13 per cent, a gain of 35 per cent

in Manhattan being offset by losses in Brooklyn and the Bronx. Taking into account the circumstance that the presidential election occurs during the present year, the gradual decrease of total losses from 37 per cent in March to 15 per cent in June is decidedly encouraging. The decrease in the price of structural steel seems to be producing an effect, notably in Manhattan, while the loss in Chicago is but trifling.

City.	June, 1908.	June, 1907.	Per cent gain, loss.
Baltimore	898,631	634,807	35

Sanit Lake City leased two permits for \$500,000 each, June, 1907.

Miscellaneous Notes.

A. Herzog and J. B. Cabell, under the name Cabell & Herzog, will conduct a forwarding agency and foreign freight brokerage business at New Orleans as successors to the late L. Herzog. They will give close attention to the handling of all shipments consigned to their care, and will secure the lowest possible ocean rates; will also write marine insurance. A. Herzog is the son of the late L. Herzog, and aside from his association with his father in this line of business has had a number of years' experience in the steamship business. Mr. Ca-

bell has been engaged in both railroad and steamship work and was the first secretary and traffic manager of the National Lumber Exporters' Association.

Peter Elting of the Starr Lumber Company, Weston, Wis., states that the company sawed about 5,000,000 feet of hardwood this year.

C. M. Edick, formerly of Benton Harbor, Mich., is now running a large veneer and fruit package plant at Troy, Ala. The fruit crop in the South is large this year, so that the demand for packages is excellent.

The state of New York has purchased from the Eagle Nest Country Club a large tract of land at the head of Blue Mountain Lake. The land lies at the foot and side of Blue Mountain, extending to the shore of the lake. The tract has escaped forest fires and is covered with a fine growth of hardwood.

A recent issue of the Timber News of London says that certain large estates under well-trained foresters are getting excellent results in forestry. At a recent sitting of the royal commission now engaged in the question of afforestation the forester to Lord Lovat gave some valuable particulars concerning the woods under his charge. It appears that the estates include some 8,300 acres of planted woodlands and about 1,500 acres wooded by natural growth, and that from seventy to 100 acres of land are planted annually. The witness mentioned that he had planted about 500 acres of land not worth more than 1 shilling an acre for agricultural purposes, but which, he estimates, will acquire the value of £90 an acre as woodlands in seventy years' time. That is a satisfactory prospect for the owner, and the opinion expressed should encourage other landlords in the pursuit of forestry. Another important point is that Lord Lovat's woods find employment for fifty men, representing a wages sheet of £1,500 a year, and that the timber merchant who buys the wood pays about £2,000 a year in wages in respect of the same timber. If the cultivation of trees were generally practiced in suitable places throughout the country there would be a large opening for labor, bringing numbers of men back to the land and materially reducing the ranks of the unemployed.

The forestry department of the Pennsylvania railroad has just completed its spring forestry planting, setting out 625,000 trees. These make 2,425,000 which the road has set out up to the present time.

The Buckeye Lumber Company has its new plant at Augusta, Ala., operating in full force. They are cutting spokes, felloes, etc., and are prepared to cut all kinds of lumber, especially hardwoods.

Yull Brothers have started up their sawmill at Logan, Mich., which has been idle since last winter. It has been extensively repaired.

John Watkins of Battle Creek has just contracted to saw 1,600,000 feet of hardwood lumber for the Advance Thresher Company.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

The summer vacation season is on, and from most of the large lumber offices in the city familiar figures are missing. The heat, combined with the rather dull business season, is causing lumbermen to devote an unusual amount of time to fishing, golfing and the like, or to take extra long vacations.

The Michigan Hardwood Manufacturers' Association announces that several of its officers will soon return from protracted absences, and that it will probably hold its annual meeting the lat-

ter part of the month. Full particulars will be announced within a few days.

The Furniture Journal, published by the Trade Periodical Company, 355 Dearborn street, this city, celebrates the opening of the midsummer furniture-buying season by issuing a magnificent number of 258 pages. The issue is done on fine enameled stock and is replete with beautiful half-tone illustration, considerable color work, and literary contents rarely seen in a similar publication. It is one of the handsomest specimens of trade publications that has ever been issued, and reflects distinct credit on its publishers.

Wagstaff Lumber Co. is located in Chicago—Buff sed.

The Himmelberger-Harrison Lumber Company of Morehouse, Mo., is sending out to its trade a series of postal cards showing the various features of its big new industrial plant, which make very attractive ads.

Tom J. Christian of South Bend, sales manager for Maley & Wertz of Evansville, was a caller at the Reconn office on Thursday of last week. Mr. Christian reports a decided revival in trade and states that his sales for two weeks previous to his call aggregated more than for the previous two months. He states values are gradually getting back to those of a year ago and that the quarter-sawn white oak production of his house is selling at even higher prices than six months ago.

G. G. Roberts, sales manager for D. G. Courtney, Charleston, W. Va., called at the Reconn office July 3. Mr. Roberts believes trade conditions are fast getting into excellent shape and that there is a shortage of poplar throughout the Charleston district. His company's Toledo yard is rapidly being put in good shape to handle its trade.

Schultz Brothers & Morgan, a concern organized by Schultz Brothers of the Old Colony Building, this city, are constructing sawmills at Little River, near Christiansburg, Va., with a capacity of 20,000 feet of hardwoods per day. R. H. Morgan will be in charge of the plant and the main office address is Christiansburg.

BOSTON

Lumber merchants from the leading eastern and southern cities met late in June at the Brae-Burn Country Club, West Newton, Mass., in the third annual tournament of the Lumber Trade Golf Association. The championship gold medal offered by the New York Lumber Trade Journal was won by E. H. Stillman in a close finish with F. B. Witherbee. Mr. Witherbee won the president's cup for the best gross score in the qualifying round, and Harry C. Philbrick was awarded the vice-president's cup for the lowest net score in the qualifying round. The other winners were as follows: Secretary's cup, Frank B. Witherbee; Lumberman Review cup, unfinished; that will be played off later at the Nassau Country Club, New York, by L. P. Rider and George E. Robinson; American Lumberman's cup, R. W. Wister; National Wholesale Lumber Dealers' Association cup, E. E. Price; Blasted Hopes cup, presented by the Boston Lumber Trade Club, E. F. Henson; consolation first cup, C. O. Skinner; second cup, M. C. Benton; team match for Southern Lumberman's cup, Philadelphia. This cup is held for one year and members' team receive a medal.

Charles H. Crane is the new surveyor general for Massachusetts. He succeeds Ralph L. Abbott, who resigned to become associated with the C. O. Skinner Company, hardwood dealers, Boston. There were several candidates for the berth, but Mr. Crane's friends got the first start.

The Wellington Piano Case Company of Leominster, Mass., C. Albert Jacob, treasurer, has filed the following statement: Assets, real estate, \$45,125; machinery, \$12,539; cash and debts receivable, \$11,097; manufactures and merchandise, \$55,750; total, \$129,335. Liabilities, capital stock, \$30,000; accounts payable, \$84,393; profit and loss, \$15,902; total, \$129,335.

The R. E. Cleaves Lumber Company has been organized in Boston with a capital stock of \$3,000. The incorporators are Robert E. Cleaves, George H. Leatherbee and William H. Allen. Both Mr. Cleaves and Mr. Leatherbee have been associated with the Charles W. Leatherbee Lumber Company. A wholesale business will be done.

Harrison Parker, president of the Palmer & Parker Company, hardwood dealers and manufacturers of veneers, Boston, has gone abroad on a pleasure trip accompanied by his family. He will be absent until late in September.

J. R. McLane of the Alabama Flooring & Lum-

ber Company, Noma, Fla., was in Boston recently.

Medy W. Stark of the American Column & Lumber Company of St. Albans, W. Va., has been visiting this market.

NEW YORK

Schedules in bankruptcy of J. B. Brewster & Co., large carriage manufacturers of 737 Seventh avenue and 213 East Forty-fourth street, Manhattan, who were recently perturbed bankrupt, show liabilities of \$46,011 and nominal assets of \$34,494.

Following the recent death of William E. Verity, principal in the Brooklyn Lumber Company, Hamilton avenue, foot of Fifteenth street, Brooklyn, C. E. Robertson, the surviving partner, announces that there will be no change in the style or conduct of the business.

Ex-President Lewis Dill of Baltimore, Robert W. Hight of New York and Secretary E. F. Perry of the National Wholesale Lumber Dealers' Association returned last week after an extended western tour in the interest of association affairs. They took in Chicago, Cleveland, Buffalo and other points and in each of those cities they were royally welcomed and entertained by C. E. Welch of Chicago, President C. H. Prescott, Jr., of Cleveland and Horace F. Taylor of Buffalo, such entertainment including lengthy sightseeing automobile tours in each city.

The Christy-Moir Company, prominent wholesale house of 149 Broadway, Manhattan, have opened a branch sales office at Albany, N. Y., in charge of C. K. Christy, Jr., and Thomas Christy. This move is in line with better service in extending trade enjoyed by the company in central New York, and the experience and capability of the two gentlemen in question will assure the trade in that vicinity of the best possible service.

Patrick Moore, senior partner of Moore Bros., prominent hardwood house of Twenty-fifth street and Eleventh avenue, sailed for Europe on July 2 for a lengthy pleasure tour through France, Switzerland, England and Ireland and will re-appear some time in September. This is Mr. Moore's first trip abroad and he has laid extensive plans for his trip.

Captain A. P. Bigelow of A. P. Bigelow & Co., West Fifty-fourth street, Manhattan, has returned from a visit to his old home in Rochester, N. Y.

A matter of interest in the local trade during the fortnight was the announcement of the incorporation of the American Piano Company under the laws of New Jersey to represent the largest of piano manufacturers ever attempted in the country. The capital stock is \$12,000,000, of which \$6,000,000 is seven per cent cumulative preferred stock and \$6,000,000 common. The company will represent a merger of Wm. Knabe & Son, Chickering & Son and the Foster-Armstrong Company, and in addition will control the sale of Haines, Marshall & Wendell, Brewster and J. B. Cook & Co. pianos, totaling an output of 18,000 annually, or about 8 per cent of the country's total output. It is claimed by the new company, however, that it will represent seventy per cent of the high grade pianos of the country.

Following the resignation of C. E. Kennedy as manager of the local sales office of Shepard & Morse Lumber Company of Boston, at 18 Broadway, city, which took effect July 1, announcement is made by the company that O. N. Shepard of the Boston office will assume charge of the New York selling department, with Charles H. Hudson of the New York office and John Whitcomb of the Burlington office as head of the New York clerical department. F. W. Naylor will continue to represent the company in New Jersey and Long Island, and Shirley Gale will look after the Hudson River valley and New York central trade.

Owen M. Bruner, well known Philadelphia wholesaler and chairman of the special membership committee of the National Wholesale Lumber Dealers' Association, was in town last week en route home from an extensive Canadian trip in the interest of association membership, on which he was very successful. Quite a number of new members have been secured under his active work this year and it is his purpose to make several trips before the end of the year, as a result of which 1905 will probably see a regular increase in National Wholesale membership.

Charles Nellie Cloke of Palmyra, N. Y., was united in marriage at that place on June 15 to Harold Varvoe, who is associated with the J. C. Torner Lumber Company, 1133 Broadway, Manhattan. After a lengthy honeymoon Mr. and Mrs. Varvoe will reside at 13 East Twenty-sixth street, Manhattan. Mr. Varvoe has been associated with the cypress trade for many years and is well known locally and in the other eastern markets.

The extensive retail lumber interests of Church E. Gates & Co., one of the oldest retail houses in the metropolitan district, headquarters 138 West Twenty-sixth street, Mott Haven, has been incorporated under the same style with a capital of \$900,000, fully paid in, the new corporation to embrace all the retail interests of the old firm and the principals therein. In addition to embracing the extensive retail operations at Mott Haven, the company will take over the new property almost completed of the Oak Point Laid & Improvement Company at Oak Point, L. I., which was undertaken by J. F. Steeves and the late H. H. Binard, individually, and which when completed will embrace one of the biggest retail operations in the eastern states. The Mott Haven yards will be maintained and the new Oak Point yards will be engaged in business about January 1 next.

Magovern & Bowen, managers of the New York wholesale hardwood flooring warehouse of the Thomas Forman Company, Detroit, Mich., located at Fifty-eighth street and Eleventh avenue, have just acquired additional ground adjoining the warehouse, which will be added to immediately, so as to increase the storage capacity to 1,500,000 feet of all grades of flooring. They are now carrying sixty-four different grades and sizes of oak and maple flooring and 105 grades at the Detroit warehouse, and the excellent facilities offered through the maintenance of these wholesale stocks for immediate shipment to the retail trade from the New York warehouse is being increasingly appreciated by the trade.

Budd & Co. have been incorporated in this city to manufacture stone, office and bank furniture with a capital of \$5,000, by Wilhelm Lind, William Budd and Jonas Ehrbrenten.

The extensive coffin manufacturing operations of J. and J. W. Stotts and Messrs. Hornthal & Co. of Manhattan have just been merged under the style of the Stotts-Hornthal Casket Company, a New York state corporation. The main office will be established at 10 East Twenty-second street.

Graves C. Talbot has joined the selling staff of E. H. Page & Co., 1133 Broadway, and will assist in representing them in the New York state and metropolitan markets.

George D. Burgess of Russett & Burgess of Memphis, Tenn., the new treasurer of the National Hardwood Lumber Association, spent several days in town during the fortnight in the interest of business.

Beecher & Barr of Pottsville, Pa., the Tennessee Lumber Manufacturing Company, hardwood manufacturers of Sutherland, Tenn., and the Georgia-Carroll Lumber Company of Savannah, Ga., all of which are controlled by the same interests, have appointed Van W. Tyler, the well known wholesaler of 27 William street, Manhattan, to represent them in the metropolitan district, northern New York, New Jersey and New

England territory exclusively. This announcement is in line with the recent arrangements closed by Beecher & Barr in the matter of the exclusive distribution of the production of the firms mentioned and the extensive facilities represented therein in the matter of hardwoods, white pine, hemlock and yellow pine supplies and will be of much interest to the general eastern trade.

Isidor L. Cohen, who did business as the Mott Haven Lumber Company, 137th street and Fifth avenue, has made a settlement with his creditors at 40 cents on the dollar, and the court has dismissed the bankruptcy petition filed against him on April 3. He will continue the business under his own name.

C. Von Struve Cigar Box Company, manufacturers of cigar boxes, 504 East Seventy-third street, assigned July 3 to L. Gloeckner. The business was started in August, 1904, and was incorporated on May 1, 1908, with a capital of \$15,000.

Uptegrove & Beckwith report a slight improvement in business, inquiries coming in more lively of late. They regard the outlook very fair. Mr. Beckwith is looking after the firm's interest at their branch in Grand Rapids, Mich.

The Mann-Caven Lumber Company, Inc., 1 Madison avenue, is a recent incorporation under New York laws; capitalization, \$50,000. The incorporators are O. J. Mann, R. A. Caven and C. H. Turner. They will handle hardwoods, spruce, hemlock, North Carolina and white pine. Gouverneur E. Smith reports business, though only aggregating a fair volume of trading, coming only in spurts. However, he is hopeful of an early revival of good times.

The Indiana Quatered Oak Company is meeting conditions as they arise. It reports the number of inquiries increasing, but that orders are moving slowly. Willard Winslow of this concern is still confined to his home from the effect of an automobile accident last May, but is recovering slowly.

H. Salmon & Co. admit that improvement in trading is slow, but they are optimistically inclined and believe that the day of revival is not far off.

The Lumber Insurance Company of New York and its allied companies, Adirondack Fire Insurance Company, New York and Toledo Fire and Marine Insurance Company, report business a little quiet of late as regards the retail lumber yard end, but among the wholesale yards there has been a decided increase in the amount of business written up. They regard the outlook as very encouraging.

W. S. Dunn & Co., mouldings, report business keeping up fairly well and that they are encouraged over the outlook. This firm is building up an extensive export business and reports improved foreign trading of late.

The old firm of Soble Brothers, which recently formed an incorporation, with a capital of \$750,000, has not yet elected permanent officers. John J. Soble has been confined to his home for some time with rheumatism, but his friends will be glad to learn that he is improving rapidly. Harry I. Soble is spending most of his time at the mills in Honaker, Va., looking after the company's interests.

Uptegrove & Polhemus are not without orders any of the time and realize that to the hustler comes the business. They regard the outlook as promising.

C. W. Manning looks upon the present state of affairs as only natural after the recent financial panic, and having passed through many similar trade disturbances in the past, meets philosophically conditions as they arise. He reports trading spasmodic, but looks for a gradual improvement as the summer passes.

PHILADELPHIA

The Lumbermen's Exchange rooms, although officially closed, are far from deserted. One of

the coolest quarters in the city, groups of lumbermen naturally gather here at the noon hour. Plans are rapidly being formulated for the fall outing, which excursions have proved so enjoyable. Recent visitors to the exchange rooms were Martin Hoben of Hoben & Curtis, New York; S. J. Gums, superintendent Otter Creek Lumber Company, Otter Creek, Fla., and F. S. Plyer of B. B. Martin & Co., Lancaster, Pa.

The Hindle Lumber Company is better employed than discussing the lumber situation at this time. It reports business holding its own in spite of general conditions.

W. H. Lear reports a decided improvement in trading during the last fortnight and feels there has been a step forward in the ranks.

Watson Malone & Sons report a normal summer business, and says that trading is all that could be expected under present state of affairs. They are sanguine as to outlook and feel that a gradual general improvement in trading may now be expected. Edwin B. Malone will spend the summer on his farm in Bucks county.

The S. B. Vrooman Company, Ltd., is getting a far business right along and is optimistic regarding the outlook. Samuel B. Vrooman left New York on July 2 for an extended tour of England and the continent, combining business with pleasure.

Lewis A. Thompson, uncle of Charles H. Thompson, the well known president and treasurer of Lewis Thompson & Co., Inc., was found dead in his bed on June 30.

The Monarch Lumber Company has its affairs now in good working order and is much pleased over results so far. It reports orders coming in satisfactorily.

The Philadelphia Veneer & Lumber Company, Inc., reports that its hardwood department has been fairly active, but the veneer line has slackened up somewhat. This concern now has as a representative in the east, Samuel Y. F. Johnson, a salesman well known throughout that territory and who is already sending in some good orders. Francis Goodhue, Jr., secretary of the company, is on a four weeks' vacation at his home in Brattleboro, Vt.

Wistar, Underhill & Co. are always ready to back up the sign so conspicuously placed in their office, which reads, "No calamity howlers here." They are thorough optimists, and can well afford to be. Frederick S. Underhill wears the honors conferred on him during the last few months, as usual, unobtrusively. It is the united opinion, that the Lumbermen's Exchange of Philadelphia, in making him their president, and the National Hardwood Lumber Association, in their choice of him for second vice-president's chair, have shown a wise discrimination and a full appreciation of Mr. Underhill as a man of the highest integrity, and an indefatigable worker in their behalf. This firm keeps its men on the jump, and in consequence gets a good share of business right along. T. N. Nixon, of this firm, is touring the Lehigh Valley section; H. E. Bates has just returned from a western trip, and James W. Anderson is on a trade hunt through New York City and northern New Jersey. Frederick S. Underhill will pass his vacation up the Perkolmen, camping out.

The Tomb Lumber Company states that it has no complaint to make over trading, inquiries are coming in and it is picking up some fair orders. W. N. Lawton of this house is on a selling trip through eastern Pennsylvania.

Daniel B. Curll has opened an office at 630 Real Estate Trust building, where he will conduct a wholesale hardwood business; he will also represent the Commonwealth Lumber Company of Glen Ray, near Alderson, W. Va. Mr. Curll was formerly of Curll & Evans Lumber Company, and Curll & Lytle Lumber Company, both of Pittsburgh, Pa. He is a thoroughly experienced lumberman, and well known to the trade.

Sheep & Vandegrift Company, Incorporated, manages to keep its plant fairly active. It reports business in cigar boxes and lumber picking up gradually, but the veneer line slightly off; however, it regards the outlook encouraging. Jerome H. Sheep recently returned from an extended trip to the company's various plants in the South, and reports them all moving along satisfactorily.

J. Wistar Evans, formerly vice-president of Philadelphia Veneer & Lumber Company, is now in business for himself. His office for the time being, will be at his residence, 734 Church lane, Germantown, where he will conduct a wholesale hardwood business.

Among the recent visitors to the local trade were: Jacob Eisenberger, Evergreen, N. C.; Hon. Samuel Horter, Norristown, Pa.; James J. Wilson of Wilson & Stokes Lumber Company, Trenton, N. J.; G. E. Boyd, Lebanon, Va.; Joseph C. Jones, Conshohocken, Pa.; J. B. Purcell, assistant manager, Welch Lumber Company, Welch, W. Va.; Samuel E. Barr, New York; W. H. Aemes, manager flooring department, M. B. Farrin Lumber Company, Cincinnati, O.; Edgar Burgess, manager, New York branch, Mailey, Thompson & Moffett Company, Cincinnati, O.; and E. A. Harrington of W. L. Clement Lumber Company, Greensboro, N. C.

It is announced that widespread forest fires have raged in Elk county, New York, recently, causing considerable loss in timber.

The entire plant, including real estate, of the Neafe & Levy Ship & Engine Building Company, will be sold on July 28, by Auctioneers Samuel T. Freeman & Co., by order of the receiver, Howard E. Cornell. The entire property will be sold subject to irrevocable ground rents of \$101.06 per annum and a mortgage of \$277,000. A deposit of \$10,000 will be required on the day of the sale, and the balance in thirty days after confirmation by the United States court.

Juniata township, Huntingdon county, Pennsylvania, recently reported the cutting of a monster oak tree. Its dimensions, after it was cut down and peeled, were: Circumference of the butt, 12 feet and 7 inches, or a diameter of about 4 feet; diameter at the end of the last log, or 62 feet from the butt, 22 inches; no limbs grew on this tree within 60 feet of the ground. The logs were measured and the amount of lumber obtained was 2,100 feet, board measure. From the limbs can be made 12 cross ties, and the bark will amount to from 1½ to 1¾ cords.

The will of the late Samuel Williams of Thos. Williams, Jr., & Co., was offered for probate at Norristown, Pa. The estate is estimated at \$50,000 and upwards. Mr. Williams requested that his stock in the lumber firm in Philadelphia be not sold, but divided among his widow and children.

John F. Holloway, individually and trading as the Holloway Lumber Company, was discharged as a voluntary bankrupt on July 1.

The Woodwork Supply Company, Reynoldsville, Pa., obtained a charter under Pennsylvania laws, on June 25, authorized capital, \$6,000.

The Economy Furniture Company, Scranton, Pa., was incorporated under Pennsylvania laws on July 1; capitalization, \$45,000.

The Virginia Hardwood Lumber Company, York, Pa., was chartered under Pennsylvania laws on July 2; capitalization, \$5,000.

On July 2 creditors filed a petition to have Frank F. Rambo of this city adjudged an involuntary bankrupt. The names of the creditors and their claims are: Condon-Lane Boom & Lumber Company, \$504.39; S. B. Vrooman Company, Limited, \$497.43; J. S. Kent Company, \$325.69.

The furniture manufacturers of Philadelphia are making extensive preparations for a fur-

niture exposition to be held at the Second Regiment Armory, from July 13 until August 1. It will surprise many to know that in Philadelphia alone there are eighty-nine factories devoted exclusively to the manufacture of furniture, beds and bedding.

BALTIMORE

James H. Cranwell, a wholesale hardwood lumber dealer with offices in the United States Fidelity and Guaranty building, was adjudged a bankrupt in the United States district court on June 26 upon his own application, filed through Robert E. France, attorney. Pending the selection of a trustee in bankruptcy, Charles Lee Merriken and Charles E. Cockey were appointed receivers, their bond being fixed at \$10,000 each. According to the schedule filed with Mr. Cranwell's petition, he has liabilities of \$324,814 and assets of \$163,022. Banks in this city and out of town are his principal creditors and out of town are his principal creditors and out of town are his principal creditors.

Mr. Cranwell blames the disastrous effect of the ordinary course of transactions, slow collections and other developments growing out of the financial stringency as the causes for his embarrassment. He was also actuated in applying for the benefits of the bankruptcy act by a desire to conserve the interests of all creditors and to prevent a wasting of assets by his creditors, largely of the people ought to pay were paper received in the ordinary course of business from creditors and disallowed by the banks. This paper, of course, should be met by the makers. He adds that if care is used in the winding up of affairs and sacrifices are avoided, he will pay dollar for dollar and come out with a fair equity. It is his intention to continue in the wholesale business, and to that end he has already made a trip to Pennsylvania and other adjacent territory. Mr. Cranwell has been engaged in the hardwood trade for many years. Some of his earlier years ago he also organized the J. H. Cranwell Lumber Company, which acquired a large tract of timberland in Southeastern Tennessee and erected a sawmill. The venture did not prove profitable and about eight months ago Mr. Cranwell withdrew. With regard to Mr. Cranwell's individual standing there have been disquieting rumors about for some time past, and the failure did not come as a surprise. It was known that he found himself in difficulties and this fact made it all the harder for him to straighten out his engagements.

The meeting of the Transportation Committee of the National Lumber Exporters' Association called for June 24 was largely attended and various important matters were considered. The gathering took place in the committee room of the Chamber of Commerce, Chairman Harvey M. Dickson of Norfolk presiding. Those present included W. E. Weakley, traffic manager of the W. M. Ritter Lumber Company; Richard W. Price & Heald, Baltimore; H. L. Bowdman of the H. E. Wood Lumber Co., Baltimore; John L. Alock, president of the association, Baltimore; A. P. Xerlin, attorney of the National Association of Manufacturers, New York; C. M. Baldwin of Swift & Co., New York; Secretary E. M. Terry, Baltimore, and J. O. Elmer, assistant secretary, New Orleans. One of the principal matters taken up was that of uniform ocean bills of lading, just as the bills of lading on railroads have been made uniform. It is not the intention of the lumbermen to go ahead on their own account. They will endeavor to get the co-operation of other shippers of freight, so as to make the movement as strong as possible. It was decided to form a temporary committee consisting of representatives of the various associations of shippers which have written favoring the idea. The members for the National association are Harvey M. Dickson and Secretary E. M. Terry. A resolution was adopted favoring further steps to as-

sertain the views of shippers. If a sufficient number of favorable replies is received a joint meeting of representatives of the various organizations is to be called to formulate a plan of action. A proposition was received from an insurance company which is willing to insure shippers against shortages and damage from causes other than ordinary sea perils, covering the shipments of members. The membership will be canvassed to ascertain how it is impressed with the proposition. Various other matters were also taken up. Assistant Secretary Elmer afterward went to New York to stay the balance of the week conferring with the members of the association and taking in the sights.

W. H. Hallam of Sioux City, Iowa, has been made manager of the big factory of the Baltimore Sash & Door Company in South Baltimore, succeeding W. H. Waltz, who retired to look after his other interests. Mr. Hallam, who is 50 years old, has been active in the sash and lumber business in Iowa for many years.

M. S. Baer of the hardwood firm of R. P. Baer & Co. was on a trip to Philadelphia, New York and other eastern markets about ten days ago and reports that business in Philadelphia and especially in Brooklyn showed considerable improvement. He found the builders quite active and calling for lumber in materially augmented volume, and he learned that a much better feeling prevailed at nearly all points, though the two cities mentioned seemed to lead in the improvement. His brother, R. P. Baer, has also met with considerable success abroad. He is traveling in Great Britain and on the continent, and he secured a number of orders in Bristol and elsewhere, though the situation still felt much to be desired in the foreign market.

The H. E. Wood Lumber Company is getting its operations at the Eagle Creek mill in Swain county, North Carolina, freely well under way, and the output is being steadily increased. Reports from there show that the quality of the white oak turned out is better than that on any other tract ever worked by the company, exceeding even the lumber produced in West Virginia, which was previously regarded as holding the record. The company has a large tract in Swain county and the supply of timber there will last for years. All of it is virgin timber.

Just what will be done with the inspection rules adopted at the annual meeting of the National Hardwood Lumber Association, in so far as the Baltimore Lumber Exchange is concerned, seems still to be a matter of doubt. Though John L. Alock, who attended the Milwaukee meeting as a representative of the Exchange, has expressed himself as prepared to recommend approval of the rules, considerable opposition appears to exist in the Exchange. Some of the members contend that the new rules do not go far enough, and that nothing short of the restoration of the 1905 rules will meet the situation. The matter is expected to come up at the next monthly meeting of the managing committee, when the sentiment of the Exchange may be expected to manifest itself with sufficient distinctness to indicate the future course of the local organization.

PITTSBURG

The Newell Brothers Lumber Company is handling a nice lot of hardwood from its West Virginia plant and has lately secured some good business in the East. The company is doing very little in the jobbing line, but is confining its operations to disposing of its own product. J. M. Hastings is at Jacksonville, W. Va., looking over the operation of the J. M. Hastings Lumber Company, of which he is president. Oak and hickory are the leading products at this camp.

Bemis & Vosburgh have kept their force of salesmen busy all summer and with the extensive advertising which they have been doing are pushing right into the trade in a way that

means lots of orders for them this fall and winter. They note little change in general conditions, but look for marked improvement soon.

J. L. Lytle, president of the J. L. Lytle Lumber Company, reports that his company is securing a nice lot of lumber from its West Virginia operations and is having fair success in selling it. Mr. Lytle is spending this week in northern Ohio and western Pennsylvania among the retailers.

"Trade in mixed earload lots is decidedly better. Prices are firm and the manufacturing business is looking up." This is a summary of conditions from the W. E. Terhune Lumber Company, which is kept busy at its spacious offices in the House Building.

A. P. Johnson, who is managing the export business of the W. E. McMillen Company, Inc., at Baltimore, is losing no time in making mid-summer shipments. The company loaded over fifty cars of oak in June, nearly all of which was intended for the export trade, and has shipped some fine stock from its mill at Williamsport, Pa.

The Mead & Spear Company reports conditions slightly improved in the hardwood market and looks for a resumption of prices when the fall trade fairly sets in. Unless present indications are deceiving the amount of lumber sold for manufacturing and general building operations will be larger in September and October than in any former months of the year to date.

The Pennsylvania railroad has ordered all of its box cars to be repaired in time for the fall shipping season. Its purchases of lumber will have to be very large for the next few weeks to enable the company to carry this work forward quickly, and wholesalers are feeling good as a result.

The Wholesale Lumber Dealers' Association held its annual picnic at Rees Grove on the Allegheny river June 27. Sport was provided for 114 persons, and the cartoons of the ball games, fat and lean races, etc., show that the event was anything but prosaic.

The American Lumber & Manufacturing Company reports that the hardwood business much improved since the Xmas season. Its manager says: "Things are beginning to brighten up. There is more call for building lumber, especially from large contracting concerns, and the yards are starting to fill in their stocks."

The L. L. Satter Lumber Company is running its mill at Blackstone, Va., to cut on current orders, and is not branching out any with the new trade. Mr. Satter is convinced that business is improving and that by September 1 things will be about normal again.

The A. M. Turner Lumber Company also reports that the demand for bridge timber is considerably increasing. The company is fairly busy and notes a slight tendency to higher prices on a few lines.

The Germain Company, which has been operating as a wholesale lumber agency in Pittsburgh for several years, has applied for a state charter. The members of the company will be Louis Germain, Jr., Albert Germain and Louis Germain, Sr., who have been with the firm since its start here.

The West Virginia Lumber Company is sending in quite a lot of lumber from northern Pennsylvania in barges and boats which it makes there and delivers at Pittsburgh. This saves the company a large item in freight bills and its extra time except for loading.

The C. P. Coughlin Lumber Company reports while each source and good timbers hard to get. Manager S. A. Sennott has had some difficulty in getting enough stock to fill his orders for river and harbor work this summer and is keeping very little busy supplying them.

A. M. Kinney has closed down his mills in Washington county, Pennsylvania, and will not resume until trade begins to improve. He has been making a specialty of oak and mixing stocks and up to very recently has had a good supply of orders.

William R. Cornelius seems to find business when he goes after it hard, and with his fine West Virginia connections has been piling up a good lot of orders considering the season. He is optimistic on futures and sees no reason why there is not money to be made in speculating in lumber.

The Clay-Schoppe Lumber Company has been ponding away at its operations in southern Pennsylvania, but shut down for a few days over the Fourth. Manager W. A. Clay is spending a short time in the city and reports a general increase in railroad business.

The H. Curll Lumber Company contends that poplar is strong in the hardwood market, both in point of demand and prices actually secured for it. The company is getting its West Virginia pieces shaped up well and will be one of the heaviest manufacturers in that district this fall.

BUFFALO

G. Elias & Bro. are among those who speak of trade as doing better with them, a little stir being noticed in all of the many branches they carry. They have not yet brought up any yellow pine by canal, but are active in the lake trade.

F. W. Vetter is able to report some good white ash orders of late, but does not call business very good as a rule. He is carrying a good assortment of hardwoods, with white ash and oak leading, and maple well represented.

Dynamiters wrecked the Lehigh Valley railroad tracks just back of the yard of I. N. Stewart & Co. on June 29, but they are not suspected of the job. The firm is active in the cherry trade, which has been pretty good this season.

The Hugh McLean interests are running four of their sawmills, the two in Canada and all but that in Memphis in the Southwest, where logs have given out. The demand for most woods is as good as the times will warrant.

President Beyer of the Pascola Lumber Company has not yet found a lumber yard site in Buffalo, but he is hoping the Missouri mills got the stock moving, with the yard not so much a necessity as some other things are.

The Buffalo Hardwood Lumber Company has already sold quite an amount of the big lot of hardwood stock that came up from Mississippi, but is carrying a fine assortment in their yard here, as the demand ought to spring up in the fall.

Scatcherd & Son are very actively engaged in the sawmills at Memphis. They waited till they had a big lot of lumber, but they are up and now they appear to be going through them at a good rate. Sales are not very active.

The Standard Hardwood Lumber Company is looking to the furniture expositions for lumber outlets and is running the table mill about as usual, with a fair amount of orders ahead and a good fall business in prospect.

T. Sullivan & Co. will now drop right back into the Pacific coast fir trade, as the freight rate is settled and there is plenty of need of that lumber here, for it is already reported that the mills are meeting the 5-cent rate advance.

O. E. Yeager is still getting oak and some other lumber out of Ohio, but tries not to bring it here, as he has a good assortment and shipment direct means a better show of profit. Not much stock is coming up from Kentucky just now.

The yard of A. Miller is good to look at, for it always has a good lot of stock, being so well supplied now that not much effort need be made to get more right away, though the fall trade is likely to carry it off at a good rate.

The work of the lumber exchanges for the season is about over and the annual picnic is set down for July 14th at the Canoe Club up the Canadian shore of the lake, a new stopping-off place for the lumbermen. There will be a

concatenation before long and then the Hoo-Hoo will take themselves and their wives down the river for a good day off.

CLEVELAND

Workmen have completed the installation of the exhibit of hardwoods of the Martin-Barriss Lumber Company, in the main room of the Builders' Exchange, in the Chamber of Commerce building. Since its completion a day or two ago it has attracted general admiration. The exhibit occupies a space about ten by fifteen feet in size. The floor has been laid with plank teakwood from Lurma. This makes a rather expensive flooring, but it is very attractive after it has been laid and polished. The exhibit is set in panels, four large ones, two at each end, with the smaller ones banked up in the center. There are some splendid pieces of hardwoods, most of them imported. There are specimens of African, Mexican and Cuban mahoganies, brown English quartered oak and white mahogany. There are also samples of Cretaceous albat and setinwood. It is expected that the exhibit will repay the Martin-Barriss company, for the woods are shown up in a very convincing manner.

The Guy & Malpa Gray Lumber Company has established uptown offices on the sixth floor of the American Trust building, which faces the Public Square. The company will continue the offices which have been operated in connection with the yards at 2184 West Third street.

R. H. Jenks of the Robert H. Jenks Lumber Company is in Luluah, having made the trip by way of the steamer Northland, stopping off at Macleanie island en route. He is combining business with pleasure.

One of the interesting displays of the great N. E. A. convention, held in Cleveland from June 29 to July 7, was the exhibit of the King Furniture Company, which is manufacturing a line line of hardwood desks. One of the new things the company has been booming is an individual chemical desk. Each desk is a laboratory in itself. The body of the desk is paneled and all exposed parts are made of selected white oak. The drawers are dovetailed, while the top is "built up" of thirty-one strips of hard white maple dovetailed together and protected with a chemical proof black finish.

F. T. Peitch of the Advance Lumber Company spent the first few days of this month in New York City on business. Mr. Peitch reports business with the Advance company quite active.

Mrs. F. W. Gilchrist, wife of the well-known lumberman who was operated upon for cancer in a Cleveland hospital several weeks ago, passed through the operation successfully and is well on the way to recovery.

The \$2,000,000 Hippodrome building is to be finished at once, creditors having agreed to waive their claims for two years. The great theater has been finished, but the interiors of the twelve-story office building facing Euclid avenue and the seven-story structure facing Prospect avenue were not finished for lack of funds. An immense amount of hardwood will be required for the work and dealers are hot on the trail, as the promoters of the great enterprise have announced that the structure will be whipped into shape at once.

George Meier, president of the Oceone Lumber Company, with a large preserve and mill in Georgia, reports that the cut of oak at present is very heavy. A good deal of it will be quartered. A good cut of ash and hickory is also reported. Although both these are far from hard for the company proposes to get a good stock on hand for the time when they do come into demand again.

Following the disastrous fire of a few weeks ago the Lake Erie Lumber Company, with office and yard on Hamilton avenue, N. E. near Marquette avenue, is making extensive repairs. Both the stable and main lumber shed were destroyed

by the flames and are being renewed. The lumber shed will be 130 by 64 feet in size and two stories in height. The hardwood dry kiln, which was badly damaged, is being repaired and a section of the office building which was scorched is being put in shape again. A railroad truck will run the length of the main lumber shed. The loss of the company was fully covered by insurance.

SAGINAW VALLEY

The lumber industry is not characterized at present by any noteworthy features. Mills are being operated steadily and lumber is being piled up. Some lumber is being sold right along, but the movement in June was scarcely as large as in May. For instance, C. A. Bigelow of the Kneeland, Bigelow & Kneeland, Buell & Bigelow plants says during May he sold and shipped 3,000,000 feet in car lots. In the first half of June the movement was a little better than in May, but in the last half of the month business fell off some. Both mills of this concern are operated right along one day and night and the other ten hours a day. The Kneeland-Bigelow Company is operating only one camp, looking after logs in the woods that have been checked for shipment to the mill. The company has logs enough skidded at the railroad to run the mill into September. Frank Buell is loading and shipping logs to the Kneeland, Buell & Bigelow mill.

S. L. Eastman states that the flooring business dropped off some during the latter part of June, being apparently affected by momentary weakness. He is confident that it is only a mid-summer lull and of short duration. This refers largely to the domestic trade. Local plants quite recently have gotten contracts which enable them to do business without closing down. Foreign business has been good only recently, but just now the inquiry is slower.

The Bay City Board of Trade paid a visit to the extensive plant of W. D. Young & Co. recently. This plant, it will be remembered, was totally wiped out by fire September 2, last, while Walter D. Young, the guiding genius of the concern, was in Europe. Shortly thereafter arrangements were perfected and the site is occupied today with a plant in every respect comparable with the one destroyed. It is within bounds to say that it is perhaps the finest plant of the kind in the world. It is modern and up-to-date in every essential. Power is generated from a 1,000-horsepower Corliss engine for the flooring plant and a 300-horsepower Bates-Corliss engine furnishes power for the sawmill, which has a capacity of 75,000 feet of lumber a day. This will shortly be doubled by the installation of another turbine engine. The flooring plant has a capacity of 50,000 feet a day. Nothing is wasted at this plant that can be utilized. Thirty-six cords of refuse wood are turned over every day to the I. E. Dupont de Nemours wood alcohol plant, located adjacent to the Young plant, which is converted into wood alcohol, charcoal and acetate of lime. One cord of firewood is shipped every day to Chicago. The plant is now running 300 hands. The sawmill is operated day and night and the flooring plant all the time. Mr. Young has a rare faculty of getting business. The market enjoyed by this company betrays the globe. Last week cars were loaded for Liverpool, Glasgow, Hamburg, Dresden, Rotterdam, and an order for 500,000 feet was booked for Los Angeles. B. P. Whedon is the strong right arm of the concern and gives the practical operation of the plant as well as the bookkeeping end of it close attention. In one word, the chief of staff, and a very efficient one at that.

The Richardson Lumber Company at Alpena began running a night crew the present week.

The Roman Lumber Company, operating a small mill at Bonnaville, Gladwin county, has shut down for the season, having cut up all its

stock. The mill cuts about 1,000,000 feet of mixed hardwood.

No changes are noted in hardwood prices. Dealers say that while something is doing, trade just now is rather dull, but all feel that as soon as the midsummer is over business will rouse itself with a vim.

INDIANAPOLIS

The Udell Works, manufacturers of woodware specialties, have resumed operations after a shut-down of several weeks with a full force of 250 men.

C. R. Balke of the Balke-Krauss Company, hardwood dealers, has been elected secretary of the Indianapolis Builders' Exchange for the ensuing year.

The Central States Lumber Company, Pythian Building, has been reorganized with \$10,000 capital. O. A. Jase, O. E. Barker, L. W. Hunston and J. T. Shimer are the new directors.

J. H. Hicks, engineer, and Otto Nelson, yard foreman, of the West New York Street plant of the Capital Lumber Company, have invented a smoke consumer that is being thoroughly tested at the plant.

William Waterman, Danville, Ill., has purchased the West Lebanon and Williamport yards of the recently organized Wagon County Lumber Company and will take possession at once.

On July 1, J. C. Hallett, a well known lumber inspector of Evansville, was married in that city to Miss Enla C. Hoskins, a well known young society woman of that city. They will reside in Evansville.

E. Walter & Co., Wabash, has incorporated for the purpose of manufacturing furniture in that city. They have \$25,000 capital stock, with E. B. Walter, E. E. Walter and C. Kish as directors.

Two-Hoo of the city have completed plans for a twelve-room cottage to be erected at the Summer Mission for Sick Children, north of the city, to cost about \$2,500. Fifteen children can be cared for in it during the summer months, while during the winter four widowed mothers and their children will be provided with homes.

The Indiana Board of Forestry has decided to allow the Standard Oil Company to drill for oil on the state forestry reservation near Henryville. One-eighth of the oil obtained was promised the board.

Charles Peabody, inspector for the Capital Lumber Company, shot himself at his home in this city a few days ago. He was despondent because of ill health and his inability to support his wife and seven children as he thought he should.

Mr. and Mrs. F. M. Bachmann sailed July 7 from New York City for Germany, where they will remain during the summer. Mr. Bachmann is president of the F. M. Bachmann Company, lumber dealers and veneer manufacturers.

Jordan D. Williams, for several years located in the State Life Building, moved a few days ago into a suite of offices in the new I. O. O. F. building at Pennsylvania and Washington streets.

The American Box Ball Company is building a dry house at its plant at Draper and Van Hook streets. It will cost about \$1,000 and will be ready for use within a few days.

C. O. Roberts of the Adams-Carr Company, this city, spent several days in Chicago recently on business.

C. D. M. Houghton and E. H. Greer of the Greer-Houghton Lumber Company have returned after an extended trip through the South. They were gone thirty days, visiting Alabama, Florida and Mississippi ports.

The two yards of the Walnut Lumber Company and the National Veneer and Lumber Company will not be consolidated until most of the stock at the former yard has been disposed of. This will not likely be until early in the fall.

President Louis Buddenbaum of the Indianapolis Lumberman's Club is trying to arrange a summer meeting and banquet of that organization for the purpose of talking over present trade conditions, including prices. Usually the club does not meet during June, July and August.

Henry Maley, one of the best known hardwood lumbermen in the country, died at his home in Edinburg on the night of July 6 after a short illness from kidney trouble. Mr. Maley was president of the Henry Maley Lumber Company, operating large hand mills in Edinburg, Jasper and Evansville and at Vazoo City, Miss. He was also interested in the firm of Young & Cotsinger at Evansville. Mr. Maley was sixty-seven years old and is survived by three sons and three daughters.

MILWAUKEE

United States Senator Isaac Stephenson of Marinette, one of the best known lumbermen in the West, has announced his candidacy for reelection, and his associates and friends in the lumber world are enthusiastically endorsing him. Mr. Stephenson is 79 years old, but the early years he spent in the woods of northern Wisconsin and Michigan have, apparently, given him a lease on life beyond the ordinary, and his friends say that the "Tall Pine of the North Woods" will see "four score and ten." The senatorial fight in Wisconsin will be more than usually interesting because another prominent lumberman of Wisconsin, William H. Hatton, who also owns timber and mills in Alabama and Mississippi, is a leading candidate for these honors. Mr. Hatton was state senator until two years ago, and he gained fame for his progressive legislation. With Senator La Follette he was a framer of the railroad and public utilities commission law. Another candidate is Samuel A. Cook of Neenah, a former congressman and one of the best-known paper mill owners in the West. Both of the lumbermen have wide support and until the primary election the fight will be anybody's.

The Menasha Wood Split Pulley Works, Menasha, suffered a loss of \$1,000 by fire recently, but the company is not inconvenienced to any appreciable extent.

Charles Freyler, president of the C. B. Freyberg Lumber Company and the Citizens' State bank, Shelbygan, died from heart disease at the age of 74. He was a pioneer lumberman and manufacturer. He was president of the Shelbygan Novelty Company.

The Wisark Lumber Company of Janesville, composed of Wisconsin and Arkansas capital, as the name indicates, has increased its capital stock from \$100,000 to \$200,000. John M. Wiltchell of Janesville is president.

Pendleton, Gilkey & Co. of Oconto suffered a loss of \$75,000 by fire recently. The blaze was confined to the cedar post yards.

The Gilkey-Anson Company of Wausau is rushing work at the sawmill to clear the river of hardwood logs before they are lost by sinking. Rhinelanders friends of "Cash" Salth, formerly a leading lumberman of that city, later a saw-mill owner at Munising, Mich., learn with gratification of his success in the Georgia forests. He lost heavily in his ventures at Rhineland and Stuntings. It is said.

The recent storm in Wisconsin badly damaged a number of lumber establishments. The Collar-Stange mill at Merrill suffered damage through the collapse of a tall chimney. The damage is \$1,000.

G. F. Sanborn, A. H. Smith and A. G. Miller of Ashland have incorporated the Sanborn Timber Company of Ashland. The capital stock is \$100,000.

Keller & Murtter, saw-mill owners of Prairie du Chien, were among the sufferers in the recent Wisconsin-Minnesota Iowa storm. They suffered \$2,000 damage through the destruction of logs and mill.

A shaper guard for woodworking machinery has been invented by H. P. Ogenorth of Shelbygan, an employe of the M. Winter Lumber Company, interior finishers. The danger to operators is reduced to a minimum. A number installed in the Winter plant have proven successful.

Much confusion has resulted in the vicinity of Stephenson, Mich., from the recent order of the Michigan supreme court regarding the ownership of "deadhead" or sunken logs. The "harvesting" of these logs has formed a veritable industry there. The court said that the timber still belongs to the original owners, whose consent must be gained before the logs can be raised. However, as there have been dozens of different drives on the rivers year by year, and each lost some logs, the conditions are regarded as impossible to fulfill. Millions of feet of good logs are under water and may be lost forever.

The Winter Lumber Company's ancient factory at Merrill, a landmark, has been razed. The factory was closed several years ago and the building, old and dilapidated, was of no use.

O. C. Little of Menasha, inventor of the sliding furniture shoe being manufactured there by the Onward Manufacturing Company, has made arrangements to build a factory at Berlin, sixty miles from London, Ont. It will be a branch of the Onward company.

There has been some misapprehension of the part the G. W. Jones Lumber Company of Appleton, Wis., played in the trial of Fred Heiden, Jr., on the charge of bribery. Heiden was found guilty. The lumber company sold lumber to Milwaukee county for the chair factory at the house of correction, and Heiden, then inspector, held up the Jones bill, a just and legal account. He forced the lumber company to pay him \$150 to put his O. K. on the bill. The impression had gone abroad from reports of the trial that the claim was fraudulent.

BRISTOL

The Virginia Hardwood Lumber Company, recently organized at Tazewell, Va., is preparing for the extensive development of a large tract of timber just acquired in Russell and Tazewell counties. This will mean the installation of a number of mills.

J. A. Wilkinson is overhauling a number of circular portable mills at his shops in Bristol, and preparing to ship them to the woods. Mr. Wilkinson has his band mill and woodworking plant in Bristol in operation and is now erecting a large building in which he will carry on a retail lumber business on a big scale. He has also installed a large commissary for the benefit of his employes.

Italian operations in this section are contributing to what activity there is in the lumber business. It is reported that the Clinchfield Coal corporation, a large concern owned by Thomas F. Ryan and George L. Carter, which is making preparations for the development of upwards of a half million acres of coal lands in southwest Virginia, will probably be in the market for a very large amount of lumber for building purposes. Over \$2,500,000 will be spent in preparing for developing the property. George E. Davis & Co. report very slight improvement in business. The company operates four mills at Shawsville, Va., on the Norfolk & Western Railway, and has made contracts covering a large part of its output.

A riot occurred in the lumber town of Damascus, Va., last week, when a band of masked men sought to drive away a force of Italian laborers imported by the Inamascus Lumber Company. The purpose of the mob was to prevent the foreign laborers from competing with them. They attacked the town in truly frontier style, though they did not succeed in scaring off the foreigners, and the Inamascus Lumber Company and the county authorities are taking steps to indict all who participated.

"Business is not nearly as bad as it might be," said E. L. Warren, a Bristol wholesaler handling lumber, in the work "It is generally believed that the coming fall and winter will see much better business."

Bird M. Robinson of New York was a recent visitor in Bristol. Mr. Robinson is interested in the Little River Lumber Company, which has a large number of mills along the new Tennessee railroad through White, Scott and other Tennessee counties, and which is developing a large tract of timber land in that section.

The consummation of the plan to take over the Virginia & Southwestern Railway and subsidiary lines, the Black Mountain and the Holston River railroads, was accomplished last week, when new officers were elected, being the same as those of the Southern. The road is a very important lumber carrying line. J. H. McCue is made general manager, while W. W. Finley succeeds Henry K. McHarg as president and Fairfax Harrison is the successor of John B. Newton as vice-president and general manager. J. H. McCue will be in actual charge of the properties. The stock in the road was purchased more than a year ago by the Southern.

The Tag River Lumber Company will put its band mill in Wise county, Virginia, in operation about August 1, when a new five-mile line of railroad it is constructing at that operation will be completed.

J. Mortimer, Jr., superintendent of all of the operations of the W. M. Ritter Lumber Company of Columbus, and R. D. Loftis, the latter in charge of the company's operations in this section and at Hampton, Carter county, Tennessee, were in Bristol this week on business. The mills of the Ritter company are all running and no let-up is expected. Shipments have been fairly heavy and conditions are regarded as very good.

CINCINNATI

Edward Roberts, head of E. Roberts & Co., lumber dealers, died at his residence, 2345 Highland avenue, East Walnut Hills, last week after a lingering illness. Mr. Roberts was a pioneer lumber merchant of the Queen City, having been connected with the business for over half a century. Although 77 years old he was active in business almost up to the time of his death. Mr. Roberts is survived by five sons, who will assume charge of the business.

The figures just issued by the Cincinnati Chamber of Commerce covering receipts and shipments of lumber for the month of June show that the receipts by far exceeded those of the month previous, as did the shipments. Receipts of lumber here during the month of June aggregated 6,209 cars, as compared with last month of 5,104, and for the same month of the year previous, 8,652. Shipments last month were 4,065 cars, as compared with 3,504 for May and for the same time of the year previous of 6,149 cars.

The regular weekly meeting of the Cincinnati Lumbermen's Club scheduled for June 27 was postponed owing to the annual outing of the club, and the next meeting will be held at the Business Men's Club July 11. Several minor points are to be attended to, among them the application of several firms for membership. Several outstanding committees will also report.

"The past few weeks have been very good for us," said Thomas J. Moffett of the Maley, Thompson & Moffett Company recently. "Our mill-order business has shown a healthy increase, and the domestic trade has also stiffened up some. The market at the present time, I think, is better than it has been at any period this year, and that is saying a great deal considering the time of the year. Usually this season is quiet, but this year we are able to get some of the trade that we usually received several months previous. All our mills are busy, and I think they will be run for several months to

come. The nomination of William H. Taft has helped the situation considerably."

J. E. Tuttle of the E. L. Edwards concern is very optimistic over the situation here and speaks freely on what trade will be within the next six months. He is of the opinion that the best six months of the year are yet to come, and thus far his observations have panned out. The latter part of June usually brings on a halt to the demand for all grades of lumber, but this year was an exception, and instead the demand increased, which alone gives evidence of further improvement.

Fred W. Mowbray of Mowbray & Robinson is receiving congratulations from his many friends upon the arrival of an heir to the Mowbray estate. The newcomer is a girl and adds much joy to the happy family.

William S. Sterrett of the Sterrett Lumber Company has been elected secretary of the Cincinnati Mutual Fire Insurance Company of this city. Sterrett is a pretty busy man these days, as he is also secretary of the Lumbermen's Club, besides of course having his regular lumber business to attend to.

The Sunshine League, which was launched the early part of June to try to get the business men of the Queen City to re-employ as many men as possible on July 1, has met with much success, as fully 3,000 men were re-employed on that day. Many furniture factories were among the number, while the J. A. Fay & Egad Company helped along to the extent of several hundred men. Senator Foraker spoke on the floor of the Cincinnati Chamber of Commerce July 1 and complimented the work of the Sunshine League, and also dwelt upon politics.

Burglars forced open a window in the Western Lumber Company's office on West Eighth street last month and took some of the office fixtures, but little cash. They scattered the contents of the desks over the floor and caused a great deal of work for the clerks.

J. Huben Boske, office manager of the Hinckley Lumber Company, and Miss Loretta Benzinger of Covington will be married August 5 in Covington. The couple will spend several weeks on the lakes on their honeymoon. Boske has been with the Hinckley company for several years and is highly valuable.

Clifford P. Egan, son of Thomas P. Egan of the J. A. Fay & Egan Company, woodworking machine manufacturers, has been admitted to membership to the Cincinnati Advertisers' Club.

Chester P. Korn of the Farrin-Korn Lumber Company has returned from a business trip to the South, where he visited the mill of the company.

The McFarland Lumber Company of Mansfield, O., with a capital stock of \$10,000, was incorporated last week by G. O. McFarland, R. C. M. E. D. O. and A. L. McFarland.

Harry Freilberg of the Freilberg Lumber Company was successfully operated on the latter part of June for appendicitis. He is again back in harness.

George M. Morgan of the Nicola, Stone & Meyers Company states that in his opinion a change in the situation will not be manifest until the first of September, and then an improvement will be perceptible. Things at the present time are about the same as for several weeks past.

The creditors' meeting of the Wiborg & Hanna Company will be held in the office of Referee Greve July 9, when a further discussion of the proposed offer of 40 cents on the dollar will be heard. This meeting is expected to bring out many arguments.

EVANSVILLE

It was with deep regret that the lumber trade here learned of the death of Henry Maley at his home in Edinburg, Ind., on July 6. His death was a surprise to his many friends here, as he was in this city a short time ago in the best of health and spirits.

The bandmill and filing-room of the H. Herrmann Manufacturing Company were destroyed by fire of unknown origin here on the night of June 29, entailing a loss of about \$15,000. The loss was covered by insurance. The mill had not been operated for some time. The large dimension mills of the company located near the sawmill were saved by the good work of the fire department. They are being operated full time.

G. D. Glover of R. Glover & Sons, the well-known lumber and stove manufacturers of Shawneetown, Ill., passed through this city this week in his big touring car on route to Shawneetown from Vincennes, where he had been with his family.

A telegram was received from Queenstown, Ireland, from Nathan Thayer of Thompson, Thayer & McCowen, this being Mr. Thayer's first stop in the tour of Europe which he is making.

Plans for the new Furniture Exchange Building, which have been under way for some time, are about finished now and the contract will probably be let in a short time. The building when completed will cost over \$100,000.

The large sawmill of Maley, Young & Cutlinger at Jasper, Ind., was destroyed by fire there on the night of June 27, causing a loss of \$40,000, covered by insurance. The large dimension mill and lumber yard located near the mill were not damaged. The mill had resumed operation only a week before the fire, after a shut-down of several weeks, and had a nice stock of logs on hand ready to be sawed. The firm has not decided at this time as to its course in rebuilding the mill.

James Williams and wife of Fort Branch, Ind., were found guilty of arson in the Gibson County Circuit Court at Princeton, Ind. Williams will be sent to the state reformatory at Jeffersonville and his wife goes to the women's reformatory at Indianapolis. The charge against the couple was attempting to burn the Greer-Wilkinson lumber plant at Fort Branch.

C. W. Talge of the Evansville Veneer Company returned recently from the Northwest, where he had been on a business trip for several weeks. Gilbert Heidt of the same company says business is picking up; in fact, the improvement is very evident with them, especially the demand for rotary-cut veneer.

ST. LOUIS

The Lumbermen's Club of St. Louis held its last meeting, previous to the summer closing, at Delmar Garden on June 23. It was purely a social gathering and a lady friends of the members were the guests of the club. A dinner was given at the restaurant connected with the garden at 6:30, followed by a visit to the theater where summer opera is given. About one hundred members and guests were present. Immediately after the dinner and before the visit to the theater a social session was held. J. A. Freeman, president of the club, called the assemblage to order and after expressing the wish that these present enjoy themselves, he suggested that resolutions of respect on the death of Mrs. George E. Hibbard, who died June 22, would be most appropriate and as a motion to that effect was made and passed. Mr. Freeman named W. A. Bousack, W. E. Barnes and Julius Sedel to draw up the resolutions, which were adopted and ordered served upon the minutes and a copy of them sent to Mr. Hibbard.

The month-end report of the St. Louis Building Commissioner shows the total amount of building in June was \$72,774 less than during the same month in 1907. The total building operation last month was \$1,942,730, against \$2,015,510 for June of last year.

The following is a comparative statement of the receipts and shipments of last year and this, as reported by the Merchants' Exchange:

RECEIPTS.

	1907.	1908.
	Railroad Cars.	River Feet.
January	9,721	52,000
February	11,832	103,000
March	14,333	127,000
April	15,351	189,000
May	16,827	250,000
June	13,611	372,000

	1907.	1908.
	Railroad Cars.	River Feet.
January	8,218	8,000
February	8,419	143,000
March	8,880	142,000
April	9,802	152,000
May	9,803	335,000
June	9,677	63,000

	1907.	1908.
	Railroad Cars.	River Feet.
January	6,396	17,000
February	6,048	75,000
March	6,363	75,000
April	10,223	164,000
May	10,607	342,000
June	9,233	356,000

	1907.	1908.
	Railroad Cars.	River Feet.
January	6,512	90,000
February	6,531	140,000
March	7,307	140,000
April	7,597	140,000
May	7,732	76,000
June	7,308	33,000

Totals 54,850 330,000

This shows a falling off of 26,893 cars in receipts by river for the first six months this year, as compared with the first six months last year, and a falling off of 230,000 feet in the receipts of lumber by river this year. It shows a falling off in shipments of lumber of 9,343 cars by railroad and by river of 615,000 feet.

The following is the amount of lumber measured and inspected by the Lumbermen's Exchange of St. Louis during the month of June, 1908:

	Feet.
Quartered red oak	8,964
Quartered white oak	55,356
Plain red oak	8,992
Plain white oak	29,952
Cottonwood	17,278
Cypress	218,054
Cedar	8,957
Poplar	750
Gum	16,132
Ash	15,566
Yellow pine	11,390

Total 380,954

George F. Cottrell and wife left for Atlantic City early in July for a two weeks' visit. They will then go to Asbury Park, N. J., for a longer stay.

J. S. Garetson, president of the Garetson-Gronson Lumber Company, recently left for Old Mexico to be absent for several weeks. His family are at Chautauque, N. Y., for the summer. When Mr. Garetson returns from Old Mexico he will join them for the balance of the summer.

The chief inspector of the National Hardwood Lumber Association, F. P. Southgate, was a recent visitor in St. Louis. He is making his quarterly tour of the cities in which the association has inspectors. He was in St. Louis for several days.

Mrs. Laura Hensiek, wife of William H. Hensiek of the Wilson-Rehels-Roffes Lumber Company, died recently. Besides the husband she leaves two small children.

G. W. Allport, manager of the lumber department of the Ozark Lumber and Lumber Company, is the father of a handsome baby girl. His friends are showering congratulations upon him.

The Independent Lumber Company of this city has gone out of business. This company's business is considerably better than it was a week or two ago, according to Theodore Plummer, president of the Plummer Lumber Company. While it is not yet what it ought to be at this season of the year, it is beginning to look more encouraging. Several good orders have been received, Mr. Plummer says, and as he will not accept orders unless satisfactory prices are obtained, it can safely be said that

good prices were obtained for the orders booked.

H. Luehrmann, vice-president of the Charles F. Luehrmann, Hardwood Lumber Company, reports business as having started up right well this month. June sales held their own in comparison with the same month last year. Prices are better, Mr. Luehrmann says, on all items of hardwood.

Inquiries and orders are coming in better than they were a month ago, is the report made by Charles Thomas of the Thomas & Frotts Lumber Company. Prices are much better than they have been, owing to the scarcity of a great many items on the list.

L. M. Borgess, secretary of the Steele & Hillbard Lumber Company, spent the first week of this month in the city. He had been up in the Northwest on a selling trip and came home to spend the Fourth. He has now gone out on another selling trip. He says business has been fairly good, with prices showing improvement.

After being ill for several weeks, E. W. Blumer, sales manager of the Lothman Cypress Company, is at his desk again. He reports that they have been doing as well as could be expected with the cypress market as quiet as it has been. He has faith in the future, however, and looks for better conditions before very long.

W. A. Bousack of the Bousack Lumber Company says the lumber market has been very quiet, but is improving. Many items on the hardwood list are quite scarce and they are bringing good prices.

A. G. Wetmore, president of the Southern Hardwood Lumber Company of Memphis, Tenn., was in St. Louis a few days ago on his way north on business. He spent the time here with his sailing agents, the F. C. Adams Lumber Company, and placed some little business. He stopped over again on his way home on the 3d of July. Mr. Wetmore says that business is quiet. His export trade, though, has held up much better than the trade in this country. Advice received by him from Europe are to the effect that the foreign market is glutted with lumber because the lumbermen of this country have been sending over so much lumber for exchange in dealers to sell.

"Unc" Bush, secretary of the Lumbermen's Exchange of St. Louis, was called to Memphis, Tenn., the first of July because of the serious illness of his mother.

Mrs. Caroline M. Hillbard, wife of George E. Hillbard, vice-president and general manager of the Steele & Hillbard Lumber Company, died Monday morning, June 22, after an illness of two years. The funeral took place from the residence of her aunt, Mrs. J. Adams. Mrs. Hillbard was the daughter of the late Tracy Turner, a prominent St. Louis business man before and during the civil war, and of Harriet Dukes Turner, whose father, William Dukes, was a well-known St. Louis contractor. Mrs. Hillbard had been married about twenty-two years and was a woman of much beauty and of a disposition that won her many friends.

MEMPHIS

Lumber interests are much encouraged over the fact that railroad shops, which have been running on short time or were closed down altogether, are resuming operations with full force and on regular schedule. The railroads found it necessary to economize during the period of financial stringency and the dullness of business which followed and the fact that they were being handed out in excess of a business sufficient to justify them in restoring the forces which were temporarily laid off is accepted as a most favorable feature.

The Illinois Central has announced officially that it has put to work about 5,000 additional men since July 1. The company has also increased its force at some of its northern plants.

The St. Louis Southwestern (Cotton Belt) Railway Company has reopened its shops at Pine Bluff. These were cut down to very limited hours and the force was greatly reduced. The Missouri Pacific-Iron Mountain system is gradually increasing the number of employees at the shops at Argenta and other points on the system, and information received here from Meridian, Miss., indicates that the shops of the New Orleans & North Louisiana have resumed on full time after a shut down of some duration. Another encouraging feature is that the Southern Railway Company has restored the cut of 10 per cent in wages of its employes which covered about four months. This became effective July 1.

Still another encouraging factor is to be noted in the reopening of offices by the Missouri Pacific-Iron Mountain system, which found it necessary to cut down operating expenses and closed some of the smaller offices. Furthermore, this road is increasing the number of freight cars in use and it is announced that the Illinois Central is distributing 15,000 empties which have been idle for some time in order that they may be available at proper points for the handling of traffic offering. The Southern Railway, Louisville & Nashville and all the other roads operating in the Central South show a large increase in the volume of business and, from a railroad standpoint, conditions look a great deal better than they have at any time since the suspension of work last fall. It may be noted in the same connection that much new railroad work which was abandoned at that time is being taken up again with a view to pushing to completion as rapidly as possible. This applies not only to the Central South, but practically to every other part of the country.

Another index to the improvement in business conditions may be found in the splendid statement made by banks in Little Rock, Memphis, Atlanta, Birmingham, Nashville and other points. There is not a banking institution in Memphis which has not already declared or proposes to declare quarterly or semi-annual dividends. Similar reports come from the other points mentioned. Furthermore, banks in Memphis have an average of about \$140 for every man, woman and child on deposit, which is large enough to show that the confidence which was so badly impaired during the financial panic has been entirely restored. The total deposits in Memphis banks are about \$27,000,000, and this compares most favorably with other years at this date.

Lee Wilson & Co. are completing their veneer mill at Wilson, Ark., and making rapid progress on the planing mill. The latter will be completed and ready for operation in about sixty days. The concern has announced its intention of shutting down its big band mill at Wilson July 15 for an indefinite period. It is expected that the company will not operate this plant nor the veneer and planing mills within ninety days after that date unless the market should show material improvement in the meantime.

Russe & Burgess, among the more important hardwood manufacturers and exporters in this market, have announced their intention of closing down their band mill in Memphis within the next fortnight. They have about 2,000,000 feet of timber yet to saw, but in view of the fact that they are not doing any logging they prefer to close down during the summer and saw the remainder of this timber next fall.

The Illinois Central and Southern railway have abandoned operation of the Tennessee Central system. They have been true even to its trial and this road has been true even to its trial. The two operating roads had an option which expired July 1 and both of them refused to exercise this. They said that the use of the road had not proved as profitable as they had anticipated and not enough so to justify them in continuing. The abandonment of this line has made it necessary for the Illinois Central to increase its force at Memphis. W. E. Downing will come to this city as assis-

tant general freight agent of the Illinois Central. He will continue to look after the territory between Hopkinsville, Ky., and Evansville, Ind., and will probably have other territory assigned him.

It is unofficially announced that the Atlanta, Birmingham and Atlantic railroad contemplates the establishment of commercial offices in Memphis this fall, and color is given to the report by a visit to Memphis recently of J. J. Compton, general freight agent of the company. The road discussed the advisability of opening offices in Memphis May 1, but decided to hold off for a time until traffic conditions improved. It is now suggested that the plan will be carried out September 1.

The regular semi-annual meeting of the Tight Barrel Stave Manufacturers' Association will be held in the assembly room of the Gayoso Hotel July 14. This announcement is made on the authority of E. H. DeFoaugh, secretary of the organization. For a long while this association has held practically all of its meetings in Memphis, the headquarters of Jackson, Ark., is president. The general condition of the mill will be one of the chief topics of discussion at the coming sessions.

Dispatches received here from Caddo Gap, Ark., indicate that rapid progress is being made in saving the timber blown down in that section in April. It is estimated that about 75,000,000 feet of timber was leveled by the storm. Several sawmills have been placed along the path through cyclone and most of the timber will be converted into unmarketable lumber. The white oak is being worked into staves.

Announcement is made that work will begin on the interurban line between Memphis and Lake View between now and August 1. It is reported that financial arrangements have already been completed and that the contracts will be let in a short time. The estimated cost is \$820,000, including equipment. This is the first step in the building of the interurban line connecting Memphis with Clarksville. The new electric line, as surveyed will divide the country between the Illinois Central and Yazoo and Mississippi Valley and will furnish splendid facilities for the development of the resources of that section, as it will operate cars for both passenger and freight traffic.

The falling off in the price of building material and the cheaper cost of labor have proven a stimulus to building, with the result that the showing for June is exceptionally favorable so far as Memphis is concerned. Total expenditures were \$254,845, and the number of permits called for 248 buildings. Building Commissioner Newton states that he has investigated the matter and that he can promise the people of Memphis that there will be a very large increase in July over June. He states that a number of buildings have been projected and the outlook will be very extensive. The newspapers in Memphis and at other points have taken up the slogan "build now," and it appears to be bringing results.

The George H. Temple Lumber Company has been launched in Memphis. Mr. Temple was connected for some time with John B. Ransom & Co. of Nashville, and later with Richard P. Baer & Co. of Baltimore, with offices in Mobile. He has also been connected with a number of other lumber concerns in the south, including the Pettibone-Taylor Company. Mr. Temple engaged in business in Memphis with W. T. Powers under the firm name of the Powers-Temple Lumber Company. This recently liquidated and Mr. Temple has taken entire charge thereof. The company will manufacture, deal in and export hardwood lumber.

The Helena, Ark., Woodenware Company has made a notable extension of its business plans. It has set up in that mill and will add a hardwood department, manufacturing and carrying in stock a full line of hardwood lumber. Special attention will be given to cottonwood. The leading spirit in this enterprise is J. H. Bas-

sette, who was for some years at the head of the Trewitt-Spurr Manufacturing Company.

Frank Conkling, who has been in charge of the southern operations of the Farrin-Korn Lumber Company of Cincinnati, with headquarters at Memphis, has removed to Glendora, Miss. Mr. Conkling does not know whether this change will be permanent, but for a while at least he will operate from Glendora, where the band mill of the company is located. It was necessary to make so many trips down to the mill that the management decided it would be well to have a stay at that point. Mr. Conkling has been prominently identified with the lumber interests of Memphis and is very popular with the fraternity, who regret to see him leave even for a short time.

John L. Kaul, president of the Kaul Lumber Company, whose plant at Collins, Ala., was burned some time ago with a loss of \$175,000, announces that the mill will be rebuilt and that the plant will be in operation again by October 1. The new building cost placed them at \$200,000, but Mr. Kaul states that this was entirely too high. The company was fully protected by insurance.

Lumbermen of this city are congratulating themselves upon the fact that the announcement made from Washington regarding the forthcoming conference of executive officers of southern railroads to consider advancing rates on commodities in the territory south of the Ohio and east of the Mississippi will leave out two very important commodities, cotton and lumber. The roads in their attempted advances on hardwood lumber and yellow pine from points in this territory were not eminently successful, being recalled by the Interstate Commerce Commission, and this probably accounts for the fact that the roads will not attempt to interfere with the rates on lumber shipments.

Abraham J. Perry, one of the owners of the Great Lumber Company, which recently began business in Memphis, has been arrested upon capias charging larceny. He gave bond, which was signed by J. P. Sullivan and G. W. Whitatt. Mr. Perry is specifically charged in the bills of indictment with obtaining through fraudulent schemes 169,000 feet of lumber. C. L. Schoffner of Newport, Ark., is the prosecutor in one of the bills of indictment, which charges a theft of 53,000 feet of lumber, valued at \$1,700. W. O. Mitchell of Jonesboro, Ark., is the prosecutor in the second bill, which charges the theft of 75,000 feet, valued at \$1,500. The prosecutors both allege the lumber was shipped by them under conditions which subsequently proved to be the reverse from what they had been led to believe by the defendant at the time shipments were made.

NEW ORLEANS

In spite of a vigorous protest from the timber holders of the state and an urgent petition from the financial interests of New Orleans, calling upon the legislature to vote against the measure, the state senate has passed the Wilson land bills No. 368 and 369, with the result that thousands of acres of timber lands in the state are now threatened with confiscation. In many instances these lands are held by eastern and northern investors who have put thousands of dollars into them and who will lose heavily unless they can prevent the successful operation of the measure. Besides establishing new minimum prices that must hereafter be paid for state lands, house bill No. 368 provides for the annulment of all applications now on file in the office of the register of state land office for entry or purchase of public lands from the state to which patent or certificate has not issued. It further stipulates: "That whenever the governor shall be satisfied from information received, that swamp lands of the state, not subject to tidal overflow, have been illegally and fraudulently entered by private persons or corporations and sold by the state for a price less

than \$1.25 per acre, or for a price authorized by law, but in a quantity in excess of 640 acres entered by any one person and sold by the state, he shall have the authority to order the institution of proceedings for the recovery of all such lands in excess of 640 acres, or the value of the timber taken therefrom, of damage thereto and waste thereof." Thousands of acres of all kinds of lands are involved in this matter. The law practically amounts to the repudiation of certain land scrip which the opponents of the bill held should be honored by the state. These lands alleged to have been fraudulently entered are now in the hands of third or fourth persons who are guiltless in so far as any fraudulent entries are concerned. These people, however, under the present circumstances will have to pay the bill.

E. S. Sacksonie of Paris, France, a prominent European lumberman, was here recently looking over the lumber situation with a view to arranging for some 1908 exports to his native land, and in discussing the lumber situation generally Mr. Sacksonie took exception to the manner in which the American timber operators cut their lumber. "I notice great waste in the manner in which your forests are cut," he said. "The trees are sawed down and what is left of them is burned. In Europe the trees are pulled down instead of sawed and every bit of the trunk is used. There is a great deal of splendid timber in Louisiana and many different kinds which we do not have in Europe, and in fact know nothing about. I am looking for these different varieties in order to see what we can ship from here back to France." From New Orleans Mr. Sacksonie will go to Mexico and will return to France in the fall.

The Louisiana Furniture Company has been incorporated in this city to manufacture, buy and sell furniture and hardwood products. Its authorized capital is \$25,000. These are the incorporators: W. Salun, president; A. Phillips, vice-president; L. A. Le Blanc, secretary-treasurer.

Announcement is made from Monroe, La., that the Hardwood Manufacturing Company of Kentucky has bought for \$104,000 the hardwood holdings of Henry Lipp, located along the D'Arbonne in Ouachita parish. The tract contains 19,123 acres of land covered with fine hardwood timber. A big hardwood mill will be built shortly to develop the land.

The Old River Lumber Company has been organized at Sauters Bluff, near Lake Charles, La., to do a general business in manufacturing and exporting lumber. It is capitalized at \$10,000. J. E. Loxley is president, C. E. Loxley is vice-president and Frank Mace is secretary-treasurer.

The Kimberly-Wing Company has been incorporated at Jackson, Miss., with an authorized capital of \$100,000, to manufacture woodware at Atopola and investments from native woods. John F. Conant, William T. Wing and Daniel L. Kimberly of Neshoba, Wis., and T. R. Foster of Vicksburg, Miss., are the incorporators.

The Wilson-Flowers Furniture Company has been incorporated at Crystal Springs, Miss., to manufacture furniture and hardwood products. W. W. Wilson, J. B. Flowers and others are the incorporators.

The Mendonah Lumber Company has been incorporated at Mendonah, Simpson county, Miss., with an authorized capital of \$20,000. C. R. McLaughlin, H. E. Welsh and J. S. Harrison are the incorporators.

Local furniture men and manufacturers of hardwood products will in all probability be well represented at the big exhibition of home manufacturers that the New Orleans Progressive Union will hold here in September. Several hardwood lumber companies have already gone into the project and it is believed that an attractive display of hardwood products, all native manufacturers, will be made a part of the fair. Great interest is being manifested in the development of the plan.

NASHVILLE

One of the most important lumber sections in or near Nashville is that located just across Cumberland river in East Nashville along the bank of the Cumberland river. One after another here, in a long line reaching a mile or more up the river front, are such well-known concerns as the Standard Lumber and Box Company; Prewitt, Spurr Manufacturing Company; Love, Boyd & Co.; Standard Furniture Company; Davidson-Benedict Company; Nashville Tie and Cedar Company; Indiana Lumber Company; E. & N. Manufacturing Company, and many others. These concerns will, in the no distant future, be brought into more direct connection with the main business portion of Nashville by reason of the fact that the county is now engaged in erecting two spammack bridges across Cumberland river. The Sparmack Street bridge, just south of Broad, will run right through the heart of this big lumber section and will afford quick access to the Tennessee Central and the Nashville, Chattanooga & St. Louis railway and Louisville & Nashville freight yards. The Jefferson Street bridge, which is lower down the river, will tap the Indiana Lumber Company's yards and likewise a number of companies along Front or Wall street on the west side of the river. These two bridges will cost together more than \$1,000,000.

A special from McEwen, Tenn., announces the assignment of the L. D. Baker, who executed a deed of trust for the benefit of his creditors, naming J. J. Slinkaker as trustee under the instrument. The liabilities are about \$22,000 and the assets about \$16,000. Mr. Baker was the owner of several large sawmills in and near McEwen and was engaged in the manufacture of lumber and cross-ties. The recent financial trouble and the accompanying decrease in the price of lumber were responsible for his assignment.

Many friends of Hamilton Love will learn with gladness that his little son, Hamilton, Jr., is now doing nicely. The little fellow, who is only five years of age, was recently stricken with typhoid fever, and for a while much uneasiness was manifested concerning his condition. However, he is believed to be practically out of danger now. His father is junior member of the firm of Love, Boyd & Co., one of Nashville's biggest lumber concerns.

A special from Florence, Ala., announces the incorporation there of the Richardson Consolidated Lumber Company, with a capital stock of \$24,000. The company will do a wholesale and retail lumber and building material business and will have yards at Florence, Haleyville and Russellville, Ala. The company is in reality a consolidation of the Haleyville Lumber Company and the R. & H. Lumber Company of Russellville, Ala. The officers are: President, W. M. Richardson; vice-president, D. F. Hargett; secretary and treasurer, R. C. Redd; general manager, E. G. Prosser; sales manager, J. F. Richardson.

"I ails thought er sawmill was the bizziest place I knowed of," said a stranger of rural type in an uptown office the other day, "but, Mister, I jes' wan' ter remark right here that I's been around some in my day and seen a paaner of queer things, but I'll be gosh durned if you ain't got the all-freshest liveliest squirrel in that air cage ever I seed in all my life before." The country man had stood for some moments looking intently at an electric buzzer before he said a word, and had even started to put his fingers through the side of the cage to play with the "squirrel," when he was restrained from doing the latter, at least.

WAUSAU

The Front Veneer and Seating Company's plant at Antigo, which was recently destroyed by fire at a loss of \$50,000, will be rebuilt.

The Frone Manufacturing Company's plant and lumber yards at Howard's Grove, near Sheboygan, were destroyed by fire recently. Loss \$14,000.

The Wausau Fixture and Furniture Company recently made about \$8,000 worth of improvements in its plant, adding eight new machines for the manufacture of hardwood flooring, casings, doors, etc.

The Culler-Clange Company of Merrill recently suffered a \$70,000 loss through a severe wind-storm. A refuse burner was blown over onto the mill, knocking down the smoke stacks and about 675 feet of piping between the mill and the dry kiln, caving in the roof of the mill and causing more or less other damage. The tops were also blown off the company's lumber piles.

Officers of the company say that the Mason-Dixon Lumber Company's mill, which was recently destroyed at Donaldson, will be rebuilt without delay.

The D. L. Greely sawmill at McCord was destroyed by fire recently; loss \$20,000; no insurance. About \$200 worth of lumber was burned also. The fire is thought to be the work of incendiaries. The site and stock of lumber has been sold to Emerson Brothers of Prentice at receiver's sale for \$5,000. Mr. Greely's creditors will receive about 50 cents on the dollar.

The annual meeting of the Coys Furniture Company of Stevens Point was held recently and the following directors elected: D. E. Frost, F. A. Southwick, A. I. Week, W. B. Buckingham, W. W. Gregory, W. H. and C. M. Coys. At a subsequent meeting the following officers were elected: President, D. E. Frost; vice-president, F. A. Southwick; treasurer, W. H. Coys; secretary, W. S. Young. Reports of the secretary and treasurer show a falling off in business the past year of only 15 per cent, notwithstanding the strenuous times through which it has passed. No additions or expensive improvements are planned for the coming year.

The Foster-Lattimer Lumber Company of Melien recently entertained about thirty lumbermen from the Twin Cities and elsewhere who are its patrons. The delegation arrived in a special car and was tendered a trout breakfast at a hotel. The guests were then taken on board the company's logging railroad trails out to the camps, where an elaborate dinner was served. The afternoon was spent in inspecting the mill property, etc. In the evening a six-course dinner was served at a hotel. The guests were very much impressed with the company's hospitality and with what they saw.

Frank O. De Salx has closed out his piano manufacturing business in Chicago, where he has been located for the past eight years. He has gone to Antigo, Wis., where he is engaged in a like enterprise under the firm name of De Salx & Bevkman.

A Foster City operator has been given a contract to take 10,000,000 feet of snaken logs out of the Menominee river. It is estimated that these logs contain millions of feet of such timber in that river.

TOLEDO

A new and novel question has been raised in the suit brought by the Toledo Storage and Loan Company against Adam Salko, receiver for the Kelper Brothers' furniture concern, lately thrown into bankruptcy. The plaintiff claims to have purchased the entire stock and paid the cash therefor to Carl Kelper, and asks that it be given possession of the stock which it has bought and paid for. The creditors claim that under a new law of the state of Ohio a sale of an entire stock of goods cannot legally be made until seven days' written notice thereof has been filed with the recorder of the county, and that said notice was never filed, and that the sale was therefore illegal and the title to the goods did not pass to the purchaser. The plaintiff admits the state law, but contends that it is not applicable to the federal courts, where

the present action is now pending. Bankruptcy Referee Fordyce Belford has taken the matter under advisement. The proposition is a new one and is being watched with interest.

A change was recently made in the stock of the Compressed Preserving Wood Tie Company of Toledo. The concern now has \$25,000 of preferred stock drawing 6 per cent dividends and a common stock amounting to \$75,000.

The hearing of the complaint of the Ohio shippers against the railroads of the state for the establishment of a seventh class of rates for low-priced commodities, including lumber and most all kinds of forest products, which was to have been held a few days ago before the Ohio Railroad Commission, has been postponed until some time this fall. An exact date was not fixed for the hearing.

There has been a change in the name of the Toledo Remodeling Furniture Company, which for three years has been engaged in the manufacture of store and office fixtures, interior finish, mantels, etc. On July 1 it assumed the name of the Ette Furniture Company. There was no change in the personnel of the concern.

T. E. Coleman, who owns and operates a saw and planing mill at Findlay, O., recently purchased a fine tract of hardwood timber from G. W. Montgomery, near that city. The timber will be worked up into building materials.

The Pennsylvania Railway Company and several other railroads doing business in Ohio have entered extensively into the plan of raising trees for cross-ties. The company this spring planted 625,000 young trees, making a total of 2,425,000 trees now owned by this one railway company.

CHARLOTTE

Indicative of the improvement in conditions affecting hardwood manufacturers of North Carolina is the fact that during the past fortnight several large manufacturers have found it profitable to resume operations after a suspension of several months, due to the general depression in business. The Oak Furniture Company, extensive manufacturers of furniture at North Wilkesboro, has just resumed operations full time and the Forest Furniture Company of North Wilkesboro has also resumed operations after a short close-down. Manufacturers in High Point, Lexington, North Wilkesboro and other manufacturing centers report business active again and that trade is opening up satisfactorily.

The Piedmont Bugzy Company of Monroe, N. C., has just manufactured what is said to be the first automobile made in the South. It is a buggy equipped with a 10-horsepower gasoline engine and can go thirty miles an hour. The manufacture of the auto-buggy by this concern is considered as significant of the opening up of a new industry in the South, where raw material is easily accessible.

MINNEAPOLIS

Building permits for the Twin Cities continue to average up pretty close to last year, which was a record breaker, indicating that this particular spot is no dead one in the lumber market. The Minneapolis record for June was \$876,120, and St. Paul's was \$807,542. Last year in June the Minneapolis total was \$1,062,025 and St. Paul's was \$662,972. The two cities together show an increase, and on the six months' record they are not far behind last year, Minneapolis showing \$4,366,625 to \$5,059,610 last year and St. Paul \$2,975,139 to \$3,167,015.

E. Payson Smith of the Payson Smith Lumber Company has returned from a four weeks' business trip to southern points, where their chief interests are located. He says the production of southern oak mills has been considerably curtailed by the high water troubles, which have attacked their properties four separate times, necessitating a shut down each time. Mr. Smith

and family have gone to their summer home at Annandale, Minn., to recuperate.

A. S. Bliss of the Payson Smith Lumber Company went to Chicago with his young daughter on July 4 and spent the holiday there with friends.

I. P. Lennan of I. P. Lennan & Co. says there is evidently a stronger tone all around to the hardwood market and prices are holding up well. Stocks of northern hardwoods are light and the southern supply has been limited. The manufacturers have been calling for stock only as they absolutely required it, and this has kept down the volume of transactions, but a fair amount of hardwood has been going into consumption and there is sure to be a better trade in the fall on that account.

The railroad committee of the Northwestern Hardwood Lumbermen's Association has not been active this summer in the matter of railroad overweight claims, and has had no satisfactory adjustment yet with the railroad officials. A meeting on the subject will be held in the near future and the standing of the hardwood men will be taken up with a determination to get something near justice.

NORFOLK

The weather in this immediate section has been excessively hot, accompanied with excessive humidity, during the past two weeks, although so far as has been learned no drawbacks have been experienced in milling operations because of this, the majority of the laborers employed being negroes, who are by nature prepared for hot weather. With the wholesalers in the city every opportunity has been availed of to attend the seaside resorts and get relief from the oppressive weather.

Frank Betts of C. M. Betts & Co., Philadelphia, was a visitor to the city June 30 on business.

A. B. Turnbull of the Rowland Lumber Company left for New York City last week, accompanied by his sister and father, R. W. Turnbull, president of the Rowland company. Mr. Turnbull will be gone about a week or ten days.

There is a strong rumor afloat that the Virginia railroad, which has been nearly completed, its financial end being managed by H. H. Rogers of Standard Oil fame, and which taps fertile West Virginia hardwood and pine timber lands hitherto undeveloped, transporting them to Norfolk for export, will purchase the Kanawha & Michigan and the Toledo & Ohio Central railroads, to be used as their western outlet, these roads connecting the Virginia road with the Great Lakes. The activities of the management of this road are being watched with much interest by local hardwood men, its completion meaning great things for this city's future as a hardwood exporting port.

Lyman S. Stone of St. Louis was in the city during the past two days on business.

Building operations in this city have been extensive of late, although contrary to expectations, last year being exposition year and the reaction being expected during 1908. For the month of June permits to the amount of \$206,000 were granted.

One of the most spectacular and disastrous fires which has been witnessed in this city in recent years was that which destroyed the plant of the Farmers' Manufacturing Company, located on the outskirts of the city, the latter part of last month, resulting in a monetary loss of about \$125,000, of which amount only about \$40,000 was covered by insurance. This factory manufactures barrels, hoops and crates, and in the making of these consumed a large amount of gum, this wood being the principal one used. An especially unfortunate feature of the conflagration was the loss of a machine on which the East brothers, operators of the establishment, had spent years in perfecting, and the loss of which irreparable damage would have been done. The Illinois building on the Jamestown Ex-

position grounds has been purchased by W. H. Wales, Jr., president of the Atlantic Crosscutting & Wood Preserving Company. Several other lumbermen have invested in similar buildings at the grounds.

In order to more economically administer their company's affairs R. P. Baer & Co., operating in hardwoods, have formed the Virginia Hardwood Company, with headquarters at Tazewell, Va., and the North Carolina Hardwood Company, the latter being at Asheville, N. C. The same officers will direct the affairs of both concerns. They are R. P. Baer, president; O. M. Thayer of Mobile, Ala., vice-president, and M. S. Baer, secretary and treasurer. It is announced that there will be no change in the firm policy and that Mr. Thayer will continue in active charge of the mills in Mobile.

S. S. Mann of Mann & Parker, Baltimore, dealers in hardwood lumber, is spending a few days at his concern's mill at Robins Neck, S. C. The operation there is being run on full time, and they claim to be disposing of a maximum production at fair prices.

A dispatch from Christiansburg, Va., dated June 27 states that Schultz Bros. & Morgan, organized by Schultz Bros., Old Colony Building, Chicago, are constructing sawmills at Little River with a capacity of 20,000 feet of hardwoods per day. K. H. Morgan will be in charge of the plant, and the main office address is Christiansburg.

CADILLAC

David Wolf of Wolf Bros., Grand Rapids, is visiting F. A. Diggins.

D. B. Kelley and family have returned from a week's automobile trip, taking in Charlevoix, Petoskey, etc.

A disastrous fire destroyed Kalkaska's business district recently, the main street of the town being practically wiped out of existence. The fire originated in the basement of T. D. Hobbs Racket Dry Goods Store from some unknown cause. Forty-four firms and residences were burned out, including the electric light plant and Bell telephone exchange. The estimated loss is \$125,000, with slight insurance.

It is the prevailing opinion here that the business situation is improving. Generally orders are coming in slowly, but on the whole more business has been done by a number of firms during the past month than for several months before. Reports indicate good crops

which, if they materialize, will have a great influence in stimulating trade. Again it seems that after the nomination of candidates at Denver this week much of the uncertainty will cease and gradually business will resume normal conditions.

Ground has been broken for the turpentine plant which is promised to give employment to 200 men.

The Michigan Hardwood Manufacturers' Association is figuring on holding its annual meeting the last week in July. Mackinac Island will probably be the meeting place this year.

ASHLAND

J. W. Kitchen of Vansant, Kitchen & Co. of this city was on a business trip last week to Detroit, Cleveland, and other cities.

C. W. Peters of H. C. Creith & Co. of Columbus was a business caller in the city this week, looking after the interests of this company. Mr. Peters advises good receipts of orders and feels confident that the demand for lumber will soon increase materially and prices come back to what they should be. Mr. Peters will call on several manufacturers in Kentucky and West Virginia before returning to Columbus.

R. G. Page, secretary of the Licking River Lumber Company, has returned from a business trip through Ohio and Michigan. He reports receipt of orders during the past week for bill oak, mostly for eastern markets.

Ashley Ward, one of the leading timbermen of Paintsville, Ky., was a business caller in the city this week. Mr. Ward brought down several rafts of timber last week in the rise of the Big Sandy and while here was advised that he had sold all of his timber and was returning to Paintsville. Mr. Ward advises that the timber operations in his vicinity are very quiet at this time; the demand for timber is not what it should be and prices are considerably less than the timber can be sold for, so the operations have discontinued for the present time.

Whisler & Searcy of Fronton, Ohio, have closed their mill at that place for an indefinite length of time. They will continue to operate their mill in West Virginia and expect to continue operating there for some months.

W. A. Cool of W. A. Cool & Son, Cleveland, was a recent business visitor in this city. He will visit several of the lumber centers in Kentucky and West Virginia before returning to Cleveland.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

Within the last fortnight the Record office has had calls from fully twenty-five hardwood lumbermen and lumber salesmen, and without exception everyone made a very cheerful report on the local market situation. One salesman announces his orders for the previous week amounted to forty-one cars. Another says his sales for the last two weeks in Chicago and vicinity have been more than for the previous two months, and everyone reports an improved situation. Evidently the market has materially strengthened during the fortnight and there is a considerable renewal of buying on the part of furniture manufacturers as well as railroads and car builders. Everyone believes that the situation will show further improvement as the season advances and that the year will close with remarkable strength.

As is well known, stocks in the hands of wholesale consumers are very light. Stocks in the hands of jobbers are only from fifty to seventy cars in size as large as a year ago, and notwithstanding the comparatively dull trade of

the last six or eight months, lumber in the hands of manufacturers is rather light in quantity and more or less broken in assortment.

BOSTON

The market for hardwoods still lacks that snap necessary to make activity, yet there is a slight and steady gain for the better. Some large consumers who have been practically out of the market for several months are now interested in quotations on good sized blocks and important trading is near at hand. Prices as a whole are held with more firmness and on a little higher level. There are still some manufacturers who are forced to sell their product in order to take care of notes coming due. Manufacturers of veneers are operating their plants from four to six days a week. Demand for veneers is fair. Good figures in mahogany are selling at full asking prices. Piano manufacturers are doing more than for several months and the furniture plants in some places have larger orders.

The demand for quartered oak is fair and prices are firm. Offerings of good lumber are

not large and dealers predict a strong market as soon as demand becomes normal. Plain oak is in quiet call, but sales are reported at lower prices than have been obtainable of late. Mahogany is in moderate call. Very little demand for elm and birch is being received in this market. Dealers report more inquiry for hickory, with offerings small. Cypress can still be purchased at low prices.

NEW YORK

The hardwood market at New York continues of the hand to mouth order, there being very little change in the movement of lumber or demand either one way or the other. Indeed, the trade has pretty much settled down to talking things as they come, not looking for any material change between now and the latter part of the year. It is freely admitted that there are ample hardwood supplies in all grades for current needs, but any sudden or material change in the demand for hardwoods between now and the latter part of the year will immediately force a sharp rising market by reason of the fact that so many mills have suspended operation at the manufacturing end, and the average buyer and consumer has let his stock run down to the minimum. Such a condition leaves simply a floating stock in the hands of the wholesale and mill trade, which, while ample for the present limited needs of the market, would be quickly absorbed with any change in demand. This is a point which should be fully appreciated by the manufacturing trade and those having any amount of hardwoods for distribution as an incentive to refrain from sacrificing any good stock at today's prices or forcing the present market. Present buying is purely of the hand to mouth order and there is no stimulation evidenced by any sacrifice in prices, and for the most part it must be stated that with the increasing appreciation of actual conditions the tendency to sacrifice prices or crowd the market is growing less, with the result that prices throughout the list are very firm in line with such business as is offering.

PHILADELPHIA

There are many who cling to the opinion that the turning point in trade may be expected only when the presidential nominations are complete and the various platforms decided upon; others of a more logical turn do not look for any substantial change in affairs until there is a complete restoration of confidence in financial centers, which will take, they reason, a much longer period to effect. However, in spite of the above pessimistic notions, optimism generally prevails. The conservative element in the hardwood trade neither anticipates nor desires boom in trading, which condition usually forces values to prohibitive heights and creates an unhealthy situation. They predict, judging from past experiences, a gradual increase in demand and a comparative advance in prices. Though the building work in this territory for June has fallen far below that of the same month of last year, there has been a noticeable increase, such as to employ more hardwood finish. It is generally understood that there is considerable work of the better grade on the boards awaiting capital to push it along.

Stocks in the hands of the yardmen and consumers are below normal, and purchases are made for absolute needs only, with the request for immediate delivery. Mill stocks are well contained, and seasoned stock of all grades is anything but plentiful, and there is no sign of the action to increase the amount. Values in the better class of hardwoods still hold steady, while in lower grades there is considerable fluctuation. Quartered oak remains high and scarce, with good poplar second and the other hardwoods

varying. Veneers are off on account of substitutes bearing the legitimate brands being placed on the market. Clear box lumber is slightly more active. The furniture factories of eastern Pennsylvania are feeling the effect of the depression in the general trade; sash and door mills, flooring manufacturers, office fixtures and indoor finish works are fairly busy. Box factories are still running on reduced time, and the much deplored practice of price cutting is still persisted in.

BALTIMORE

While no important changes have taken place in the hardwood trade, a very much better feeling prevails among dealers as well as manufacturers. Not so long ago the period of recovery was put at a rather remote date, but now the opinion prevails that a marked improvement may take place the latter part of this year, and that from now on a slow but continuous advance toward better conditions may be looked for. Just what has given rise to this feeling of optimism would be rather difficult to point out. It may be accepted as certain, however, that the clearing up of the political situation had as much to do with it as anything else. In other mercantile and industrial lines men have taken heart and are going ahead with so much energy that the lumbermen have found themselves almost against their will obliged to follow suit. Certain it is that the tone of the trade is far more hopeful despite the fact that no one appears to be getting much higher prices for his lumber or receiving a very material increase in the number of orders. The mills have been holding down to such an extent that the available supplies have reached a low ebb. Many of the biggest plants have not yet resumed operations, having remained idle for several months. With the big consumers getting ready to enter the market once more, there is some likelihood of a positive shortage. The range of values has been kept up quite well all along, and comparatively little room for improvement remains in this direction.

The restoration of the domestic trade to normal proportions may also be expected to have a good effect abroad, and stop the demoralization there by cutting off further shipments. Within the past six months it was easy enough to urge the discontinuance of export orders on consignment, but the big mills with heavy accumulations felt that they had to have an outlet, and as long as the foreign brokers were willing to make advances on stocks the export movement kept up. Recently the brakes have been put down somewhat and this, together with the improved outlook on this side of the Atlantic, ought to prove helpful to the exporters.

PITTSBURG

Contrary to the usual state of affairs, midsummer is bringing an increase in lumber sales. Some attribute it to politics, some to the fact that the big industries are nearly starved for lumber, and others to the fact that financial matters are getting easier and that legitimate business is now prepared to go ahead with projects which were held up several months ago. More requisitions are coming in, and, what is still more to the point, more lumber is developing into orders. Railroads are entering the market; so also are the coal mining companies and the big industrial corporations. None of these is buying heavily, but the sum total of their purchases is enough to justify the belief that from this time forward there will be stronger buying. Aside from these different lines of purchasing there is a marked improvement in the demand for ordinary building lumber. The city of Pittsburgh itself is not contributing its share of this business by any means. Comparatively few houses are going

up here, but outside the city house-building operations are coming on to the boards in constantly increasing numbers, especially miners' houses. Trade in the past month, but has not been brisk during the past month, and it is sufficient to keep down the stocks and to hold prices fairly firm at present levels.

Demand is less spotted than it was in June. The best grades of oak, especially white oak, are excellent sellers, and it would not be strange if the price advanced before September 1. Many mills are cutting stock to order, and where they have choice lumber they are able to get good prices for it. The medium grades of oak and chestnut are moving slowly and competition is keen all along this line. Poplar keeps its place at the head of the hardwood columns in so far as buying popularity is concerned. Spruce has been less active for a few weeks, although shipments are much larger than they were earlier in the spring. Hickory, maple and ash bring good figures when sold to the manufacturers. The stocks are small and no large orders are being taken.

BUFFALO

A morning spent in visiting the east side hardwood dealers brings out no very inspiring news as to the amount of business going on. The rule is that all lumber sells slow and some of it very slow. Only one or two offices reported any late improvement in sales and some of them could not be persuaded by any means that it was better with them now than it was a month ago. One dealer had gone fishing and taken with him a downtown associate, the word given out being that they were not especially needed and might as well be away as at home.

This is the literal and extreme sizing up of the case, though when it comes to be analyzed it does not need to mean very much. It is mid-summer. The trade has not been large with the yards at any time this year. It has been very spotted, as most of the dealers report. Some weeks it would really look as if the long looked for return to full business was in sight and then it would all drop off again and there would be weeks before the revival. But this is always so when a trade is recovering from a panic. It is not the time of year for increase in any business except excursions and soda water and there is no reason why this year should be an exception. We must wait. It is a sound trade, every bit of it, and it will come out all right.

The woods themselves are doing about as before. Some dealers are doing a little better with white ash and others are selling maple somewhat faster than they were. All agree that quartered oak and poplar are very scarce and the oak of all sorts and cuts will come large, give out if the demand should become larger, for the mills have not tried to pile lumber up much. It might not be safe to do that. So the plan for the most part is to run the mills slower this summer than has been the rule, with the idea that they can be started up at any time fast enough to take care of all the logs that are to be had, for logs are pretty scarce.

There is no stir yet in chestnut and birch, but these woods are used properly, just as elm and basswood proved to be. The extra expensive woods, cherry, walnut and mahogany, are pretty fair sellers, for in some instances the car shops are doing a little more buying than they were.

NASHVILLE

Things look a little better in the local hardwood market just now. Reports from distributing centers are encouraging. Good crop reports have helped to give a healthful tone to the lumber business, as the crop situation, especially in the South, is reflected very quickly

in all lines of industry. Hardwood prices are holding up unusually well for the summer season. In fact, it is said that a gradual improvement of conditions is expected throughout the month of July. It is expected that quite a number of mills and factories that have been shut down for months will resume operations in the not distant future. There is quite a lot of building going on in and around Nashville just now and the demand for hardwood flooring, interior finishing of chestnut, oak, cherry and beech is quite active. Quartered oak continues to be the leader in the local market.

CLEVELAND

Price cutting has been reported among the hardwood concerns during the last two or three weeks. While more building has appeared and conditions are gradually but surely becoming normal, there are still a wild race for orders.

Poplar leads in the woods called for, with oak a close second. Quartered oak is becoming quite scarce and is active. There is not much call for the other list of hardwoods, with the exception of maple flooring, which is in good demand.

Considerable optimism exists among the trade as to the outlook. It is admitted on all sides that the month of June has seen a distinct improvement in conditions, which, however, do not begin to approach the volume of business done a year ago.

COLUMBUS

The lumber trade in Columbus at this time is decidedly quiet, but in the month of June it was much better than in May, and the present dullness is largely due to inventory time, which is now on.

Trade in hardwoods was active during the first two weeks of June, but in the latter part of the month there was considerable falling off. It is felt that retail dealers refused to buy much until they had taken an inventory of stock on hand. The present lull, however, is regarded as only temporary, and after the middle of July it is believed that business will resume a more active scale. The building permits taken out during the past two weeks show that there will be a good demand for hardwoods in the near future. Work is being resumed on the new Federal building at State and Third streets and the excavation is about complete for the new Lazarus block, a large corporation is figuring on erecting a fine structure at Spring and Fourth streets, and work on the skyscraper to be built at High and Gay streets will probably begin in the near future. Work on the Tracy Wells building and several others will be rushed during the fall months. The building situation in Columbus is fairly satisfactory and from present indications an immense amount of lumber will be required in this city later in the year.

Local lumbermen are now more confident regarding the future than they have been at any time since the October panic. They are encouraged over the favorable reports coming from other lines of trade and the large number of men that have been put to work during the past week in different shops and factories throughout the country. Another good feature of the situation is the fact that people contemplating building of any kind seem to be convinced that material will never be cheaper than it is now. The latter condition is reflected in the increased number of building permits that have been taken out since the middle of June.

General trade in Columbus seems to be on the mend, even in the face of the hot period of the year. Bank closings show improvement, and for the month of June the total was nearly up to that for the corresponding month a year ago.

That the bottom level of the market for hardwoods has been reached seems to be the

general opinion of Columbus lumber dealers. The hardwoods, especially, show strength and in some cases an advancing tendency. This being inventory time, the supplies are light, which is decidedly in favor of a higher market within a short time. First and second poplars are the strongest item on the list. In some cases gum and cottonwood have been substituted for poplar, because of the prevailing high prices of the latter.

The oaks are decidedly scarce and, relative to the future of the market for poplar, local dealers are very optimistic. The market is in good position and will give a good account of itself when business conditions become normal.

INDIANAPOLIS

The local hardwood market showed increased activity during the last two weeks following a slight temporary depression, probably due to the recent decrease in building operations. The present improvement is due to an increased demand for hardwoods from local and state furniture factories and other woodworking plants.

All grades of oak remain firm, with an excellent demand. Other hardwoods are still a trifle weak, although there has been no break in prices. On the whole conditions are very satisfactory for the season of the year, although they are not equal to those that prevailed during the same period last year.

MILWAUKEE

Little change has taken place in the Milwaukee hardwood market during the past fortnight. The improved trade has been holding its own and prices are being well maintained, although there has been no decided gain in any one wood. There is a feeling of optimism among the leading dealers and there is every indication that prices will be higher during the summer, as prospects for a growing trade are bright at this time. Reports from dealers about the state say that building demand is gaining now that better weather prevails. It is felt that with increased building in the rural districts the hardwood trade in general will take an upward turn.

Poplar is in steady demand and there is a marked tendency toward advance in prices. Stocks in quartered and plain oak are low as usual and prices are firm. Basswood is holding its own and the demand in this line has showed considerable improvement. Ash and hickory are being well maintained because of the fact that there has been a growing demand from the implement manufacturers in the city. Crop prospects in Wisconsin were never better and as a result has been that implement manufacturers are running their plants at full capacity. The hickory supply in Milwaukee is never equal to the demand and many dealers are much concerned as to the future in this wood. Demand for maple flooring has fallen off somewhat during the past week, due to the advance in building that is under way in the city. Box manufacturers of the city are reporting that business is on the gain, and the result has been the placing of better orders from this line.

BRISTOL

There has been little change in the market here, except that more inquiries are being received and in the opinion of most of the lumbermen, there is a slightly better tone to trade. Stocks are getting low and there is a general feeling prevalent that prices will be better during the coming fall. While the demand is now somewhat restricted, there is a fair volume of business being done, with excellent prospects for a continued increase during the remainder of the summer, fall and winter. The hardwood men are now more optimistic than before and prove this by the fact that they are making

extensive improvements and planning to take care of a large business.

The export market is said to be considerably off, due to the large consignments to foreign markets. However, it is believed that matters abroad will soon be adjusted and conditions will improve. Poplar is certainly holding its own, while the demand for oak, with the exception of quartered oak and special bill stock, is weak. Walnut and chestnut have fair call.

CINCINNATI

That the hardwood situation has improved is evident by the figures just completed by the Cincinnati Chamber of Commerce concerning lumber receipts and shipments during the past month. These figures show a handsome increase over those of the month previous, and only a small decrease over that of the year previous. The demand locally for hardwoods is the best this year, and dealers are of the opinion that the best six months of the year are yet to come. The latter part of June, which is usually the beginning of the dull season, proved altogether different this year, and instead of being a drag on the market has developed increased activity, and there seems every reason to believe that the market has seen its darkest clouds and that sunshine is due in the very near future.

The demand for poplar is as good as ever, and while the shipments of that stock are not as heavy as they were some time ago, this is perhaps explained through the firm prices being asked by dealers. Quartered oak, plain white and red oak have all recorded increases in demand and prices on them have been held firm. Other hardwoods are holding their own.

EVANSVILLE

The market for hardwood remains about the same in this territory. Some manufacturers report a slightly increased demand, however, prices remain about the same. This is usually the dull season with the lumber trade as well as other lines of business, and a great many of the furniture factories are looking forward to the semi-annual sales which are held about the middle of this month and are not trying to do much buying until after this date. In view of these facts it is not surprising that the lumber business does not show any very marked improvement. The scarcity of good logs is more noticeable now than at any time this year.

ST. LOUIS

The hardwood lumber situation is becoming better all the time. Prices have stiffened considerably and there is little or no cutting in prices. The most called for item on the hardwood list is plain sanded red and white oak, and it is being called for freely. Quarter-sawn plain white oak is also quite strong and very scarce. Quarter-sawn red is not moving as well as it should, although there is not a great deal of it in the market. Gum and cottonwood, lower grades, are in good supply and are only in fair demand after being quiet for some time. The box factories have recently, however, been buying it more freely than they did. Poplar and ash are being called for freely. Thick ash is most in demand, however. It is getting rather scarce. As all items on the hardwood list, or nearly all of them, are getting pretty scarce at the producing centers, the supply is becoming exhausted and those who have a fairly good supply on hand will be benefited. Manufacturers have a light supply on hand, particularly upper grades. Cypress conditions are getting better but slowly. Inquiries are coming in fairly well and the prospects look bright for a betterment in trade on this item.

ASHLAND

The month of July is starting in with an increased amount of inquiries and orders over any prior month this year. Lumbermen in this vicinity feel much encouraged over present conditions and outlook. Prices are more firm and the demand more regular. Poplar and quartered oak seem to be in the front rank as to demand and firm prices. The buying of the yard men and furniture factories is certain to increase, as they have been out of the market for so long and have been buying so sparingly that their stocks are badly depleted, and they must soon seek the market for present and future supplies.

MEMPHIS

Demand for hardwood lumber is quiet and there is every indication of it remaining so. The trade seems indisposed to buy except to cover pressing requirements, and the smallness of orders is one of the striking features of the situation. The trade usually expects only moderate activity at this time of the year, and, with the general depression which has prevailed in lumber circles during the past few months, it is believed by some members of the lumber fraternity here that this summer will offer even more limited opportunities. However, the feeling is one of confidence regarding the future and there is a striking disposition on the part of both manufacturers and wholesalers to look forward to a good business at the beginning of fall.

The best demand at the moment is for the higher grades of plain and quarter-sawn oak. Offerings are very light and satisfactory prices are obtainable for this class of material. The lower grades are slow of sale. Cottonwood is being offered at low prices in some quarters. It is reported that log run is selling at about the lowest price of the year. Manufacturers believe that it is wiser to carry present stocks than to expose thereof, cut their timber and take chances of replacing these holdings, and there is little attempt to dispose of dry stock at the prevailing level. The gum situation shows no material improvement. The demand is light and the volume of business small. Some of the trade hold to the view that the low price of the year has been seen on gum and that any change must be for the better. The demand for both ash and cypress is exceptionally light and there is very little stock of either description moving. Poplar is sustained as to prices, but there is little for sale and the volume of business is naturally restricted.

The export situation shows no improvement and advice received here by prominent exporters from their brokers on the other side do not hold out hope of any change for the better in the near future. In discussing the situation they declare there is so much consigned stock as to make it practically impossible to do business. Prices are so demoralized that it is out of the question to send lumber abroad and dispose of it at a level that will yield even a fair margin of profit. As a matter of fact, exporters have about come to the conclusion that they will be unable to do much in the foreign market until there has been sufficient demand to remove from the market the consigned stock which has proven such a depressing factor.

MINNEAPOLIS

There has been some increase in the orders enjoyed by local wholesalers in the past two or three weeks. They do not expect much business during the next month, but generally figure that fall demand will start somewhat earlier than usual, from the fact that many of the large users of hardwood have put off their or-

ders and have only a small amount of stock on hand. The sash and door factories have been in the market more lately, and some furniture demand is also noted. Country trade is still quiet and almost confined to mixed cars. There is a stronger feeling in plain oak and while the market here is still \$45 to \$46, some are putting up their price to \$48 and expect to get it eventually, though not just yet. They prefer to stay out for a while in order to get their price when the market advances. There are no snags in the hardwood market now. Freshwood prices are fully up to those of last year. Birch is inclined to become firmer also.

The flooring demand continues good and is about the only feature of outside trade. Maple and birch are the leaders, and city consumption of flooring as strong as ever, as a good share of the building operations at present is residence building. Railroad demand continues to be quiet, but some indications would show that there will be a revival in the call for car stock before long.

TOLEDO

If there has been any change in the hardwood situation it is that there is even less activity than there was some time ago. There has been no increase in the factory consumption and the buildings are of such a character that they require but little hardwood finish. Considerable oak flooring is moving, and there is some movement of oak timber. It is hauled here on wagons, where it is being worked up as ordered at the local mills. Poplar is also in fair demand for building purposes and is holding quite strong. There has been a fair supply of incoming shipments from down along the Ohio river, but it has all found a good market, and with few exceptions there has been no cutting of poplar prices. Very few hardwoods have held firm recently. Oak, ash, elm and hickory have been in good demand at the agricultural implement plants and vehicle works, where there has been a shortage of output, and orders have been rushing day and night recently in an effort to catch up. The box plants are also doing a good business and have received a number of large water shipments of mixed hardwoods for local consumption. Dealers still expect that there will be a general picking up in the building trades before the season is over. It is said that the factories will increase their output a little later on, and everyone is living in hope of some good business in the near future.

NORFOLK

In discussing conditions with the wholesalers and manufacturers here it would be inferred that the general state of trade is rather quiet and that there is somewhat less than the usual summer business being done. It seems also quite the general feeling that during the past two weeks prices have been more steady than during the month preceding, although this is not to be accepted as indicative of higher values, but merely of an absence of the fluctuations which have been apparent since the inauguration of the late panic. Contrary to expectations during the last few days of the month exportations increased in volume sufficient to exceed those of the preceding month and place June on a better footing than the same month of 1907 by a safe margin. This was particularly surprising in view of the damage done the foreign market by the consignment evil, and in view of the quiet state of trading during the month just past it is considered quite extraordinary.

The consensus of opinion among the hardwood trade here is that the month just past has been, all things considered, a satisfactory one. While profits have not been nearly as great as during preceding years, the hardwood interests must expect to suffer along with others, and

when questioned regarding the outlook for future trade the general expression now seems to be of a more hopeful trend, and according to many there are improvements reasonably to be prophesied as regards values during the remainder of the summer's trading.

LIVERPOOL

Trade shows no signs of recovery and we have still a gloomy outlook to show shippers. Prices still show a weak tendency, though the import has been less heavy during the past fortnight. Stocks are, however, excessively heavy and we look forward with decreasing demand to still lower prices. We advise shippers to lower their prices for contract goods which are too high in comparison with goods now being sold on consignment.

Cherry whitewood is particularly weak, especially in lower grades, and log timber is practically unsalable. The stock of logs is much too heavy and shippers should take care not to ship without definite orders. Wagon oak is being shipped in all kinds of unsalable lengths and we hear of prices which cannot possibly even pay the freight. Some good parcels of white oak logs of prime quality would come to a fair market. Ash logs are weaker, though some wood of large size with fair proportion 14 feet and up would find buyers at reasonable prices. Hickory logs are somewhat weaker, but good prime wood will bring fair values. Small second growth ash logs are unsalable at any price and planks of even the best quality are not finding any sale. Three mahogany sales are to be held this week and we anticipate rather lower prices than at last sale. The wood offered is of very good quality and there is much stock which will suit American buyers. Purchase should be made well ahead while values continue low, as the next few months will surely see a small advance at any rate. The mahogany trade here is much firmer than it has been and we have heard of several fairly large purchases from English consumers.

WHO BUYS HARDWOODS?

Do You Want the List?

The Hardwood Record supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of consumers of those materials throughout the United States and Canada.

Specifically, the items of the bulletins recite:

Name of state and town
Name of concern
Name of buyer
Line manufactured

Kinds, grades and thicknesses of Lumber
Kinds and sizes of dimension stock
Kinds and thicknesses of veneers
Kinds, thicknesses and sizes of panels.

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber not used are removed, and the cards are filed in alphabetical order between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete roster of the hardwood requirements of all users, and is an invaluable adjunct to the sales department of every manufacturer and jobber.

This service is free to all advertisers, save the patent index cards which show at a glance the kinds of lumber used by each concern, and which are sold at \$3.50 a thousand, the state guide cards costing 75 cts. a set.

Write us about this service.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

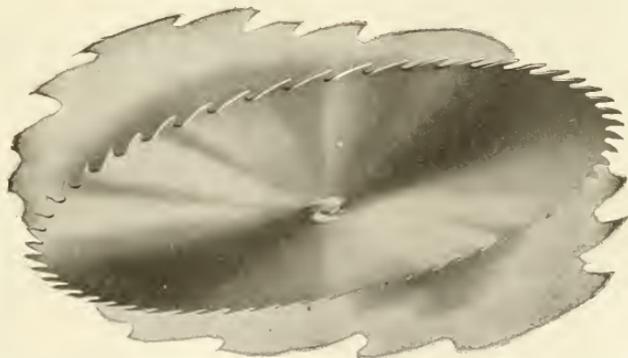

We also build the machine with a movable saw, at a slightly higher price.

CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

General Market Conditions.

The features in the hardwood trade of the last fortnight have been liberal buying on the part of the furniture trade of the middle West, and a considerable resumption of railroad business in the same section. The improved buying conditions in this section, while not putting the market back to normal condition, have all approximated that desideratum. In the East slowly improving conditions are reported from all trade centers, but even with this resumption the volume of business is only a modicum of what it should be to compare favorably with sections further west. The center of buying seems to be Chicago, although factories of southern Wisconsin, southern Michigan, Illinois, and Ohio have all been participating in the buying movement. The policy of the furniture manufacturers in guaranteeing prices to December 1, 1908, has had a very stimulating effect on furniture sales, and those made this early in the July season have already outstripped the entire movement in January.

Nothing but improved conditions can be expected from the present situation. The railroads are stripped of the lumber necessary to carry on even repair work on their freight cars, to say nothing about general betterment of their lines. The retail furniture men's stocks of goods have been reduced to the very minimum. Lumber in the hands of furniture manufacturers has been worked down to the foundations, and this even moderate resumption means a cleaning out of practically all the dry stock in the hands of manufacturers. Therefore, with very light stocks in first hands there surely will be a scramble for hardwood lumber of all kinds before many weeks.

Specifically, the good end of poplar still ranges relatively the highest in price of any of the hardwoods, with quarter-sawn oak a close second. First and seconds plain oak is receiving a good deal of attention and commanding a fair price. The recent sales of common oak in the furniture trade will materially strengthen this grade. All the northern woods are doing fairly well, with basswood in the lead.

Unquestionably the hardwood trade is over the "bad place in the road," and from now forward can look for very fair conditions.

Why Not Assist.

The howl which is continually coming from certain directions, notably Colorado, that the national forests of the United States are handled "at the expense of our western people through the imposition of taxes for lumber, grazing, rights of way, firewood and multitudinous special uses" would be supplemented by the strenuous objections of timber owners should this government attempt to put into practice such stringent regulations as does France toward private individuals. The handling of the national forests is, however, another matter, and there is certainly no reason why the very small proportion of the country's inhabitants who dwell near them should expect to avail themselves of facilities belonging to all. Forestry and Irrigation, in commenting upon this ridiculous attitude of some western districts if nearby residents are to be allowed to overrun the forests at their pleasure, says that consistency would require the same policy to be applied to our other properties. Our eighty million people own sundry battleships; why not permit certain individuals living near the waters where these vessels ride at anchor to use them gratuitously as private yachts? The eighty millions own an ocean cable in Alaskan waters; why not donate its free use to the few Indians and Americans who live near its termini? Surely this would be just as reasonable, and although it seems that the majority of the people are now waking up to the fact that there must be "something doing" very shortly if our forests are to be preserved and increased, there is always the few who not only do nothing to assist progress, but who drag back and complain rather than render even passive approval of the government's efforts.

A western forest commission recently sought information from France as to how that government has succeeded in inducing individuals to practice forestry, and the financial results of proper methods applied to poor lands. It found that France has adopted the only solution of the reforestry problem by exempting cleared lands upon summits and mountain sides, dunes and moors from all taxation for thirty years, and exempting also all other lands which individuals may replant to the extent of three-fourths of the ordinary tax rate during a like period. In addition, the government gives every possible aid to private persons, based upon the importance of the work proposed or accomplished, such subventions being in the form of seeds, plants, labor, etc.

It supplements exemption, however, by strict regulations and assumes considerable authority over existing forests privately owned. For instance, certain legislation declares that no private property owner may exercise the right to uproot trees or clear wooded lands except after having declared such intention at the Under-Prefecture, at least four months in advance, during which time the administration may signify to such proprietor its opposition, if any, to the proposed work. Before signification of such opposition an inspector examines the condition and situation of the wood and prepares a detailed report, which is presented to the party at interest, with an invitation to refute the opposition. The prefect then gives his opinion upon the opposition, which is forwarded to the forest agent of the district in which the timber is located, and to the owner of the wood; it is also transmitted to the minister of finance, who pronounces ad-

ministratively. If within six months the decision of the minister is not signified to the owner of the land, clearing may be undertaken.

Opposition on the part of the state, to the clearing of private forest lands, may be made when woods are concerned whose preservation is recognized as necessary; for the maintenance of soil upon mountains and slopes; for insuring the existence of springs and watercourses; for the protection of dunes and slopes against the erosions of the sea and the invasion of sand; for the defense of national territory on the frontier, and for the public health. Violations of these regulations may cause the offending land owner to be fined as high as \$275 for every one and one-half acres of land cleared, and he must, if so ordered, set out to re-establish the clearings by plantations within three years. If he disregards this likewise, the state will do the work at his expense.

Decadence of Wholesale Hardwood Yards.

Conditions surrounding the trade in building woods and hardwoods are essentially different. A very large portion of the yellow pine, white pine, hemlock and Pacific coast woods is handled through the medium of thousands of retail lumber yards scattered all over the country. There is scarcely a community of five hundred people that has not at least one lumber yard, and towns of ten thousand often have three or four.

The yard business in the hardwood trade is confined to large commercial centers—notably those that have big manufacturing and woodworking industries. Naturally the largest hardwood jobbing city in the United States is Chicago, as in that city many million dollars worth of furniture, interior finish and other products consuming immense quantities of hardwoods are manufactured. Even in the city of Chicago, however, it is noticeable that there is a gradual diminution in the number of hardwood lumber yards, and those that still exist are carrying lighter stocks than ever before in their history. Every year the extinction of half a dozen hardwood yards is noticed. This is not only true of Chicago, for even in the large eastern cities there is a gradual thinning out of stocks held for local use by wholesale and retail yards.

This relinquishment of the combined wholesale and retail hardwood yard trade is being brought about by the growing non-profitable features of the business. Increased handling cost has entered very largely into this, for by reason of it profits have been sealed down below the point of safety. It is especially noticeable in the east, where the eight-hour labor day prevails almost universally, that the average hardwood yard man says business has grown to be unprofitable. In the heyday of hardwood lumber yards in commercial centers very few manufacturers sold the consuming trade direct, but with the evolution of business nearly every large manufacturer today maintains a sales organization and sells a large portion of his lumber direct to that trade.

There is always going to be room in all the commercial centers for the lumber merchant carrying a well-assorted stock of lum-

ber, but his business is being gradually reduced to wagon trade and quick delivery. When all the cost of re-handling lumber through local yards is taken into account, including labor, waste, shrinkage, etc., very few dealers can figure a handling cost of less than \$5 a thousand. This is a tremendous handicap for the yard man, and if the evolution continues as it has for the last few years it is doubtful if nearly so many wholesale yards as are now maintained can be continued on a profitable basis.

Trade ethics in the sale of hardwoods vary in different localities. A good many large eastern jobbers still confine their trade to retail yards, to a comparatively limited number of large manufacturing concerns, and to the railroad trade. On the contrary, the average hardwood manufacturer, wherever he may be located, is perfectly willing and glad to accept orders from any wholesale consumer of hardwood lumber, and, in fact, from any one who will buy lumber in car lots. This evolution of trade ethics will probably never prevail in the softwood trade, as the manufacturer of yellow pine and like commodities thinks it is much safer to do business with a competent retailer than to attempt to sell his lumber direct to the consuming trade.

Buy Now.

In the issue of June 25 the HARDWOOD RECORD made a careful analysis of present and prospective hardwood conditions, which was largely repeated in its issue of July 10. The summing up of all evidence obtainable from every consuming section of the country enabled this publication to emphasize the fact that a resumption of lumber buying was at hand; that stocks held by jobbers and remanufacturers of hardwood lumber were extremely low; and that prices had reached their very lowest stage.

The advice following "Buy, Now" was perhaps unnecessary, but still is worth repeating, for if users of hardwoods want to take advantage of the best market they will ever face, now is the time to buy lumber. The important orders that have been placed during the last month by many of the large jobbers and manufacturers make it self-evident that the best wisdom of the best men in the trade is in harmony with the views expressed by the RECORD.

Unfortunately for the jobbing trade, during this period of depression there has been little opportunity to buy large blocks of lumber at a price that would show much speculative profit on the present market, but such purchases as have been made will in a short time show a reasonable margin on sale. As a matter of fact, the hardwood lumber business is pretty nearly down to solid trading, with very little of the speculative features embraced in it. Unfortunately also margins are constantly growing narrower and the day of fancy prices in hardwood re-handling are probably over for all time.

Michigan Hardwood Men to Meet.

The annual meeting of the Michigan Hardwood Manufacturers' Association will be called within a few days, probably at Mackinac Island. At this meeting the secretary will lay before the association a complete statistical report showing the stocks of both hardwood and hemlock lumber sold and unsold in the state of Michigan, as well as a close estimate of the lumber output for the year.

SKIDDING THE LOG

(See Supplement Drawing by Thomas J. Nicholl.)

*In the wake of the log is torn, black earth;
A clew to the great forests tragic tale
Where the battle royal makes strong men quail
And stills, for a moment, the woods-men's mirth.
Reluctantly dragged from its forest home,
The huge trunk lurches and plunges to stay;
U'plurning the white leaf mold in the fray
And bringing the scent of the heavy loam.
Woe to the teamster unless he be swift
And strong and brave in the wild forest fight.
Woe to the steeds that are straining to lift,
And fall 'neath the rolling log's swerving might.
Inanimate nature's indemnity
Is paid with men's lives to the fallen tree.*

Laura Raitz Law.

SKIDDING THE LOGS

Pert, Pertinent and Impertinent.

The Family Reading-Table.

Father's busy reading of "The Graft That's All About";
 Mother's wondering when the next magazine comes out;
 Aunt hasn't finished with "The Lifting of the Lid."
 Little Johnny's busy with "The Life of Captain Kidd."
 Grandma's underneath the lamp with "Cities and Their Loot."

Sister reads a poem titled "Justice Gagged and Mute."
 Far off in a corner with a book sits little Tim: "The James Boys in Missouri" is quite good enough for him.

Grandpa has a pamphlet on "The Economic Stench."
 Nephew is engrossed with "The Debasement of the Bench."

Uncle reads a paper on "Corruption in the State."
 Brother reads a torrid screed on "Weakness of the Great."

Sizzle 'em and frizzle 'em and serve 'em piping hot.

What's a reputation? They are guilty, like as not;

Dust on "Pilgrim's Progress," for it isn't much account.

Has a Motive.

The man who robs Peter to pay Paul usually intends to strike Paul for a larger loan later on.

Needn't Worry.

The girl who is in love with herself seldom has rivals.

Pretty Loud.

"Do you believe that money talks?"
 "You bet I do. I no sooner get my hands on a dollar than it says 'Good-by!'"

His View.

"If you are kind and polite to your playmates, Johnny, what will be the result?"
 "They'll think they can lick me."

Safer.

"Don't you believe in love at first sight?"
 "At first sight, yes; but sometimes you take another look."

Cheap Shelter.

A little philanthropy covers a lot of fraud.

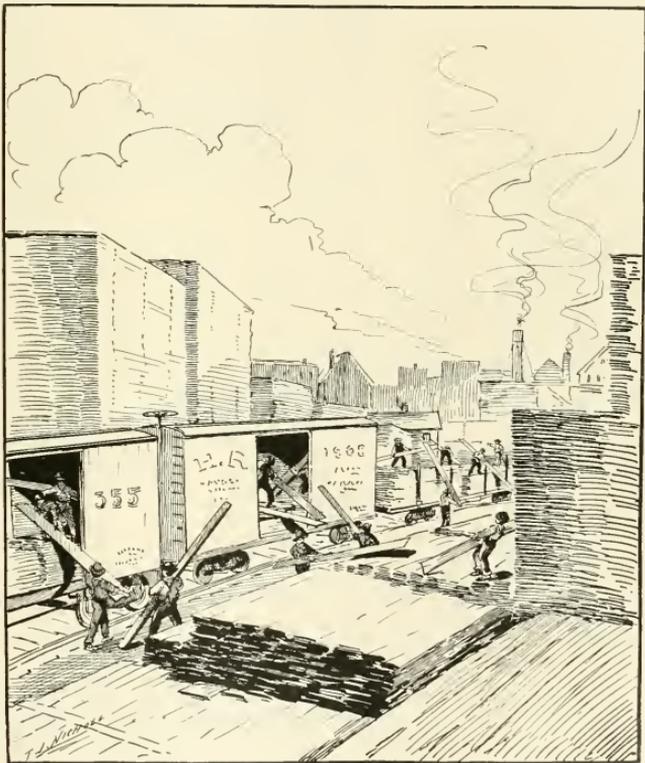

Doubly So.

"Do you believe that Rockefeller's money is tainted?"
 "You bet I do—'taint yours and 'taint mine."

A Popular Variety.

Dog Fancier—Yes; I have all kinds of dogs here; did you wish to purchase any particular breed?
 Old Lady (who reads the papers)—Oh, anything that's fashionable; let me see an ocean greyhound!

Begins to Look Like Old Times.

Hardwood is Moving.

The Jonah.

He meant well, but he didn't know.
 Oh, words of deep pathetic woe!
 He caught a hornet wandering by;
 He thought it was a butterfly.
 Live wires he would boldly test.
 Because they looked just like the rest;
 He'd trust a mule and walk behind,

Because its look was meek and kind;
 A toadstool he would pluck with care,
 With mushrooms growing everywhere!
 Fate always played him curious tricks,
 He had a passion for gold bricks.
 And yet his heart was very kind;
 Exceeding active was his mind.
 And still his troubles seemed to grow;
 He meant well, but he didn't know.

Love Is Blind but Not Deaf.

She smiles—my darling smiles and all
 The world is filled with light.
 She laughs—'tis like the bird's sweet call
 In meadows fair and bright.
 She weeps—the world is cold and gray
 Rain clouds shut out the view.
 She sings—I softly steal away
 And wait till she gets through.

Some Important Foreign Woods.

ARTICLE III.

Ohia.

The building of a hardwood mill is, generally speaking, an ordinary proposition to those engaged in that line of work. However, the writer last winter accepted an offer to install a plant for a hardwood concern in the Hawaiian Islands, with the expectation of profiting not only from the work, but from gaining the unusual experience to be had in a foreign country, and of becoming acquainted with requirements for the successful operation of a mill running on a "new" and "coming" foreign lumber material.

At most of the mills in Honolulu in which hardwood is used the native ohia timber is the principal lumber for building and car making purposes; while the koa, which is a very beautiful species of mahogany, is used almost exclusively for finishing and furniture. It was for the purpose of manufacturing this ohia timber into railroad ties that I made the trip. This wood is somewhat harder and tougher than our American white oak and as evidence of its strength as a tie material I might mention that in a wreck, which occurred on the Hilo railroad in which two ears jumped the track and ran for several hundred feet, the redwood ties were splintered and broken and the ohia ties remained intact, two only of them being torn from the spikes. This spike-retaining quality is one of their chief features, while the ties are as durable as cypress when laid, many of them having been on the ground from sixteen to eighteen years are still perfectly sound.

The timber, as far as commercial uses are concerned, is practically a new thing, and is a very superior material for cross tie purposes; what the future holds in store for it has to be learned, as it has not yet been put to any practical uses other than for ties for the plantation roads on the islands. In regard to its lasting qualities, the fact that ties made of this wood will last from sixteen to eighteen years in a climate that is so excessively moist as is that of Hawaii speaks very highly for this wood. In addition to this lasting quality, the wood has the element of strength to a degree not possessed by others by from ten to fifteen per cent, and its future looks very promising on that account alone. There will be many other uses to which it can be put, among which will be hardwood flooring, as the ohia takes a fine finish, is easily worked and has very few knots or defects in the outer portion of the tree. For framing purposes the only objection that can be offered is its extreme hardness when dry, and its nail-resisting qualities, which, in flooring, would have to be overcome by deep boring for the nail holes.

The timber is exceptionally heavy, as some

of the hewed ties we got out for our own road weighed as much as 250 pounds for a 6x8 S-foot tie, which, with an allowance for the over-size would make the weight as much as seven pounds to the foot. This wood will dry out to 4,300 pounds to the thousand feet. Present contracts for the output will require the sawing of 2,500 ties a day, to cut which we are erecting a mill equipped with a double circular outfit and a mammoth edger for making ties from the 6-foot flitch direct from the circulars, the mills being used for flitching only, while a special trimmer has been designed to take care of the ties and cut them off to lengths, and a transfer carries them direct to the cars.

Fortunately for this enterprise there is no question of a car shortage to face, as the haul in the Islands is short, and a special engine will take care of the product as made. The most interesting part of this operation to an American millman is the logging. These trees grow on top of a lava formation called Poi-Hoi-Hoi, in soil not over two feet deep, and, instead of being cut down, the trees are caught by a cable and pulled over to the ground, with all the roots attached. The tree is then cut into log lengths and hauled to the mill site with "donkey" engines. Part of this method will be retained, but a new system of logging is being installed that will increase the efficiency of the engines many times. At present all the time is consumed in hauling the wire rope around to the trees, while with the new cable system the engine will do this work much faster.

The land on which this timber is now growing is to be planted in sugar cane, and the object in pulling the trees is to clear the land of the roots, which are piled as the trees are removed. As the underbrush is from six to twenty feet high, it may be imagined what a forest fire this will make when this brush and limbs are burned off, which will be done as soon as the firewood has been cut out from the tops left after the logging has been completed.

There are other uses to which this ohia timber can be put, one of which is the manufacture of telegraph and telephone pins, some of which have been made here and were found superior to any other wood. But, like so many experiments, there was a fatal flaw in the working of the pins, which developed from the nature of the wood; it has a tendency to twist and warp while drying, and the pins were made from green stock. Ohia works easily when green, but is very hard when dry, and no one has yet tried to make the pins from dry stock. One thing is certain, and that is the output of pins from dry ohia will not be more than 50 per cent of the amount that could be made from green timber, owing to the hardness of the wood. The only solution of the difficulty of warping is in drying the squares and

working the pins afterward, and any attempt to turn them from stock otherwise treated will meet with the same objection from users. The wood will not dry straight when cut thicker than one inch.

As yet there has not been any attempt to make this material into flooring, because there has never been enough of it cut into inch stock to give it a trial. But the objection to red gum was overcome by proper handling and piling, and there is not much doubt that successful drying of this stock will result with similar care. It will have to be piled more carefully than many other hardwoods, and will have to have sticks closer together; but for all that it will be a paying material under proper management.

Some of the inch boards sawed from the tie logs here were dried in the open sun to see the effect as to checking, and the amount of cracks opening was neither more nor less than in any other hardwood under similar conditions. It is the intention to make flooring as soon as the stock now on sticks shall have dried sufficiently. It will require harder cutters than those ordinarily used to stand up to the work, however, and this one point will be carefully watched.

The tie question is becoming a serious one, and the railroads have for some time been casting about in all directions for sources of supply which would take care of their enormous wants in future years. The Pennsylvania has made extensive investigations of ohia wood, recently sending its expert forester to the Hawaiian Islands for this purpose; as a result it has taken the matter up readily, and contracted for large amounts of stock to be shipped to the States and used as ties.

Probably no "new" wood which has been suggested of late as a possible substitute for the well known old standbys has met with such attention and been so favorably received as has the ohia. It seems to be all that is claimed for it, and it is confidently expected that the years will only prove its good qualities, and perhaps bring out some not yet claimed for it, rather than reveal disappointing characteristics, as has often been the case with many woods which were expected to fill long-felt wants.

As to the country itself—while it is true that Hawaii is part of United States territory—its people and its customs are as distinctly foreign as are its products, but none the less charming. The Islands may well be called the garden spot of the Pacific, and the view of the coast line on approaching Honolulu is one of the finest of the kind in the world. The coloring of the landscape is beyond description, and the climatic conditions ideal, so that lumber operations there do not entail the necessity of hardships and "acclimating" encountered in many tropical countries.

Utilization of Hardwoods.

ARTICLE VIII.

Tables.

The kinds of lumber used for the manufacture of tables have varied considerably in the last few years. Formerly walnut, poplar and

her most pass before it is assembled into the finished furniture product.

From the dry kiln the boards pass directly

of the lumber used is bought already cut in these sizes.

If the boards are for table tops, as of course many of them are, they next pass through the joiner, two at a time, where one edge receives a tongue and the other a groove. These boards are piled one upon the other and the edges of the entire lot are covered with glue at one time. They are then fitted together and clamped very tightly. In this condition the boards are allowed to dry thoroughly, after which they are passed through the planer and then taken up to the next floor of the factory.

The large "solid" table tops are, for obvious reasons, made in two parts which are later fitted together, either permanently or otherwise, depending upon the style of the table made. The round tops which are perhaps the most numerous, pass through several stages before their final circular shape is attained. The planks are first glued together with the longest board corresponding to the diameter of the rough semi-circle; each one farther outside being shorter. After being planed this half table top is passed on to the line-sawyer, who draws a true semi-circle upon it and proceeds to split this line by means of his scroll saw, with unflinching ac-

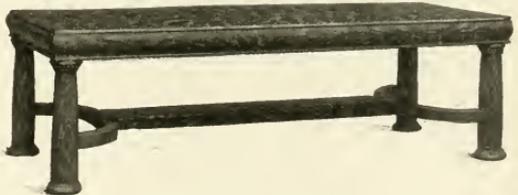

AN ELABORATE EXTENSION TABLE.

ash were employed almost exclusively. Later cherry and birch came into popular favor, and in fact the latter especially is still in demand as the great imitation of mahogany. However, 70 per cent of the lumber now put into tables is of oak, both quartered and plan. Quarter-sawed oak is used extensively as a veneer, and indeed this work is often times more expensive than a piece of solid oak because of the high price of the core and the additional labor involved. The other woods now employed are principally mahogany, birch, maple, gum and elm.

Much of the lumber used at the present time is ordered for direct shipment from the mill. After being thoroughly air-dried in the factory yard it is put in the dry-kiln, where the process is continued until the boards are in perfect condition. This is the rule to which there are no exceptions and is but one of the many processes through which the lum-

ber is usually stacked preparatory to their journey through the plant. It is here that the rip-saw and cut-off saw come into play, for

FINE DIRECTORS' TABLE IN QUARTERED OAK.

ber in the manufacture of tables the average board is from three to five feet in length and about a foot wide. Indeed considerable

curacy. It next passes through another machine which completes the circular shape and also gives it a round beveled edge. An interesting point here is that in finishing this one piece four separate "cuts" are taken so as to enable the operator to work always against the grain. Of course, some round table tops are made in one solid piece, the process of construction being similar to the one just described.

Hitherto we have only considered the tops of tables as being the most conspicuous even in their early stages. Some of the other parts, however, are of more difficult construction, notably the panels or legs on which there is scroll work or hand-carving. Even in these cases the bulk of the work is done by cleverly shaped cutters run by machinery and practically only the finishing touches are left to the hand-carver. The automatic, as well as the hand lathe, plays an important part in

LIBRARY TABLE OF SOLID MAHOGANY, HAND CARVED.

the making of the legs, while a special machine finishes the panels, bevel, mill-work and all. When the innumerable shapes which the various parts of the different tables are considered, some idea may be obtained of the number of machines employed and the varying uses to which they are put.

Another important part of this cabinet work is of course the veneering. The woods

One large machine—a host in itself—has various grades of sandpaper in the form of revolving bands and here an entire table top can be completely sandpapered in a very short time.

Now comes the varnishing. This is an important part of the operation and often several floors of a factory are devoted almost exclusively to this, and to the assembling of

prevent the loss of many important industries.

The above review of conditions in the Ohio valley is contained in a recent pamphlet of the Forest Service, and is followed with many valuable suggestions for farmers and timber growers, which are herewith excerpted for the benefit of the readers of the RECORD.

A farm with a good woodlot properly managed should supply the farmer with posts, fuel, building material and some timber for market. Every farm should be provided with protection from winds and shade for fattening animals, when the weather is very hot. A belt of forest trees will greatly reduce the danger of late frosts to the orchard. The woodlot should occupy the waste land not suitable for farm crops—at least one-eighth of the farm if possible. Forest growth on steep slopes and river banks protects them from erosion by heavy rains and freshets. On a farm without waste land the woodlot should be so located as to afford the best protection along the windward side and around the buildings. Such tracts add materially to the appearance and value of the farm.

The first requirement of a woodlot is protection from grazing. The young sprouts and trees make it imperative to exclude stock from plantations and open stands where reproduction is desired. Hill sides and drifting sands are most liable to injury and even light grazing of such areas should not be permitted. Constant care should also be taken to keep out fire. It is poor policy to burn off leaves to improve grazing, as grass in a forest indicates an unhealthy condition, and the destruction of the leaf litter and humus impoverishes the soil and retards tree growth, while young sprouts and seedlings, upon which the future of the woodlot depends, are destroyed or stunted. It is not a single fire which causes the greatest loss, but the combined effects of many fires, until the trees are either burned through or so weakened that they are thrown easily by the wind. Scars also afford openings for insects, which destroy the tree and infect others. If a railroad passes through the forest or near it the right of way should be kept free from all inflammable material.

A fault with nearly all woodlots is the absence of a dense border as a protection from winds. When the forest is suddenly opened the inside trees are not sufficiently stable to withstand the removal of the natural windbreak which has been formed, and many are blown down, especially where the soil is wet and the trees have a shallow root system. A strip a few rods wide along the exposed margins of the woods should be kept as dense as possible. Bushes and undergrowth should be encouraged and no trees removed from the strip. Where such a windbreak is maintained it will be possible to make thinnings to the leeward with little danger of the remaining trees being blown down. If a windbreak is planted, it is usually best to employ two species, one of which is a rapid grower to afford early protection. Carolina poplar and hardy catalpa are excellent for this purpose.

EXTENSION DINING TABLE—ORIGINAL DESIGN—DOUBLE TOP.

used are principally mahogany and quartered oak. The veneer is glued on to the core and is carefully clamped while drying. Mahogany veneering is somewhat expensive but exquisite effects are produced and so it is well worth the cost.

The next stage in the development of the table is one in which there has been more improvement in the last few years than in all the other processes put together. This is the sandpapering. There are now in use revolving sandpaper cylinders of both hard and soft types, the latter having the property of adjusting themselves to whatever shape the piece to be sandpapered happens to be. There are also machines for sandpapering the rough boards just after they have passed through the planer, and others to add a finishing touch after the shape and size is complete.

The parts. The varnish and shellac are applied in several different coats, due time being allowed for each to dry. The gloss is usually taken off, for the old-fashioned dark Mission finish is coming more and more into use. In fact by far the larger number of tables now used are of this type.

In the final assembling other materials besides woods are used. The trimmings if any are usually of brass, while feet mounted on glass spheres—a design much used—are often of the same material. The table, however, illustrates admirably one of the important uses to which hardwoods may be put. Some idea of the various styles now on the market may be obtained from the accompanying cuts, which were kindly loaned the RECORD by Louis F. Nonnast, a well-known Chicago manufacturer. CLARENCE BOYLE, JR.

Possibilities of the Ohio Valley Woodlot.

For over forty years the Ohio Valley was the very center of the hardwood industry, but little now remains of the original forest but detached, irregular woodlots or woods pastures, usually in poor condition. The custom has been to cut trees for special uses from time to time, leaving inferior trees in possession of the ground. As a result woodlots once fertile and promising have degenerated into stands of crooked, defective and otherwise undesirable trees. Most woodlots are used for pasturage and the ground has become covered with dense bluegrass sod. A heavy growth of grass not only tends to prevent the reproduction of valuable trees, but also robs the

soil of moisture and smothers the roots of trees left growing. The demands of the people are largely supplied from outside and before long the exhaustion of forests in the neighboring districts will cut off the supply which now tends to conceal the actual local shortage. In 1899 Ohio, Indiana and Illinois produced twenty-five per cent of the hardwood used in the United States, but should they adopt the most careful reforestry methods they can never regain that standing. There is, however, sufficient waste land in the Ohio region adapted to forest growth if properly employed, to provide an adequate and perpetual supply of timber for local uses and

In cutting and felling the first precaution is to be careful of the young growth and to have new trees of the most useful kinds replace just as soon as possible those that are cut. All stumps should be cut as low as possible for high ones needlessly waste the best timber of sound trees. Branches too small for firewood should be scattered over the ground, especially in openings, where they will help to hold the leaf litter, keep out grass, and in decaying enrich the soil, except, of course, along railroads. Many trees, chestnut, basswood, catalpa and the oaks and hickories, sprout readily from the stump. If stumps are cut very low and have the rough edges carefully trimmed off with an ax their sprouting capacity is greatly improved.

In planting for post and pole material, chestnut, Osage orange, catalpa, locust and mulberry should be favored; for handle stock, white ash and hickory; for pulp, cottonwood, Carolina poplar, basswood and willow; for firewood, beech, maple, hickory and many others; for lumber white oak, yellow poplar, black walnut, white ash, black cherry, basswood, elm and maple. Trees should stand close enough together in youth to stimulate growth in height and produce long, clear trunks. Later more space for each will be needed. Stands under ten years of age may contain from 1,000 to 3,000 trees per acre. This number should be gradually diminished as the trees develop, until at maturity probably 200 of the original trees are left, that the energy usually wasted in competition for the "survival of the fittest" may be employed in growing timber. The composition of the stand and the quality of its timber can be controlled remarkably by gradually removing the trees of inferior quality and kind. But there should be no large openings in the woods, for the crowns of the trees should be so close together that in summer very little direct sunlight falls upon the ground. The soil should be loose, porous, rich in vegetable mold.

The amount of wood produced annually by a fully stocked thrifty stand of timber in this region depends upon the quality of the soil and the species of trees. Rapid growers on good soil may produce as much as 175 cubic feet per acre each year, which is equivalent to almost two cords of four-foot wood, but it is doubtful if an acre of the average woodlot of this region produces more than one-half a cord of wood per year under the present unsatisfactory conditions.

If the wood cut from the forest annually or at stated periods does not exceed the amount grown during the interval and care is taken to keep the ground fully stocked with thrifty young trees, the woodlot may be kept up indefinitely. The endeavor should be to ascertain about how much wood the area is each year capable of producing and to cut a little less than is grown in order to be on the safe side. In managing the woodlot the goal should be this model condition. In discussing the methods required to accomplish these results several common types of woodlots may be mentioned, and although it may

be impossible to attain an ideal condition much can be done toward it.

A great many woodlots are merely parts of the old hardwood forest which have been preserved in their virgin condition, with long, smooth trunks and compact crowns. Increase in height has practically ceased, and growth in diameter is very slow. The trees are mature, and many are deteriorating. In such stands the producing capacity is practically nothing, since the amount of wood formed annually is offset by the death and deterioration of the over-mature trees. Thus the forest capital is virtually inactive. The dead and dying trees should be taken out first, next the weed trees, and then those which are crowding the best timber producers, but not in large groups, exposing the remainder; rather it should extend over a period of years. In general, it is not safe to cut out more than one-fifth of a stand at one time, or to cut over the same ground oftener than once in five years. The object should be to leave the sound and thrifty trees, which will continue to increase in value, well distributed over the tract. It is important to maintain the humus and ground moisture in every upland forest. No thinnings should be so severe that grass will enter before the openings are filled with young growth.

A large proportion of the woodlots in the Ohio valley region are remnants of the original forest, which have received no care or attention. They are the woods pastures so common to farms. As a result of constant grazing the ground is covered with a dense sod to the exclusion of desirable young growth. The standing trees are usually mature, growing in clumps or sparsely scattered over the lot. Many of them are dry-topped, diseased and scraggy. If the woods pasture is located on land valuable for agriculture, and the rejuvenation of the old forest is impracticable, it probably will be the best policy to remove the timber and lay out the ground into permanent fields. However, the first step in the improvement of an open and grass-grown woodlot is the exclusion of live stock, or at least to fence off the thickest part as a forest reserve, if all cannot be spared. The rest can be cleared of most of its trees and the pasture greatly improved.

Another step is the removal from it of all dead and badly diseased trees and those whose reproduction is not desired. The remaining trees will seed up the openings and provide for natural regeneration. If other species are desired it will be necessary to plant them. Young seedlings for this purpose can be secured from other parts of the forest, or nuts and acorns can be planted. The best time to plant is in early spring. Next comes the preparation of the soil for seeding and restoration to the natural forest conditions. The sod should be broken up by means of a bull-tongue plow or a disk harrow. As soon as good reproduction is secured the remaining mature trees may be removed. It is usually good policy, however, to retain a few large trees to supply special needs of the farm. In removing them care should be exercised to in-

fluct as little damage as possible to young growth. The planting of a shelter belt along the exposed margins of the woodlot is highly desirable.

There are many dense second-growth woodlots in this district. The trees range in size from four to twelve inches in diameter and twenty-five to fifty feet in height. In some instances there are dense groups so evenly matched in size that the development of all is temporarily arrested. Often there is a considerable proportion or so-called weed trees or those which spread out and bush until they occupy space all out of proportion to their value. Occasional old trees remain from the first cutting; they are usually crooked, limby and defective. Reproduction in the dense shade of these old trees is scarce and stunted. In such stands an improvement cutting is needed, including all growth which the woodlot would be better off without. As a result this material can be used for firewood.

Very dense stands need thinning. This should not be undertaken, however, without a clear understanding of its objects. Trees which have grown in the open are extensively branched, while a typical forest tree has a long, clear trunk and a short compact crown. The amount of wood a tree produces depends upon the area of leaf surface exposed to sunlight—the larger the surface of the crown the larger the amount of wood produced. Trees which are crowded while young try to get their crowns into the sunlight and consequently produce long, slim stems. When straight trunks of sufficient height have been obtained thinning gives room for increased root and foliage development, which is followed by increased wood production. In thinning a stand those trees should be left which will be most valuable for final crop, and those removed which have the smallest crowns, show signs of deterioration, or are of less valuable species.

Thickets are common on outover lands and abandoned pastures. The trees vary from three to twenty-five feet in height and diameter up to four inches. Cleanings should be made when the most serious crowding begins, which will be when the trees are from ten to fifteen years old. In general, no openings in the crown cover should be made that will not close in three or four years; that is, not more than two or three feet of open light space should be left between the tops of the trees remaining. The spacing in the stand should be from six to nine feet each way, though of course the arrangement will be irregular. The material removed may have a value for hop and bean poles or barrel hoops, or part of it may be large enough for firewood. A second cleaning should be made as soon as the trees have begun to crowd seriously again, which will be about ten years after the first. The timber removed this time will probably have considerable value for firewood, posts, stakes and other uses.

All of these suggestions for the management of the woodlot are considered entirely practicable by the Forest Service, and are being carried out successfully on a great many farms in the Ohio river region. With a little care and foresight every farmer can make his woodlands a valuable and attractive asset to his farm.

The Handle Trade.

More Fraternalism Needed.

Conditions in the handle industry seem to be looking up, in common with other lines of business. However, there is still disposition on the part of many manufacturers to do business, whether they profit by it or not. Of course there are a good many instances when it is necessary for a man to get back the use of a portion of the capital he has tied up in stock to meet obligations and current expenses; but on general principles, doing business merely for its own sake is about as foolish a policy as a man can pursue, and one which is better calculated to demoralize the majority than any other.

The trade that people are in the handle business to make money, and it would be only reasonable to suppose that they do not care to sell their goods except at a profit. This being the case, it would seem not only an unbusiness-like but a precarious proposition to place goods upon the market at cost, or actually below the average cost, as certain manufacturers have been known to do of late; of course there is the bare possibility that manufacturers who do so have system down so fine they find they can make handles cheaper than the majority—but this is hardly likely, in view of the experience of men much older in the business. Therefore the price-cutting proposition seems to resolve itself into the simple question, "What shall it profit a man if he gain the whole trade and lose his handle factory?"

The association has recently put out three sets of grading rules for the consideration of its members, soliciting opinions and suggestions. One of the three sets, or modifications thereof, will be adopted at the next meeting, and from all indications it will be the three-grade set, as the committee is receiving congratulations and support from all directions on its logical arguments in favor of such rules, and the concise and practical set which it has evolved. It is sincerely to be hoped that the next meeting will see a large and enthusiastic group of handle manufacturers come together to thresh out this very important question, for if there is one thing which the handle association needs and needs badly, it is a standard basis of grading—or rather a basis of grading to which all will adhere.

There is no use in having such a system unless every member will stay by it loyally and honestly, any more than there is any use in figuring cost of production to a nicety, establishing reasonable values for the product, and then going out and selling the goods for anything which may be offered. Thus if the grades also are to be "juggled" and one man quote a certain price on a certain grade, while another says to the buyer, "I'll make you the same price, but I'll guarantee a better article for it," the point is missed again, and nothing is gained by all the meetings, discussion, committee work and grading rules in the world.

As regards selling handles—while of course buyers have their place in the trade—don't forget that they are going to drive the best bargain they can for their house; when one of them tells you he can buy a certain handle from a certain man for a certain price, make him "show you." And don't let him take an old quotation and keep his thumb over the date while he's doing it, either! Because some of the nicest gentlemen in the buying fraternity have been known to do that very thing!

Don't be suspicious of your fellow handle manufacturer, and above all don't be too credulous when you're talking to the buyer!

The New Three-Grade Proposition.

The secretary of the Handle Manufacturers' Association recently sent out the reports of two committees on grading rules for the consideration of manufacturers, urging them to attend the next meeting—of which they will be duly notified—prepared to offer suggestions and vote for the adoption of the one which most nearly meets their views.

Without disparaging the report of the regular committee in any way, which indicates long and patient study over a very complex problem, the majority of correspondents seem to think the three-grade set perhaps supplies the needs of the present more concisely and adequately. While designated as "new," this mode of grading has long been in use by Canadian concerns, and the secretary is receiving numbers of letters from manufacturers who state that they have used a similar system independently for a long while.

Frank J. Leland, chairman of the special committee which worked out the rules, sets forth his arguments in their favor as follows:

"The manufacture of hickory handles is a special business with the plant assets of par value to those only who are interested in the business and taking into consideration the danger of fires, trouble with labor, the growing scarcity of timber, the invested capital and the talent connected with the business, it is certainly worthy and entitled to a good profit every year. In the years following 1875 the handle business paid large dividends and was highly satisfactory, and there is no reason why, if the handle business is squared with present conditions, it should not be equally as successful now. To realize this there are some reforms needed, but none that cannot be brought about by the handle association.

"One of the reforms needed is in the grading or classification of handles for the domestic trade. For more than twenty years the Five Grade list on ax handles has been in use. This list has been a huge mistake and responsible for many of the ills of the business. Under it the grading has been so elaborate and complex that handle manufacturers themselves were unable to agree,

while the jobber who bought the goods knew little or nothing as to the grade outside an extra or a No. 3 and as the average handle sold has ranged between these two extremes, it has been an easy proposition for unscrupulous makers and those without reputation in the markets to cut prices and grade goods accordingly, the result being ruinous competition and the demoralization of the business.

"Under a Three Grade system there can be no misunderstanding. Manufacturers can make no mistake on classification and jobbers cannot be imposed on. Under it any manufacturer will be slow to offer goods below standard prices, as any concession will be entirely at the expense of profits.

"Under a Three Grade system the special advantage to the manufacturer will be easier methods of grading raw material, sawed handles and those that are rough turned; less danger of bad grading from carelessness in packing room; less trouble in keeping stock; less depreciation of stock; less clerical work in office; better maintenance of price, and larger profits.

"Under a Three Grade system the special advantage to the jobber will be easily-obtained working knowledge of the grades so that inferior goods will not be accepted. Number of grades will be more in keeping with other lines of woodware, such as spokes, hubs, rims, and other lines of carriage and wagon wood stock, agricultural tool handles, cant hook and peavey handles and the like. Sales will be made easier and clerical work lighter.

"A number of jobbers have been approached with regard to a Three Grade classification, and without exception they have endorsed it and stated that it would, in their opinion, surely be welcomed by the entire jobbing trade. With this endorsement, the sooner same can be accepted and put in force the better, as the light stocks of handles now in hands of the trade furnishes an opportunity which may not occur again in years.

"The Three Grade proposition is submitted and recommended to the handle association as a move in the right direction for the improvement of the business and the producing of satisfactory results. Its adoption is strongly urged in connection with price list that will not put any handles below cost of manufacture or the price of extras below present quotations.

"Another reform that is needed in the handle business is the grading of red hickory. There has never been a time when red timber has been given the place it deserved and in the purchase of white stock vast quantities of red wood, the equal in every way of the white wood, have been rejected or destroyed. The time has come when the growing scarcity of hickory makes it necessary to consider the value of red stock and its introduction on a better basis into handles. The national government has made exhaustive comparative

tests as to the value of white and red hickory for the spoke people and in their report as to the result of the investigation they say 'that weight for weight red and mixed hickory has as great a resilience factor as white wood and are equal in mechanical value.' With this supreme authority it is simply a matter of education of the buyers to insure red handles being given the recognition to which they are entitled.

"It is therefore suggested that the best selection of all red ax handles be put under the select grade, but that they shall be packed separately and branded on cases "All Red Select," and that they shall be sold at same price as the regular select grade of goods. Also that the association issue a circular letter to the trade setting forth the value of red hickory and urging its use, and that same be distributed by the members of the association."

An Interesting Feature of the Next Meeting.

H. D. Hartley, secretary of the National Hickory Association, called at the office of the Handle Manufacturers' Association in Chicago, July 23. Mr. Hartley is well posted on all hickory matters, and is in close touch with manufacturers of wagon material and other lines in which that wood is employed. He states that it is now the intention to make the National Hickory Association one composed of organizations engaged in special lines of manufacture, which would naturally be eligible, rather than continue it along the line of having individual firms constitute its membership. This is undoubtedly a better plan and one which will enable the

association to cover a broader field, and with greater efficiency.

Mr. Hartley has been invited to address the next meeting of hickory handle manufacturers on the work of his association, and on various phases of the hickory supply question. He considers the new three-grade list recently submitted by special committee strictly in keeping with present conditions, and in fact necessitated by them, and believes that the association would do the wise thing in adopting it. The Forest Service has fully demonstrated that the commercial value of red hickory should be as great for most purposes as that of white, and efforts to have it included in the higher grades of stock have been successful with manufacturers of wagon material. In the work of experimenting which the government carried on for two years or more, the members of the National Hickory Association furnished the necessary land, timber, machinery, and in fact all equipment for conducting the tests in the most approved and thorough manner, and their outcome should be a source of much gratification to users of this material.

Secretary Hartley believes that the handle association could accomplish wonders in getting red hickory established by a little educational campaign among buyers of handles, for he believes that they are amenable to reason in this matter, and certainly to proof. He has kindly consented to outline the work the National Hickory Association has accomplished so far for an early issue of the Record, and it goes without saying that handle manufacturers will take pleasure in bearing from him along the same line, at the next meeting.

Hardwood Matches.

Strenuous efforts have been in progress the past half dozen years to produce suitable common matches from material other than the ordinary soft wood. There are several reasons for this. One reason is that the species of soft woods which have been utilized for making matches for many years are becoming exhausted. The expense of getting the proper lumber has been increasing right along. This has compelled match manufacturers to experiment. They have undertaken to produce matches from something else.

Another reason why manufacturers have turned their attention to producing matches from hardwood and various other materials recently is because the hardwoods are preferable for some reasons. The fire underwriters in certain portions of the country prohibit the use of soft wood matches in mills and other places where fires are liable to be caused by the soft wood matches breaking off at the head while scratching them, causing the lighted head to fly off among inflammable material. Many fires can be traced to this source. Hardwood matches being tougher and more elastic do not break off so readily.

Again, hardwood is used necessarily in the

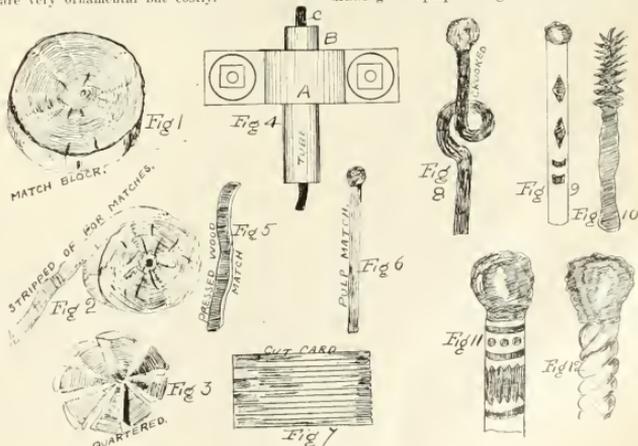

In making hardwood matches the process differs in some particulars. The blocks are selected as in Fig. 1. There are several operations involving the reduction of the block to the little cylindrical forms of matches. Sometimes the stripping process is employed, by which the strips are shaved off from the revolving block as in Fig. 2. The long strip is readily cut into matches by machinery possessing the required blades for mechanically performing the work. There is not very much hand labor employed in the making of the modern hardwood match. Again, instead of the strip method, in some shops the blocks are quartered as in Fig. 3, and each piece is taken in hand for splitting. The individual pieces are reduced to the size of matches and finished.

Still another operation involves the reduction of the pieces of wood to pulp form. Various kinds of pulp are used, some is made from old rags, and paper from the pulp mills is used. This is mixed with the pulp of wood and matches are pressed from it. In reducing the wood to pulp digesters and boilers are employed.

After the pulp is formed it is passed through tubes to make the round form of the slender strand. One of the tubes is shown in Fig. 4. It is of steel and is held in place by the bolted cap A. The tube proper is marked B. The pulp in process of pressing through the bore in the tube is marked C. The bore is made the right size to reduce the strand of pulp to the standard match diameter. After the long strands are made and partly dried cutting them into match lengths follows. Then comes dipping and the matches are ready.

Pressed wood matches in ribbon-like form are also seen on the market now, one of which is shown in Fig. 5. A finished pulp match is shown in Fig. 6. It is possible to cut cards of matches from pressed wood pulp. Fig. 7 shows one of these cards. Instead of drawing the pulp through tubes into round

production of certain engraved or polished matches and fine, surface-finished stock, which are very ornamental but costly.

forms it is pressed between steel rollers into a ribbon form, wide and thick enough for the formation of cards of matches. The cutting follows and then the dipping.

Various forms of hardwood and pulp matches are exhibited next. Fig. 8 shows a match with a twist in the center. This is solely for novelty. The crook is put in while the wood is undergoing steaming. When dried out the match becomes stiff and the buyer wonders how the turn was made in the shaft without splintering it. Some wonderful effects can be made with pulp matches. It is possible to adorn such matches with pieces of glass, worked in at the moulding, as in Fig. 5.

Luth Hickman's Invention.

Luth Hickman used to run a sawmill in east Tennessee, and kept the wolf away from the front door of his residence by throwing sawdust into the animal's eyes.

One fall, several cycles since, he took a

LUTH AND HIS INVENTION.

contract to supply the "bridging" for the "sleepers" in the new Ducktown hotel. The bid he made was so low that not a few of his friends advised him to make an assignment before he even started on the job. But he said he would stick to it or bust. So he started in on the work, and before he had 50 per cent of it completed he was the loser by considerable. This naturally caused him much worry, and he sat up late in the evening nursing said trouble.

One P. M. very close to A. M. he ran across a scheme to stem the tide of bankruptcy. Then he began to smile. He sniled so vehemently that his wife was awakened by the noise. She sat up and at once began to scold him. But that did not hurt Luth's feeling, for he was quite happy over his bright idea and in spite of his wife he dozed off into slumber, and mixed snores with smiles.

Before breakfast next morning he got up and dressed. Then he sauntered down to the mill several furlongs distant. There he took off his coat and cuffs and, procuring a file, colchisel and hammer, began to tink-

This results in an ornamental match, which looks attractive among the smokers' effects. One also finds engraved hardwood matches occasionally.

Fig. 10 shows a queer form of hardwood match, made with a bushy top by slivering some of the wood. This slivered part is saturated with oil, so that when ignited there is quite a torch of light made for a minute or more. Hardwood engraved matches of the nature shown in Figs. 11 and 12 are coming out in elaborate smoking rooms found in clubs and hotels. They are expensive, but the buyer does not care for that so long as he gets a novelty.

GEORGE RICE.

with the 36-inch band-saw. He measured the teeth on the circular saw and their distance apart, and with the file made holes in the other so that the teeth in the circular would fit into the holes perfectly. In other words, he so fixed the circular saw that it would permit the band to curve around it. After accomplishing this he set the machinery going.

Picking up some studding he placed it against the circular portion of his invention until it had cut into a considerable length, then he bent it over to the band part and severed it on an angle which made perfect bridging.

The old way took four men laboring constantly for half a day to do what could

DUNC AND LUTH.

be done by one individual in twenty five minutes with Luth's scheme.

When these four hands came to work as usual that morning and saw their profession damaged by the labor-saving device they were disgusted and moody. One of them had seen the moon through the trees, so understood his bad luck; but the other three were at a loss to know how they came by such adversity.

"You have kicked the wolf from your door against ours," said Dunc Looper, the

one who had seen the moon through the trees. "I am awfully unlucky—besides this I have the indigestion and broke my razor strap. Troubles never come singly."

"Don't feel so out of sorts, employee," said Luth, good naturedly. "I will give you work in other lines. There is plenty of labor for all. So long as I am proprietor of this sawdust institution you will not have to board that wolf."

So the four workers began to look upon the Bill Nye side of life at once, and congratulated each other, and Luth himself. They even went so far as to telephone to their families about the invention.

As for Luth, he got the "bridging" contract out ahead of time, and actually cleared \$50 on the deal. Yes, he made it out of the invention and sent a model of same to Washington to have it protected by the government. After doing this he sold it to a sawmill machinery house in Cincinnati for a snug sum. In fact, he got enough cash out of it to give his son a college education, and enough left over to buy some timber land in Kentucky.

G. D. JAMES.

New Market Condition Report.

The Hardwood Manufacturers' Association of the United States under date of July 14 sent out a new statement of market conditions covering poplar, oak, ash, cottonwood, gum and other hardwoods. Accompanying the report was a letter from Secretary Lewis Doster, as follows: "To All Members: We have passed through the hardest part of our battle with the commercial depression. We have been able to realize an apparent betterment in the industry which naturally comes with the return of a more suitable amount of business and are met with the fact that stocks of hardwood in the hands of the producers are very small. This refers especially to the higher grades of lumber in all kinds of wood.

"In this new statement of market conditions you will note are some changes, the most decided of which is in quartered oak—a slight advance in high grade white and in the red, in both No. 1 common and fns. A slight increase will also be noted in gum. No. 1 common and better grades in practically all woods are strong; it is hoped the lower grades will develop more strength in the near future owing to the splendid condition of the boxmaking industry and the noticeable change to higher values in some of the competitive woods, especially pine. Respectfully submitted,

"LEWIS DOSTER, Secretary."

Canadian Lumbermen's Association.

The Canadian Lumbermen's Association was organized last month, with headquarters at Ottawa, to promote better trade conditions in the Dominion. The association states that its object was not so much to do with prices as with other matters affecting the industry, which are continually arising along other lines. The membership is gathered from all sections of the country, and it represents a capital of perhaps \$25,000,000. The association will pattern somewhat after the mode of operations of the National Wholesale Lumber Dealers' Association of this country—in which its president is a prominent worker.

The officers chosen by the Canadian Lumbermen's Association are as follows: Honorary president, J. R. Booth, Ottawa; president, Gordon C. Edwards, Ottawa; vice-president, J. B. Miller, Toronto; treasurer, R. G. Cameron, Ottawa; the secretary will be a permanent paid official and has not yet been appointed. The Executive Board will consist of twenty members.

A Plea for the Young Walnuts.

The time has now arrived when it is safe to say that the passing of the hewn export walnut log is an evident fact. The logs represented in the picture are a bunch of eighty-five choice pieces of wood, running from eighteen to thirty-two inches in diameter, making an average of twenty-three inches. They were collected at considerable expense from a territory thirty-five or forty miles in extent, and shipped to the Hamburg market about eighteen months ago. It would be a difficult task to assemble such a collection of logs again. The area of country that produces this variety of timber, though large, has been scoured from center to circumference by timbermen in search of walnut. They have for years been selecting and picking out the largest and best trees, adjusting the requirements as to size and standard of logs to, in a way, make them conform to the specifications of inspection rules. This accommodating method of adjustment has now reached the limit, as the logs have dwindled so in

tion with a large mill, and most of the small dealers, who have been getting out export walnut logs exclusively, are eliminated from that branch of the business.

The best of the walnut has been taken, to such an extent that there is but little of the good left. It was handled similar to the manner in which the company of soldiers handled the farmer's zigzag string of fence. On a certain wintry day, when the thermometer registered considerably below zero, and the bluecoats were shivering from the cold, the captain realized that the temptation to appropriate the well seasoned rails for fuel would be too great for resistance, so he gave orders that only the top rails should be taken. Strange to say, this order was not violated, and yet when they broke camp there was little left but the ground chunks.

I do not wish to convey the idea, however, that the walnut business is about at an end in America or that this noble timber will soon become extinct, for such will not be the case.

profit, should not be cut, from the fact that they have just reached the point at which they most rapidly increase in value. Very few of these trees are large enough for shipment in the log, but they are a tempting morsel to the saw mill man who is hungry for walnut. If the ax could only be withheld from this walnut, and if left unmolested for a period of at least twenty years, what a grand inheritance they would be for the next generation.

One of its most favorable features is that it is mostly growing on lands that would otherwise be comparatively non-productive of wealth. As if by its own intelligence of a proper sphere in which to locate itself, the walnut seems not to encroach upon the realm of the plow. It establishes itself along the lanes and byways, or in nooks and corners of the fields, not intruding upon lands desirable for agricultural purposes. It invitingly reaches out its graceful limbs, and the sprays of its beautiful foliage form shady spots

BUNCH OF EXPORT WALNUT LOGS READY FOR SHIPMENT.

measurement that no further attempt will be made to form rules in their favor.

It is hardly possible for a shipper of walnut to find a big log even occasionally, to mix with his little stuff, to sweeten it up, and make a small shipment of but a car load or so, possible. Some dealers who have mills and are buying large numbers of walnut logs, have for several years been combining the log and lumber business by holding out the choice and most suitable logs for hewing, probably finding on an average, about one first class prime log to seventy-five or a hundred. These have been nicely dressed and prepared for export in the log, and brought very attractive prices, but it was robbing Peter to pay Paul, and the lumber piles suffered, so this method is being abandoned, and the passing of the export walnut log will soon be complete. This way of handling the business is not possible except in connec-

tion with a large mill, and most of the small dealers, who have been getting out export walnut logs exclusively, are eliminated from that branch of the business.

Proper action will doubtless be taken before such a lamentable condition could possibly come about. It is only to the passing of the hewn export logs that I refer. And as to these I must say there is no special regret attached to their disappearance. They have not been cut before their time; as a rule, only the older and fully matured trees were taken.

It is the waste and destruction of the smaller trees that has set in, that most grievously concern us now. There are myriads of them, actually more clean, straight bodied and thrifty young walnut trees scattered all over the Mississippi valley states now, than ever before; many times more than in all the rest of the world combined. They range from the size of saplings, and I might say from seedlings, to trees from ten to sixteen inches in diameter, breast high. These latter sizes, while they might yield a

about the border of the fields, and at the end of the corn rows, where the plowman stops to scratch a moment's rest, and breath of coolness beneath it; and where the panting cattle seek shelter from the summer sun. It has taken up its abode along all the streams, and in every secluded spot, and waste piece of rich, though neglected overflow lands along the bottoms. It has crowded its way into these irregular shaped plots of ground, surrounded by the many bends and crooks of streams that follow a tortuous course through the valleys. The lands have become set to a stand of this indigenous growth of thrifty black walnut, and the aggregate of its area would amount to millions of acres. There is no logical or any other reason why it should be cut down before maturity, and wasted. It is a foolish crime to do so, and it should be prohibited by law. The land on which the trees grow is not needed, further than as

pasture, which the trees do not prohibit. It is only on account of flooding, or the rocky nature of the land, and other features rendering it unsuitable for cultivation, that they have been permitted to assert themselves.

Hence why should they be cut down? Why should their owners, like the imprudent Esau of old, be permitted to sell their unearned inheritance for a mess of pottage? What is the use of all this talk about silviculture, arboriculture, afforestation, and all subjects relating to the planting of trees or the restoration and creation of forests, if on the other hand the young and undeveloped, though thrifty trees, that have cost nothing, a handsome gift of Nature, are allowed to be all cut down and ruthlessly destroyed? How grossly absurd, and inconsistent is such a proposition. What is the use of making a mockery out of the whole subject of forestry, by strenuously advocating economy in cutting timber, and the care of young trees in certain localities, and at the same time allowing them to be wilfully slaughtered in other places where they are just as much needed?

All the farmers in the great Mississippi valley should have some legal restrictions placed upon them, as to the cutting of walnut

trees under certain sizes and conditions, even on their own grounds, and laws should be enacted governing these matters, with penalties fixed for the violation of same. The walnut, above all other species of tree, should be preserved and perpetuated in as great numbers as possible, for there is no other kind of timber that so completely fills all the requirements and uses for which wood has been applied. If Aladdin, through his magic lamp should cause his genii to appear and suddenly transformed into walnut every forest tree, and there was no other kind of timber left on earth, still there would be no serious interruption of any one of the vast multitude of avocations in the line of woodcraft! There is no other timber that could so perfectly be substituted for all. It is quick to grow, long lived and durable, ornamental in the open and majestic in the forest, produces an edible fruit, and is not attractive to insect pests. For centuries it has stood highest in the estimation of man, and many pretty legends are associated with its history. As to its very superior qualities as a commercial wood, there is no question, and I hope an interest will be aroused in its behalf that will prevent its utter destruction, or even a further diminution of the present supply of this wood.

J. V. HAMILTON.

A Land of Desolation.

The HARDWOOD RECORD is pleased to give space to the following interesting article, written by Frank Spangler of Toledo, Ohio, which is a strong argument, if another be needed, for the immediate necessity for this country's taking up in a logical way the reforestry problem:

I invite you to visit in imagination a country which serves as an example of what this one may expect unless early legislation is brought about to reforest cutover lands, regulate the cut of timber and protect it from fires.

Dalmatia, now a part of the Austro-Hungarian monarchy, located on the eastern shore of the Adriatic Sea, was once one of the richest provinces of the Roman Empire and a favorite resort of the wealthy aristocracy. During the reign of Emperor Diocletian he had an immense palace there and the country supported a large population. The soil was fertile, the upland grass fattened herds of cattle and goats for the city markets, and, altogether, the Dalmatians were a prosperous and happy people.

Later this land fell into the hands of the conquering Republic of Venice, then the dominant commercial power of the world. The greedy Venetians ruthlessly stripped the trees from the fine mountain slopes to build ships for their large navy. As a result the soil washed away, springs and rivers dried up, and now it is a land of desolation more dreary even than Syria. We are told the attempts at cultivation by the peasants are pitiful. As far as possible they collect the rocks and stones in great mounds on the least de-

scribable ground of the tiny fields, and where they can find among the remaining rock-earth sufficient for the roots of one olive tree, or even a grape vine, it is planted. Often a whole family is compelled to live for a year on the product of one olive tree!

Dalmatia might well say to our country: "As I am now, so you will be." Italy is well on the same road to the same ruin and for the same reasons. The Apennines, once heavily timbered to their summits, are now practically bare. Firewood is sold in small bundles at high prices. There are no wooden houses, and it is necessary to employ all sorts of makeshifts for the once abundant timber. France went the same course for centuries, and only by the most strenuous exertions and enormous outlay of money has the destruction of timber been partially checked by legislation, the introduction of scientific forestry, and the establishment of a system of reforestation. Spain also stands forth as an awful example of what happens to a country which permits the reckless destruction of its forests. When there is plenty few, if any, ever think of the future.

Even in my short lifetime I am seeing the effects of all this waste. We need not ask the government for an appropriation of \$250,000 with which to make an estimate of the standing timber of the United States. Most of the standing timber is now in the hands of individuals and large corporations, whose holdings are already estimated, which could be reported. I know of timber holders who spent as high as \$15,000 to estimate 250,000 acres. This will give an idea how much the department would have to spend to estimate

independently the standing timber of the entire country.

Go back with me to the woods of Maine. Lumbering has left parts of that state a hideous array of blackened stumps and unsightly brush. A large part of the beautiful White mountains has been ruined by the remorseless saw. Sections of the Appalachian chain have been converted into crying wastes as well.

All are familiar with the sweeping away of the pines in the east; the second act saw the despoilers busy in Michigan, Wisconsin and Minnesota and the final attack is now being made upon the Pacific Northwest and the forests of the South. The last of the pine areas are going rapidly the same way, though even thought to be inexhaustible.

Legions of men, in well organized armies, are engaged in conquering these forests and the time will speedily come when not enough will be left to sigh a mournful requiem over their departed glory. The destruction of the hardwood forests, left for the most part to the smaller lumber interests and the settler who makes clearings, is proceeding at a pace so alarming that a competent authority estimates it will be complete in twenty years. And then a wood famine; then the fate of Dalmatia!

Little Switzerland, perched up among the Alps, has taught the world some valuable lessons. The first was how to get rid of tyrants and establish a free democratic republic that for centuries has bid defiance to all greedy conquerors. While France and Italy, nearby, were destroying their forests and with them their national life and prosperity, Switzerland was taking good care of her natural resources. Over one thousand years ago she possessed a forest system, and the fifteenth century developed scientific forestry. She is perhaps the best governed country in the world and her people, though mostly poor or of limited means, seem the most contented and happy to be found anywhere. The beautiful scenery and magnificent mountains, limpid streams and salubrious climate draw great hosts of tourists every year, leaving behind them an amount of money that adds greatly to the revenues of the government and pocketbooks of the peasantry. Had the forests been destroyed centuries ago, as in Syria and Dalmatia, Switzerland would now be a desolate waste.

There is not a farmer or land owner between the oceans whose future prosperity is not dependent on the preservation and restoration of the forests. Not only every farmer or land owner, but every citizen, every voter, should be interested in this movement. The timber still standing on the farms and along the waterways should be carefully guarded and husbanded and the planting and replanting of trees, to take the place of those destroyed, should be the fixed policy of every land owner. This is a young country and may learn from the older the sad lessons that like causes produce like effects.

Much more may be said on this subject, and statistics can be had that are astonish-

ing. We must keep on writing and talking with the belief that it may not be in vain—that a wave of this sentiment may blow so strongly over the country that each state

will have on its statutes a law enforcing the preservation of such timber as is left and the reforestation of all the waste lands.

FRANK SPANGLER.

News Miscellany.

Will Hold a Unique Festival.

PISGAH FOREST, N. C., July 17.—Editor HARDWOOD RECORD: I thank you for the very kind writeup you have given me in the last issue of the HARDWOOD RECORD. There is no better grease to our enthusiasm than a little approval of our actions coming from a friend. I think all good fellows crave more the love and approval of their friends than they do money or other worldly success.

However, one statement I wish to correct if I may, and that is that the Pisgah Forest boundary consists largely of cut-over lands. This is not the case; on the contrary, the large majority of the lands have never seen an axe as yet.

I want to say that you are setting for yourself a lasting monument by arousing in an intelligent way a definite interest in forest conservation; the HARDWOOD RECORD is doing wonders to aid a practical understanding of forestry in this country. With regard to the articles on "American Forest Trees" I want to say honestly that I consider the book which you propose to issue will be a very good one. I am sure it will find a ready sale among all foresters and forest students, and above all in the lumber fraternity, where forestry interest has been aroused to a high pitch.

Your article on "Forestry vs. Forest Economy" is particularly good. It supports the suggestion that the Interstate Commerce Commission be given increased authority towards regulating the rates on low grade lumber in carloads. The main enemy of conservative forestry, meant to preserve timber for the future, is the present low value of stumpage and the present cheapness—in spite of claims to the contrary—of lumber. As long as lumber is relatively cheap stumpage is relatively cheap. As long as stumpage is relatively cheap, nobody can be induced to either raise it, to preserve it, to protect it, or to pay taxes on land for producing stumpage. Give me European stumpage prices for western North Carolina, and I shall practice sylviculture with the same intensity in western North Carolina with which I would practice it on the happy hunting grounds of Germany. Nobody raises cotton with the prospect of getting 4 cents a pound on it, or wheat with the prospect of obtaining 50 cents a bushel for it. Cotton production and wheat production are reduced where and when the price of cotton or wheat is particularly low. For

the same reason stumpage is not produced where the price of stumpage and as long as the price of stumpage rises particularly low.

I enclose herewith a photo showing our present yard of yellow poplar at Pisgah Forest station, in a situation known to you.

Forestry at Baltimore will be twenty years old this fall, and the Hillmore Forest School will be twenty years old. I have planned, together with graduates of the school, a Thanksgiving festival beginning on Thanksgiving day and ending on the Sunday following. Do you think there is any chance to arouse the interest of lumbermen, notably the committees of the various associations, in this festival? It is my plan to show during that time the achievements of the first attempts at mechanical forestry in this country. Do you not think this plan is a good one and one in which prominent lumbermen will be interested?

C. A. SCHENCK.

Big Timberland Transaction in West Virginia.

What is said to be the largest single sale of timberland in the history of West Virginia has been made by the Baltimore & Ohio Railroad Company to a corporation which will at once begin development. The purchasing company has mills at Ridgeway and at Camden-on-the-Gauley, within reach of the tract. The combined capacity of its mills is 350,000 feet a day. Two million dollars is the reported price paid for 200,000 acres of hardwood, chiefly virgin forest, containing yellow poplar, cherry, oak, maple, birch, ash and many other valuable woods.

The land lies in a mountainous region drained by northeastern tributaries of the Great Kanawha, which empties into the Ohio about 200 miles from Pittsburgh. It is one of the largest and most valuable bodies of hardwood timber remaining in the Appalachian region. Many of the mountain ranges which cross the tract are from 3,000 to 4,000 feet high and covered to their summits with rich forests.

North of this tract, but drained by the same streams, lies another holding of 120,000 acres, recently secured by a pulp company. This is covered with spruce and hemlock, with many patches of hardwoods. Development of the property, it is said, will begin in the immediate future. The two bodies of land, lying in the

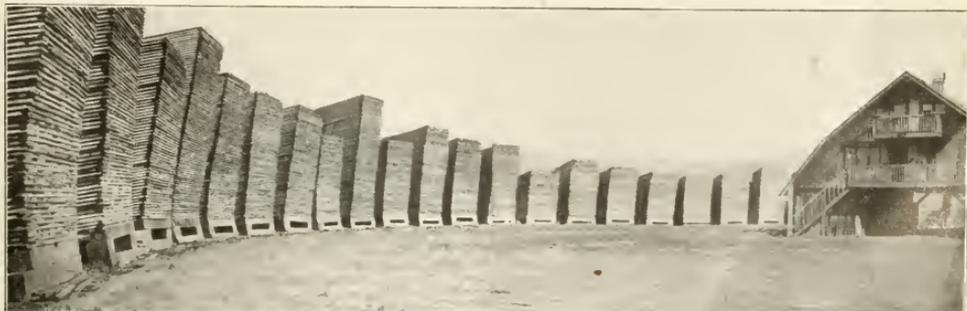

same region, aggregate more than 500 square miles of primeval forest about to be turned into marketable products.

The stripping of the forest cover from a region so large and so mountainous will be watched with interest by those who study the effect of the soil cover on stream flow. The rainfall over the region is very heavy—more than four feet annually. Snow six feet deep on the timbered mountains, while not usual, is an occasional occurrence. Fire is sure to follow the usual methods of lumbering, and unless this region is more fortunate than most lumbered tracts in that part of the Appalachian plateau, many of the summits and sides of the mountains will be laid bare down to the soil and rocks. The rainfall and melted snow, which are now retarded by the forests, will then pour down the naked slopes and cause destructive floods in the lower streams, and low water will follow.

West Virginia is one of the states which has taken no measures to protect its valleys from floods by preserving the forests on the mountains. Its woods are being cut and burned more rapidly perhaps than those of any other state, and this in face of the fact that it is by nature a forest state, with soils and situations well suited to almost all eastern timber trees. It might perpetuate its forests and have woods of immense value always. A little protection against fire, the leaving of small trees to form the future forest, and provision for reproduction by means of seed trees, are simple measures, but they would mean all the difference between wasted hillsides and well stocked forests, ripe for the ax. A few years would bring handsome returns from the investment.

A Dangerous Feast.

A story wherein a young man's presence of mind, determination and bravery took prominent part in the recent floods has just come to light, says the Fort Scott (Kan.) Tribune of July 3. Perry Hamilton, son of the well-known log exporter, J. V. Hamilton, is the hero, the Hamilton lumber camp southwest of town was the locals and the day the flood reached its crest was the time. Young Hamilton's father has a force of men working at a post up the river a few miles and when the floods came the other day they fled, the water attaining a considerable depth in their tents. There were nearly \$4,000 worth of walnut logs piled up, which the flood commenced to move slowly towards the river. Perry arrived at the camp to find it deserted and his father's logs slipping out to midriver. He quickly plunged into the water, dragging after him a big log chain. Swimming towards the front of the logs, which were floating down the river, he piloted them towards the bank, where a fence was used to corral them, making a temporary boom into which the logs drifted.

YARD OF YELLOW POPLAR AT PISGAH STATION, N. C. ON THE VANDERBILT ESTATE.

The young man chained the logs together and saved them all from being washed away. He was in the water nearly six hours all told and was forced many times to stop and rest. The current was so strong that Hamilton was lashed to tree tops many times, where he caught the loughs to support himself for a rest. It is seldom that a man will take such chances with the water is did this young man. He is about twenty years of age.

Mr. Hamilton is one of the regular correspondents of the Record, and in sending in the above clipping he wrote: "It was a dangerous undertaking for a boy single-handed and alone, and I believe not one in a thousand would have tackled it. I was absent when the flood occurred and had I been at home would have been considerably poorer today, as I would not have allowed him to undertake it for all the walnut in America."

The Raymond Log Loader.

The two illustrations on this page are made from a brand-new and important invention of O. L. Raymond of Marinette, Wis. It is the Raymond log loader. This is said to be the first and only practical machine which is a money saver, for loading logs on sleighs, trucks, etc. The machine is operated by horse-power, gasoline or steam. The maker places them on approval and with a guarantee that they will do the work of loading logs with less than half the expense of the or-

THE RAYMOND LOG LOADER.

inary way. The machines have been practically tried out by several prominent lumbermen in both North and South, and have given universal satisfaction.

By using the Raymond log loader and the Phoenix Manufacturing Company's patent stink pockets, bunches of logs can be picked up and swung between the stakes by an inexperienced crew in one-third the time that almost a double crew of veteran log loaders can do it the old way. This is said to be the first rear-end swinging crane sleigh loader in combination with a double pole sleigh ever invented.

The second illustration shows the log loader mounted on trucks. This type of machine has been especially constructed for logging purposes in the South, and is also of value for general yard work. The apparatus is strong and durable and steel cables are used throughout. It is employed by several prominent Wisconsin hardwood manufacturers and is in use by the Curtis-Atala Lumber Company of Curtiston, Miss., and by the Interstate Lumber Company of Columbus, Miss. On page 60 of this issue of the Record an ad of this machine may be found, in which several testimonials of its high value are reproduced. The manufacturer, O. L. Raymond of Marinette, Wis., will be very glad to supply catalog and prices on application.

Executive Board Meeting Hardwood Manufacturers' Association.

The Executive Board of the Hardwood Manufacturers' Association of the United States convened at the Seelbach Hotel, Louisville, July 11. Those present were: John B. Ransom, president, Nashville, Tenn.; R. H. Vansant, Ashland, Ky.; C. M. Crawford, Coal Grove, O.; W. A. Gilchrist, Memphis, Tenn.; G. E. W. Lebrmann, St. Louis, Mo.; Clinton Crane, Cincinnati, O.; R. M. Carrier, Sardis, Miss.; Lewis Doster, secretary, Nashville, Tenn.

A general report of association conditions was read to the board, which covered its work for the first six months of the year. The assistance the secretary has given and will give in the future to other associations identified with the lumber trade was approved and will be continued. Likewise the methods in which the market condition reports have been placed before members and the lumber trade at large were approved and ordered carried on.

The financial condition of the organization was thoroughly reported on; the various details were approved by the board and arrangements made for further financing the organization, by proper methods, for the balance of the year. The financial statement showed the membership of the association maintaining an even proportion, and the expenditure sheets showed that the estimate

the membership can thoroughly consider them and give them proper consideration at the next annual meeting.

An official lumber gauge was adopted by the Hardwood Manufacturers' Association, which is a very unique and desirable invention, gotten up by Chief Inspector Hill; it will be placed on the market by a company which will make 5,000 of them immediately. It will be known as the "Doster gauge" and is a most desirable article for the use of inspectors and lumbermen at large for the purpose of determining the thickness of lumber with absolute accuracy. The gauge forms a convenient pocket piece.

Other departments, such as stock reports, commercial reports, etc., were thoroughly gone over and direction given for future maintenance of those several departments.

At 1 p. m. automobiles took the members to the residence of R. M. Carrier on the Newburg road, about five miles from the city of Louisville, where luncheon was served. The visitors were greeted by Mrs. Carrier, who presided over the luncheon. Two and one-half hours were delightfully spent at this country villa.

At 7:30 p. m. Mr. Carrier entertained the visitors at the Penderis Club at supper, and certain subjects, such as interinsurance and the possibility of the association membership becoming interested in same were discussed.

THE RAYMOND LOG LOADER MOUNTED ON TRUCKS.

on the 15th of January is being maintained. The methods in which dues should be collected as in the past was ratified, and a method of notifying the board regarding the monthly financial condition was also outlined.

The work of the Bureau of Grades was fully reported on and special action taken on the methods to be pursued in grading lumber for members and non-members. Past work was reviewed and present work will be continued with the same energy. A few suggestions relative to grading rules were referred to the chairman of the committee. The different subjects and rate questions in the transportation department were thoroughly gone over and the subject held open for further action, to be governed by conditions arising.

The report of the secretary of the Minneapolis meeting National Lumber Manufacturers' Association was made and the president authorized to appoint any committees resulting as the outcome of this meeting at a time when he considered it proper to do so. The American Lumber Trades Congress at Minneapolis, in which the association was represented, was also reported upon, and regarding the agreement made the secretary was authorized to send to each member of the association a copy of the trade ethics principles resulting from such meeting, so that

House party Mr. Carrier entertained Mr. Gilchrist and Mr. Doster at his house over Sunday, where a house party enjoyed itself thoroughly. LEWIS DOSTER, Secretary.

Important Legislation N. H. L. A.

On July 17 the executive board of the National Hardwood Lumber Association held a meeting at Chicago and an important piece of legislation prevailed, viz., the secretary was instructed to issue a blank form to members, which should definitely specify that upon any lumber on which they asked for 1905 inspection, they should over their signature guarantee that the sale of this lumber and the specification for 1905 inspection covering such sale, was made previous to Dec. 1, 1907. Otherwise the secretary was instructed to refuse to apply any other inspection than that of the rules which were endorsed at the Milwaukee meeting, and which will take effect Aug. 1 next.

The National Association has located at Cairo a salaried inspector, D. R. Pinney, transferring him from Boston to that city. Mr. Pinney will have charge of the inspection at Cairo, Joppa and elsewhere in that vicinity. He is one of the best inspectors the associa-

tion has on its force, and previous to his work at Boston was an inspector in the Missouri hardwood district for fifteen years. The appointment was made on request of a large portion of the Cairo trade and will materially strengthen the inspection forces of the association.

An Unjust Decision.

The recent decision of the Interstate Commerce Commission in the car strike and equipment matter which has been pending since January, 1905, is, of course, very unsatisfactory to lumbermen, in that the ruling is directly against their contentions and plea. It has been the sincere and honest belief of shippers of lumber that they should be relieved of the railroad rules and regulations now governing this equipment, and their reasons, as set forth in the complaint, were certainly logical and just. They have worked, both individually and in associations to this end, and the decision of the commission is naturally a matter of disappointment to them.

Production of Lumber, Lath and Shingles in 1907.

The Bureau of the Census, with the assistance of the Forest Service of the Department of Agriculture, has for some years collected statistics concerning the annual production of various forest products, and the preliminary totals for the cut of lumber, lath and shingles for the year ending December 31, 1907, have just been made public.

Unusual importance is attached to the reports for the past year, which show that the aggregate cut of lumber in the United States increased from 37,551 million feet, board measure, in 1906, to 40,256 million feet in 1907—a gain of 2,705 million feet, or 7.2 per cent. For lath and shingles the total production was 3,664 million and 11,550 million, respectively, in 1907, as against 3,813 million and 11,878 million, respectively, in 1906—a decrease of 149 million, or 3.9 per cent, in lath, and an increase of 92 million, or eight-tenth of 1 per cent, in shingles. The number of mills reporting in 1907 was 28,850, while in 1906 the cut of 22,398 mills was covered.

The substantial increase in the total production of lumber in 1907 as compared with 1906, in spite of the financial stringency which measurably affected most lines of manufacture during a part of the latter year, is remarkable, and especially so in view of certain well-known local causes which also operated during the whole or a part of the year to reduce the output of the regions affected. Aside from the car shortage, which necessitated a restriction of the cut in many localities during the earlier months of the year, the fact that the industry of lumber manufacture was practically suspended on the Pacific coast early in the fall, on account of the prospective rise in freight rates by the railroads which handle the product of the mills in this region, materially affected the amount of output. Furthermore a steady decline from year to year is to be expected in the lake states, because of the rapid exhaustion of their timber supply. In the southern states, however—the principal producers of lumber during recent years—local conditions were substantially normal, but the effect of the business depression obtaining throughout the country during the latter part of 1907, while somewhat obscured, may nevertheless be discerned in the showing for that region.

The unprecedented volume of building operations under way during 1906 and the earlier part of 1907 had created a demand for yellow pine which reduced stocks and kept the mills running at practically maximum capacity during the major part of the latter year—for some months even after the decline in building activity had become general and pronounced. Fur-

thermore these conditions brought into operation many new mills, a fact which also contributed to a material increase in the normal cut of the region through the earlier months of 1907. The exceptionally heavy production during this part of the year is more clearly indicated by the figures when it is borne in mind that many of the large mills in the yellow pine district were idle, or practically so, for several weeks during the latter part of the year. The greater thoroughness which characterized the 1907 canvass undoubtedly contributed in some degree also to the increased totals for these states as well as for other lumber regions of the country.

Peculiar Forest Growth.

Those who have tramped the woods know that the forests often exhibit some abnormal and peculiar specimens of tree growth. The accompanying picture shows a white oak and a red gum tree growing from the same trunk, separating and reuniting themselves four times above the ground. This odd and re-

REMARKABLE TREE GROWTH.

markable growth is on the property of the Boynton Land & Lumber Company near Boynton, Mississippi county, Ark., and the Brown is indebted to C. D. Boynton, president of this company, for the photograph from which the engraving is made.

Durability of Cypress Wood.

During the present excavations for the new sewer system throughout the older portion of New Orleans quite a number of unknown or forgotten burial grounds have been traversed and many coffins, constructed of cypress, still in a perfectly sound condition, have been unearthed. Some of these, from the coins and buttons found, undoubtedly contained the remains of Spanish soldiers, but until July 8 no coffin had been found bearing a date or other means of identification. Nearly all the coffins contained metal name plates, but those found were so badly corroded that nothing could be deciphered. On July 8, during excavations at St. Louis and Basin streets, a coffin was brought

to light which contained the inscription "Henric Miller, 1803," carved in the wood. This coffin, except for the discoloration of the wood, was as sound as the day it was made. The iron cross which surmounted the grave was so badly rusted that only a few letters and the date were decipherable.

The interest in this centers in the oft repeated story of the durability of cypress and the fact that the hand forged nails with which the coffin was constructed were not rusted where they were driven into the wood. These nails should set at rest the theory that has sometimes been advanced that cypress contains an acid which will rust nails, making the wood unfit for shingles or other outdoor uses.

Wright-Saulsberry Lumber Company's Mill Burned.

A most disastrous fire occurred about midnight on July 17 at the large band sawmill plant of the Wright-Saulsberry Lumber Company, located on the banks of the Ohio river about two miles east of Ashland, Ky. The fire, which originated in the engine room, was discovered by the watchman, who sounded the alarm. The entire plant was soon in flames, and there was no chance whatever to save the mill. All attention was turned to the immense lumber yards and the fire was checked so that only the mill plant and the blacksmith shop next to it were destroyed.

The mill was operated by the Wright-Saulsberry Lumber Company, the principal owners being Giles Wright and E. H. Saulsberry of Ashland. Just at this time it is not definitely known where the mill will be rebuilt, but it will be rebuilt soon, but probably in another location. The loss is estimated at \$25,000, fairly covered by insurance. The company has arranged with a neighboring mill to take care of its rush orders and do what saving it is obliged to do until its own mill is again in operation.

Important Timber Deal.

Dispatches from Raleigh, N. C., state that Judge E. Day of Lexington, Ky., has sold to the Litcher & Moore Lumber Company of Orange, Tex., for Asheville, N. C., parties a tract of virgin timber, largely oak and poplar, located in western North Carolina, on the Pigeon river, in Graham county. The tract, according to the dispatch, contains 55,000 acres, which were sold at \$15.00 per acre, an aggregate of \$825,000. Big lumber mills, it is announced, will be erected immediately to develop this property. Complete details as to the names of the parties interested in the deal and the magnitude of their immediate operations are, as yet, obtainable. This is by far the largest deal of its kind which has occurred during recent years.

Chinese Furniture Markets.

Furniture used in the climate of most parts of China must be especially well seasoned before it is manufactured. In June, July and August the dampness is excessive throughout the empire, especially in southern parts—Hongkong, Amoy, Canton, etc. In Shanghai and further north it does not last so long a time. During this period furniture which is put together with glue falls apart, fat work warps and splits, and drawers and rolling tops become troublesome. During the winter the air is remarkably dry, so that furniture which has cracked and warped goes to the other extreme.

The greater part of the furniture used in China is made roughly in local shops. Teak is the poplar wood, but American oak and pine are being imported. Campher wood is used for chests, trunks, etc., and does not split or warp as do some others. English manufactured furniture can be had in Hongkong and Shanghai, but foreign residents use the locally made product as a rule. Germans own two steam sawmills in Tsingtau, and ask high prices, so that there

is an opportunity to introduce American goods in competition, if styles are adapted to the popular demand.

Furniture exported to China should be put together with screws, not glue, and if possible so that it may be knocked down for shipment, freight being an important point in considering prices. Many bent-wood chairs are used, even by the Chinese, probably coming from Germany or Austria. They retail in the ports from \$1 to \$2 each, lower if bought in quantities. They come knocked down and command a ready sale. The more expensive upholstered chairs come from Europe, while dining-room furniture of all kinds is made locally, particularly the cheaper goods. Elaborately carved sideboards are the rule, and many wealthy Chinese residents are fitting up their dining rooms like the Europeans. They are especially fond of gilded mirrors and frames, and nearly all residences of Chinese officials now have their "foreign style" room. Local carpenters are supplied with copies of British and American furniture catalogues and they are ingenious in making duplicates of selected illustrations.

It might be possible to sell furniture in China knocked down and unupholstered or without upholstering, though foreign goods usually attain their safe because of the superior finish and polish which the Chinese seem unable to accomplish. American furniture laid down at anywhere near competing prices would certainly command a sale, as locally produced articles lack uniformity, the fitting of the parts is very poor and as nothing but hand machinery is used the result is always rough. Furthermore, the wood being badly seasoned, the productions are not of lasting quality. Furniture could not be sold by catalogue. The way to introduce it would be to communicate with local dealers for their advice and forward a selection of articles for sale on commission. The system of "cash with order" is not a satisfactory one in dealing with foreign merchants. The standing of local firms can be easily discovered through such institutions as the Hongkong and Shanghai Banking Company or the Deutsch-Asiatische Bank, and reputable business men should be given such credit as would be extended to men in similar lines in the United States.

Description of a Well-Known Device.

The name "Gordon hollow blast grate" is so familiar to every one connected with the manufacture of lumber that those who have never seen the grate itself are perhaps curious to know more about it. It is accordingly illustrated herewith as applied to a single furnace of the ordinary construction for the combustion of sawdust.

G is a galvanized ebb leading from the blower to the blast-regulating gate E; C, F, cast blast pipe composed of heavy flanged sections securely bolted together, with asbestos gaskets between; D, D are sections of boiler tubing fitting into patent nipples H on the pipe and corresponding nipples on the bottom of the blast bars; A, A are the blast bars themselves; and B, B, B and B are draft grate bars. The blast bars are hollow inside, and are provided with four or five "tyures," or lids. In the cut, one of these tyures, marked J, has been removed from its seat. These tyures are about 7" in diameter and weigh 10 pounds each. In the periphery of the tyure is a series of notches, and through these notches the air escapes from the chamber of the bar into the furnace.

The construction of the tyure and its seat is unique. It is such that the top of the tyure is always slightly below the top of the bar itself; that the tyure cannot "cant" or become accidentally displaced; and that such sawdust, ashes, etc., as may chance to enter the blast outlets are immediately expelled again, making the bar self-cleaning.

The mill be evident at once that as the tyures are held in place by gravity alone, in case

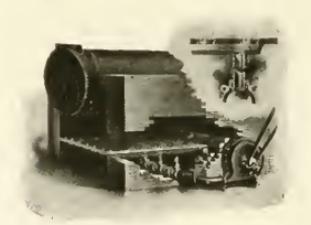

It is desired to increase or decrease the size of the blast outlets, tyures of a different description can be readily substituted. It is also an extremely simple operation to remove the tyure for the purpose of freeing the outlets from rust and other obstructions.

The Gordon hollow blast grate is the only "tyure" grate made, this being one of the patented features that has made it such a phenomenal success.

Another is the nipples that receive the vertical connecting tubes. These are of such design that all-around-adjustable, air-tight, ball-and-socket joints are secured at both ends of the tube.

While, as stated above, the form of the tyure and its seat is such that the bar is largely self-cleaning, in the bottom of each bar, at the front end, there is a large blow-out. There is therefore no possible chance for the bar ever to fill up.

The manner of operating the grate is obvious from the foregoing description of the apparatus. The air from the blower is forced into the cast pipe, ascends the vertical connecting tube, fills the chamber of the blast bars and escapes through the tyure outlets into the furnace, fanning the fire and greatly accelerating com-

MERITORIOUS BLAST GRATE, BUILT BY GORDON HOLLOW BLAST GRATE CO. OF GREENVILLE, MICH.

buition. The grate E is for the purpose of adapting the volume and pressure of the blast to the weather, the kind of fuel, its condition, the amount of steam required, etc.

That the grate is a success is evident from the following extract from a testimonial: "We were using ordinary grates. Found it impossible to keep steam. Put in your grate. Could then burn sawdust and green slabs, using one less furnace, and keep steam 'popping off.' Would not run a mill without them."

Requests for further information should be addressed to the manufacturers, the Gordon Hollow Blast Grate Company, of Greenville, Mich.

Jack Steeley Still Doing Business.

Jack Steeley, who carries an order book with an illustration of a resaw, a hardwood sawmill and all the equipment necessary to satisfy the most fastidious hardwood lumberman, even to the band mill, walked into an Indiana lumberman's car the Fourth of July, and flopped down to a chorus of seven or eight voices calling out, "Hello, Jack!" evidencing the fact that, being born in Indiana, he knows most everybody in it. No doubt this has something to do with the popularity of the "Hoosier" sawmill machinery made by Sinker-Davis & Co. of Indianapolis.

Getting a little personal, we asked Jack how the self-feed rip saw, of which orders now number up to two or three thousand, was selling. "Just like sugar and salt," he said. "Hard times don't interfere a bit, for people must have 'Hoosier' rip saws." And he kept on giving us similar good news until we all decided that panic or no panic, "Hoosier" sawmill machinery is half sold a buyer when Jack comes in sight.

Miscellaneous Notes.

Low water in the North Platte river will result in 5,000 ties and mine props belonging to the Carbon Timber Company lying scattered along the banks of the streams until next spring, says a dispatch from Saratoga, Wyo. The company's drive of 1,500,000 ties and props was caught by the recession of the spring floods.

Thousands of cords of cut pine and oak have been reduced to ashes and great quantities of standing timber burned near Carver, Mass., in the recent forest fires. More than ten square miles were burned over.

The Virginia Hardwood Lumber Company has been organized at York, Pa.; capital, \$5,000.

The Hanger & Ayer Company at Bangor, Me., has resumed operations in its veneer mill at Foxcroft, and has orders which will run it dry and night for some weeks. About 1,300,000 feet of logs have been purchased this season.

J. H. Doyle of the Doyle Timber & Tie Company, Harrison, Ark., recently purchased the plant of the Harrison Handle Works.

The Cincinnati Hardwood Lumber Company lately closed a deal for 2,280 acres of the finest timber lands in the Ozark country. The company will establish a big lumber plant at Branson, on the White river. The timber consists of oak, pine and some black walnut.

A fire at Tannersville, near Waubashene, Ont., July 1, destroyed 7,000,000 feet of lumber, 2,000,000 laths, 3,000 railway ties, 50,000 broom handles, thirteen Grand Trunk cars and eleven team cars. The lumber was the property of A. G. Chew of Tannersville.

The largest contract for lumber ever made in Mexico, so dispatches say, was recently closed by the National Railways of Mexico with Campbell & Santer of Durango. The material purchased involves an expenditure of \$1,500,000 by the railway company. All kinds of railroad stock are involved, and delivery will be commenced at once. The firm owns a great tract of virgin forest in Durango.

Japan has fine hardwoods; the oak trees of the north grow to large size. The next wood in importance is ash, of which there are about twenty-two varieties, two of which are specially sought for at present, one having a beautiful curly figure, and another an unusually wavy grain.

Lombard & Rittenhouse of Cheboygan, Mich., have sold 100 cords of ties to Chicago parties for a trolley line. They are shipping them out as fast as possible.

The Wisarok Lumber Company, a concern of Wisconsin and Arkansas, has filed articles showing an increase of capital stock to \$150,000.

Consul General John P. Bray of Melbourne reports that a large shipment of Australian hardwoods, including over 800 tons of railroad sleepers, has just been made from Australia to San Francisco. As the woods are among the best for railroad purposes, it is anticipated that this shipment is the forerunner of many similar ones. The mills and yards of Wright Brothers, located just outside Marinette, Wis., burned July 14, causing a loss of about \$25,000. All available means were used to put out the blaze, and a bucket brigade succeeded in saving about \$5,000 worth of hardwood lumber which would otherwise have been consumed.

An organization of the Kirby Lumber Company of Texas and the Houston Oil Company into the Southwestern Development Company, with a capital of \$32,000,000, is pending.

The F. F. Krause Company has been organized at Chicago, capitalized at \$40,000. It will manufacture interior finish and woodwork and deal in lumber.

The new flooring plant at Dighton, Mich., owned by Jones & Green of Big Rapids, was blown up by a boiler explosion July 15. One man was killed and the engine room entirely demolished. The mill was considered a model plant, and was erected over a year ago at a cost of \$30,000. It was engaged in turning out flooring for Dennis Brothers of Grand Rap-

ids, and had a capacity of 24,000 feet a day. A fire of unknown origin caused the complete destruction of the plant of the National Lumber Company at Eane, W. Va., July 14. The loss is said to be close to \$100,000, and forty men were thrown out of employment. The plant was one of the largest and most complete in Wetzel county, and had just finished making \$10,000 worth of improvements.

For many years the railroads have been experimenting with various plans for overcoming the great expense incident to the rotting out of ties, which amounts to millions of dollars.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

J. H. P. Smith, president of the Hardwood Lumber Company of Ashland, Ky., was in town a few days ago in the interests of business.

C. B. Dudley of the Dudley Lumber Company of Memphis and Grand Rapids, Mich., was among the visitors to this market the past week.

H. Marcus, a hardwood lumberman of Muscoda, Wis., was in the city transacting business within the past few days.

Geo. B. Zearing of the Stoneman-Zearing Lumber Company, Evals Bluff, Ark., has been spending a month in Chicago and has just returned to the mill. Mr. Zearing was accompanied by his wife.

Ralph Ely, sales agent of the American Column & Lumber Company of St. Albans, W. Va., was calling on the Chicago trade within the past few days.

Theo. Schneider, northern purchasing agent for the Brunswick-Balke-Collider Company, has just been here on business with the company's home office.

Walter B. Heineman of the Heineman Lumber Company, Helmenan, Wis., was another of the well-known lumbermen to visit this market late; Mr. Heineman was in Chicago July 23.

Col. J. W. Thompson of the J. W. Thompson Lumber Company, Memphis, was seen about town recently.

F. A. Diggins of Cadillac, Mich., first vice-president of the National Hardwood Lumber Association, and C. J. Landeck of the Landeck Lumber Company, Milwaukee, were in attendance on the meeting of the executive board of the association held here July 17.

O. O. Agler, president of the National Hardwood Lumber Association, is just recuperating from a week's severe attack of malaria, but is back at his desk attending to business.

One of the finest souvenirs ever put out by E. C. Atkins & Co., Inc., of Indianapolis, and they are noted for such things—was the "Bantam" ink pencil which they distributed to their friends at the "Yellow Piners" meeting held at the Chicago Beach Hotel the early part of the week. The neat little legend with which they are stamped—"Write for Atkins Silverstated Saws"—is decidedly apropos, and on the use pencil proved as practical as it was attractive.

W. W. Rathbun, the yellow pine and cypress man of Cleveland, O., was in town July 21, attending the convention of manufacturers engaged in his line of trade.

An interesting caller at the Record office July 22 was H. D. Hartley, secretary of the National Hickory Association. Mr. Hartley is well posted on all phases of the hickory proposition—which is becoming a very live one in view of the growing scarcity of this timber—and well equipped to work out the various problems connected with its manufacture.

The plan of using screw spikes for holding the rails to the ties has been used by some English and other roads, but the labor cost in laying a track with them has prohibited their use in this country. Now, however, the Santa Fe believes it has about overcome this trouble by means of a machine perfected in its local shops, as it has been found possible to lay track with screw spikes faster than the ties can be laid ahead of it. This will be another step to aid in conserving the timber supply as well as effecting an economy for the road.

which the association is interesting itself in. The partnership heretofore existing and carried on by William E. Pattison, H. Newton Pattison and John T. Dixon at Philadelphia, under the name of the Philadelphia Hardwood Lumber Company, was dissolved by mutual consent July 17. All claims due the said co-partnership are payable to all debts owing by it will be paid by H. Newton Pattison, who will continue the business under the firm name at rooms 1522 and 1524 Real Estate Trust building, southeast corner Broad and Chestnut streets, Philadelphia.

John T. Parsons of the Myers-Parsons Lumber Company, Pittsburg, was a welcome caller at the Record office yesterday.

A. K. Foote of the Canton Lumber Company, Canton, Miss., has been visiting the local trade during the past few days and made a call on the Record.

BOSTON

H. W. Bowler of Boston has been appointed surveyor for the National Hardwood Lumber Association in this district to succeed D. P. Pinney, who has been transferred to Cairo, Ill. Mr. Bowler is a young man and well liked by the trade. He was a candidate for the office of surveyor general of Massachusetts last month and has been associated with this office for some time.

H. M. Bickford of the H. M. Bickford Company, Boston, has purchased a new automobile. The new schooner, the Frank B. Witherbe, now being built at Bath, Me., will be ready this fall. This schooner is a sister ship to the Horace M. Bickford, which was recently put in commission.

D. L. Arnold, sales manager of Moore, Keppel & Co., Ellamore, W. Va., was in Boston early this month.

Harrison Parker of the Palmer & Parker Company, hardwood dealers and manufacturers of veneers, Boston, arrived safely in England early this month, where he has gone on a pleasure trip with his family.

Mr. Rockwood of the Louisiana Red Cypress Company, New Orleans, La., spent the early part of this month in the east.

W. H. Blanchard of the Blanchard Lumber Company and president of the Massachusetts Wholesale Lumber Dealers' Association, has returned from a vacation spent in Maine.

NEW YORK

Schedules in bankruptcy of Sam E. Barr, wholesale hardwoods, Flatiron building, show liabilities of \$46,025 and nominal assets of \$19,920. The largest creditors are western and southern banks and hardwood companies.

Ralph H. McKelvey, secretary of the Lumber Insurance Company of New York and the Adirondack Fire Insurance Company, 84 Williams street, has just returned from a ten-day fishing trip to the wilds of Canada. J. J. McKelvey, who is also prominently identified with the com-

panies mentioned as well as the president of the Toledo Fire & Marine Insurance Company of Sandusky, O., sails for Europe July 25 with his wife and daughter, to be gone till fall.

J. L. Cohen, former proprietor of the Mott Haven Lumber Company, 137th street and Fifth avenue, who failed some months ago, has settled with his creditors at 40 cents on the dollar and has resumed business at the old location in his own name, with a branch yard in the Bronx.

F. J. Cronin, the popular eastern representative of the Yellow Poplar Lumber Company, Coal Grove, O., was in town last week finishing up on his season's travels preparatory to starting for Utica, N. Y., his old home, where he will spend a few weeks.

C. E. Lloyd, Jr., the well-known Philadelphia hardwood wholesaler, passed through the city last week accompanied by his family, on route to his summer camp in the Maine woods, where they will spend several weeks. Incidentally he stopped here long enough to express his usual optimism as to hardwood conditions, present and prospective. If Cien ever gets pessimistic, look out for business and things generally.

John N. Scatcherd of Scatcherd & Son, Buffalo, visited New York during the fortnight in the interests of business, and while here expressed himself optimistically as to future hardwood conditions.

Howard S. Jennings, former manager of the Newark Lumber Company, Newark, N. J., was rearrested July 3 as he was leaving the Caldwell, N. J., penitentiary after having served six months for forgery and embezzlement, on three indictments for the same offenses, to which he pleaded guilty. Coincided with Jennings' arrest, W. S. Gilhuly, a salesman for the Newark Lumber Company, was arrested in Jersey City on similar charges filed by E. E. Phillips, president of the company, who also appeared against Jennings, and Gilhuly was held for trial. The latter claims that Jennings' speculations was the cause of his trouble.

George J. Korbill, the able manager of the New York sales office of the Palme Lumber Company of Oshkosh, Wis., headquarters 1 Madison avenue, returned last week from a lengthy European trip, covering several months and from which he derived much benefit. He reports a decidedly better tone to the millwork trade than he expected to find.

George J. Barker of Barker & Co., Boston, spent several days with Manager J. M. Bond of the local office, 18 Broadway, last week.

Another Boston visitor was H. W. Blanchard of the Blanchard Lumber Company, who was on a visit here to Manager F. S. Loomis of the local sales branch at 11 Broadway. The mills of the company down east are running on a very fair volume of business and the prospects are very fair for a stronger fall market.

Charles Hill of the Northern Lumber Company, Flatiron building, is summing up with his family at Front's Neck, Me.

C. F. Fischer of the C. F. Fischer Lumber Company, 1916 Park avenue, is enjoying the week ends with his family on the Rhode Island shore.

F. W. Crane of the F. W. Crane Lumber Company, hardwoods, Morgantown, W. Va., was here on business this week. Other arrivals were: J. L. Kendal, H. C. Huston Lumber Company, Pittsburg; R. G. Kay and R. C. Lippincott, Philadelphia; L. F. Baisley, Willson Bros. Lumber Company, Pittsburg; D. L. Arnold, Moore, Keppel & Co., Ellamore, W. Va.; J. L. Alcock, J. L. Alcock & Co., Baltimore.

R. P. Baer of R. P. Baer & Co., the well-known Baltimore hardwood house, arrived in the city this week, accompanied by his bride, from a lengthy European tour. They left immediately for Baltimore.

E. K. Meigs & Co. is the name of a new wholesale house which has just opened at 45 Broadway to conduct a general wholesale business. E. K. Meigs, the head of the concern, has been associated with the local lumber trade for many

years, his associates being his two sons, E. K. Jr., and Allen Melgs.

R. J. Camp of the Camp Manufacturing Company, Franklin, Va., was here during the fortnight visiting Manager G. W. Jones at the local sales office, 1 Madison avenue. The business of the local office is very good.

J. B. Murphree, formerly of this city and more lately of Jacksonville, Fla., has returned here to open a wholesale office at 1 Madison avenue for the conduct of a general wholesale business.

J. D. Lacey, the prominent timberland operator of New Orleans, accompanied by Mrs. Lacey, W. S. Hofstra, president of the Seacoast Lumber Company, 1 Madison avenue, city; Mrs. Hofstra and Mrs. Victor Thrane, Mr. Lacey's daughter, left here this week on Mr. Lacey's sumptuous new motor yacht the Tonopah for a trip up the Hudson, through state waters to the St. Lawrence and thence to Quebec, where they will take in the great Quebec Ter-Centenary celebrations, after which Mr. Lacey and family will go on through the lake route to Chicago on his yacht.

PHILADELPHIA

The committee in charge of arrangements for the usual outing of the Lumbermen's Exchange report that the affair will come off the latter part of September, but that all the details have not been completed as yet. E. B. Leighley, of the Summit Lumber and Milling Company, Buckstown, Pa.; G. B. Barr, of Beecher & Barr, Pottsville, Pa., and S. D. Pevely were recent visitors to the exchange rooms.

J. Gibson McIlvain & Co. report cheerfully of conditions, and although they admit a lack of enthusiasm in trading, they state that their aggregate sales of late have been very encouraging, and that the outlook is for advance.

W. M. McCormick wisely refrains from worrying over unpleasant conditions; instead, he meets them bravely as they arise. He has his stock situation well in hand and does not feel inclined to force the market.

The Forest Lumber Company, Joseph P. Dunwoody, representative, reports business moving along fairly well, considering time and conditions, and that a better feeling as to a gradual restoration of prosperity exists all along the line.

Eli B. Halliwell & Co. are far from depressed at present, as they succeed in booking a reasonable number of orders right along.

J. T. Robinson, of this house, recently made a tour of the North Carolina mill districts, acquainting himself with the stock situation there.

The Coding-McEwen Lumber Company reports a favorable turn of the wheel, during the last fortnight, and indications are towards a gradual restitution in trading. Mr. Coding is making a trip to their mill at Asheville, N. C., to look after some orders, and to get a line on the stock situation. He will make a short stay at Norfolk, Va., on the way.

The J. S. Kent Company is getting a modicum of business right along, and although it reports no decided improvement as yet, business is not running behind, and the outlook seemingly is brighter.

Charles F. Fein & Co. are busy, especially in their millwork department. They look with reason for good fall trading, and they have no fault to find personally with present conditions.

William A. Reed reports that though there has been no special turn for the better in trading during the fortnight, business is holding steady, and the prospects for future are favorable.

John W. Coles states that considering all things he has no inclination to quarrel with conditions, and is hopeful for good fall trad-

ing. G. W. Wright of this house is making a selling trip through New York and northern New Jersey, and Mr. Coles at this writing is making an extended tour of the Florida lumber district, where he will size up the situation and have an eye to some good contracts.

Samuel H. Shearer & Son are complacent over business affairs. They pay no attention to pessimistic prophecies, but go diligently after business, and get it, too. Wm. P. Shearer is scouring the eastern Pennsylvania district at this time.

Among the recent visitors to the local trade were S. P. Southgate, Chicago, inspector general of the National Hardwood Lumber Association; D. S. Cunningham, of Hendricks Lumber Company, Hendricks, W. Va.; Herman J. Haas, of Albert Haas Lumber Company, Atlanta, Ga.; Frank Gilmore, of Breen Lumber Company, Incorporated, Williamsport, Pa.; John T. Vixon, of John T. Vixon Lumber Company, Elizabethton, Tenn., and R. H. Erving, vice president of the Flint, Erving & Stoner Company, Pittsburg, Pa.

The furniture Manufacturers' Exposition, which is being held in the Second Regiment Armory, opened on July 13, and will continue until August 1. The committee in charge report the affair successful beyond all expectation so far. The original object of this three weeks exposition was principally to enlighten the trade as to the large extent this industry is being carried on in this city, but as buyers have been coming in and making deals, it has occurred to the manufacturer that it might prove an advantage to keep up what was only a business experiment indefinitely.

Report comes from Leona, Bradford county, that a barn ninety-eight years has just been torn down on the Doane homestead, of which most of the timber in a perfect state of preservation, and will be used in the construction of a barn on the A. A. Doane farm.

Extensive forest fires have recently been raging at South River and Estelville, N. J., but they finally been checked by the fire wardens, reinforced by large gangs of men, women and children from the surrounding territory, after doing considerable damage.

The sawmill belonging to Lea Wheatley, of Woodland, Del., was destroyed by fire on July 13; loss is given at \$10,000.

Congressman N. P. Wheeler and his lumber firm, of Endeavor, Forest county, lost their big saw mill on East Hickory creek, and a million feet of lumber, by a cloudburst and flood, which occurred on July 3. Mr. Wheeler and his family were absent on a trip to the Pacific coast at the time of the disaster.

Provident Lumber Company, Water and Dickinson streets, was visited by a most disastrous fire, which lasted four hours, on July 7, and in which two adjacent lumber yards, belonging to Charles Benton on January 7, J. Hussey, and Messrs. J. D. Casanave, the president of the Provident Lumber Company, and members of the concern, estimate their loss at about \$100,000, partly insured. The planing mill, a two-story brick building, was destroyed, the stable damaged and much stock consumed.

On July 17 negotiations were completed with the Barber Car Company, Water town, N. Y., for the location of a street car manufacturing plant at York, Pa. The company, which will be affiliated with the York Bridge Company, will manufacture a car forty feet in length, with a single truck. The plant of the company will join that of the York Bridge Company.

On July 17, the partnership heretofore existing and carried on by William E. Pattison, H. Newton Pattison and John T. Dixon, under the name of the Philadelphia Hardwood Lumber Company, was dissolved by mutual consent. All claims due the said co-partnership are payable to and all debts owing by it

will be paid by H. Newton Pattison, who will continue the business under the firm name at 1522 and 24 Real Estate Trust building.

BALTIMORE

The hardwood inspection rules continue to be a subject of discussion. They came up for consideration at the last monthly meeting of the managing committee of the Baltimore Lumber Exchange, when John L. Alcock made a report on the results of the action taken at the annual meeting of the National Hardwood Lumber Association, in Milwaukee, to which he was a delegate. Mr. Alcock himself favored acceptance of the new rules as embodying concessions on all material points asked for by the Eastern dealers, but in view of the fact that the Exchange has been represented at the conference of Eastern organizations in New York last January and at Philadelphia later, it was decided to postpone action on the new rules until after another conference, which has been called for next September in New York by the New York Lumber Trade Association, when the subject will be again extensively discussed. The Exchange here is to be represented at this meeting and there is a probability that the Baltimore delegates will throw in their weight in favor of accepting the Milwaukee rules.

The reconstruction of the new wharves, and especially the rebuilding of the docks to make what will be pier No. 6, is causing much inconvenience to a number of the lumber firms along what is known as the Back Bay. In furtherance of the work on the drawbridge and the Canton avenue bridge have been removed so that there is no communication now across the falls for about four blocks, and wagons going to certain sections of the city must make a rather wide detour with loss of enough time to increase sensibly the cost of delivery. The dredging of a part of the inner harbor, so as to afford the requisite depth of water for the new pier, has also taken away a considerable portion of the space for unloading cargoes of various kinds, and curtailed the storage room. Lumbermen look forward to the completion of the new dock, when they will enjoy dock facilities better than ever before.

R. P. Baer of the hardwood firm of R. P. Paer & Co., Keyser building, returned last week from an extended trip to Europe. He was away about two months, and visited London, Liverpool, Bristol, Belfast, Antwerp, Hamburg and other export lumber centers, combining business with pleasure. He came in close touch with a number of the largest foreign timber trades firms, and was in a good position to study the situation abroad. He found that quiet generally prevailed, but that there were indications of a revival of activity. A number of foreign orders were sent in by him during his travels. Certainly not the least interesting part of the trip lay in the fact that it was his wedding journey, he having been married just prior to his departure for the other side of the Atlantic.

The Norra Land and Lumber Company report things running along without a hitch, and though there is no decided show of new business their state department has orders ahead for all they can make. The export market, they state, is a little quiet.

Robert McLean reports that inquiries are coming in and that there is always some little business doing; he estimates a better tone in business than for some time, and considers the outlook encouraging.

The R. E. Wood Lumber Company express themselves as much pleased over the present improved situation. They are thorough optimists and look forward with confidence to good fall trading. They possess the get-up-and-hustle

spirit and in consequence get a respectable amount of business right along.

Frank C. Peare, instead of worrying over conditions, quietly pegs away, and so gets a share of things going. He looks for a gradual improvement in business from now on.

The Emerson Company are meeting conditions as they present themselves. They report that though things are generally quiet they have managed to book some fair contracts, and considering everything has no cause to complain.

Price & Heald report the export trade slow at this time and values in hardwoods such that they are not anxious to force trading.

The Williamson Veneer Company state that the trade they cater to most is closed down at present; however, they are not worrying. They are keeping their plant active, making up stock.

Monroe & Co. report that business is holding fairly well, with a decided optimistic feeling as to outlook. Prices are somewhat off, but at first active demand they are sure to stiffen.

R. P. Baer & Co. are quietly watching the situation. They are not making goods ahead and will wisely curtail their output until a reasonably fair profit can be made. They regard the prospects for future trading very fair and are not inclined to force the market at this time.

Man & Parker, though only a firm about seven years old, have established a decided reputation as hustlers. They are complacent over conditions and report things brightening. The outlook they think promising. They have a branch business at Asheville, N. C., and report their mills in western North Carolina all active. It is evident that they are sanguine as to the future for hardwoods, as they have recently started another band mill at Anoro, S. C., where they will manufacture red gum, oak, ash, hickory, hardwood and cypress, of which they will turn out daily about 50,000 feet.

The Dixie Manufacturing Company, makers of dust collectors, at Russell and Stockholm streets, are always keen after business and get trade proportionately. The Dixie dust collector, as it deserves, is fact finding its way into all the large woodworking concerns to the profit of the introducer.

SAGINAW VALLEY

The lumber industry is usually dull the latter part of July and the first of August, as it is the period when everybody wants a vacation and business just about runs itself in.

The flooring business trade fell off about the beginning of the month and it has continued so to date. Some manufacturers are working on contracts or large orders and keep their plants busy but others are light. W. D. Young & Co. are operating their plant full force but they ship flooring abroad in large quantities. The Bliss & Van Auklen plant is running right along with a good fair business, and the S. L. Eastman flooring plant is doing something, though Mr. Eastman says business has been dull the last three weeks.

The mills of the Kneeland-Bigelow Company and the Kneeland, Buell & Bigelow Company at Bay City are running full force, the former day and night and the latter ten hours. Mr. Bigelow says while the companies are doing something the sales the first half of July do not hold up quite as well as in May and June. There is a good feeling in trade, however, and it is generally expected that with the opening of fall business will be active.

The Richardson Lumber Company's new mill is being operated at Bay City and is cutting out some fine lumber. The mill of the same company at Alpha is being operated day and night. The Bay City mill is getting its stock by rail from Montgomery county.

The Wylie & Buell Lumber Company has sold 2,000,000 feet of logs to the L. Cornwell

estate at Saginaw and the logs will be converted into lumber at the old Cornwell mill east of Vanderbilt.

The Nunday branch of the Mackinac division of the Michigan Central, near Wolverine, is being extended four miles to reach 39,000,000 feet of timber belonging to the Wylie & Buell Lumber Company. Camps have been established and cutting of the timber started. It is mostly hardwood with a sprinkling of hemlock. The timber comes to the Saginaw river.

The Prescott-Miller Lumber Company, operating a sawmill near Rose City, on the Rose City division of the Detroit & Mackinac Railroad in Ogemaw county, is extending its branch road four miles, making it eight miles in all, and reaching 12,000,000 feet more timber. The mill will run another month and then shut down until the fall logs are available. The entire output of the mill for the year has been sold.

J. Robinson is running a small mill near South Branch on the Rose City division of the Detroit & Mackinac, cutting about 20,000 feet a day.

The Bousfield Woodware Works, which uses some ten or twelve million feet of logs a year, several million feet of which are basswood, is running full force.

BUFFALO

T. H. Wall of the Buffalo Hardwood Lumber Company is spending a short time at Atlantic City. He runs down for a few days while on his eastern sales trips and does not take his eye off business for long at a time.

The Standard Hardwood Lumber Company is selling some good thick ash which comes in from Pennsylvania mills. The plan is to revamp the home yard as soon as possible and put in a loading dock where it will do the most good.

A. Miller finds that there is good lumber in his line to be had in some parts of Canada, though he has a pretty good stock in yard right along. He keeps keen watch on the eastern seaboard trade and is quite busy.

F. M. Sullivan is suffering from throat trouble, so that he did not attend the picnic. He was represented by his brother, F. T. Sullivan. Business at the dock yard has started up lately, as cargoes are coming in.

O. E. Yeager showed his athletic training this year by pitching the ball in the outing game and feeling the strain only slightly the next day. He does not report the demand for lumber very active.

The sales of cherry by I. N. Stewart & Bro. have been good of late and some four-inch ash has been on the list, with their yards moving at a fair rate. H. A. Stewart took a trip to Canada for a short rest lately.

F. W. Vetter keeps up his usual good assortment of hardwood lumber through the summer and is selling all along the line, but he is not trying to add much to the old stock just now, as the sorts are all in.

Scatcherd & Son still report mill activity, both at log sawing in Memphis and in the door trade in Batavia, the latter mill taking in a large amount of stock this summer, considering the state of trade.

President Beyer of the Pascola Lumber Company is preparing to visit the Missouri mills of the company right away, as he wants to keep up the oak production just as much as possible. He held a 100-100 smoker July 11.

The McLean interests are keeping all their sawmills running except that in Memphis, but quartered ash is none too plenty and is not likely to be right away. Not much new stock is coming in here now.

The employees of G. Elias & Bro. go on their regular summer picnic on July 25, and it is estimated that, with families and all, the party will number about 400 people, which shows that

the working force of the firm is not very small. The annual outing of the lumbermen on the 14th was about the best on the list, being on invitation of Hugh McLean at the Canoe Club. Everybody wants to go again.

PITTSBURG

The Carnegie Steel Company has issued requisitions for more than 1,000,000 feet of lumber, to be used in its plants in and near Pittsburgh. Some excellent contracts are likely to be closed this week on these bills.

The Newell Brothers Lumber Company has had a fairly busy season at its mill in West Virginia and managed to keep its stock down pretty well. It is doing very little jobbing in hardwood but is having a good success in marketing its own oak.

The Babcock Lumber Company, which shut down its big operations at Ashtola, Pa., a few weeks ago, has resumed in full, with 150 men employed. The present condition of the market seems to indicate that this concern will not have to lay off again this year.

The H. V. Carll Lumber Company is feeling mighty good over the prospect for a big popular market this fall. Its inquiries show that the demand is strong and stocks at West Virginia and Kentucky mills are not accumulating to any extent.

The Reliance Lumber Company notes that the demand for bill stuff is improving but says that the call for timbers is not so heavy as it was two weeks ago. Along a few lines of lumber this company finds an inclination to advance prices.

J. R. Edgett, president of the Interior Lumber Company, has been stopping in Pittsburgh for a week or more. The observations of this company show that the call for good lumber for factory uses is improving considerably.

The Buckeye Lumber Company is figuring close and hard on some very nice bills of oak. It is a strong competitor in the market this summer because of the fact that it has more than 2,000,000 feet of choice oak timber under contract on the Pittsburgh freight rate.

Congressman Wheeler says he is lost about 350,000 two weeks ago by reason of the break in the dam at that place. Over 4,000,000 feet of timber was turned loose and a large portion of it was not recovered.

Indications point to a good trade in box lumber this fall. The window glass people have advanced their prices and the trade has been so extremely slow this summer that they have allowed their stocks of lumber to get down to the lowest possible point. If the plants start up in the fall in full as is expected the glass companies will have to buy a large amount of crate and box lumber before November 1. This is looked to as the chief hope for the chestnut market.

Capitalists of Pittsburgh and Buffalo have started nine camps of 75 men each to cut off a tract of 2,900 acres of timber on Upper Merick Run in Elk county, Pennsylvania. There is more than 20,000,000 feet of hardwood on the tract. A tramway 20 miles long is being built to bring the lumber down to the low grade division of the Pennsylvania Railroad. All the hardwood has been sold under contract to a New England firm.

The Flint, Irving & Stoner Company is keeping things mighty busy at its plant at Dunlevie, W. Va. It has lost little time this summer and has been making a big part of hardwood lumber for the J. E. Flint of this company, with his family, has gone to his summer home in Canada.

Philip C. Clarke, who has been organizing the hardwood business of Jones & Amstrong for several months, resigned that position to become sales manager for the E. E. Wood Lumber Company of Baltimore. Mr. M. R. Clarke has been very successful in his Pitts-

burg career, having formerly been manager of the hardwood department of the American Lumber & Manufacturing Company.

Chas. J. Kappler is rapidly settling up the affairs of the Vigilant Lumber Company in the Keystone building. This move was made necessary by the death of President Jenkins of that company a few months ago. George Bartlett, the third partner in the concern, has accepted a position with the Goodwin Lumber Company.

The Linehan Lumber Company reports the general tone of trade better. People are beginning to look around for good hardwood and are putting more speed into their inquiries. The Linehans say that the flooring trade has been very fair and anticipate a big improvement this fall in the hardwood business.

J. T. Parsons of the Myers-Parsons Lumber Company has gone to Michigan with his family for a three weeks' vacation. This company is getting a much larger inquiry for big stuff and has recently booked some very nice orders for Pittsburg delivery.

J. N. Wollett, general manager of the American Lumber & Manufacturing Company, says that the market for No. 1 and 2 common poplar is strong. He has great faith in the future of the poplar market and believes that when the fall trade is opened there will be a general resumption of operations at the mills. He also reports a much better demand lately for wagon hickory and for box stuff.

According to Wm. T. Munroe, this month is a banner month of the year so far for figuring mill work. Industrial concerns are putting projects forward rapidly and do not seem afraid to let contracts. They are encouraged also by the fact that figures submitted are from fifteen to twenty per cent lower than those they were one year ago. The J. C. Morehead Lumber Company's mill at Shryock, W. Va., was burned July 17. The power plant and all but about 40,000 feet of lumber in the yard were saved. The company had started its mill only three days before this on a good batch of orders. Portable mills have been made ready and a big new plant will be erected as soon as possible.

President Nelson Bell of the Furnace Run Sawmill & Lumber Company reports a much better business in box lumber, especially spruce. The big fruit crop is responsible for much of this and the inquiry from the glass companies is also bringing lots of business.

The Railroad & Car Material Company looks at the lumber market at present as a rising commodity in spite of the fact that there is apparently no bottom to hardwood prices except for white oak. The company feels sure that the man in charge in contracting to deliver any large quantity of hardwood two or three months ahead at prevailing quotations. The Goodwin Lumber Company was honored last week by a visit from its president, C. L. Goodwin of Indianapolis, and P. P. Griffin, its vice-president, of Lock Haven, Pa. These men hold the same office in the Blue Jay Lumber Company. The Goodwin Lumber Company believes that the bottom in prices has been reached and that there will be a marked revival of buying after September 1.

The Clay-Schoppe Lumber Company has shut down its mill in southern Pennsylvania, near Cumberland, Md., owing to the shortage of water in the mountain streams. Its best sellers now are white and rock oak, a large amount of which is going to the eastern market.

One of the most interesting experiments in reforestation that has ever been tried in the middle states has just been started by Dr. E. L. Dial of Cleveland, who has set out about 40,000 Norway spruce and fir trees on his farm close to the Pennsylvania line on the P. Y. & A. Railroad. The farm is one of the worn-out patches of land on the Western Reserve and has considerable swamp land on

it. Dr. Dial has been experimenting with these trees on a small scale for years and is convinced that they will grow well on the light clay soil where he has planted them. He secured the trees from a Paris nursery and had to pay \$1 per box duty in addition to the freight. Even at this price they were much cheaper than they could have been secured in this country. Dr. Dial estimates that in twenty years at the most the trees will be in excellent shape for market and he is looking forward to a big revenue from this source for Christmas trees, etc. The experiment will be watched with much interest by the farmers of Western Rb. who have thousands of acres of similar land that could be turned to forestry at once very profitably.

CLEVELAND

Cleveland lumbermen are interested in the discovery at Painesville, a town a short distance from this city, of a black oak log which has been buried under the bed of a river for about eighty-three years. It was dug out of the Grand river at Painesville by workmen who were making excavations for the abutments of a new bridge for the Lake Shore railroad. The trunk is four feet through at the butt and is twenty-five feet long. It was brought to Cleveland, where it was cut into lumber. The owners of the log value it at \$300. Owners of property along the river are dragging the stream in hopes of finding more black walnut logs.

Frederick B. Newton, at one time a prominent Cleveland lumber dealer, died several days ago at his home at Coeur d'Alene, Idaho. Ten years ago Mr. Newton owned one of the largest lumber plants in this city and was an extensive dealer in hardwoods of all kinds. Later Mr. Newton went to Idaho, where he became state agent for a number of lumber concerns. A stroke of apoplexy caused his death. The body was brought to Cleveland for interment.

A fire which will mean the loss of thousands of dollars' worth of valuable oak and hickory occurred near Cleveland on July 18, when a ten-acre bush, composed of unusually large oak and hickory trees, was burned in a fire which threatened to eat up nearly every tree in the county. It started on the North Ridge road several miles west of Cleveland and swept through a number of tracts of timber. Over 100 men fought the fire for two days before it was extinguished. It is said that the fire consumed some of the largest hickory trees in northern Ohio.

Some rare old carved walnut and stairway wainscoting is to be installed in a handsome new residence, 108 feet square, to be built in Wade Park for Mr. John Hays, widow of the secretary of state during the McKinley administration, and at one time secretary to President Lincoln. The old woodwork has been cut and is splendidly carved.

W. G. Ward of the Ward Lumber Company of Ironton, O., was a visitor to Cleveland several days ago. He reports business looking up, especially the hardwood end. He proceeded on his way to New York City on a business trip.

R. G. Page of the R. G. Page Lumber Company of Ashland, Ky., was in the city a few days ago looking up orders for his concern. He says that business is gradually resuming normal conditions.

J. L. Sanda, in charge of the hardwood department of the R. H. Jenks Lumber Company of this city, spent two weeks this month on the coast of Maine, the company with his wife, as a little vacation. H. H. Jenkins of the concern was in Chicago during the week attending a meeting of lumbermen.

J. D. Hitchcock of Ashtabula was in Cleveland during the past week looking up stock. He says the small towns are calling for normal quantities of hardwoods and that they seem in better condition than the cities.

The Guy & Ralph Gray Lumber Company pulled down one of the biggest flooring orders of the season during the past week when they contracted to supply 280,000 feet of maple flooring for the new Sterling-Welch building which is being erected on Euclid avenue adjoining the Euclid Club. The same company also got the order for the large bill of lumber to be used in the structure.

COLUMBUS

The North Columbus Lumber Company of Clinton township, a new corporation with a capital stock of \$25,000, was launched several days ago and has already opened for business, its offices and yards being located on the Mock road east of the Pennsylvania railroad tracks. The officers of the company are F. M. Koons, president; F. Bishop, vice president; E. H. Chandler, secretary and treasurer. All the officers and directors are well known to the lumber trade of this city, and have had considerable experience in this business. The company will make and deal in all kinds of lumber, own timber lands and real estate for yards, etc., and buy and sell oak. All kinds of lumber will be handled.

John R. Gohser & Co. reported trade as much better since the first of June than at any time since January 1. They say that business is well maintained, there being no signs of any let up. The company has a good market for hardwoods and prices are slightly higher on an average than they were two weeks ago.

W. H. Wells of the Kanawha Planing Company and Peter Carroll of the Clay Lumber Company, both of Charleston, W. Va., were in Columbus last week and called upon a number of the lumber dealers here. Both are optimistic regarding the future of the lumber business and say that normal conditions are near at hand.

The W. M. Ritter Lumber Company reports a big increase in business since the first of July, the volume exceeding that of last year by a large margin. Most of the orders were for immediate shipment, indicating that stocks are low and must be replenished at once. So are low in Columbus and elsewhere. Orders are few but contract orders and its officers expect that business will continue active from this on.

The Crosby & Beckley Company say that prices are low and that there is practically no local demand. It does not expect much improvement until after the first of the year, and a normal condition probably not before next May.

H. W. Putman, manager of the General Lumber Company, returned the first of this week from a ten-days' vacation spent at Glatt Beach, near Port Huron.

M. A. Hayward says that business is slow, but good prices are obtained for all sales made. The company expects a good business this fall and says that the situation is gradually improving.

The McDonnell Lumber Company started its mills in Tennessee this week, but it does not expect to run them full time until after September 1. Mr. McDonnell, president of the company, says that business is picking up and that the outlook is good.

H. C. Crellish & Co. report the outlook for business better and say that dealers in western Ohio are manifesting greater interest in the market. The company is now receiving fair orders to replenish depleted stocks and expects steady improvement from this on.

The Columbus Saw Mill Company says that marked improvement has taken place in its business the past month and that things are going along much better than at any time since last October. Trade is much better with this company and many new orders have

been received during the past week. The company is well satisfied with conditions for this time of the year.

W. L. Whitacre left recently for Lake Side, where he will spend a week in rest and recuperation.

The Sowers-Leach Lumber Company reports improved conditions in its business and says that it is much better than it was forty days ago. The company's road men are receiving more new orders now than they have since last October and prices for all grades of lumber are stiffer.

INDIANAPOLIS

The Barrett-Mitchell Lumber Company has been organized at South Bend by F. B. Mitchell, Ezra F. Rhodes, Mabel J. Lerner and others. They have \$15,000 capital.

Ovid Butler, deputy supervisor of forests in the government service with headquarters at Boise City, Idaho, is spending his vacation in this city. He is supervisor of about 1,000,000 acres of timber lands.

Charles W. Osgood, engaged in the lumber business here for thirty years, died at his home in this city a few days ago. He was a life-long friend of Henry Maley.

The lumber committee of the Indianapolis Board of Trade has been appointed as follows: Percy B. Raymond of Adams & Raymond, chairman; O. M. Pruitt of the Indiana Veneer & Lumber Company, Chapin C. Foster of the Foster Lumber Company, Edward H. Eldridge of the E. H. Eldridge Lumber Company and S. D. Fraser.

A committee composed of E. H. Eldridge of the E. H. Eldridge Company, M. A. Baker of the Capital Lumber Company and Eldon Dynes of the Dynes Lumber Company has completed a price list for the net of local retailers during the ensuing year. Hardwoods show a decrease of about twelve per cent from last year's list, while mill work remains practically the same.

The Indianapolis Lumbermen's Club will probably have a midsummer session and banquet at an early date at a place yet to be selected. Usually meetings are not held during June, July and August, but the present condition of the lumber market is believed to require a thorough discussion of the situation.

The Campbell Furniture Company and the Blanchard-Hamilton Novelty Works at Shelbyville are running their plants with full force. Large orders received from furniture exhibitions held at Chicago and Grand Rapids are responsible for the increased activity.

It is reported from Blytheville, Ark., that a woman, found \$2,000 in a pocket book in a hollow tree. Dickey was formerly in the lumber business at Greensboro, Ind.

Building operations during the second quarter of this year showed a decided decrease as compared with the similar period of last year. During April, May and June this year permits amounted to \$1,787,781; for the same period of 1907 they reached \$2,374,157.

Secretary J. V. Zartman of the Indiana Manufacturers and Shippers' Association is communicating with similar associations in forty-two states with a view to calling a conference to be held in this city at an early date. At that time some action will be taken on the question of the proposed increase in freight rates.

Fredrick M. Bachmann, president of the F. M. Bachmann Company, wholesale lumber dealers and veneer manufacturers, has been elected a member of the American National Bank. Mr. Bachmann is now in Europe and has not been notified of his election.

Ben Briant, son of William Briant, a Huntingdon lumber dealer, died suddenly at Denver, Colo., a few days ago. He was on a pleasure trip through the West and was in excellent health when he left Indiana a few weeks ago.

MILWAUKEE

Four recent decisions handed down by the Wisconsin railroad commission were concerned with the lumber industry. The one important refund case was that of the Chippewa Lumber & Boom Company of Chippewa Falls against the Wisconsin Central Railroad Company. In this case the railroad company is ordered to refund to the lumber company \$2,459.92 for excessive charges on the transportation of pine and hemlock logs. Instead of hauling the logs at \$1 a thousand feet, the railroad company had charged 3 cents per hundred weight. The Wisconsin Central was also ordered to refund \$387.91 to the Menasha Wooden Ware Company of Menasha, Wis., for excessive charges for hauling logs from McCann's spur to Ladysmith. The company charged 2½ cents per hundred weight when it should have charged a commodity rate of 1½ cents.

The Crocker Chair Company of Sheboygan, Wis., controlling the largest chair factory in the world, has resumed operations in both of its plants. The Phoenix Chair Factory is operating on a ten-hour schedule and also the plant of the American Manufacturing Company. Operations will be continued by the Sheboygan Chair Company as soon as its semi-annual inventory is completed. A schedule similar to that in force prior to the financial depression will soon be adopted by all the chair plants of Sheboygan.

The Wright Bros. mills and yards, located just outside of the city limits of Marinette, Wis., recently burned with a loss of \$40,000. Owing to the impossibility of the firemen getting a line of hose to the fire, the extent of the damage was great.

Inquiries are being made in Milwaukee by a firm of eastern attorneys in regard to an old deed which may involve more than 7,000,000 acres of land in Wisconsin and Minnesota. The instrument upon which the inquiries are being made is dated 1838, but the record shows that the original deed was executed in 1767, long before Wisconsin was named. By its terms the land comprising more than ten of the leading lumber counties of Wisconsin was conveyed by two Indian chiefs to one Jonathan Carver.

Charles F. Tege, president of the Tege Lumber Company of Milwaukee, extensive dealers in hardwoods, is a member of the board of directors of the new Lutheran high school. The cornerstone for the new structure was laid recently.

E. W. Whitson, a well-known lumberman of Tomahawk, has announced his candidacy for state senator from the Thirteenth district of Wisconsin. Mr. Whitson has already served two terms as assemblyman from Lincoln county and has been mayor of his home city. He enjoys a wide acquaintance in northern Wisconsin.

M. D. Reeder of the H. W. White Company of Loyal City, Mich., was a recent caller in Milwaukee.

R. F. Hodges, Milwaukee wholesale dealer in southern hardwoods, has returned to the city after a business trip to Oshkosh and other Wisconsin points.

A. A. Shead, Milwaukee representative of the Noble-Corwin Lumber Company, has been at Sheboygan and other Wisconsin cities on a business trip.

Harry Hard, manager of the sales department of the Gilkey & Anson Lumber Company of Merrill, was married recently to Miss Mae McDonald of Wausau, Wis.

John F. Conant of Milwaukee, Daniel L. Kimberly and William O. Wing of Neenah, Wis., are among the incorporators of a \$100,000 woocommerce concern at Vicksburg, Miss.

The Merryman Manufacturing Company of Chicago, 3,000,000 feet of lumber which will be cut by the Merryman company during the remainder of the present season. The entire cut of the Merryman mill for this season is estimated to be 25,000,000 feet.

Frelmuth & Son, tub and tank manufacturers of New London, have purchased the sawmill owned by the Page & Lyon Manufacturing Company and will enlarge their business and output. T. G. Hanks has opened a Minneapolis office for the Rice Lake Lumber Company of Rice Lake, Wis.

Charles B. Freyberg, president of both the C. B. Freyberg Lumber Company and the Sheboygan Novelty Company and vice-president of the Citizens' State Bank at Sheboygan, Wis., recently passed away. Death was due to heart failure and the veteran lumberman was stricken while mounting the steps of his home.

BRISTOL

The Tug River Lumber Company will start its band mill at Big Cherry, Wise county, Va., next week, having just about completed a five-mile line of railroad leading from the mills to the main line of the Virginia & Southwestern railroad. The company took advantage of the dullness in the lumber market to make this permanent improvement and hereafter will ship its lumber out on a more direct route than by way of East Stone Gap.

Walter J. Hunter, secretary and general manager of the Tug River Lumber Company of Johnson City, Tenn., and Miss Hattie King, were married there last week. Mr. Hunter was preparing to go to Ackton, S. C., to take charge of his company's operations in that state and will take his bride with him. He is well known to the lumber trade of this section.

In an incendiary fire near Cranberry, N. C., last week, the Nelson Lumber Company lost a circular mill. The aggregate loss will approximate \$5,000, with insurance. The fire is being thoroughly investigated.

General Manager Lockhart of the Jackson Lumber Company of Lockhart, Ala., one of the largest manufacturing concerns in the south, was a visitor in Bristol last week on important business.

G. H. Miles of Greensboro, N. C., representing the J. A. Fay & Egan Company of Cincinnati, was selling sawmill machinery in this section a few days ago.

"Business has been much better during July than June, though every month of the present year has shown a pronounced improvement over the preceding one," said J. H. Bryan of the Bryan Lumber Company recently. "We shipped as much lumber during the first half of July as we did during the entire month of June. Inquiries are coming in fast and things are taking on a much better aspect."

There will be considerable improvement in Bristol and near here this year, in the way of building. The city will let a contract for a new \$55,000 city hall, while the county will expend \$100,000 in improvements.

A firm of local contractors has been awarded the contract for the construction of a \$30,000 building at the national soldiers' home at Johnson City, while the contract will be let at once for an \$85,000 postoffice at that place and the contract will probably be placed in Bristol. There is a large amount of building among the coal operators, and the Clinchfield Coal Corporation, owned by George B. Carter and Thomas F. Ryan, and holding a half million acres of mineral lands in southwest Virginia, is preparing to spend \$2,000,000 in building.

J. A. Wilkinson has completed the installation of a large retail lumber business and yards, in connection with his band mill and woodworking plant on the Southern railway in this city.

J. C. Thomas, formerly of Johnson City, and for the past year connected with the Higley Lumber Company of New York, who sustained serious injuries in falling from an elevator

in New York, has recovered sufficiently to return to his home here.

Twenty-nine indictments have been returned in the circuit court at Abingdon, at the instance of Judge Hutton, against night riders alleged to have been members of the body of masked men that raided the lumber town of Damascus, Va., and scattered away foreign laborers employed by the Damascus Lumber Company and other lumber concerns in that section.

W. O. Caine of the Bristol Door & Lumber Company has returned from a trip to North Carolina. The lumber business in that state is reported slightly more active within the past two weeks.

P. W. Bevins, a prominent Scott county manufacturer, with mills and yards at Hiltons, Va., was in Bristol last week and reports that the lumber business in that section is rapidly picking up and that the manufacturers are more encouraged over the outlook.

"The lumber business will, in my opinion, be one of the first divisions of industry to fully recover from the effects of the recent financial depression," said President W. W. Finley of the Southern, who was in Bristol a few days ago with a party of officials and went over the V. & S. W. and other properties in this section just acquired by his road. President Finley stated that his company was so hopeful of the business outlook that negotiations looking to a general reduction of the wage scale of about ten per cent, affecting thousands of employes, had been deferred from July 15 to October 1 in the hope that conditions would be restored by that time and a cut would not be necessary.

Statistics gathered by the secretary of the Kansas State Horticultural Society show that the area of Kansas forests aggregates 553,896 acres, exclusive of trees in cities and towns, of course. There are 373,909 acres of "wild" timber and 179,999 acres under cultivation. Among the timber is considerable walnut, locust, catalpa and cottonwood. Missouri turned out 222,445, 624 feet of hardwood lumber, with a value of \$3,892,798. Of building woods Missouri manufactured 194,083,468 feet, valued at \$3,881,669. Missouri supplies a large amount of telegraph and telephone poles and grows considerable young cottonwood trees for paper stock. The Missouri Pacific railroad buys more ties in Stone county and has recently contracted for an extra million over usual requirements. The white and black oak, which has for so long been considered a nuisance by the Missouri farmers who wanted the land for cultivation, is now proving one of their profitable resources, so that many are neglecting their fields to make ties.

CINCINNATI

At a meeting of the Cincinnati Lumbermen's Club held at the Business Men's Club July 11, action was taken on several minor points and routine business was transacted. A letter was received asking the club to endorse the pneumatic tube mail service and to inform the postmaster-general of what great use this project would be to better the city in general. The club endorsed the movement and instructed the secretary to communicate with the postmaster-general. A letter was also received by President Ben F. Dulwiber from J. D. Cray, secretary of the New York Lumbermen's Club, asking the opinion of the various lumbermen on the grading system. The letter was read to the members present, but no action was taken. The club then appointed the following committee to represent the Lumbermen's Club in the nomination of Taft nomination, to take place at the residence of his brother, Charles P. Taft, at 316 Pike street, July 28: Thomas J. Moffett, chairman; George Littleford and Chester F. Korn. Owing to the approach of "hot" weather, President B. F.

Dulwiber has issued an order that no more weekly meetings will be held until along in September. However, special meetings will be called if the opportunity presents and they will be held at some of the summer resorts.

The Sayers & Scoville Carriage Company has acquired additional property in Winton place, where it will erect a large building for the manufacture of truck automobiles.

At a meeting of the creditors of the United States Timber Company, bankrupt, held last week in the office of Referee Greve, the proposition of a compromise of certain claims held against the Wiborg & Hanna Company, also bankrupt, was accepted. The latter company offers to settle the claims of 40 cents on the dollar on a cash basis or 50 cents on the dollar on time.

Harry Freiberg of the Freiberg Lumber Company, who was operated on for appendicitis some weeks ago, has assumed his duties with his accustomed activity.

The Sun Shine League, which has been in existence but a short time, has met with considerable success in its short career, and is still issuing weekly bulletins concerning trade conditions here, and doing much to instill confidence. The membership of the club has been increased a great deal and includes almost every business man of the Queen City.

Dwight Hincley of the Hincley Lumber Company left the early part of last week on a business trip north, and so far has been meeting with favorable success, as he landed several desirable orders.

The Kentucky Lumber Company will move from its present quarters on the fifth floor of the First National Bank Building to the tenth floor. In the new location the concern will have six large rooms. It expects to be located in the new quarters the first of August.

The William S. Sterrett Lumber Company, for years located in the Hulbert Block, at Sixth and Vine streets, has moved its office headquarters to the fifth floor of the Fourth National Bank Building directly opposite the Hincley Lumber Company. Mr. Sterrett was recently elected secretary of the Mutual Fire Insurance Company, succeeding the late J. H. Leiding. He is also secretary of the Cincinnati Lumbermen's Club, and between the two is kept busy.

James B. King, formerly connected with the Gage & Posell Lumber Company, has sold out his interest in that concern and entered the lumber business on his own account. A location has not as yet been decided upon.

William E. Delaney of the Kentucky Lumber Company has returned from a business trip to the mill of the concern located at Williamsburg, Ky. All the mills of the company have been closed down for several weeks, due to the fact that they have been sawed out, and until more logs are secured they will remain so.

W. West, secretary of the Fred Bremer Lumber Company, and P. Freisenburg, the eastern representative, left his way for a trip abroad, on business and pleasure. The company is a large dealer in all grades of oak and does a good foreign business. Ferd Brenner, president of the concern, states that business was better during June than any month this year. The company moved its headquarters to Cincinnati some months ago and finds the change quite satisfactory.

Building lumber still continues at the headline of the local trade, and during the month of July the demand has been augmented to a great extent. The weather here during the past two months has been ideal for building operations, and they have been quite heavy.

C. L. Barr of the Whiting Lumber Company of Abingdon, Va., was a visitor to the local trade during the past two weeks. His visit was confined to the selling of lumber for his concern, and it is stated that he met with fair success.

B. F. Dulwiber of John Dulwiber & Co. says that business with his concern during the month

has been fairly good and that he thinks it will compare very favorably with that of the month of June, which was one of the best months of the year. "Trade in general seems to have shown a much brighter aspect, and by September I think trade will show a handsome increase," he said.

J. Taylor of Taylor & Crate, Buffalo, N. Y., was a visitor here during the past week in an effort to get trade.

H. K. Blinn, vice-president and treasurer of the William H. Perry Lumber Company, tendered his resignation to the concern owing to his poor health, and will leave immediately for a more healthful climate. He has been connected with the local concern for a number of years and his resignation came as a surprise to his many friends. He has been in poor health for several months and has been advised by his physician to seek a different climate in anticipation of regaining his strength.

L. W. Radina of L. W. Radina & Co. has returned from a trip up the state with his family. Trade with his concern has been as good as was expected and he looks for an improvement within the next two months.

William Shrimpton, president of the Shrimpton Lumber Company, says his concern has done about twice the amount of business they transacted last month, and he looks for improvement in the situation in general. The company deals in poplar, oak and mahogany; the latter wood has done very well this month, due to the purchase of the cabinet and furniture manufacturers. H. J. Shrimpton of the company has severed his connection with the concern and has entered the hotel business. J. A. Dornes, who has been with the concern for a number of years, has been taken in as partner with William Shrimpton. The former has just returned from a business trip through Indiana and Ohio.

The Cincinnati Hardwood Lumber Company has just closed a deal which involves the purchase of a large tract of timber land in the South. The tract contains 2,280 acres, and has some very choice timber on it. J. A. Dornes of the concern states that by the middle of September they intend to erect a large mill on the property and cut the stock for market. The bulk of the lumber will be sent to Cincinnati, where the headquarters of the concern are located.

EVANSVILLE

Chas. Davis of the Perkins Lumber Company, Grand Rapids, Mich., was in the city visiting the trade last week.

"Although business is much better at present than it has been, I think about September 1 it will be getting back to a more normal condition," said a prominent wholesaler recently. This is about the sentiment expressed by all of the trade here. Not much is expected of July and August, as a great many lumbermen are taking vacations at this time and trade is usually quiet. However, many manufacturers say that up to the present time this month has been the best this year.

W. H. Cornell of the Nichols & Cox Lumber Company, Grand Rapids, Mich., was here calling on the trade this week.

D. P. McLaren of D. B. McLaren & Co., local wholesalers, has just returned from an extended eastern trip.

J. T. Christian, sales manager for Maley & Wertz, Bath Beach, returned recently from an eastern trip. He took some nice orders for his firm. Mr. Christian reports business as looking up in the section which he covered.

The large plant of the Henry Maley Lumber Company in this city, which has been closed down for some time past, will resume operations again in a short time. Their boat, the "Neptune," is at present in Green River, get-

ting ready to bring down a large tow of logs.

Daniel Wertz of Maley & Wertz, left last week with his family for northern Indiana, where he will take a vacation of several weeks.

DETROIT

Representatives of the hardwood trade of Detroit met at the Wayne Hotel this week to effect a preliminary organization to handle the early arrangements for the National Hardwood Lumber Association convention, which is to be held here next summer. The following were elected: E. W. Leech, chairman; John Matheson, secretary; Ralph Sicklester, treasurer; J. P. Scranton, vice-chairman. This committee will meet frequently to consider plans for the convention and to arrange entertainment for the guests.

The Macomb Lumber Company has been incorporated at Romeo, Mich., to handle the well-known Thompson tract of hardwood timber near Romeo. This piece contains some of the finest basswood in the state, besides a quantity of white ash, white oak, etc. The best of the logs will be cut into veneer. Officers of the Macomb Lumber Company are: W. E. Brownlee, president; William W. Kelly, vice-president; D. E. Wittmer, secretary and treasurer. The first two gentlemen are of the Brownlee-Kelly Company of Detroit.

The steamer Holland brought to the Brownlee-Kelly docks this week a full cargo of basswood, soft maple and elm lumber from Lake Superior. This is the first hardwood cargo to reach Detroit this season.

Some comment is being caused by the fact that, though the M. J. Thelsen failure occurred only a few months ago, only a preliminary report has been made by the trustees to the creditors.

A number of lumber boats have laid up at Detroit for lack of cargoes. Chartering agencies here say that some of the lumber boats which went to the head of the lakes recently are stranded there, unable to secure anything to carry on the return journey.

Detroit architects believe that building conditions will improve here shortly. "There will be plenty of building done in Detroit in the next twelve months," said C. H. Bennett. "The money stringency, which held up building, has practically passed away. We have a large amount of new work on the boards and orders for plans for some very fine buildings."

"There is no question that lumber prices have been going down," said Charles F. Meagher, manager of the main yards of the Restrict Lumber Company. "Lumber prices are down from \$2 to \$3 lower than last season. The slump in building has been more in frame structures, so the lumber dealers have felt it considerably. I think there are as many fine residences being erected this year and almost as much hardwood lumber being used as last year."

Muskegon River, like many others in Michigan, is now being stripped of the logs that were left by the waxy days years ago in the rush and bustle of the heyday of lumber operations. Companies have been formed to reclaim this wood, and it is estimated that millions of feet of good sound timber will be dug up from the river bottom.

Detroit furniture manufacturers are agitating the proposition of holding a yearly furniture exposition in this city either before or after the annual Grand Rapids exposition. There are twenty-four furniture manufacturers in Detroit, including the House of Correction, and the manufacturers feel that an exposition such as is planned would attract hundreds of buyers to the city who now go only to Grand Rapids. It was proposed to hold a show this year in the handsome and large showrooms of the Michigan Upholstering Company, 334-340 Lafayette boulevard, but this project fell through owing to hazy organization, but the manufacturers and retailers here are already planning for next year.

ST. LOUIS

A meeting of the manufacturers of hubs from different parts of the country was held at the Southern Hotel in this city July 16, and a Hub Manufacturers' Club was organized. The object of the meeting was the framing up of a standard size list. According to the present, there has never been any agreement regarding the size of hubs, in proportion to the axle, and the result has been that every plant makes a different size. The idea of the organization of the hub men and the meeting in St. Louis was conceived by F. S. Nichols of Chicago. He was elected chairman of the organization. A committee was appointed at the meeting who will confer with representatives of the Wagon Builders' Association to agree on a size list for hubs. The hub manufacturers present at the meeting were: W. F. Baldwin, Ironton, Mo.; M. R. Campbell, Tullahoma, Tenn.; W. J. Lee, Arcadia, Mo.; F. S. Nichols, Chicago, Ill.; N. C. Blanchard, Spring City, Tenn.; C. F. Siegel, Corydon, Ind.; J. H. Thomas, Hawesville, Ky.; H. J. Bosler, Jamesborough, Ark.; W. H. Hummel, Piedmont, Mo., and W. H. Mohrstadt, Dexter, Mo.

The Acme Woven-Wood Lath Company filed articles of incorporation recently with a capital stock of \$100,000, one-half paid. The incorporators are Charles H. Sommer, W. E. Pisse, Edward H. Wischer and Edward W. Savage. The object of the corporation is to manufacture and deal in woven-wood lath for plastering, etc.

Howard Watson, for many years connected with the St. Louis hardwood trade, died July 7. He was 53 years of age and for over thirty years a resident of St. Louis. For many years he was an active member of the Lumbermen's Exchange of St. Louis and at one time was one of the Board of Directors and has been on its principal committees. He is survived by his wife, a daughter, two step-sons and two brothers. The following resolutions on his death were unanimously adopted at a meeting of the Lumbermen's Exchange July 10:

"Whereas, It has pleased Divine Providence to take from our midst one of our most esteemed brother lumbermen, Howard Watson, be it

Resolved, That we extend to Mrs. Howard Watson and family our heartfelt sympathy in their bereavement, and be it further

Resolved, That these resolutions be spread upon the minutes of the exchange and a copy thereof be sent to the bereaved family.

W. A. BONSACK.

F. WALSTEIN.

E. H. WARNER.

Mrs. Julia Bush, mother of A. H. Bush, secretary of the Lumbermen's Exchange of St. Louis, died at Memphis, Tenn., July 13. She was 82 years of age, and had been a resident of St. Louis for over 40 years. She died at the home of her daughter, Mrs. Harpman. The week previous to her death Mr. Bush spent at her bedside.

Carl Lothman, a well-known planing mill man of this city died July 11 from pneumonia. He was 58 years of age. He was born in Buer, Hanover, and came to this country with his brother, William Lothman, president of the Lothman Cypress Company, in 1880. He was connected with the Mechanics' Planing Mill Company for twenty-five years, as bookkeeper and director, and was the treasurer of the company when he died. In the early '80s he started, with his friend Carl Theiling, the Theiling Moulding Company, afterwards changing to the present Theiling Lothman Manufacturing Company. The plants of the Mechanics' Planing Mill Company, the Lothman Cypress Company and the St. Louis Planing Mill Company were closed out of respect to him.

The capital stock of the Giese-Henselmeyer Lumber Company has been increased from \$15,000 to \$32,000.

Walter E. Keown, president of the International Hardwood Lumber Company, who recently booked some big orders from Chicago, says there is an increased demand for hardwood.

Henry Hafner, president of the Hafner Manufacturing Company, and his family, are summering at Lake Geneva, Wis. He comes down occasionally to look after the affairs of the company.

Theodore M. Plummer, son of Theodore Plummer of the Plummer Lumber Company, and his bride, who have been in California, have returned to Mr. Plummer's ranch at Mercedes, Texas. Mr. Plummer has quit the lumber business and is now "franchising it." For many years he was in business with his father as secretary of the Plummer Lumber Company.

According to E. H. Luehrmann, vice president of the Charles F. Luehrmann Hardwood Lumber Company, the demand for hardwood lumber is getting better right along. Their business, he says, is quite good and prices are stiffening. They are carrying a big stock of the best grades of hardwood, especially red gum, the latter they make a specialty.

The demand for plan and quartered oak is excellent, Joseph A. Hafner, manager of the lumber department of the Hafner Manufacturing Company, says. Cypress too is beginning to move quite well and better prices are being obtained for it.

Quite an active business is reported by W. W. Dings of the Garetson Greason Lumber Company.

W. R. Chivris reports a more satisfactory movement in the upper grades of hardwoods. His export trade is quite good. Inquiries are coming in well.

The band mill of the Little Lumber Company, at Blythville, Ark., closed down early this month, but the circular and dimension mill at that point is running. Only oak, ash and cottonwood logs are being cut. They have a pretty good supply of gum on hand.

F. C. Moore, president of the F. C. Moore Lumber Company, left July 18 for the South, to be gone for several days.

Lumber conditions show little change, says W. A. Bonsack of the Bonsack Lumber Company. While business is quiet, he says he gets his share of the orders given out.

The American Hardwood Lumber Company reports the lumber business as rather quiet. Some days trade is quite good, but on others it is just the reverse.

Some little railroad business is reported by the Steele & Hibbard Lumber Company.

Thomas W. Fry, secretary of the Charles F. Luehrmann Hardwood Lumber Company, has the sympathy of his many friends in an accident that has befallen his wife and daughter. Mr. Fry returned last Saturday night from Marlona, Ark., where he has been on business. During his absence Mrs. Fry and Jessamine, their 9-year-old daughter, visited relatives in Alton, Friday while playing about a bonfire the child's clothing caught fire and Mrs. Fry rushed to her rescue. Little Jessamine died early Saturday morning at St. Joseph's hospital, and Mrs. Fry, badly burned and prostrated by the shock, is now at the hospital, but is expected to recover. Mr. Fry could not be reached at the time of the tragedy, but was notified Saturday morning that an accident had occurred and summoned home. Up to the time of his arrival he did not know that his daughter was dead.

The Fred Hoffman Coopersage Company's plant at 8101 Water street, St. Louis, was destroyed by fire July 18, causing a loss of \$15,000. The fire was supposed to have been started by sparks from a passing engine falling into a pile of shavings in the rear of the plant, but Mr. Hoffman believes his plant was set on fire. The plant covered half a block and had been closed down for a week previous to the fire on account of dust business.

NASHVILLE

The Cumberland Lumber Company, a local concern which has been in business here for several months, has gone into liquidation. All the stock left on hand, about 500,000 feet, has been bought by John B. Ransom & Co. and Love, Boyd & Co. This firm was composed of Charles F. Rhea and S. S. Hull. Mr. Hull, who was formerly one of the largest log operators on the river, will again engage in that business. Mr. Rhea has organized the Charles F. Rhea Lumber Company with offices in the Stahlman building.

J. Gibson McIlwain, Jr., of the firm of J. G. McIlwain & Co., of Philadelphia, was a visitor in the city this week. Mr. McIlwain was looking around with a view of locating an office and probably a lumber yard in Nashville.

Nat W. Gennett, an old Nashville boy, now of the Gennett Lumber Company of Clayton, Ga., is visiting relatives and friends in Nashville. Although still a youngster, Nat Gennett has been unusually successful in the lumber business, as has also his brother Andrew who is his partner. They have large timber holdings in Georgia and a big supply of lumber on their yards.

Arthur B. Ransom of John B. Ransom & Co. leaves shortly on an extended vacation tour through Canada and the East. He will be accompanied by Mrs. Ransom and their little daughter.

John W. Love of Love, Boyd & Co. writes back from Markland, Nova Scotia, that he is having a great time up there, catching fish—and lying about them. He sends back the usual choice assortment of fish stories.

Richard Wilson of the Nashville Hardwood Flooring Company has sailed for Europe for a lengthy stay. Mr. Wilson has been suffering from stomach trouble and his physicians advised him that an ocean trip and the travel on the continent following it, would be beneficial.

The third game of a series between the Nashville and Memphis lumbermen will be played in Memphis, August 22. The net proceeds of the game, and both the proceeds and the game will no doubt be "big," will be given to a Memphis foundlings' home. Formal challenge for this game was issued by the Memphis lumbermen and it was straightway accepted by Nashville. Nashville agreed that the game might be played in Memphis. When the Memphis wanted to put the game off as far as August 22, however, the locals "backed up" a bit, but finally they came round all right and agreed to everything. The teams have therefore something like a month in which to prepare for the memorable conflict. There is the sharpest rivalry between these two aggregations and everyone is expecting something exceedingly torrid in the way of a ball game. The line-up of the Nashville lumbermen, which is herewith announced for the first time, is as follows: Mayes of Love, Boyd & Co., catcher; Osborne of John B. Ransom & Co., catcher; Erlson of Davidson Benedict Company, pitcher; Wolcott of the Nashville Hardwood Flooring Company, pitcher; Ralston of John B. Ransom & Co., first base; Dews of A. H. Card & Bro., second base; Rufus Wolfe of John B. Ransom & Co., third base; Marshall of the Nashville Hardwood Flooring Company, shortstop; McAllister of the E. & N. Manufacturing Company, left field; Mocker of the Southern Lumber & Manufacturing Company, center field; Taylor of the E. & N. Manufacturing Company, left field; Mocker of the Erlson of Love, Boyd & Co. is serving as all-around man in helping arrange the details of the game, helping get up the team, etc. Marshall is an old ball player and was for

merly a clever sporting writer on a daily paper. He is now the representative for Nashville of one of two well-known sporting weeklies.

A recent visitor to Nashville and a delegate to the Democratic state convention which nominated Gov. Malcolm R. Patterson for reelection, was Max Sondheimer, a well-known Memphis lumberman. Mr. Sondheimer is quite sanguine of the outlook and believes that now is the time to make hay, as it were. He thinks the opportunities now are greater for the lumbermen than they have been at any time in thirty years.

W. F. Craig, Jr. for the past five years has been lumber inspector and manager of shipments for the Nashville Hardwood Flooring Company, has resigned to accept a position with the Wilson Land & Lumber Company at Petros, Tenn.

Gen. G. F. Thruston of the Prewitt-Spurr Manufacturing Company is spending the summer at Beersheba, in the Cumberland mountains.

A special from Sparta, Tenn., announces that the East Sparta Saw & Planing Mills have been bought by the Doe Creek Lumber Company.

The Standard Furniture Company closed down its plant for a few days in order to make some repairs and take stock. The company has been running full time, however, and enjoying a big business. This concern, together with the Davidson-Benedict Company, has moved into new offices at the corner of Fifth and Crutcher streets.

The Nashville Tie & Cedar Company reports tough luck on a big tow of 25,000 cross ties which were started down the river on the "Chauncey Lamb, headed for Cairo. The boat got hung up in low water and is waiting for enough tide to do business with.

Craig & Smith is the name of a new lumber firm in Nashville that is making good headway. They have an office in the Arcade. J. F. Craig was formerly with A. H. Card & Co. and J. W. Smith was for several years with the Columbia Hardwood Lumber Company of Chicago.

W. V. Davidson and J. N. Hicks of the Davidson-Benedict Company have gone to Monterey, Tenn., for a visit of several days, which will be devoted entirely to the interests of their company.

John M. Smith of the American Hardwood Lumber Company is back at his post of duty after a stay of several weeks at Hot Springs, Ark., where he took the baths for rheumatism. He is much improved.

Henderson Baker of the firm of Henderson Baker & Co. has gone on an eastern vacation trip.

M. F. Greene, secretary of the Conasauga Lumber Company has just returned from a stockholders' meeting and gives encouraging reports of their business. The mill is running full blast, lots of logs are being gotten out and a logging railroad has been completed into the heart of the tract. The old officers were re-elected as follows: John B. Ransom, president; C. E. Benedict, vice-president and general manager; M. F. Greene, secretary, and John Byrns, treasurer.

W. J. Cude and W. H. Gleaves of the Standard Box & Lumber Company are back from an inspection trip of their properties in Putnam and Overton counties.

MEMPHIS

The final game of the series to be played between the baseball teams of the lumbermen of Nashville and those of Memphis to determine the ownership of the handsome cup offered by the American Lumberman will be played in Memphis August 22. This was decided at a

meeting of the Lumbermen's Club held at the Hotel Gayoso July 13. Max Sondheimer went to Nashville as a delegate to the democratic state convention and also as a special representative of the Lumbermen's Club of Memphis. In the latter capacity he prevailed upon the lumbermen of Nashville to accept the date proposed by Memphis. He had to do some fine talking to accomplish this, but talking is his strong suit. He says he had to tell them they were afraid to come to Memphis and that he had to keep up this bluff for about an hour before it was called. He assured them that they would be beaten even after they decided to come. Mr. Sondheimer has the consent of the lumbermen of Nashville to act as umpire but not of the Lumbermen's Club of Memphis at its last meeting. He still says, however, that he is going to umpire the game. The net proceeds will be devoted to the Memphis Foundlings Home, a worthy charity of this city. The lumbermen of Nashville who come down to witness the game will be the guests of the Lumbermen's Club and will be entertained royally. Committees were appointed to look after various features of the game, and the following are the chairmen of these: Entertainment, C. D. Hendrickson; publicity, George W. Fosshe; sale of tickets, C. M. Kellogg; advertising and programme, J. M. Thompson. W. R. Barksdale, Jr., is manager of the Memphis team and Ralph Bennett is captain.

The only other business transacted at this meeting of the Lumbermen's Club was the election of the following members: W. E. Ammons, a sawmill man of Sumner, Miss.; George Banks of Banks & Co., manufacturers of hardwood lumber, Hindsboro, Miss.; Frank May of May Bros., Evansville, Ind., and Memphis.

Rate matters are still engaging the attention of the special committee of the Lumbermen's Club having this matter in hand. The reconsumption rate has never been satisfactorily adjusted, and A. L. Foster, chairman of the special committee, is authority for the statement that this subject will be discussed further at a meeting to be held this week. A conference was held some time ago with officials of the Illinois Central, and the proposition was made to allow a concession of 15 to 20 cents per hundred pounds on shipments of hardwood lumber into Memphis from points on the Illinois Central and Yazoo & Mississippi Valley, taking a rate into Memphis in excess of 8 1/4 cents. The committee has turned this down because the limitation as to points makes its acceptance impracticable and almost useless to the lumbermen of this city. At the meeting to be held this week the question of carrying the matter before the Interstate Commerce Commission will be thoroughly discussed, and it is probable that a decision will be reached at that time. The committee some time ago announced that it was practically certain that the matter would be taken before that tribunal.

Within the past fortnight the railroads operating out of Memphis have announced an advance of from 2 to 10 cents per hundred pounds on rates from this city to points in the Southwest. This is to become effective August 10. Officials of the various lines have made an effort to keep the advance a secret, but it has become known. Shipments of Memphis will be materially affected by the new schedule, including owners of lumber and woodworking plants. The advance on lumber to Texas points amounts to 2 cents, that on handles to 6 cents, and that on barrels, kegs, etc., as well as agricultural implements, to 4 cents. The committee will discuss this matter at the meeting to be held this week and will protest very strongly against the advance. James S. Duvalt, commissioner of the Memphis Freight Bureau, and a co-worker with the special committee of the Lumbermen's Club, stated that the net to be taken by the committee will depend largely on whether or not a similar advance is ordered from St. Louis, Little Rock and other

points which compete for business in the south-western territory.

Contracts for plans and specifications for a six-story warehouse, to be erected at an early date by Crane & Co., mill supply dealers, have been closed. The structure will be located at the northwest corner of Fourth street and Court avenue on a lot 87 by 148 feet. The building will have a floor space of 52,200 square feet. The estimated cost is approximately \$250,000.

Lumber shipments from Arkansas have increased about 25 per cent during July over what they were during the same weeks of June. This is the information given out by traffic officials of the St. Louis, Iron Mountain & Southern and other roads. One of the causes of the increased movement, according to railroad men, is the more extensive activity in the building trades, and another is to be found in the fact that the railroads are buying heavy timber to be used in repairing cars and putting these in first-class condition for the large traffic they expect this fall. The roads have large quantities of "bad" cars and a large number are being made to put these in their first-class shape.

The car repair shops of the Iron Mountain located at Van Buren, Ark., will be moved at an early date to Fort Smith. The order to this end has already been issued. Officials of the company state that the people of Van Buren have not shown as much interest in the shops as they should and there have been troubles with labor at that point. These are the main causes for the order.

James Applewhite, vice-president and general manager of the Chickasaw Coopage Company, has returned from an extended western trip. He visited Tacoma, Wash., where he has a son employed in the smelter business. Mr. Applewhite reports improvement in the tight coverage situation and states that the mills of the company in Arkansas and Mississippi, which have been closed down for a long while, have recently resumed operation. The company has recently closed contracts with two of the big cottonseed oil manufacturing and refining companies for barrels for the next two years.

The box manufacturers of Memphis report some improvement in the demand for their output. There are only a moderate number of orders coming in, but shipment is being made on a fairly liberal scale on contracts on which delivery was held up during the financial depression. This is particularly true of glass manufacturers. The latter are ordering out large quantities of box material, both veneered and sawn and dressed. One company alone has recently received orders for more than twenty-five cars to be forwarded immediately. The Anderson-Tully company is running both its big factories in this city as well as its veneer plants, and it is also operating its mills in this city and at Vicksburg. The box factory at Vicksburg, however, is not running at present. Considerable gum is being used in box manufacture. The difference in price between shoeks made of gum and cottonwood is attracting attention to the former. Some veneer gum boxes are now being turned out for use by the packers, which is something of a new departure.

The regular semi-annual meeting of the Tight Barrel Stave Manufacturers' Association of the United States was held at the Hotel Gayoso during the past week. One of the principal topics of discussion was the outlook for revival of business and plans for taking care of the large demand anticipated. It developed during the meeting that practically all the stave mills are down, and it was the sense of the meeting that this condition should continue until there is a return to normal relations between supply and demand. Prices on tight coverage material have not broken as much as in some other lines, and there was a feeling of optimism regarding the future among the seventy-five or more delegates in attendance at this meeting.

The Neal-Dolph Lumber Company has closed down its plant at Greenville, Miss., but W. A.

Dolph, secretary and general manager, is authorized by the statement that the suspension of operations would be only temporary.

The E. Sondheimer Company is doing almost nothing so far as producing lumber is concerned. Only two of the mills whose output the company takes are now in operation, and President Max Sondheimer says these two would not be running if he could have his way.

D. A. Kendall, secretary-treasurer and general manager of the Sawyer & Austin Lumber Company at Pine Bluff, Ark., has resigned and has left for Kansas City, where he will make his home. Mr. Kendall had been connected with the company for twenty-one years. He has not announced his plans for the future. It is reported that President W. W. Cargill will appoint one of his sons to succeed Mr. Kendall.

A double band hardwood mill will be erected near Palmetto, St. Landry parish, La., by Charles E. Gill of Wausau, Wis., and Dr. H. B. Wrenn, Collierville, Tenn., representing a syndicate of northern capitalists who have recently purchased more than 100,000 acres of virgin good timber in the ten-acre tract. It is estimated that the daily output of the mill will be 300,000 feet. It is intended to build a model city at Palmetto, with electric lights and waterworks, and to construct a system of logging roads, furnishing connection between the respective mills. The plans include constant operation of the plants for twenty-five years, both day and night, with only such suspension of operation as is rendered necessary by repairs.

T. W. Pratt, one of the directors of the Nashville & Huntsville Railway Company, is authority for the statement that active grading has already begun on the line which is to connect Nashville and Huntsville. This road will prove an important factor in developing the timber resources of the section lying between the two points.

J. W. Thompson, president of the J. W. Thompson Lumber Company, has just returned from an extended northern and eastern trip.

That there has been no interruption in the consignment of hardwood lumber to Europe by manufacturers in the United States is clearly proven by the contents of the following letter, written to the representative of the Hardwood Record by Messrs. Kusse & Burgess:

"Referring again to the question of consignments, we would say that we are just in receipt of a letter from one of our particular friends in Great Britain calling our attention to the fact that consignments are still arriving in the various British ports by every steamer. He cites where sales have been made of first-class quality of 1-inch firsts and seconds. Plain white oak at \$6 to \$8 per thousand less than it can be bought for in this territory, and quartered oak at from \$8 to \$10 less than it is selling for right here in Memphis today. In fact, he enclosed a letter from one of his customers, stating that even at the low prices he had quoted him on some stock he had bought it on the dock at Liverpool for less money. We also read in the Timber Trade Journal, dated London, July 11, under the heading, 'American Lumber Consignments,' as follows:

"There appears to be but little abatement in the flood of consignments of hardwood lumber from the United States. Surely it is time that shippers' eyes were open to the fact that the continued dumping of goods on this side must result in disappointment. We hear from the leading importers in London, Liverpool and other ports that heavy stocks have accumulated, which it is impossible to move in the present state of trade except at a loss to the shippers, and this state of affairs is borne out by the fact that the merchants who have been purchasing for their ordinary requirements are now carrying heavy stocks."

You will see that this article bears the letter from our friend. Where do the 'suckers' come from?"

NEW ORLEANS

M. Fleischel, one of the managers for the Chicago Lumber & Coal Company and the manager of the Gulf Lumber Company, which is building a new town at Fullerton, La., was in the city recently on business.

Charles E. Gill of Wausau, Wis.; Dr. H. B. Wrenn of Collierville, Tenn., and their associates are considering plans for a new mill at Palmetto, La.

The Timber & Vining Company has been incorporated at Cedars, Miss., with an authorized capital of \$100,000. It will manufacture furniture, boxes, buckets and other lumber products. J. F. Conant is president, William C. Wing is vice-president and D. L. Kimberly is secretary-treasurer. The main office of the company is at Neechaw, Wis.

The Hibernia Bank & Trust Company and J. R. Pratt, recently appointed to succeed S. D. Blyaser as the receivers of the J. E. North Lumber Company, will shortly file suit against the Lincoln Trust Company, the Missouri-Lincoln Trust Company, the Mercantile Trust Company, Thomas H. Wagner and Burke & Crabtree, all of St. Louis, to recover moneys and assets of the North company which were taken over by the various concerns when the receivership proceedings were first instituted. Such moneys recovered will be held subject to the order of the Mississippi courts, under whose jurisdiction the receivership is.

F. M. Ikeler's big mill at Moelle, Miss., resumed operations July 20, after being closed down for several months.

CHARLOTTE

The Carolina Woodworkers' Company is a new concern at Raleigh, N. C. It will carry on all the business heretofore carried by Batchelor & Ford, lumber manufacturing and dealing in lumber, timber, iron and steel products, etc. The capital stock is \$25,000 and the incorporators are: J. G. Ball, W. H. Bagley, J. W. Hunter and others of Raleigh.

Another new concern recently incorporated is the Globe Lumber Company of Valmstead, Caldwell county, which has a capital stock of \$125,000, but will begin business with \$100,000. This company will do a general lumber business. J. M. Bernalhardt, T. F. Moore and W. C. Moore are the incorporators.

The Wadesboro Furniture Company of Wadesboro, N. C., will commence making chairs in a few days. D. H. Browder will be manager of the company, which because of the proximity of fine timber will undoubtedly be a success. V. Stapleton is superintendent.

W. B. McCall, who recently took stock in the Lenoir Bugzy Company of Lenoir, N. C., has been elected president and treasurer of the company. The Lenoir Table Rim Company, of which Mr. McCall was manager, has consolidated with the Lenoir Bugzy Company, and with additional capital anticipates a largely increased business.

A charter has just been granted by the W. S. Reich Furniture Manufacturing Company of Elkin, N. C. The capital stock of the company is \$100,000, and W. S. Reich, W. S. Gouch and others are the incorporators.

In the opinion of prominent architects interviewed building operations in North Carolina are on the increase. Members of the North Carolina Architects' Association who attended the recent meeting at Wrightsville Beach, N. C., are greatly encouraged over the prospects for business, as evidenced by reports and addresses at the convention.

Three creditors of the Crazy Lumber Company, a large company organized several years ago to handle the timber on the Great 'Crazy' mountain boundary, near Asheville, N. C., have just filed a petition in the Asheville Circuit Court asking that the company be adjudged bankrupt.

U. S. Bailey, president of the company, purchased the boundary from R. S. Rowland several years ago. Creditors filing the petition are the Citizens' Trust & Savings Bank, Henry Dinston & Sons and W. H. Westall & Co. of Asheville. The petition alleges that the lumber company committed an act of bankruptcy several weeks ago by giving to the Battery Park Bank of Asheville a deed of trust on part of its property to secure \$18,000. The total amount alleged to be due the creditors filing the petition is only \$1,200. The lumber company has been cited to appear and show cause, if any there be, why the prayer of petitioners should not be granted.

Judge Charles E. Day of Lexington, Ky., has just sold to the Luthers & Moore Lumber Company of Orange, Tex., for Asheville, N. C., parties, a tract of virgin poplar and oak timber in western North Carolina, containing 55,000 acres, the consideration being \$25,000. This is the largest timber deal consummated in the South in a long time. A logging camp has been established in the forest, which is the finest in the Allegheny mountains, and immense lumber mills will be built on the tract.

From various furniture manufacturing centers of the state information comes that orders are coming in rapidly and business is resuming normal activity again. The furniture men were hard hit by the panic, but happily the worst is over and they are again busily engaged with prospects of continuing so.

MINNEAPOLIS

Quite a number of lumbermen were visitors in Minneapolis last week, attending the various ceremonies and lunchea connected with the meeting of the Imperial council of the Nobles of the Mystic Shrine. The Minneapolis lumber fraternity is well represented, and all have been busy with entertainment of the visitors, for though the main session was held in St. Paul, the local Shriners did their share of entertaining. D. F. Clark, president of the North western Hardwood Lumbermen's Association, was active in the work, and C. F. Osborne, another prominent member of Zuhrah Temple, Minneapolis, was a wheel-horse in the strenuous days of the council. F. T. Peltch, assistant manager of the Advance Lumber Company, Cleveland, O., was one of the visitors here, coming as a representative of Al Koran Temple of Cleveland.

E. Payson Smith of the Payson Smith Lumber Company is spending most of the summer with his family at their cottage near Annandale, Minn. He came in the other day for the Shrine festivities and the automobile races. A. S. Bliss of the same company reports that his salesmen have been getting a good line of hardwood orders, but that local trade continues to be from hand to mouth and mall business is still slow.

The Missouri Lumber & Land Exchange Company of Kansas City has opened a sales office in Minneapolis, at 244 Security Bank Building, with E. M. Jones in charge as northern sales manager of the company. They are going after retail yard trade and have mills at Grandin and Wainona, Mo., also in Louisiana, where they are engaged in manufacturing yellow pine.

Building activity at Minneapolis continues very good, and the same is true of St. Paul, also of the smaller cities of the Northwest. The lower cost of material is appealing to a mass of small means who want to get homes, and this is the bulk of the building, as not so many business blocks and skyscrapers are being erected. White pine men are predicting an advance in their prices before fall that will bring them up above the January flats, and the trade here is generally counting on an upward movement.

ASHLAND

R. G. Page, secretary of the Lacking River Lumber Company, returned from his trip

through Ohio with some very desirable orders, especially for bill oak. Mr. Page advises that conditions are much changed since several weeks ago, and his satisfaction that business is bound to return to normal conditions. His company has again started its mill at Farmers, working all the departments full time and loading out several cars this week of bill and export oak. Its log supply will last probably until December.

C. N. Crane of C. Crane & Co. of Cincinnati passed here this week with a couple of fleets of fine poplar logs, en route to the firm's mills at Cincinnati.

S. M. Bradley, the tie and lumber dealer of Morehead, was a business visitor in this city this week. Mr. Bradley is one of the largest tie dealers on the Lexington division of the C. & O. In connection with the tie business he handles a large amount of lumber.

Vansant, Kitchen & Co., who have had their double band mill shut down for a few weeks, will not be able to run until they receive another supply of logs. They have a large run of logs through the breaks of the Sandy, and with the first rise they will receive a good run of logs, which will probably run them several months. They have on sticks a nice lot of poplar lumber and advise that they are receiving some orders for high-grade stock. John W. Kitchen of this company is on a business trip through Ohio and Michigan this week looking after the interests of his firm.

Leon Isaacson of Brooklyn, N. Y., president of the Yellow Poplar Lumber Company of Coal Grove, Ohio, is a business caller in the city this week. Mr. Isaacson advises that they are running all departments of their mills and yards full time. They are receiving an increased amount of orders during this month, and feel very much encouraged over the present outlook. This firm has enough poplar logs to run until probably the first of the year. During the past week several fleets of their poplar have passed here.

It is almost a decided fact that there will be built in the Big Sandy river, near Pikeville a large concrete dam, and also one in the river above the breaks. Leon Isaacson of the Yellow Poplar Lumber Company, with the chief engineer Mr. McDyer, will look over the grounds this week, and will draft plans and specifications to be sent to contractors for bids on the work. The Yellow Poplar Lumber Company receive from above the breaks a large supply of their poplar timber.

Wm. E. Kaman of the R. G. Page Lumber Company was on a business trip up the Sandy last week, loading several cars of lumber to be shipped to the yards here.

J. H. P. Smith, president of the Hardwood Lumber Company, has returned from a business trip through Michigan, Indiana and Illinois. Mr. Smith has returned with a nice lot of orders for oak, poplar and chestnut lumber, and also advises quite an improvement in market conditions, and is very much inclined to believe that it is only a question of time now until business will return to a more normal condition.

Mr. Hogg of the Hogg Lumber Company of Glen Jean, W. Va., was a business visitor in the city this week, calling on several of the lumbermen, looking after the interests of his company. Mr. Hogg advises that the lumber business is very quiet in his locality, with not a great supply of dry stock ready for the market. He also advises that this is not only the condition of his firm, but of their neighbors. The supply of dry stock is very limited.

Emanuel Brammer, a well-known Ironton lumberman, who owns and operates a saw mill at Fort W. Va., on the Guyan branch of the C. & O., met with what is probably proving a fatal accident last week at the saw mill, a log rolling over him, striking him in

such a manner as to bend him almost double and severely injuring his back.

Robert Young of the Fischel Lumber Company, Salt Lick, Ky., was a business visitor in the city this week looking after the interests of his company.

E. F. Vansant, one of the leading lumbermen of Morehead, Ky., was a business visitor in the city this week.

The Standard Planing Mill Company has lately closed contracts for several fine residences to be built in this city, and also will furnish the material for one of the finest residences to be built in Caledonia. This firm reports business very good.

The W. H. Dawkins Lumber Company advises that it is receiving inquiries now for large blocks of poplar lumber, which would indicate that buyers are getting in line again to lay in a new supply. This company has in its yards a fine lot of poplar lumber, and has enough logs to continue operating its large band mill at Ironton for some months to come.

NORFOLK

W. F. Best, of the Ford Brenner Lumber Company, which recently removed its headquarters from Norfolk to Cincinnati, was in the city last week upon a visit to his sisters, who reside here. Mr. Best called last week on the Hamburg-American line for Bremen, where he will look up trade and study foreign market conditions. Mr. Best will go direct to Cincinnati on his return several weeks hence.

The plant of the Farmers' Manufacturing Company, large manufacturers of barrels, boxes, etc., have announced their intention of rebuilding their plant upon a larger scale in the immediate future. This firm was recently visited by a distributor, who destroyed an enormous quantity of gum lumber.

Varying reports as to the condition of the export market are heard from the different local concerns. Some are able to report improvement, though slight, while others see no change in conditions. Reid & Co., stave exporters, in the Citizens' Bank Building, say that during the latter part of June business was somewhat better than for some time past. F. W. Blake, of the exporting firm of F. W. Blake & Co., reports business dull, though not unusually so. He says that there is some trade moving, but that prices are not satisfactory.

Exports for the month of June were quite heavy. A detailed list follows.

4,584,000 feet sawed timber	\$282,556
Logs, etc.	35,543
272,000 staves	8,000
Heading	1,760
Bar	1,996

\$327,845

TOLEDO

Building in Toledo is still dull, but the general character of the structures under way is of a superior quality and will consume considerable hardwood.

After lying in the wet ground for nearly eight years, workmen are removing a large quantity of hardwood timbers at Massillon, Ohio, last week. Many of them were twenty-five and thirty feet long and two feet square, and all were in a remarkable state of preservation.

The Dayton Lumber Company of Dayton, Ohio, will rebuild the plant which was recently destroyed by fire in that city. The new structure will be of brick and concrete, four stories high and will cover five city lots.

With a terrific charge of nitroglycerin thieves blew the door of the big safe through the window, wrecked the interior of the building and destroyed the furniture of the Charles Cook

Lumber Company, at Maumee, Ohio, last week. The thieves secured \$12 to repay them for their trouble. The explosion aroused the entire community, but the burglars made their escape and have not been apprehended.

Emanuel Brammer, an Ironton, Ohio, lumberman, was badly injured a few days ago at his sawmill at Hart, W. Va., as a result of a log rolling upon him, bending his back almost double. He was taken to a hospital at Huntington, where it is said he is slowly recovering.

LITTLE ROCK

The Wapakoneta Wheel Company, Wapakoneta, Ohio, has extended its operations in Arkansas. The company is capitalized liberally and has made Augusta, Ark., its headquarters for this state. Edward T. Land, of Augusta, is named as agent.

A Kansas City land company is in the market for a 15,000 acre tract of hardwood lands in Searcy county. The timber desired by the company is white oak, hickory, etc., of which the county in question has a great deal.

The Red River Land, Timber and Transportation Company has sold its interests to the Newport Packet Company, of which Frank F. Fee, of this city, is the controlling factor. The company operates boats on practically all of the rivers in northeastern Arkansas and have been instrumental in building up a large timber trade.

The Mena Box and Manufacturing Company, of Mena, Ark., has been chartered by the secretary of state. The company is capitalized at \$10,000. James L. Hogan is president, R. Dusenbery vice president and treasurer and W. J. Falls secretary.

What is reported as the largest single deal in cross ties ever noted in Franklin county was closed last week when McElroy and Wagner disposed of 2,000 ties to the Wagner Tie and Timber Company. The ties were valued at \$10,000.

The Watkins Lumber Company of Mena, capitalized at \$25,000, with a paid-in capital of \$14,000, has been incorporated. W. E. Watkins is president of the new company, D. M. Watkins vice president and J. T. Monroe secretary.

The Paragould Handle Company of Paragould, Ark., has filed notice of an increase in its stock from \$5,000 to \$10,000. P. C. Scott is president of the company.

The large heading mill of F. Keich, together with two kilns of lumber, was destroyed by fire at Nettleton recently. The loss amounted to \$15,000. The factory will be rebuilt at once.

Among the new industries installed by the Grainger & Kelly Bros. Lumber Company at Eureka Springs is a box factory, which has just been opened for operation.

The Fort Smith Lumber Company, which has for the past ten years maintained its general offices at Abbott, Ark., has removed the offices to a thriving new town in the lumber belt being developed along the Arkansas Central Railroad.

The Arden Lumber Company, of which H. E. Broman was manager, and which operated extensively in Little River County, has gone into bankruptcy, failing, it is reported, for about \$25,000.

St. Louis and Chicago are buying extensively of Arkansas gum. T. T. Green of Newport has just closed a deal for 400,000 feet of gum, purchased from the firm of Bealy Bros., at Sunrise, to be shipped to northern points.

The H. Alfrey Company, a coeprage concern of Memphis, has filed a copy of its articles of incorporation with the secretary of state and been chartered for operation. It is capitalized at \$400,000. W. F. Alfrey of this city is made state agent.

Warren G. Chase of the lumber firm of W. G. & L. H. Chase, Plymouth, N. H., died at his home in that town July 14. Mr. Chase was widely known in the manufacturing business of New England.

E. G. Phinney of Jacksonville, Fla., has been on a trip to Boston and New York.

W. R. Chester of W. R. Chester & Co., Boston, a member of the State Board of Trade, sailed for England July 14 to attend the Peace Conference. Before returning home he will visit Germany, Holland, Switzerland, Italy and France. Mr. Chester is making his first trip abroad.

George W. Gale of the George W. Gale Lumber Company returned last week from a European trip.

The members of the surveyor general's office presented Ralph L. Abbott, who recently resigned as surveyor general, with a diamond ring. Mr. Abbott is now connected with the C. E. Skinner Company as a salesman.

CADILLAC

The G. R. & L. and Ann Arbor officials were here last week looking over the site of the new

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

The smile has come back to the faces of most of the Chicago hardwood jobbers and to the hardwood salesmen from abroad. Last week showed the largest sales that have occurred in months. While local market conditions have not reached the high-water mark of the early part of last year, they are in very satisfactory shape. In consumption Chicago is leading all other cities of the country. Generally speaking, all the woodworking factories are fairly busy. Local building, especially flat construction, is tremendous, considering the year. There are said to be twenty-five miles of street front of buildings being erected in Chicago at the present time. As practically every one of these buildings requires hardwood finish the aggregate in this line should be immense.

Without exception dealers are reporting improved sales conditions and everyone is optimistic over the immediate future.

BOSTON

Dealers in hardwood lumber are beginning to be a little more optimistic in their views for the future, because inquiry of late has developed in a few very fair orders being placed. Not only are the men who stay at their offices to take care of the visitors and mail orders feeling more hopeful but salesmen have found their customers more willing to talk. While prices are not materially higher, manufacturers are less willing to offer good stock at concessions. Manufacturers of interior house finishings are not as busy as usual at this season of the year. The furniture manufacturers are beginning to do more, and from now on a more normal business is anticipated. At the hardwood mills stocks of lumber are not large and buyers have kept their stocks down to as low a point as possible. When business does resume its normal proportions, it is expected there will be a marked advance.

Pine oak is offered in fair-sized blocks, and it is still possible to buy from some mills at low prices. Quartered oak is in better request and supplies are not large. Dealers report they cannot find as much good quartered oak as they thought they would be able to. Spanish cedar is reported as being in larger call from manufacturers of cigar boxes. Mahogany is steady with a moderate demand. Maple flooring is steady, with demand from some quarters larger than it has been of late. Beech and elm are in rather

turpentine plant relative to putting in a siding.

F. J. Cobbs and wife have returned from an auto trip in the East. Mr. and Mrs. Cobbs visited the New England states and also New York.

Charles T. Mitchell of Mitchell Bros. has returned from an eastern trip.

There is much talk of Cadillac becoming quite a summer resort. Option has been given on twenty acres of land facing Lake Mitchell, which it is proposed to plot, the lots to be sold to those who will erect suitable cottages thereon. There is an important move to extend the boulevard around Lake Mitchell, the larger of the two lakes adjacent to Cadillac. This would open up additional resort spots, and no doubt be the take place on that river, once famous for that means of attracting a large number of desirable resorters each season.

A big drive of logs on the Manistee river passed through Greenwood township one day this week, headed for the Peters mills at Manistee. That will very likely be the last drive that will ever kind of log transportation.

NEW YORK

The hardwood market at New York rises steady, but is to a large extent featureless. The trade has settled down to taking business as it comes for the summer season, but with a general belief that the early fall and winter will see improvement in trade. This belief seems to be well founded by reason of the slow but steady improvement noted in commercial circles as a whole plus the fact that supplies will not be excessive in any of the hardwoods when the turn comes. The supply feature of the market seems indeed to be the chief factor in holding prices and trading on their present basis, and the fact is now well realized that while there is ample stock for present actual needs, the mill capacity has been so reduced through the financial depression and stocks in the hands of buyers have been allowed to so run down that even a little turn for the better in the matter of demand will be immediately felt in the price situation. With the awakening to these facts has come a constantly lessening tendency to force or crowd the market. Of course this is not to say that prices do not show considerable adjustment from the standard previous to the panic, but hardwoods show a less percentage of readjustment than any other class of lumber. Bottom prices have been reached all around and any change must not only be for the better but very much so, when the relation of supply and demand is considered.

The local yard trade is scattering and desultory, but on account of the low ebb of stocks in the hands of the manufacturing and consuming trade the wholesale market reports a fair call for ash, basswood, poplar and oak, the first three being not over plentiful for prompt shipment and prices very firm. Birch, chestnut, maple, etc., are more plentiful, with light demand and consequent price fluctuation.

PHILADELPHIA

The last fortnight's business report is much more satisfactory as regards the hardwood end and general confidence is gaining fiber every day. Inquiries are coming in more lively and there have been some very fair

orders booked. It is universally conceded that, considering the condition of the crops, etc., it is only a question of time when there will be a normal adjustment of things. Now that the political programmes have been made public, a natural suspense has been relieved, and making due allowance for the usual summer dullness a marked improvement may be justifiably looked for as fall opens.

Values with the exception of some of the better grades of wood are still subject to fluctuation, but a canvas of the large hardwood makers reveals the fact that the stock situation is kept well in hand by them and that there is no intention on their part of throwing their product on the market until a reasonable profit is assured. The furniture factories of eastern Pennsylvania, Maryland and surrounding territory are in the main quiet, and buying is on a close basis.

Building work, especially of the better class, has shown some advancement, and as considerable hardwood finish is required, the millwork concerns have reason to rejoice. Boxmakers report trading spasmodic, but prices have shown no inclination to stiffen. Clearbox makers feel somewhat encouraged, but in the veneer business there is much room for improvement. Taking the situation on the whole, however, the outlook is favorable.

BALTIMORE

As yet no important changes are to be reported in the hardwood trade of this section, although it is to be said that a decidedly better feeling prevails, and some slight improvement has taken place. A somewhat more active inquiry appears to have set in, though the gains are not so pronounced as to make a marked impression upon the business. The range of prices is practically unchanged, but rather more steadiness characterizes the market and a disposition is manifested to buy beyond immediate necessities. Dealers here report a rather fitful business, some weeks developing nearly a normal volume of transactions, while others show a marked deficiency. At the same time the stocks on hand at the mills are so low that a decided quickening of activity must certainly result in a scarcity of supplies with a rise in values. The production appears to be slowly increasing in anticipation of a livelier inquiry, but the trade requirements fully keep pace with the recovery, and there are no extensive accumulations in any direction.

The foreign situation continues very weak, with stocks large and prices so depressed as to eliminate profits. As a result, many exporters are making few, if any, shipments, the trade being confined to supplies that were ordered some time ago and under conditions that admit of the elimination of the objectionable features which are urged against the forwarding of stocks at this time. A material improvement is not looked for until the domestic situation shall have changed so much for the better that lumber can be disposed of without trouble at home, relieving the foreign markets of any additional influx and permitting the accumulations there to be distributed. This state of affairs, it is now thought, will come about sooner than hardwood men felt they had reason to expect not so long ago. The attitude of the entire trade therefore is one of hopefulness, and even of optimism, and the outlook is much more promising, regardless of the quiet which is natural for this season of the year.

PITTSBURG

Hardwoods are moving along quietly with little change in the situation. Demand has not increased as was anticipated a few weeks ago, but there is good reason for this. While the bulk of building operations is larger than

in May, they are of the sort that require little hardwood. There are almost no large buildings in course of construction that would take up big bills of fine hardwood for finishing. The work that is starting now will not be ready for the finishing lumber for two months and as a result, fine hardwoods are not in active demand. The market for timbers, especially white oak, is somewhat better than a month ago for railroads and trolley companies are pushing their operations. The big demand for lumber at present seems to be for repair or extension work at the industrial plants throughout this district. There is more figuring being done for mill work of this kind than at any time since last October, and what is still more encouraging, the projects are going ahead to the contract stage.

The yard trade in Pittsburg is little improved. Outside of the city reports indicate the yard men are filling in their stocks but are not buying to any extent for future uses. The call for lumber from the factories of the middle west is very fair and prices are still at a profitable level. Poplar is the best seller in the Pittsburg market, with white oak a close second. Prices are practically where they were June 10, with stock perhaps a little reduced.

BUFFALO

The lumber trade appears to be holding its own through the summer as it has not always done, for as a rule it falls off considerably about now. The demand for all sorts of lumber is no doubt better than it was in May; this may not be considered as trading much, but it is encouraging this year.

Nobody looks for any rush of trade this year, but there ought to be a pretty good movement in the fall, though as to hardwoods it will all depend on what the furniture factories do. They have not been buying much lumber of late, but it is said that they have taken in some very good orders at the exhibitions. If this is so the problem will be solved so far as the hardwood trade is concerned.

The various hardwoods are keeping pretty steady as to price, and there is no great amount of stock anywhere; reports even of cypress are very hopeful, and all on account of the light stocks. The same is true of almost everything but the pines. Quartered oak is as much the leader in the hardwood trade as ever and it is said that plain oak has gone off in price perhaps more than any other hardwood, so the two are about as far apart as ever, in spite of the effort to cut down the production of plain and increase quartered. It is probable that some other woods are entering into the account, for birch and maple are easily had and are not selling high.

Local lumbermen are doing what they can, but are not taking in much stock, as they have a good supply and are preparing to take care of the entire trade on demand. They are staying at home this summer. If they have special mills in the city they are keeping them going close up to the demand.

As a rule the hardwood saw mills owned or controlled here are active, but they will hardly be run very strong till the demand is active again, for though it is always said that lumber in stock is good property there are turns taken in it that cannot be foreseen, so it is not well to pile up too much of anything.

SAGINAW VALLEY

The market is passing through the usual midsummer dullness of trade. Some lumber is moving, however, and prices are well sustained, taking general business conditions into consideration. Dealers are carrying pretty

fair stocks and are able to supply about everything that is wanted. Manufacturers and dealers are optimistic as to the future and believe that when business activity revives in the fall there will be activity in trade.

CLEVELAND

Dealers here report that a further improvement in the hardwood market is noted and that the volume of inquiries continues to increase. Price cutting is still resorted to by some firms to get orders, but there is a tendency towards steadier prices.

Manufacturers who are heavy users of hardwoods are beginning to get their plants under way again. Many have been running of late on stock they had on hand, and it is now apparent that many are forced to buy lumber and are coming to it with a cheerful smile.

Poplar continues to hold its own, while the call for oak is quite firm. There is little call for other hardwoods, with the exception of maple flooring, which is one of the bright spots in the hardwood firmament just now.

COLUMBUS

Nearly all the Columbus lumbermen say that the market is more active and that prices show an advancing tendency. Southern pine is at least 75 cents higher than it was two weeks ago and the market for hemlock is decidedly stiffer, and it is believed that this advance will affect some of the hardwoods before long. The oaks and poplar are firm and show but little change compared with the market around July 1. Good prices are generally obtained for all kinds of lumber and it seems to be the disposition on the part of dealers to hold for higher prices. The market shows better form, and considerable activity is evident in certain lines. Dealers are optimistic regarding the future of the market and firmly believe that prices from this on will show an advancing tendency.

INDIANAPOLIS

This month has been a fairly active one with the hardwood dealers of this vicinity. While the demand for hardwoods for building operations has shown a decided decrease, manufacturing plants have more than made up any lack of business in that respect.

The local carriage plants and furniture factories are all busy; in fact, their business now is almost as good as it was at this period last season. However, they continue to buy cautiously, hence hardwood men are now having more than sixty per cent of the business they had last season. Prices remain steady, with no tendency to change. It is expected that the market will brighten up perceptibly toward fall.

MILWAUKEE

The hardwood trade during the last two weeks has been less active than at any time since its revival at the opening of the building season. Dealers are all looking for a heavy fall trade when building takes on a more active aspect. The present season seems to be one of transition, and while dealers say that prices are holding well the volume of trade is expected to be small for the next few weeks.

Quartered oak is holding its own and prices are firm, with a tendency to rise. Plain oak is less active and demand is not so strong. Maple flooring is lower, but dealers are looking for better things in this line later in the season. The poplar market is strong and stocks in general are light. Basswood is holding its own, and the supply is light. Birch is commanding good prices.

BRISTOL

The condition of trade in this section is said to be slightly improved and lumbermen are receiving many more inquiries for stock, which they take to mean that there will be a better demand within the next few weeks. It is believed that this will give prices a slight upward tendency. Business seems to be holding its own pretty well, and while it appears a little dull on the surface, a considerable volume is being done, as is shown by reports of railroad traffic agents on transportation equipment.

Local lumbermen say that the foreign market shows signs of rallying from the effects of a condition bordering on demoralization, due to the consignments of American manufacturers during the early part of the year. They believe that conditions abroad in the lumber trade are adjusting themselves, though there is not yet a very striking tendency in this direction.

Nearly all the band mills in this section are running, while probably not over sixty per cent of the circular mills are in operation. Labor is employed at a reduction of about ten per cent below the former scale, but manufacturers say that it is really much cheaper than this because of the greater efficiency demonstrated.

CINCINNATI

The local trade has not shown an increase over that of the month of June; it has not lagged any, but has kept about on a par with last month. July and August are usually the dull months of the year, but this year trade did not act according to form, and has been improving each month. That, however, was generally expected by the local trade, and to keep up the good work, they are working all the harder to keep the wheel going. The Sun Shine League here has helped trade considerably; it has instilled confidence in the minds of consumers and in that way has benefited the lumber trade.

Plain white and quartered oak are the leaders in the market at the present time, while the demand for poplar on the part of the box manufacturers has been equal to that of other months. The box manufacturers are also purchasing considerable cottonwood and red and sap gum. Generally speaking, the hardwood situation is good, with prospects for improvement from now on.

EVANSVILLE

The market for hardwood lumber is improving in this section. Manufacturers express themselves as being pleased with the outlook. Inquiries for oak, poplar and ash are coming in freely. Quartered oak is in good demand, both red and white. Poplar and ash are in better demand, and plain oak is stronger now than for a long time past, which is due in part to the curtailment of operations at a great many southern mills where the bulk of the plain oak is manufactured. One manufacturer shipped ten cars this week which in ordinary times would not be looked upon as an extra large week's business. However, at the present stage of the market it is taken as an indication that the market is undergoing improvement.

Several of the local mills have been shut down a good part of the last two weeks, partly on account of making needed repairs and partly on account of the scarcity of logs. However, reports from logging territory indicate that they will be more plentiful in the future, as most of the farmers are about

through with their crops and will now turn their attention to getting out logs.

ST. LOUIS

There is a much better feeling in the hardwood market than there was a couple of weeks ago. Of course, business is comparatively dull, as it usually is during the summer. It is not to be expected that trade could be anything but quiet when lumbermen, both buyers and sellers, are away on vacations, but the fact is manifest that there is an improvement. Some few orders are coming in from the railroads. While the orders are not large it shows that a beginning is being made from this source. Upper grade hardwoods are moving, more, probably, in this class than in any other. The furniture factories are coming in the market for this grade. The demand for the better grades of hardwood has caused an overselling and there is somewhat of a scarcity in this, particularly in oak. The result is that the dealers are trying to discourage the selling of straight carloads. Straight cars of firsts and seconds have gone up. There will be a still greater scarcity of high-grade lumber, for the mills have recently been cutting up old logs, so the amount of low-grade lumber will be greater than ever when the demand begins.

NASHVILLE

Decidedly optimistic is the tone of local lumbermen just now. From many sources come encouraging reports of the resumption of work and business in all lines is picking up considerably. Prices are not going off a bit on hardwood and orders are coming in right along. In fact, it is stated by the local railroads that the outgoing tonnage for July this year is almost up to that of last year. Lumbermen are selling back orders right along at regular prices and there is no disposition manifested to cut anywhere. In fact, those who had held out and waited in hopes that prices would be cut have seen that such would not be the case and they have therefore come into the market.

Quartered white and red oak seem to be the leaders in the local market. The upper grades of poplar are in good demand; the lower are a little slow. Plain oak is beginning to move briskly. This wood has been dragging for some time back. Chestnut is in good demand, especially the better grades, which are used for interior finishing. The lower grades have been dragging, but they, too, are moving now. Ash and hickory are steady and are selling briskly, especially hickory, which is much in demand for agricultural implements and vehicle manufacturers. Cumberland river is quite low now and the logging season is over for months to come, unless some unforeseen rise takes place, and no such happening is anticipated.

MEMPHIS

An appreciable improvement was shown in the demand for hardwood lumber during the past few days. Even with this improvement demand is somewhat below the average for this time of year, but there is such an increase over even a fortnight ago as to attract attention. Prices are some better in a few instances and the opinion prevails that bottom values for the season have been witnessed on all hardwoods. It was not expected that buyers would be disposed to operate at all freely as long as prices showed a declining tendency, but owners of lumber are inclining to the view that steadier values will bring a much better demand. It is always difficult to get anyone to operate on a declining market, but hardwood interests believe they will

have the same experience as yellow pine manufacturers. The latter are now able to sell their output at from \$1 to \$2 per thousand higher than a short time ago, and there is a much better demand at the higher level than when prices were touching bottom. The amount of hardwood lumber for sale is large enough to meet all requirements, but there is no large surplus and holders believe that very large inroads would be made on present stocks if anything like an average demand should appear. There is practically no logging under way in the South, and it would require a great deal of time to get out timber and put lumber on stocks, and a much greater time to get it ready for market. This is another one of the factors which manufacturers of lumber are stressing in their comments on the situation. It is also noted that business conditions throughout the country are rapidly improving, and lumber interests are unable to see how this improvement can go forward without being reflected in the hardwood lumber industry.

The best demand is for plain and quarter-sawn oak in the higher grades. Offerings are comparatively light and holders are able to secure very satisfactory prices for what they have to offer. The lower grades, however, are slow of sale and prices are low. There is some improvement reported in the demand for gum, and it is expected that the decided betterment noted in yellow pine will tend to stimulate increased activity in gum. Cottonwood is practically without change. The demand is comparatively light, but, while some sections are offering cottonwood at very low prices, the disposition of holders here is to refuse to sell except where satisfactory values are obtainable. The demand for ash is very light and the same is true of ypress. Prices on both are rather low. There is not much poplar offered and those who have any to sell are able to secure prices that are fairly good.

NEW ORLEANS

While the strike of the freight handlers which has tied up Stuyvesant Docks for some weeks has affected in some degree the exports out of New Orleans, there is still an active movement in staves through this port and some other stuff is also being exported. The movement in lumber other than staves is not very active, this being due to the slack European demand and the fact that the European operators are not operating to any extent here. General conditions in this market have changed little within the last fortnight. The building activity in this vicinity has been responsible for a fair demand for lumber, while the construction of several handsome residences and apartment houses has generated a good demand for interior hardwood finish and products of this character. Many of the mills of this section are still running only half-time, with small forces.

CHARLOTTE

There is decided improvement in the hardwood situation in North Carolina. It is not so difficult to secure funds to carry on operations, and work is being conducted on a more liberal scale. Building is going on at a more extensive rate, and as a consequence hardwood dealers are finding that orders and inquiries are more numerous, while prices show decided improvement. It is the general opinion that before many months have passed normal business will be witnessed and lumbermen are generally optimistic over the situation.

MINNEAPOLIS

The situation just now is characterized by a sort of indifference among the wholesale dealers. They recognize that consumers and

retailers are trying to make out with smaller stocks than usual this year, and are buying only for immediate needs. They know that as hardwood goes into consumption their trade will soon become normal, and may even take a big boom when there is probability of a shortage in stock. Prices in some woods are not what dealers think they ought to be, and so they are not pushing sales. They are satisfied to hold the stock at firm prices for a while, feeling sure they will find a market during the fall and winter, and that prices will probably advance by that time. There is a good deal of inquiry, and some large buyers are endeavoring to lay in a supply at low prices, but this is a difficult matter. The best price deals are as usual to be had from those who hold very little stock. Heavy operators in hardwood are not willing to sell any large quantity at low prices, and some of them will sell a car load at a lower rate than they will ten or twenty. Birch seems to be stronger, and basswood is holding up to fully as high prices as last year. Northern oak is scarce and held at fancy prices, and southern stocks do not seem to be plentiful. Ash and rock elm are practically out of the market already. The flooring trade continues good, and both birch and maple are in good demand for this purpose.

ASHLAND

All indications now seem to be for a steady increase in volume and grade of business. There is an increased amount of activity among the eastern and western cities as well as among all railroads. Several of the roads which two months ago enjoyed but one crew have now many as five, with indications for more. Inquiries are increasing and more orders have been placed this month than any month since last October.

With few exceptions practically no preparations are being made for log supplies in this section, and already several of the large band mills are entirely sawed out. Ordinarily at this season of the year the timbermen are busily engaged getting out logs to have them ready for winter and spring tides, but at present the conditions are almost the reverse. This can be accounted for in that timber stumpage cannot now be bought on a ratio with the present market prices for lumber, and while the conservative millman has every evidence in higher prices, yet he is not disposed to load up on high-priced timber unless some actual assurance for so doing is offered.

Constant oak is a great factor in the production of tan bark, as the logs must be cut in July and August in order that they may be peeled. From the fact that there is being no logging done at this time, the bark industry, which is one of importance in eastern Kentucky, surely will suffer a great shortage. The large tannery located in this city uses large amounts of the bark each year.

NORFOLK

There is a slight stimulation in the foreign trade, according to some of the local exporters, although quite the reverse is the opinion of others. This, of course, means that trade is about as it has been for the past few months and the improvement is confined to a few fortunate concerns. There have been few shipments to domestic markets from this section lately, and there have been some surprisingly large shipments of consignment stocks in spite of the demoralized condition of the markets across the sea. These shipments were exceptionally large for the month of June and swelled that month's exports to a surprising total. With most of the trade in this city, however, little of this is being done, and the shipments being made come

more largely from outside operators who are using Norfolk as a shipping port. From portions of Virginia and North and South Carolina come a few better trade conditions in the shape of a few requisitions for car oak from the railroads, and other hardwoods.

From a local viewpoint there is an improvement in the demand for hardwoods because of the tremendous strides being made by this city in building operations, the city being rated second in the percentage improvement list recently compiled by Bradstreet's agency of building operations in the country. Approximately \$300,000 in building permits were granted during the month of June, and July has secured a good start: for last week alone permits were issued for close to \$100,000. Large furniture men, supplying territory contiguous to this city and portions of North and South Carolina, report business as unusually dull and profitless.

With the mills in this territory operations are not as healthy as it is thought by manufacturers will be the case after the two calling days of July and August are passed. There have been one or two plants established along the line of the Virginia railroad which will eventually mean much for this port's hardwood future, but these during the existing dull period are cutting little lumber.

TOLEDO

There has been a marked improvement in local conditions within the past few days. Some of the factories are running at capacity, notably the agricultural implement concerns and vehicle plants, and they are consuming more than their usual quota of oak, hickory and ash. Suitable material to meet their needs is not so plentiful and more or less difficulty is had in furnishing certain grades required. Other manufacturing establishments are operating about as they have been for some time, with a slight increase in the output of a few. None of them seem to be curtailing. Box materials are in good demand and orders for this lumber have been liberal recently. Oak flooring has been quite active and considerable other finishing is on the move. Lumber is in good demand. The past week has shown a letter tone to building operations and many of the structures planned will consume considerable hardwood, a thing which has been rare here this summer. Prices have not declined and stocks are not large. On the contrary, the market is very sensitive and has responded to the general strengthening process which for some days has pervaded the market. Local dealers feel much encouraged under present prospects and fully expect to do some creditable business before the season closes.

LITTLE ROCK

There is a decidedly brighter outlook in the lumber business in this section than was the case a month ago, despite the fact that some lumbermen still take a rather gloomy view of the situation. The manager of one of the largest local hardwood plants stated recently that he looks for an almost unprecedented business the coming fall and winter, as conditions, he believes, will require it. For months the markets have been dull, little interest shown in timber deals, many plants operated on a curtailed schedule, and some shut down for months. In the meanwhile the consumption of materials, from resources hoarded at the time of the panic, has been going on, until it is evident that any active buying would soon see the stocks on hand and reverse the condition of the market. This is strengthened, too, by the evident revival in business generally in this section. It is now conceded by the railway officials themselves that they will practically reopen their shops in this city the latter part of this month. They have already restored large numbers of men in the

car repairing and other departments, which tends to indicate the revival of confidence on the part of the transportation companies.

SAN FRANCISCO

The consumers and dealers are all optimistic, and the latter report that money conditions to be more plentiful every day. All kinds of lumber are moving in larger or smaller quantities, and although the mills do not complain of overwork they are, as a rule, satisfied with conditions and with prospects of the near and distant future.

Building continues quite active and many new projects are being taken up and pushed to completion. For the first time in its history San Francisco has been lately a borrower and eastern financiers have not been slow in realizing what an excellent opportunity this city offers for the profitable use of their money, either in large or small quantities. The money coming from outside sources is naturally used for improvements on real estate and as so far it has been loaned on the best of properties and the principal streets, it has gone into handsome structures of all sizes. These expenditures have kept building operations quite beyond expectations, although they are not to be compared with operations of the last two years, when we were all working under extraordinary conditions. The building now is done on a sensible, substantial and reasonable basis; that is, there does not exist that feverish anxiety to throw a building into place as quickly as possible and without regard to cost, such as was done heretofore since the fire of 1906. Buildings now are costing so much less that the property owners who waited with their construction are reaping the benefit of a very substantial reduction in their expenditures and they are thereby able to make more attractive rentals to tenants. This condition will no doubt prevail for some time and will be the cause of a continuance in all kinds of construction.

 NEW YORK CITY

WOODS No. 53 SINGLE OR DOUBLE SURFACER

WORKS 9, 15, 18, 24 AND 30 INCHES WIDE BY 6 INCHES THICK. SIX FEED ROLLS

This machine is built on the same principle as our heavy timber planer and matchers. It is an exceptionally fast-feed machine of great capacity—adapted to any class of surfacing at any rate of feed.

THE PATENT BELT-RELEASING DEVICE and the PATENT WEDGE PLATEN, which are distinctive features of the Woods machines are incorporated in the No. 53 Surfacers. The gear train, common to other types, is eliminated.

The top feeding-in rolls which are divided into two or more sections with corresponding chip breakers, permit of simultaneously planing different thicknesses of stock. All machines are equipped with our PATENT RADIAL KNIFE-SETTING GAUGES AND TRUING DEVICES.

There are other important features, many of them.

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

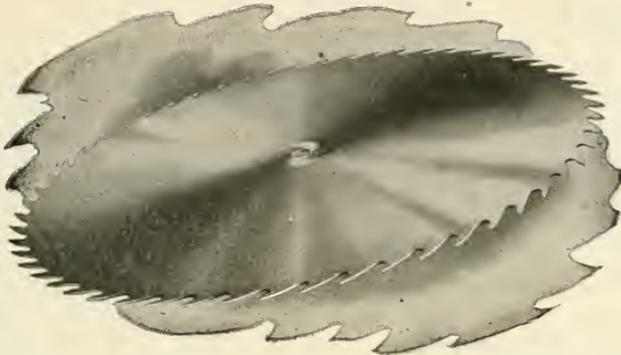

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding stick of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular

RUSSEL WHEEL & FOUNDRY CO. :: Detroit, Mich.

Branch Office: 208 GOE CHAUX BUILDING, NEW ORLEANS, LA.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

 SOLE MANUFACTURERS
 CADILLAC, MICH.

THE TRIMMER THAT DOES THE MOST WORK WITH THE LEAST FATIGUE TO THE OPERATOR AND WASTES THE LEAST LUMBER IS

The "Tower"

TOWER One-man 2-saw Trimmer.

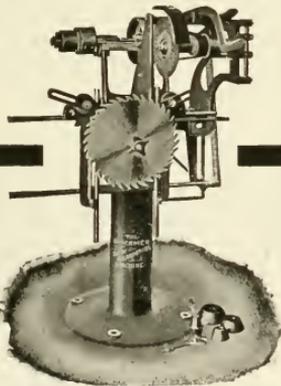

IT DOES THE MOST WORK WITH THE LEAST FATIGUE TO THE OPERATOR because the crank that adjusts the saws is attached to one of the transfer blocks (whichever is preferred). Hence it is not necessary to go to the end of the MACHINE to shift the saws, as with all other trimmers. This saves steps and time.

IT WASTES THE LEAST LUMBER because the operator is CLOSE TO THE BOARD, whether long or short, when he sets the saws, and can therefore see INSTANTLY how to trim it to the BEST POSSIBLE ADVANTAGE.

TWO FEEDS controlled by ONE LEVER.
 MADE IN 10 DIFFERENT SIZES.

O. L. RAYMOND — Marinette, Wis.

Inventor and
 Manufacturer of the

RAYMOND LOG LOADER and the **RAYMOND**
DECKING MACHINE

Operated by Horse-Power, Gasoline or Steam.

What users say of these Machines

DEAR SIR:—

Blaney, Mich., March 23, 1906

The eight loading machines which you installed here this winter have been thoroughly tested as to strength, durability and economy. We are satisfied that the machines will pay for themselves in a month or eight weeks and can cheerfully recommend them to anyone who may desire to facilitate and economize in the lumber industry. Yours truly,

WM. MUELLER, By F. W. Bunker, Supt.

DEAR SIR:—

Monico, Wis., Feb. 5, 1908

I am in receipt of yours of the 31st and in reply will say we have not had any trouble with your loader so far, nor changed our mind in regard to the same as it is the finest rig I have ever seen. We have not broken anything on it yet and I do not think we will as it is strong and durable. We are putting in from 35m to 40m per day of 30 log timber and are loading it all with the loader, so you can see we have no kick coming.

Very truly yours, WILSON & COMPANY.

MINNEAPOLIS CEDAR & LUMBER COMPANY,

Minneapolis, Minnesota, 505 Lumber Exchange.

Escanaba, Michigan, July 17, 1907

GENTLEMEN:—

In answer to yours of July 16th, we would say that we have about a dozen of the Raymond Log Deckers and Loaders, and find that they are the best machines that we have ever had. They will easily pay for themselves in three weeks or a month over the old method of decking and loading sleighs with the additional advantage that it does not take experienced top loaders who are always giving trouble. We use them for a variety of purposes, we load into cars—poles, ties, pulpwood, logs, and timbers, at a considerable more saving over what we did before. As we said before a month's use pays for the investment. Very truly yours,

MASHEK LUMBER COMPANY, By G. W. Mashek, Manager.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. *Our Rooklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.*

A Suggestion for August

In addition to the lumber in our Philadelphia yards, shown in the following list, we show in **McIlvain's Lumber News** for August several million feet of well-seasoned-ready-for-immediate-shipment lumber at forty other shipping points. **ANSWER**—Get your name on the "News" mailing list and receive a copy each month. The initial cost is a one cent postal, after that it is FREE.

General Market Conditions.

During the past fortnight intense heat has prevailed throughout many parts of the United States. Such weather is invariably disastrous to the transaction of business, but notwithstanding these unfavorable weather conditions there has been a gradual accretion of orders in all sections, which has been particularly noticeable in the Middle West. The railroads report a distinctly increased movement of lumber and even anticipate a decided car shortage within the next month. The New York Central Railroad and several other important lines have issued orders calling in all their cars from other roads, and it is certainly the belief of the average railroad management that they are going to find use for all the equipment they have within a very short time. Money conditions are still very easy and anyone who has a license to borrow from banks can be accommodated to a very liberal extent.

Agreeable to anticipations the midsummer furniture sale season closed in very good shape. The aggregate of orders was far in excess of those covering the January period. Furniture orders placed are very largely for cheap and medium grades of goods. The makers of high-class lines have not had their full share of sales. Furniture manufacturers are buying lumber quite freely, and as their requirements run quite largely into common oak it has cleaned up about all the surplus of this grade there is in the country. The good end of both red and white oak was already very well taken care of and there is no surplus in first hands. Undeniably there is some excess of cull oak, as well as the low grades of other varieties of hardwoods, but there has been a considerable renaissance in buying for boxes and crating purposes of late, and it will not be long before the coarse end of hardwoods is cleaned up as closely as the good end. The call for the good grades of poplar still remains active, and the lower grades are selling fairly well. There is also a fair demand for all varieties of northern hardwoods.

The mahogany trade, though not active, is in very fair shape, and there seems to be an increased use of this magnificent wood for fur-

niture purposes. The export trade is far from satisfactory. It is alleged that consignments still continue in spite of the loss they entail. Foreign merchants and brokers are protesting against this incessant delivery of lumber on the other side; that is not wanted, but it seems impossible to stem the tide of the consignment evil.

Veneer and panel manufacturers state that their business is still rather inactive. Generally they are keeping their plants going on hurry-up orders, but there is very little accumulation of advance business. There is increased inquiry for dimension stock of all varieties, but there seems to be less activity in wagon material than in other lines.

On the whole, the hardwood situation is improving and it is practically certain that the lowest stage of values has passed and that both business and prices will improve with the advancing season.

Buffalo's Strategic Position.

Notwithstanding the decadence of the handling of hardwood lumber through wholesale and retail yards in many manufacturing centers, there is one community of hardwood lumbermen that occupies such a strategic position that their business will probably be perpetuated for an indefinite period. This locality is Buffalo. Generally speaking this city is remote from all general sources of hardwood supply, and it is at the very threshold of one of the largest wholesale consuming hardwood sections in the United States. Dealers there draw their trade from Ontario, New York, Pennsylvania and all New England. This is the section of the country where things are made out of wood and the totality of demand is immense. Buffalo's prestige in the hardwood field is based not alone on its geographical position, but from the fact that the numerous hardwood houses in that city have been long established and have built up a very desirable and extensive clientele throughout all the section named. They have also established a reputation for fair dealing and for fair grades that is enviable. Perhaps the greatest factor, however, that contributes to the large volume of Buffalo hardwood business, is the ability of the dealers there to make quick shipment from their large and well-assorted stocks. A manufacturer in central New York can telephone his Buffalo hardwood dealer that he wants a rush shipment of a car of lumber, and can have it delivered on his sidetrack within twenty-four hours.

Another point of advantage possessed by Buffalo in its geographical position is its ability to secure low freights on all varieties of northern hardwoods via the Great Lakes. Again its railroad facilities from and to all other sections of the country are superb, and local dealers are able to group stocks of lumber to the best possible advantage. There is no gainsaying the fact that Buffalo will be engaged in the merchandising of hardwood lumber for many years to come.

The Selection of Woodworking Machinery.

Long before woodworkers awoke to the value of high-class tools the metal working industry learned the lesson that their real value is determined by what they will do, not by original cost. Lately successful leaders in the woodworking industry have learned that it pays to buy high-class, well and accurately made and thoroughly up-to-date woodworking tools. But it is somewhat difficult to educate small woodworkers to see the final profit in the paying of \$2,000

instead of \$1,000 for a specific machine, both of which have the same general dimensions as regards the size of the lumber they will handle. But when one analyzes the daily output of each, and notes that the \$1,000 machine will not stand up day in and day out to the rate of feed that is possible with the better machine, nor will it turn out the same grade of work—he will soon learn that it pays to buy the best machine that is made for a specific purpose. In a word, the difference in quality and quantity of output will show a net earning power that is indubitable evidence that the high-class machine is the cheaper.

Figuring interest at five per cent and depreciation, taxes and insurance even at the high figure of twenty per cent, the annual excess charges for the higher priced machine would only be \$250. This amounts to only about 50 cents for each working day. In the light of these figures, can any woodworking manufacturer be so shortsighted as not to see the wisdom of buying the higher priced machine, especially when he knows the good machine is bound to be the most durable and therefore prove the least costly in the matter of repairs?

The Science of Letter-Writing.

There is scarcely any business in the country that has met with so much evolution in the matter of its purchase and sale features of late as has the hardwood lumber industry. It was but a few years ago that nearly all purchases were made through visits of buyers to the small hardwood sawmills throughout producing sections, where they contracted for the mill cut, or for certain varieties of lumber, or for specific grades of certain varieties. Ten or fifteen years ago it was quite rare to see a sawmill man circulating around among jobbers and consumers of hardwoods to dispose of his output. Perhaps a small portion of it was moved direct to jobbers' customers, but the greater portion of the stock was shipped directly to merchants' yards.

Then a gradual evolution started in. Many manufacturers, notably the larger ones, conceived that the jobber was making too large a percentage of profit off their stock, and they concluded to establish sales departments of their own and sell their output to jobbers or wholesale consumers wherever they could. The plan resulted in starting thousands of hardwood salesmen out over the country, and this system of disposing of stock still prevails to a considerable extent.

Thus for some years the average jobber has been between the devil and the deep sea. He has been obliged to solicit trade that was also being solicited direct from the larger manufacturing concerns, and naturally his profits have materially narrowed as time has progressed.

During the last year or two there has been an immense development in transacting lumber business by mail. Manufacturers and jobbers alike have kept the mails flooded with stock-lists and price-lists, with the result that every remanufacturer of hardwoods who bought lumber in carload lots has found a perfect flood of stock-lists in every mail that he opened. Men whose line of production called only for oak and poplar have been solicited to buy elm, ash, gum and shellbark hickory. This system of exploitation, while having great possibilities, has been handled with very little discrimination and has reached a point where many buyers of hardwood lumber in carload lots regard these circulars as a nuisance. A few leaders in the trade have learned the value of talking to buyers by post simply concerning the lumber they know is employed in the line of production the buyer represents. Such people are getting mighty good returns from their letter-writing and miscellaneous mail exploitation.

These observations lead up to the subject of this editorial—the science of letter-writing. There are numerous men in this country who can go out and intelligently discuss the merits of lumber, but when it comes to describing the same lumber in a letter they are absolute failures. While they are able to sell it personally, they are not able to do so by mail. The RECORD has on file today at least a dozen requests for competent letter-writers—calls for men who can write a forceful, intelligent, convincing, business-getting letter on the subject of lumber. Such men are hard to find. Lots of them know all about stocks, but very few are able to express themselves in such a way as to command business in competition with the suave personal solicitor.

The science of letter-writing is a much neglected one. A letter from its very start must be honest, must be intelligent, must be convincing, must be as brief as it is possible to make it and do justice to the subject. But the chief value of any letter that will secure business lies in its concluding paragraph. A letter must be so prepared that its termination shall strike the reader in such a forceful way as to insure at least a reply. Many people start a letter with a whirlwind argument, but peter out of ideas before they get through, leaving the finish so weak and enucleated as to fail to inspire the prospective buyer with the necessity of forwarding an order, or even continuing the correspondence.

One of the best lumber salesmen, by mail, in the country takes infinite pains in his letter-writing. He does not hurriedly dictate a letter to his stenographer and perhaps not even read it over before signing, but prepares it with the utmost care, often rewriting it two or three times before he is satisfied to mail it. This man advises the RECORD that he can sit in his office and sell more lumber by mail than any five salesmen he has on the road.

The science of letter-writing is worth thinking about, is worth studying, and is worth developing. There is money in it.

Editorial Notes.

Senator Isaac Stephenson of Wisconsin, one of the best known men in the lumber trade as well as in the political world, declares in favor of an immediate revision of the tariff, says the daily press. He desires to see lumber, wood and wood pulp put on the free list. He believes the country needs more factories clear of the syndicates that control raw products, or, in other words, more establishments outside the pale of the trusts.

* * *

As many lumber manufacturers are aware, the Forest Service has long been experimenting with red hickory, particularly with a view to determining its relative value when compared with white hickory. After prolonged and exhaustive tests extending over considerable time it has announced that in every particular, with the sole exception of appearance, the red stock is quite the equal of white, and buyers should not hesitate to accept it for the multitude of uses for which the latter is now specified. In view of the foregoing there comes to hand an amusing incongruity, in that buyers of supplies for the United States government work in the Philippines and on the Panama Canal, in recent specifications and calls for bids, lay particular stress on the fact that the hickory handles ordered in this connection must be heavy, all white stock!

* * *

Architects, builders and other users of lumber are complaining more and more of the total lack of uniformity in popular designations of trees growing in different parts of the country. They state that the increased trouble is arising from the fact that many of the kinds of lumber formerly in good supply are now growing extremely scarce, and substitutes are taking their places. Scarcely a half dozen of the almost 5000 species of forest trees found in the United States are popularly known by their botanical names; among those which are may be mentioned the sassafras and catalpa. Most species have names sometimes as widely varying as those of the states in which they grow. For instance, if an order should carelessly call for "gum" lumber, the person executing it might well be at sea as to whether *Liquidambar styraciflua* or the popular red gum, *Nyssa sylvatica* or *aquatica*, the black gum and tupelo, or *Eucalyptus globulus*, were intended. Thus it will be seen that in specifying certain varieties of lumber it is very difficult for a contractor to know what variety of wood to order. Inasmuch as it would be an impossible proposition to educate the general public into adopting botanical terms, the Forest Service has established a bureau for the identification of woods sent to its laboratory, giving users of timber the services of a trained dendrologist without charge. This plan should prove a great convenience and trouble-saver in many instances.

Pert, Pertinent and Impertinent.

"Everybody's Out of Town."

New York is absolutely deserted. Everybody is out of town—Society Notes.
If, some pleasant, broiling night,
When the summer's at its height,
And the burning streets are quivering in the heat,
You should casually stroll
To the east, you'd think it droll—
All the hundred thousand folks you'd seem to meet.

For they seem to come and go—
Men and Women—to and fro
In the City's ghastly heat, and up and down;
But though very real they seem,
They're but shadows of a dream—
For you know that Everybody's Out of Town.

And that tot so pale and mild—
You would think she was a Child!
She is tired, for the night is very warm;
She is very thin and small
And she hardly seems as tall
As the baby she is holding in her arm.

And the tenements aren't cool;
Why, their very roofs seem full,
And the phantom Mothers seem to sit and hum
Just a crooning, soothing song,
For the night seems very long:
"O Mother, will the morning never come?"
And the Mothers seem to weep,
"O, my dearie, go to sleep,
For the cool night-wind is rising in the west."
And sometimes a hearse all white
Rattles through the burning night.
And the Frencher tells them all is for the best.

When the stifling evening heat
Pours its thousands on the street,
There is scarcely room to pass the gasping throng;
They are crowding all around,
And you seem to hear the sound
Of a thousand moaning Children—but you're wrong.

For they really don't exist,
And it's all a phantom mist—
All the sweltering heat and nonsense of that kind;
And the throbbing and the noise
And the little Girls and Boys
Are nothing but an Error of the Mind!

For they're really far away
In the pleasant fields at play;
And the patient Mothers that you think you see
Are but figments of the brain;
And the suffering and the pain
Are only foolish Thoughts in you and me.

So we sing this righteous song,
For we know there's nothing wrong,
And these things should not impair our fair renown;
For the squalor and the shame
We are not at all to blame;
For we know that EVERYBODY'S OUT OF TOWN.
—LIFE.

Something.

Guest: Finest I ever
ate.

In New York.

"Where do you pass
your honeymoons?"

Autocratic.

At Higgins thought he married well when he got
Sally Brown,
For very well connected was his "pearl;"
Connected, too, with all the finest families in
the town—
By telephone; she was a "hello-girl."

That Doesn't Go Any More.

If you have a leaning towards shady French
plays,
Tell your friends the real reason you go:
You could only bamboozle a bunch of old jays
By saying, "It helps my French so!"

The Man Who Fills the Bill.

"The man who wins my admiration," said the
serious girl, "must be one that can stand firm
in his convictions in the face of ridicule, oppo-
sition and personal danger."
"I see," said Miss Cayenne. "Your ideal is a
baseball umpire."

Some Valuable Foreign Woods.

ARTICLE IV.

Circassian Walnut.

Juglans regia - Linn.

Anyone who has observed with fidelity the varying and constantly improving methods of furniture manufacture cannot fail to be impressed with the great changes which have also taken place in the selection of woods for this purpose, or rather the distinct modes which have come and gone, much as do fashions in vehicles, clothing, and far less durable articles. Years ago black walnut had an extensive vogue for both furniture and interior finish, and was within the reach of everybody, while mahogany and rosewood were the popular choice for high-class cabinet work. Later black walnut was relegated to the cellar and the attic, and only now are old pieces being brought from their obscurity and refurbished to once more occupy a conspicuous place among the household equipment; while many who are not for-

Odessa, the great outlet of southern Russia on the Black Sea, is the chief market.

These logs are brought to market by small crafts from along the seacoast, and from the rivers which penetrate the interior. The walnuts do not thrive on the open mountain sides, but their growth is confined to the coves and valleys between.

The trees are not tall, their boles rarely being over twelve feet in height. They are taken out with the roots attached. When the tree has been felled it is usually hewn to about the original shape, tapering from the limbs to the swell of the roots.

The logs are bought from the Armenians by the pound or ton, never by actual feet measure, as our domestic walnut is sold. The average price obtained at the shipping point is \$90 per ton, or about 4 cents per pound.

It is a matter of surprise to many to learn

and soil, which the same kind of seedling may encounter; but to the laity it would seem that there should be a quite different and more specific classification for the various types.

As to physical qualities, the Circassian walnut is heavy, hard and easily worked; it has an open grain, fine or coarse appearing, according to the cut. It shows a lustrous surface, and often a fancy figure, or intricate "burled" effect. The heartwood is dark brown and the sapwood a delicate fawn or softer shade. The annual rings are clearly defined but not striking, becoming almost entirely obscure in very dark specimens. A radial section is always lighter in tone than a transverse, and the pores show up distinct and shining.

The bark of the tree is thick and fissured. Its character is plainly visible in one of the accompanying illustrations.

FINE SPECIMEN CIRCASSIAN WALNUT LOG.

fortunate enough to possess any of these antiques can scarcely afford to purchase them.

Today there is probably no more popular wood, and certainly few more expensive for both furniture and interior finish than the beautiful Circassian walnut. Not only is it comparatively rare and difficult of access, but its magnificent figure, delicate tones and cool, velvety texture would still make it costly were it more plentiful and readily attainable. It is brought from the shores of the Black Sea, the growth extending through southern Russia and as far east as Persia. The trees probably reach their maximum development in the Caucasus mountains. They are hauled out with a great deal of difficulty, owing to poor roads and insufficient facilities, and shipped in the form of logs, both round and hewn, to various ports, but probably

that Circassian walnut is of the same family, genus and species as the well-known California walnut, and that it is practically the same tree which is known as French, Italian, English and Persian walnut. While the fruit and general appearance of the trees which grow in these several localities are much the same, and they were ages ago transplanted from the same parent stock, their wood varies to a marked degree, and should not be confused; witness the fact that while the walnut of California is very little used for lumber, but almost entirely for its nut product, the Circassian is one of the most valuable timber trees of the world.

Authorities upon the structure and characteristics of woods affirm that these differing qualities in the *Juglans regia* are due to different environment in the way of climate

While possibly the fine old walnuts of England and the Persian trees show more of the burled effect, the Circassian type shows vivid stripes of brown and black, which give it an appearance different from that of any other wood. It is susceptible of such a fine finish that piano makers and cabinet manufacturers prize it greatly for high-grade work. The burl consists of a peculiar wart or knot that forms upon the tree when young. It may be the sting of an insect or some similar wound, but at least it causes the grain to become so involved and twisted as to produce a wonderfully curious and intricate pattern. No two specimens are alike and the strange figure and combinations of lines form many a unique pattern, especially if selected parts are combined. One combination may form the perfect similitude

PANEL STOCK FROM ONE OF THE HANDSOMEST CIRCASSIAN WALNUT LOGS EVER IMPORTED TO THIS COUNTRY.

of a butterfly, and a well-known American importer displays in his office an exact reproduction of a fancy lamp, its parts fitted painstakingly together from several pieces of the wood.

Some idea of the value of choice Circassian logs can be gained from the fact that manufacturers of veneers pay as high as \$750 for a single choice log, and suites of bedroom furniture of five pieces made from solid selected stock retail at about \$3,500. Finely manufactured veneers cost from 10 to 20 cents per foot.

For interior finish there is no more popular wood at present, but its cost naturally prohibits its use in any but the finest kind of work. It is seen in some private houses, in specially designed hotel suites or lounging rooms, in Pullman smoking apartments and occasionally in restaurants. A notable example of the use of Circassian walnut may be seen in the new grill-room of Marshall Field & Co.'s Chicago store. The room

is immense and finished throughout in this wood, with carpet and accessories in dull blue. The effect is artistic in the extreme and exceedingly restful to the eye.

The illustrations accompanying this article were made at the Chicago plant of C. L. Willey, the largest importer of fancy woods and manufacturer of high-class veneers in the United States. The log pictured was one of a shipment recently brought from Odessa by the steamer Hughland, and the two sheets of veneer are specimens cut from one of the finest Circassian walnut logs ever brought into this country. Mr. Willey takes a personal interest in every fine piece of timber that goes through his plant, first selecting them carefully from the markets of Europe during his yearly trips abroad, and then superintending the manufacture of each individual log, giving all its features consideration, and deciding upon the mode of operation which will bring out its attractions to the best advantage.

Brazil as a Market for American Furniture.

Furniture sold in Brazil at the present time is of Brazilian manufacture almost exclusively. In the cities furniture factories are largely shops for hand work. Labor is the chief element in the cost of production and is very expensive. Styles follow French models and decorations. There are many native woods which are suitable to the finest sort of furniture, but they are very expensive because of the heavy transportation charges. Gradually improved machinery is being introduced and more will be as labor is secured to handle it advantageously.

The duty on goods is high, but the opportunities when the trade is studied are improving.

Brazilian furniture dealers as a rule are not disposed to take up with new styles if they can avoid it. They know that they can sell goods of the French order, but are doubtful about others. The experience of two Japanese who opened a store in Rio de Janeiro for the sale of Japanese furniture, clothes and curios, however, leads American residents there to believe that a similar establishment with American furniture would be a great success.

BEAUTIFULLY FIGURED CIRCASSIAN WALNUT VENEER.

Builders of Lumber History.

NUMBER LXX.

J. Gibson McIlvain.

(See Portrait Supplement.)

After making several attempts we have succeeded in securing for our readers a short history of the old lumber firm of J. Gibson McIlvain & Co., of Philadelphia, and the business career of their senior member, J. Gibson McIlvain, who stands today as one of the pioneer lumbermen of the United States.

This firm has had a most remarkable record, having done business in Philadelphia for one hundred and ten years under the name of McIlvain. It was established by Hugh McIlvain in 1798, assisted by his brother John, at West Chester road, an old Lancaster road in West Philadelphia, now Thirty-seventh and Market streets, where the West Philadelphia station of the Pennsylvania railroad is located, and has been a source of family pride and is now conducted by his descendants.

He did business under the name of Hugh McIlvain from 1798 to 1801, when his brother Richard was admitted into partnership, trading as Richard and Hugh McIlvain until 1832, when Richard retired. Hugh continued alone until 1855, when his son James entered into partnership with him, trading as Hugh McIlvain & Son until the death of Hugh, November 24, 1838.

The first of the following year, 1839, the three sons, John H., James and Hugh second entered into partnership and continued the business of their father. John soon withdrew, leaving James and Hugh second trading as James & Hugh McIlvain until 1854, when Hugh McIlvain bought out his brother's interest and continued as Hugh McIlvain until 1868, when his son, J. Gibson McIlvain, was taken into partnership; they traded as Hugh McIlvain & Son until the death of Hugh second February 25, 1879. J. Gibson McIlvain continued alone until January 1, 1888, when his brother, Hugh McIlvain third, was admitted and the firm name became J. Gibson McIlvain & Co., which title has since been used, they having admitted J. Gibson McIlvain, Jr., into the firm January 1, 1903, and his brother, Walter B. McIlvain, January 1, 1908, so that the members of the firm are now J. Gibson McIlvain, Hugh McIlvain third, J. Gibson McIlvain, Jr., and Walter B. McIlvain.

The location of the business when it was first organized was very advantageous, being at the junction of three main thoroughfares, West Chester road, old Lancaster turnpike and Darby road, now known as Market street, Lancaster avenue and Woodland avenue, respectively; Market street is the main thoroughfare of Philadelphia proper, and in close proximity to the Schuylkill river, requiring only a short haul from the rafts to the yard; at that time considerable of the lumber was hauled by wagons from the surrounding country.

This site was occupied till 1852, when another property at the northwest corner of Thirty-fourth and Market streets was purchased and the business removed. In 1872 another piece of ground was purchased at Thirty-sixth and Market streets, owing to the rapidly growing business. Later on, in 1892, business still increasing, J. Gibson McIlvain and Hugh McIlvain purchased the property comprising about fifteen acres, between Woodland avenue, Grays avenue, Fifty-sixth and Fifty-eighth streets, which had originally belonged to their grandfather, John Gibson. This was considered a most suitable site on account of the Pennsylvania and Baltimore & Ohio Railroads crossing each other within it; also because within a short haul of the Schuylkill river. After making connections with both railroads, improving the property and building the largest lumber shed in the United States, with a capacity for 16,000,000 feet and railroad tracks running through it; the new yard was stocked with selected hardwoods and building lumber, and in 1898, the company's centennial year, the offices were removed to the new yard. Within a few years after this the business grew to such an extent that they soon had most of the fifteen acres well covered with lumber, carrying probably the heaviest stock of any yard in Philadelphia.

About 8 o'clock in the evening of March 27, 1906, fire was discovered under the shed, the origin of which is unknown. The entire center of the yard, including the shed and 10,000,000 feet of lumber, the most of the carefully selected stock, was destroyed, costing the company \$335,000. This was doubtless as choice and well selected a stock of hardwood and white pine as was ever accumulated in any one place and furnished the most spectacular fire that ever occurred in Philadelphia, the light from the flames being visible for many miles. The city of Cape May, over sixty miles distant, fearing a great conflagration, communicated with the authorities at Philadelphia for information, and it was observed that large flocks of birds, including ducks and geese, were attracted by the light for many miles and flew into the flames.

On account of the changing conditions—the property surrounding the yard having been built up as a residential section and the firm's wholesale business having increased—they did not rebuild the sheds, but continued to handle carload lots of hardwood, expecting to sell the property for building purposes. In the meantime they established new offices in the Crozer building, 1420 Chestnut street, Philadelphia, where they have continued to push their growing wholesale hardwood trade, shipping direct from stocks they now carry at the mills and various other points to all parts of the United States.

J. Gibson McIlvain, whose picture we present as supplement to this issue, has been a

member of this old firm for forty-two years. During this long career the lumber business has seen many changes. Shortly before he went into the business lumber was brought into Philadelphia by rafts or vessel in a rough state, and during the winter months it was customary to work cargoes of flooring from the rough yellow pine by hand, but machinery soon supplanted this old method and boards were bought in vessel lots and worked in Philadelphia. It was the same with nearly all branches of the business; there were no doors, sash, mouldings, etc., worked by the mills in the West and shipped in. The company always carried a large stock of good white pine, hardwoods, hemlock and yellow pine. Walnut in those days was one of the woods which was handled a great deal.

J. Gibson McIlvain applied all his energies to the business. He made trips into the West and bought large blocks of walnut and other hardwoods, had them shipped into Philadelphia and sold them in that vicinity. The business grew very fast under his management and in 1888, when his brother Hugh was admitted to the firm, it had a still greater impetus to it and through their combined efforts and continuous application of their energies they were more and more successful.

Mr. McIlvain also has other interests besides the lumber business. He holds considerable real estate and timber lands. He is president of the Frank P. Miller Paper Company, located at Downingtown, Pa., which is a thriving and growing concern. His brother Hugh is vice-president of this corporation; and both are officers and directors in other companies. Mr. McIlvain has also been an active member and manager of the Pennsylvania Society for the Prevention of Cruelty to Animals for many years. He takes great interest in this beneficiary work, which has done an untold amount of good to people all over the country. Through the activities of this and other humane societies the twenty-eight hour law was passed and the percentage of live stock lost in transit was reduced to the minimum.

He has a fine farm near Downingtown, Pa., comprising about 225 acres, with a fine spring up on the hill, water from which flows by gravity to all the buildings on the farm. The spacious brick house is surrounded by handsome trees and an orchard of fine fruit trees of many varieties. Mr. McIlvain loves the country and its environments. At the age of sixty-five he loves to drive and ride horseback and run an automobile, and spends considerable time in the saddle, taking some long jaunts. He has always been fond of hunting and fishing and in 1896, with his son Gibson and two friends, made an extended trip to the Rocky mountains. They spent about three months there, most of the time from 100 to 250 miles from a railroad. It gives them both the greatest pleasure to think of this most delightful

J. GIBSON McILVAIN,

HUGH McILVAIN.

J. GIBSON McILVAIN, JR.

W. B. McILVAIN.

Junior Members of the House of J. Gibson McIlvain & Co. Philadelphia.

trip, which was very successful, as they got a number of fine specimens of deer, antelope and bear. In 1899 he and his two sons, Gibson and Walter, accompanied by two friends, made another extended trip into Wyoming. As a result of this one they succeeded in bagging five handsome elk and a mountain sheep.

In 1900 Mr. McIlvain suffered from a prolonged illness, due to overwork; J. Gibson McIlvain, Jr., then turned his attention to the lumber business and was admitted to the firm the first of the year 1903. The same year Walter M. McIlvain entered Princeton, from which institution he graduated a little over a year ago, and was admitted to the firm the first of the present year.

The younger generation are very active, hard workers, and unquestionably the business will continue to grow and be prosperous for many years to come. Hugh McIlvain is still in the prime of life and turns his attention very closely to the affairs of the firm, having charge particularly of the purchases and the financial end of the business.

It is remarkable that this firm has been handed down from father to son for nearly four generations, and has continued to grow and prosper during the entire time. It has never been incorporated and they do not know that they have ever renewed a note outside of bank.

It is needless to say that it is a pleasure to deal with this character. It has been their motto never to have an enemy, nor break up people who owed them money, and to adjust all differences on grading of lumber amicably, even if they have to pay in full and discontinue future dealings.

For over three years the firm has published a monthly bulletin known as "McIlvain Lumber News," which is sent free of charge to their many customers and prospective patrons; it contains a list of their stock and comments on the market condi-

tions, together with some timely articles to give it a little life.

The firm has been able to withstand the many panics which have occurred during its existence and have always met the occasion with considerable foresight. It went into the recent panic with a much smaller stock of lumber than is usually carried, and as its members take the optimistic side of these questions, they immediately added more men

to their force, covered a larger territory, and today we find them doing a large business in the Middle West. They believe this country is bound to be prosperous the greater portion of the time and they are confident that good times will be with us shortly and are preparing to offer to the trade larger blocks of lumber to better advantage than ever before.

A Possible New Industry.

As is well known, Sweden is a country of remarkably extensive forests in comparison with its size, but instead of taking advantage of this to deplete them unnecessarily, it takes all sorts of measures to "save at the spigot" and make use of every possible substitute for wood. For instance it has found reed laths to be not only a good substitute for wood laths in the plastering of ceilings and wooden walls of buildings, but they are also much cheaper.

The reeds employed for these purposes are of the ordinary variety known botanically as *Phragmites communis*, and they grow wild all throughout southern and middle Sweden, particularly along the banks of all bodies of water, and in marshes. The United States consul at Gothenburg suggests that builders and farmers of this country might do well to look into the proposition with a view to seeing whether these reeds, or similar varieties which grow wild here, could not be utilized for the same purpose, in which case their growth could be cultivated and extended. If such a scheme proved practicable it would give rise not only to a cheaper building material, but to an industry including the growing and harvesting of the reeds or manufacturing them into a kind of matting, where this would be preferable to using them in the raw state in building operations.

In Sweden they are employed in both these ways, and the consul suggests that American machinery and ingenuity would doubtless make the development of the entire proposition quite feasible and profitable. The matting form is more easily handled and nailed to walls or ceilings than the single reeds. The mats are of two kinds, one closely woven and of heavier reeds; the other more open and thinner, usually used double. The warp is of annealed iron wire, and the matting is delivered in rolls.

The reeds are the largest of the wild grasses in Sweden; the tops are often used by the farmers for fodder and the remainder for stuffing mattresses. The full grown reeds grow seven or eight feet above the water, and are cut in winter after their leaves have fallen and the water frozen over, making them easy to reach. The reeds are often bought in stocks of twenty bundles, each bundle about two feet in circumference, and cost delivered about \$1.07. The mats usually contain about twenty square meters and sell at the factory for about 50.9 cents per mat, or 27 cents per 10.76 square feet. Sweden has a much larger supply of these reeds than it can use, but it is a question whether it would be profitable to export such cheap and bulky stuff. A manufacturer writes:

"Reed laths are probably just as durable as wood laths. The writer has seen houses torn down which were at least seventy-five years old and found the reeds nailed to the walls just as sound as when they were put there. All depends, however, upon the manner in which the reeds are harvested and kept, because they are easily damaged if the bundles are kept wet or covered with ice. Wood revetting mats are scarcely manufactured any more in Sweden, because they are too expensive. Besides that, the reed mats are considered better and more practical because when such are used the surface of the plastering does not crack, which was often the case when unseasoned wood laths were used. So-called loose reeding is used a great deal; that is, the loose reeds are nailed to the walls and ceilings by hand. If skilled workmen are available, such reeding can be just as good and practical as the mats. Whether one or the other of the two systems is used depends a great deal upon the custom of the respective building

contractors. The old ones, among whom there are a number of conservative persons who hold on to old methods, prefer the so-called loose reeding. No practical preference can be given to either of the methods, except that when mats are used the reeding can be made more quickly and specially experienced workmen are not needed. The use of reed mats is also increasing, as compared with the use of loose reeds."

The consul in concluding his description of the mats and their value says that the matter seems well worth careful investigation, and that he stands ready at any time to give any further specific information that may be desired and that is procurable. The question is one that

must be looked at both from the agricultural or producing standpoint and the commercial standpoint. Parties in the United States interested in the general subject or any of its specific features, or in the importation of the loose reeds, the reed matting or the machines for making the latter, could not do better than enter into correspondence with the consuls whose names, together with illustrations of reeved reed and wood lath mats, prices of machinery, etc., are on file in the Bureau of Manufactures.

Hard Luck.

W. E. McMillan, president of the McMillan Lumber Company of Pittsburg, which has re-

cently gone into the hands of a receiver, still has the Nemesis of hard luck following him. On last Wednesday morning he reached Pittsburg en route from Baltimore to a Baltimore & Ohio sleeping car, and discovered that during the night a sneak thief had appropriated every stitch of his clothing and personal belongings, save a dinky nightshirt which he wore, and a speckled vest! His loss included \$200 in money and \$250 in jewelry.

Mr. McMillan succeeded in borrowing a blanket, and made good his escape from the Pullman to his home in a cab. He is receiving the sincerest condolences—not to say chaffing—of his friends at Pittsburg.

Annual Michigan Hardwood Manufacturers' Assn.

The third annual meeting of the Michigan Hardwood Manufacturers' Association was held in one of the clubrooms of the Hotel Pontchartrain at Detroit on Friday, August 7. There was an unusually large attendance, nearly fifty members being present.

President's Address.

President F. A. Diggins of Cadillac occupied the chair, with Secretary J. C. Knox recording. At the roll call the minutes of the special meeting held at Petoskey May 8 and the special meeting held at Milwaukee June 12 were read and approved. The president made a brief address, in which he recited that the association has shown a gain of seven members since the last meeting and that it is in good financial condition, having more than \$1,100 cash balance on hand. He said it would probably not be necessary to levy any further assessments to carry on the work for the remainder of the year. He congratulated the members and the secretary on the very complete report of stocks on hand and sold by the various members; also called attention to the danger of an advance in freight rates and thought the matter worth the attention of the organization. He thanked the members for their cordial support of him as president and for their cooperation in the work carried on by the secretary.

Secretary's Report.

At the beginning of my report I want to thank the members for their cooperation in sending prompt reports to the secretary. You will notice from the present stock report that we have more members reporting than ever before; in fact, we have a report from every single member, three of the sixty-seven actual members reporting no stock.

I will make no comment on the stock report which is presented to you today, as this will be dissected and given to you fully by the Market Conditions Committee.

The following list of names in our membership have been removed, either from noncooperation or being practically out of the business: Engadine Lumber Company, Engadine, Mich. Johnson & Crowl, now Crowl Lumber Company, Harbor Springs, Mich.

Northern Lumber Company, Birch.

O. C. Lumber Company, Vulcan, out of hard-wood.

The three latter have never paid the original membership fee of \$10.

We have added the Stephens Lumber Company, of Detroit, Mich., to our list.

One of our present members, J. S. Weidman, advises they have cut their last hardwood and are simply cleaning up.

The secretary asks for your hearty cooperation in adding new members to our list. The present depressed condition of the lumber market, which, I am happy to say, is much improved of late, has seemed favorable to taking out membership with us.

If any of the members can aid us by giving information of any of the firms named above, or of any new firms, it will be heartily and thankfully received. I realize that some of the firms in the extreme western end of the upper peninsula may have more of an interest in the Wisconsin association than our own, and that may be their reason for not coming in with us. But there are firms on the Detroit & Michigan, Michigan Central Railroad and other roads and on the lake shore of Huron and perhaps Michigan, that should be in with us.

At the special meeting held at Petoskey, Mich., May 5, a motion was passed that in the

minutes of the special meeting held in Milwaukee prior to the final important session, where the rules were fixed for the next year, showed that we agreed to stand by the report of the committee as a unit, this being the stand taken by the Wisconsin association.

We wish to call your attention to the resolution passed at the last annual meeting in regard to employing a secretary with knowledge of traffic matters, and capable of giving information as to freight rates, claims, etc.

We have endeavored to get as many of our members to correspond with us as much as possible in this line, and stand ready and anxious to aid them in this line.

The secretary, on invitation from the Illinois Manufacturers' Association, met with them at Chicago, May 15, where resolutions were passed asking the carriers to submit such advances to the Interstate Commerce Commission before making rates effective, thus giving the shippers and manufacturers an opportunity to protest if desired before the rates become effective.

The hardwood lumber and flooring manufacturers of Michigan have a complaint to make to the Interstate Commerce Commission in regard to rate on hardwood lumber and flooring, carloads, to Pacific coast terminals.

The rates from Missouri river, Mississippi river, Chicago and common points, Cincinnati, Detroit and common points, Pittsburg and common points and New York and common points were formerly 75 cents per 100 pounds. This rate was advanced from all the groups named above, January 18, 1904, to 85 cents per 100 pounds. Some time ago complaint was made by George D. Burgess and other hardwood manufacturers and shippers that this rate was excessive from Chicago and common points, and the Interstate Commerce Commission ruled that the rate should be reduced to the former basis. But when the railroad tariffs were received it was discovered that the rate had not been reduced from any point east of Chicago, thus giving the Chicago, Mississippi river and Missouri river points an advantage of 10 cents per 100 pounds under rate from Michigan points.

Gentlemen, we as individual members of this association are interested in such irregularities in freight rates as the one referred to. What is your pleasure in regard to it, and do you wish to take action in any way? I can appreciate from a railroad standpoint some of the difficulties the railroads are having, yet such irregularities as the one referred to should not be overlooked by us. It seems to me if a lot of shippers, individually or collectively, asked the railroads in Michigan to aid them in having the injustices, as in the case referred to, brought to light, that they would take up the subject with the transcendent roads without our having to make regular complaint to the commission, and we would be gaining time by taking such procedure.

From our treasurer's report, judging by the balance reported on hand August 4, you will see that we can probably go through the year

F. A. DIGGINS, CADILLAC, PRESIDENT.

future the secretary only collect and send out reports of stocks to members of this association. In a way this narrows the scope of our association reports and of our work. As per result of motion passed at the Saginaw meeting, February 5, the secretary obtained valuable information as to the amount of stocks of hemlock lumber on hand in Michigan, both among members and non-members, the result of which was given you by special report, and on invitation of the Michigan Hemlock Company, in company with Mr. Odell of Cummer-Diggins Company, met with them at Detroit, March 18.

Most of you were at the meeting at Milwaukee, June 11 and 12, of the National Hardwood Lumber Association and took part in the discussion as to grading and inspection rules of hardwood lumber.

without levying an assessment to carry on our work. This, I think, we can do unless something unforeseen develops.

The above is respectfully submitted.

J. C. KNOX, Secretary.

The secretary then read the report of the treasurer, F. J. Cobbs, and both reports were accepted and adopted.

President Diggins made a brief address introducing to the members Frank F. Fish, secretary of the National Hardwood Lumber Association, who spoke briefly on the inspection situation. He stated that there was

C. A. BIGELOW, BAY CITY, FIRST VICE-PRESIDENT.

comparative harmony in all parts of the country on inspection matters and that the amended rules adopted at the Milwaukee annual were being very generally employed by all classes of trade.

Theodore Fathauer of Chicago was then introduced and made a brief and optimistic address covering trade conditions, stating that he was as much interested in good values as any manufacturer of lumber; he suggested that the policy of the last few months of holding down output be continued until such time as the demand is fully equal to the supply.

An Important Motion.

On the suggestion of President Diggins, D. H. Day made a motion, which was adopted, pledging the Michigan association to the adoption of the inspection rules of the National Hardwood Lumber Association as amended at the Milwaukee meeting.

The secretary's report covering the amount of each kind, thickness and grade of hardwood lumber on hand with members of the association, together with amount of unfilled orders and a comparative statement of stocks on hand July 1, 1907, October 1, 1907, January 1, 1908, and July 1, 1908, was presented and discussed at some length. The total stocks of all varieties on hand in Michigan July 1, 1908, was 221,425,000 feet; unfilled orders amounted to 126,894,000 feet, leaving a remainder on hand unsold of only 94,531,000

feet. The only item in any apparent surplus was inch maple, and after the culls were subtracted from this item and such stock as goes direct to maple flooring plants owned by members, it was shown that there was less than 36,000,000 feet left on the market.

On the whole the stock situation was regarded as very favorable, and with the trade conditions now prevailing it was thought the members would go into the winter with less lumber on hand than they had a year ago.

Messrs. Ballou, Day and Batchelor each spoke briefly on the subject of following the suggestion of Mr. Fathauer and holding down the cut to not exceed seventy per cent of normal output.

Two Committees Appointed.

On motion of E. C. Groesbeck the chair was instructed to appoint a committee to cooperate with the Detroit committee for entertainment of the next annual convention of the National Hardwood Lumber Association, which will be held in Detroit in June, 1909. The chair appointed as such committee Edward Buckley, D. H. Day, E. C. Groesbeck, J. S. Wiedman, H. A. Batchelor, E. F. Jenks, W. L. Martin.

On motion of C. A. Bigelow the chair was instructed to appoint a permanent railroad committee, to take such action concerning the proposed advance in freight rates and other railroad matters as it might deem best. President Diggins named the following to serve as railroad committee: C. A. Bigelow, R. Hanson, R. W. Smith, D. M. Kneeland, Mr. Lobdell and J. C. Knox.

W. W. MITCHELL, CADILLAC, DIRECTOR.

The president then introduced C. F. Lusk, of Owen, Wis., assistant secretary of the Wisconsin Hardwood Manufacturers, who spoke briefly concerning his association. He stated that it had adopted the same system of work covering stock reports as had the Michigan people and was working in entire conformity with it and with the National Hardwood Lumber Association on inspection

matters. He stated that the only improvement he could suggest for the Michigan association in its work would be the employment of traveling inspectors to check up inspection at the plants of the various members. He stated that this system was in vogue by the Wisconsin Hardwood Manufacturers and was meeting with great success.

On motion of Henry Ballou the Market Conditions Committee of the association was requested to meet for consultation and the making of a report every three months, the

J. C. KNOX, CADILLAC, SECRETARY.

actual expenses incurred by its members in attending such meetings to be paid by the association.

Mr. Ballou also moved that a nominating committee consisting of C. A. Bigelow, D. H. Day, W. L. Martin, W. C. Hull and E. Fitzgerald be appointed to place in nomination officers and directors for the ensuing year.

E. C. Groesbeck, on behalf of the Stearns Salt & Lumber Company and the city of Ludington, invited the association to hold its next meeting at Ludington. On motion of O. A. Felger the invitation was accepted.

The meeting then adjourned to give the various committees time for conference, and those not so engaged to attend the ball game.

EVENING SESSION.

The association reconvened at 7 p. m. and listened to the Market Conditions Committee report, made by Chairman Odell. The report was optimistic and showed that the manufacturers of Michigan had their stocks and sales well in hand and that prices being obtained at this time were as low as conditions warranted. There was no attempt at "bulling" values contained in the report.

Following the report considerable discussion was indulged in concerning various woods involved, after which it was unanimously adopted.

Election of Officers.

The Nominating Committee recommended the re-election of present officers and directors for another year, and on motion the

secretary was instructed to cast the ballot in this form. This action resulted in the re-election of the following:

President—F. A. Diggins.
 First vice-president—C. A. Bigelow.
 Second vice-president—R. W. Smith.
 Treasurer—F. J. Cobbs.
 Secretary—J. C. Knox.
 Directors—W. W. Mitchell, R. Hanson, William H. White, Henry Ballou, G. von Platen, R. G. Peters, W. L. Martin, D. H. Day, H. A. Batchelor, R. J. Clark, E. Fitzgerald, H. M. Loud, C. A. Bigelow, R. W. Smith, F. J. Cobbs, F. A. Diggins.
 Executive board—W. W. Mitchell, William H. White, F. A. Diggins.

President Diggins made a brief and graceful response, thanking the association for its confidence and pledging his continued endeavor for the coming year.

J. W. Dickson of the John W. Dickson Company, Memphis, who was a visitor, was introduced and made a brief address in which he stated he believed the country was going to witness a big car shortage during the next few months owing to the fact that so much of the railroad equipment was out of commission for want of repairs and from the fact that trade is increasing every day, with every prospect of a good volume before early fall.

The meeting then adjourned.

Attendance.

Henry Ballou, Cobbs & Mitchell, Inc., Cadillac.
 H. A. Batchelor, Batchelor Timber Company, West Branch.
 C. A. Bigelow, Kneeland-Bigelow Company, Bay City.
 F. A. Diggins, Murphy & Diggins, Cadillac.

Edward Buckley, Buckley & Douglas Lumber Company, Manistee.
 B. J. Clark, Peninsula Bark & Lumber Company, Sault Ste. Marie.
 E. H. Day, Glen Haven.
 James Danaher, Danaher Hardwood Lumber Company, Dollarville.
 R. F. Duggan, Tipton & Jackson, Pellston.
 Edward Fitzgerald, Mitchell Brothers Company, Cadillac.
 O. A. Felger, Hackley-Phelps-Bonnell Company, Grand Rapids.
 E. C. Greesbeck, Stearns Salt & Lumber Company, Ludington.
 Bruce Green, Williams Brothers Company, Cadillac.
 G. S. Hawes, Salling-Hanson Company, Grayling.
 W. C. Hall, Oval Wood Dish Company, Traverse City.
 W. N. Kelley, Kelley Lumber & Shingle Company, Traverse City.
 J. C. Knox, secretary, Cadillac.
 W. S. Langdon, Amtrix Iron Company, Manistee.
 W. L. Martin, Embury-Martin Lumber Company, Chelogyan.
 S. L. Mead, Michelson-Hanson Lumber Company, Lewisport.
 Harry Nichols, Charlevoix Lumber Company, Charlevoix.
 Bruce Odell, Cummer-Diggins Company, Cadillac.
 M. D. Reeder, Boyne City Lumber Company, Boyne City.
 R. W. Smith, Lewis Sands Salt & Lumber Company, Manistee.
 J. Sullivan, Cedar.
 J. W. Wiedman, Wiedman.
 James A. White, W. H. White Company, Boyne City.
 G. F. Williams, Williams Brothers Company, Cadillac.

VISITORS.
 J. N. Day, St. Louis Lumberman, St. Louis.
 J. W. Dickson, J. W. Dickson Company, Memphis.
 Theodore Fathauer, Theodore Fathauer Company, Chicago.
 F. F. Fish, secretary National Hardwood Lumber Association, Chicago.
 L. E. Fuller, Lumber World, Chicago.
 Henry H. Gibson, Hardwood Record, Chicago.
 W. C. Howe, American Lumberman, Chicago.
 John H. Jenks, Robert H. Jenks Lumber Company, Cleveland.
 C. F. Lusk, assistant secretary Wisconsin Hardwood Lumber Manufacturers, Owen, Wis.
 O. B. Law, Chicago.

the manufacturer takes in this drying process. Whatever may be said to the contrary, the maker of a good desk does not like to hear of it being kicked to pieces by the purchaser, and he knows that this follows as the logical sequence after a sticking experience.

Another important adjunct to the modern factory is the elimination, as far as possible, of all danger, both to the men employed and the article manufactured, from belts, pulleys and other machinery used in the transmission of power. This is done by having most of the apparatus, especially all the belting and exposed machinery, situated in the basement of the factory, which is used as a general store room rather than for active construction operations.

Upon leaving the dry-kiln the lumber passes directly to the main floor of the factory, where it is cut into the desired lengths by means of the circular cut-off saw. With a few minor improvements this is accomplished in the same way as it was years ago, but in the twin operations—ripping the board into

MODERN TYPEWRITER CABINET.

the desired width and splitting it into the required thickness—modern methods and first-class machinery prevail. In ripping, a sharp-toothed wheel revolves in front of and with the saw, though of course at a much slower rate. The board is pushed under this wheel which catches hold of it and so feeds it to the saw. These "self-feeding" machines are a marked improvement over the old-fashioned types, as they only require the board to be handled by the men at the beginning and end of the operation. A different style "self-feeder" is used in splitting. Here the band-saw runs between the last of a set of heavy vertical rollers, all revolving inwardly so as to force a board between them and so onto the saw. In this manner boards are split accurately to any desired thickness.

Many of these strips now pass to the moulding machines. Here some of the shapes turned out in one operation are really wonderful. A rough strip of lumber of most any size is fed to one of these miraculous tools and behold! a transformed article is turned out. One side may be merely plain with the edge beveled; the other side moulded into an

Utilization of Hardwoods.

ARTICLE IX.

Desks.

In the stone age prehistoric man carved hieroglyphics upon slabs of stone. His "desk," if the slab itself did not serve as such, was a flat-topped boulder which was able to withstand the blows of the stone cudgel and chisel. Now all is changed and it is interesting to note that in place of the

Adjoining the modern factory for the manufacture of desks one invariably finds the dry-kiln. Here the lumber, after being dried in the mill yard, where it was cut, and later in the factory yard, is kiln-dried still more thoroughly. This is of especial importance in the manufacture of desks, where so many

SANITARY FLAT-TOP DESK.

stone slab, wood—in the form of paper—is being used more extensively every day; and as a substitute for the boulder, wood again—in the form of desks—is employed almost exclusively. It is with this latter use of hardwoods especially that this article deals.

parts fit accurately into each other and where the slightest warping or shrinking of these parts would cause serious inconvenience. To anyone who has endeavored to open a desk drawer which religiously "stuck," it is hardly necessary to emphasize the care which

exquisite design, with perhaps a groove running down it into which the next piece fits; and the other edge beaded or not, as desired. Another form of these machines is one in which both ends of a board are simultaneously shaped as required, while along this same line is the dove-tailer which accomplishes its particular task in an incredibly short time.

Practically all desks consist of several well-defined portions, the distinction being drawn

by filing boxes, pen rests and card racks, there is in many desks a special card-index drawer. The number of drawers, pigeon-hole boxes and other compartments in this part of the roll-top desk ranges from half a dozen to twenty-five or thirty.

The roll-top curtain is of very peculiar construction. The different panels are turned out by one of the moulding machines mentioned before and are in the form of a tongue

than a desk, but the typewriter cabinet, as may be seen from the accompanying illustration, is primarily a desk and only differs in that it has the additional feature of a typewriter stand and compartment.

It is well to note the great care that is taken in sandpapering, veneering and varnishing the different parts. The sandpapering machines are of many shapes, one peculiar one consisting of two large revolving wheels, the sides of which are covered with sandpaper and between which an entire drawer is pushed

MASSIVE ROLL-TOP DESK.

BANKERS' ROLL-TOP DESK, SANITARY STYLE.

as to the methods of manufacture of these parts. First of all, there is the flat-top or writing bed desk. This is conspicuous, and as it has to stand a good deal of wear and tear, is made of the very best material. Sometimes this top is a solid piece of quarter-sawn oak, but more often, and especially in the better class desks, it is veneered. Such a top of five-ply, built-up stock, which is selected for the figure, is indeed a thing of beauty.

With the exception of the very best desks the side, top and back panels are of less expensive material. Simple designs are frequently cut into these parts. The closed panel back is usually in all but standing and flat-top double desks, the latter being shown in an accompanying cut.

Next come the drawers. The fronts of these are of the same material as the rest of the desk, either quartered oak or mahogany, as the case may be, but the sides, back and bottom are usually of ash, though sometimes oak or birch is used. The great wood for drawer sides, however, is ash. These drawers are dove-tailed, front and back, and are fitted either with wooden or brass handles. The two lower right-hand drawers are frequently double and are partitioned for vertical files or books, while many are varnished inside and supplied with movable partitions.

The small drawers and pigeon-hole boxes on all roll-top desks are of somewhat different construction. With the exception of the front, which again matches the rest of the desk, the pigeon-hole boxes are almost always made of quarter-sawn sycamore. They are fitted with knobs or handles, and with card holder for labeling purposes. Besides the

and groove. These are sandpapered, varnished and glued side by side on heavy canvas, which enables them to be solid in construction as well as pliable. Most curtains slide in "S" shape grooves, though many of the more recent ones, as shown in the illustration of the sanitary roll-top desk, roll in a sloping groove.

Of course, there are various parts of the desk which have not been considered here. Among these are the extension slides which are in nearly every desk, and the stokey legs, which are confined to the new sanitary type. Most desks are also fitted with locks of various styles and with casters.

Ordinary office desks are divided into four distinct types. These are the roll-top, old fashioned as well as sanitary design; the flat-top, of like distinction, including the dou-

ble desk type; the standing desk, and the typewriter cabinets.

back and forth until the exact width is obtained. The veneer is usually of three or five-ply. The varnishing is done in one large room of the factory, thus reducing fire risks to a minimum. Several coats of varnish are applied and either the glossy or dull mission effect may be obtained, as desired. When so much effort is spent upon finishing the tops of the flat-top desks and directors' tables now so popular, it is the custom to cover them with heavy plate glass, that their beauty may not be damaged by use.

The modern desks consist almost exclusively of wood, for even the joints are dove-tailed and not nailed. In fact, the desk is another admirable illustration of one of the many uses to which hardwood may be put. For the different types illustrated in this article, the

FLAT-TOP DOUBLE DESK.

ble desk type; the standing desk, and the typewriter cabinets.

Of the standing desk little need be said, for it really resembles a high table more

RECORD is indebted to the O. C. S. Olsen Company, one of the foremost desk manufacturing concerns of Chicago.

CLARENCE BOYLE, JR.

Electric Equipment of the Great Southern Lumber Company's Plant at Bogalusa, La.

One of the most important electrical installations of recent years is that lately completed by the Great Southern Lumber Company at Bogalusa, La. The importance arises not only from the fact that this is the first installation of the kind in that section of the country, but because it is the largest electrically-equipped woodworking plant in the world.

The enormous capacity of this plant has made it necessary to cover a large area, consequently considerable of the woodworking machinery is located at such a distance from the main sawmill that the transmission of power would be almost impracticable through any other means than by the application of electric motors. The distribution of power could have been accomplished by cable transmission, or the various mills could have been operated by independent steam plants, but the low efficiency of such methods of drive was objectionable in this case.

A practical millman will readily understand that there are a large number of complications required where rope transmission is used and that such a system only multiplies the use of belts, pulleys, hangers, etc., as well as adds to the cost of help necessary to keep such apparatus in working order.

The installation of several steam plants, including the costs for boilers, steam engines, pumps, piping, etc., may not be considered as being prohibitive in the matter of first cost, but the expense of maintenance, including insurance and the cost of labor connected with these separate steam installations make such applications expensive and the plant a source of worry and annoyance to the management.

The electric drive, when properly installed, does away with long lines of shafting and multitudes of hangers, journal boxes, etc., which have to be continually looked after and kept in repair. It further does away with a great number of expensive belts, which frequently break and have to be renewed or re-tightened owing to various conditions which must be anticipated.

It is not possible to eliminate all belting in a woodworking plant where electric motors are used, as, for example, the small machines in the filing room which may be grouped so that several operate from one motor, or the lumber sorters, blowers and stackers may require short lengths of belting, but even in this case long lines of shafting and gearing may be eliminated. The excellent arrangement and consequent economy of operation of the Bogalusa plant, secured by direct drive, is in great part due to the efforts of G. U. Borde of New Orleans, who acted as consulting engineer for the company.

The entire 1,500 horsepower for use about the mill is generated at a central point by General Electric generators and is distributed through cables to motors located at the ma-

chines to be driven. The three generators, direct driven by slow speed engines and delivering current to the line at 2,300 volts, are excited by current from two direct current marine engine sets shown in the foreground of Fig. 2. The entire current is carried to the mill through cables in underground conduits: The heavy black line running to the left from the power house in Fig. 1, shows the course of the underground conduit supplying the two planing mills, sorter and stacker and ending with the forty-two motors in the main planing mill.

The woodworking machinery furnished by the Berlin Machine Works, as well as the auxiliary apparatus and sizes of motors, is listed in the following table:

PLANING MILL NO. 1.

Thirteen 16-inch No. 238 trim saws, each direct coupled to 5 H. P. 1,200 R. P. M. motor.

Seventeen No. 94 planers and matchers, each direct coupled to 25 H. P. 600 R. P. M. motor.

Two No. 260 three-saw gang edgers, each belted to 35 H. P., 900 R. P. M. motor.

One 64-inch No. 285 band rip saw, direct coupled to 55 H. P., 514 R. P. M. motor.

One 44-inch No. 283 hand rip saw, direct coupled to 25 H. P., 600 R. P. M. motor.

One 44-inch No. 281 band rip saw, direct coupled to 25 H. P., 600 R. P. M. motor.

One 30-inch No. 177 double surfacer, direct coupled to 35 H. P., 900 R. P. M. motor.

Three double 70-inch Startevant blowers, each direct belted to 150 H. P., 600 R. P. M. motor.

All machinery in the filing room is connected with line shafting, belted to a 10 H. P., 1,200 R. P. M. motor.

PLANING MILL NO. 2.

Eight No. 94 planers and matchers, each coupled to 85 H. P., 900 R. P. M. motor.

One 44-inch No. 281 hand rip saw, direct coupled to 25 H. P., 600 R. P. M. motor.

Four 16-inch No. 238 trim saws, each coupled to 5 H. P., 1,200 R. P. M. motor.

One double 70-inch Startevant blower, direct coupled to 150 H. P., 600 R. P. M. motor.

PLANING MILL ON TIMBER DOCK.

One 30x20-inch No. 1 timber sizer, direct coupled to 85 H. P., 900 R. P. M. motor.

One No. 94 planer and matcher, direct coupled to 35 H. P., 900 R. P. M. motor.

One double 60-inch Startevant blower, direct coupled to 150 H. P., 600 R. P. M. motor.

DRY LUMBER SORTER.

Dry lumber sorter, driven by one 35 H. P., 900 R. P. M. belted motor.

LUMBER STACKERS.

Eight lumber stackers, driven by eight 25 H. P., 600 R. P. M. belted motors.

FUEL CONVEYORS.

Two fuel conveyors, driven by two 35 H. P., 900 R. P. M. belted motors.

CENTRIFUGAL PUMPS.

Two 14-inch centrifugal pumps for pumping into log ponds, each direct coupled to 85 H. P., 720 R. P. M. motor.

MACHINE SHOP.

One 2 H. P. motor connected to upright drill.

One 2 H. P. motor connected to bolt cutter.

One 7½ H. P. motor connected to planer.

One 2 H. P. motor connected to pipe machine.

One 2 H. P. motor connected to pipe machine.

One 5 H. P. motor connected to shaper.

One 5 H. P. motor connected to radial drill.

One 3½ H. P. motor connected to machine lathe.

RELAY BLOWER STATIONS.

Two double 70-inch Startevant blowers, belted to two 150 H. P., 600 R. P. M. motors.

Transformers inside the mills reduce the pressure to 440 volts, at which pressure the motors driving the various mill machines are operated. All of the machines in the three mills of this plant are driven by the General Electric Company's Form K induction motors, which on account of their extreme simplicity and sturdiness are especially suited to this class of work. Moreover the electric motor of such sizes as are used in this work is essentially a high speed high efficiency machine, making it not only possible but highly desirable to connect this direct to the shaft of the machine to be driven. This has been done in all except a few instances, as the higher efficiency obtained with the absence of long belts and lines of overhead shafting more than justifies the extra first cost for individual motors. Swing saws, planers, matchers and band saws are all connected direct to the driving motor. This makes the lighting remarkably good, as it does away with all overhead shafting and belts, and at the same time gives an installation of remarkable flexibility. The good lighting and entire absence of belts is well shown in Fig. 3, which illustrates the direct motor drive to one of the Berlin hand rip saws.

The dust which is generally such an obstacle to the satisfactory operation of planing mills is removed by electricity. Seven double blowers are driven by 150-horsepower motors, drawing the dust up through a system of pipes. These blowers are distributed through the mill as follows: One in each of the small planing mills H and I shown in the diagram, two in the rough lumber shed and three in the main planing mill. About eight ounces of pressure is maintained by these, which not only carries away dust and fine shavings, but also knots and large chips. One of these blowers is shown in Fig. 4 and the arrangement of the pipes is well shown in Fig. 3.

Fig. 5, showing an 85-horsepower motor connected to a timber sizer, gives a very good idea of the simplicity and compactness of this form of drive. This sizer is in the planing mill on the timber dock, as shown in the diagram.

Each of the motors is supplied with a starting device and protecting fuses at the motor so that each machine is a plant in itself and practically independent of the other machines. Fig. 6 shows one of these starting compensators connected to a motor driving a band edger. The fuses at each machine protect that motor and its cable from internal injury, and as the cables are encased in iron conduits fire danger is eliminated.

The entire installation is one that exemplifies the best and most economical methods of handling lumber and the cleanliness and flexibility secured by the improved methods used are making the dutsy sawmills of the past more and more uncommon.

Hardwood Record Mail Bag.

In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.

Another Inspection Conference.

The following letter is being sent out by Hugh McIlvain of J. Gibson McIlvain & Co., Philadelphia, acting chairman, referring to the conference on inspection rules held in Philadelphia in March, and calling another for next month. The invitation has been sent to the delegates present at the former conference and to the Eastern States Retail Lumber Dealers' Association, New Haven, Conn.; Lumber Trade Club of Boston; Massachusetts Wholesale Lumber Dealers' Association, Springfield, Mass.; Retail Lumber Dealers' Association of Philadelphia; Lumbermen's Exchange of Philadelphia; Lumbermen's Exchange of Baltimore; New York Lumber Trade Association; Building Material Men's Association of West Chester, N. Y.; Retail Lumber Dealers' Association of the State of New York, Utica, N. Y.; New Jersey Lumbermen's Protective Association, Newark, N. J.; Pittsburg Wholesale Lumber Dealers' Association; Lumber Dealers' Association of Connecticut, New Haven, Conn.; Cincinnati Lumbermen's Exchange; Buffalo Lumbermen's Exchange; Hardwood Lumber Dealers of Norfolk, and the Lumbermen's Exchange of Washington.

The call reads as follows:

Gentlemen: Acting under suggestions and by the advice of a number of associations interested, you are hereby notified that all associations represented at the conference on inspection rules, which was held in Philadelphia March 6, 1908, are urgently requested to reconvene there at the Bellevue-Stratford hotel, September 24, 1908, at 11 a. m., to act upon such business as shall come before the meeting; and especially for the purpose of giving the inspection question further consideration. This will probably be one of the most important meetings ever held by the hardwood trade, and your association should be represented. Send as large a delegation as you think proper, arranging to stay two days if necessary. The meantime, kindly have your association defer consideration of the new National hardwood rules, as adopted at the Milwaukee convention June 11 and 12, 1908, and recommend to the individual members of your association that they continue buying under the old National Hardwood Lumber Association rules of 1905 or the Northeastern rules.

Death of Colonel McLeod.

The death of Col. A. D. McLeod, assistant general freight agent of the Chicago, Hamilton & Dayton Railroad, which occurred at Cincinnati July 18, was a severe shock not only to the railroad fraternity, but to the lumber trade generally, by whom he was greatly beloved. As a matter of fact there was no man connected with railroad interests so well known to lumbermen as was Col. McLeod. He was an expert on lumber freight tariff cost, and was always an advocate of transporting stock at a just price. To him, perhaps, more than to any other individual connected with the roads were

pending the action of the Philadelphia conference in September. Please let me hear from you promptly after receipt of this and oblige Yours truly,

HUGH McILVAIN,
Acting Chairman.

About Consignments to Hamburg.

HAMBURG, July 25.—Editor HARDWOOD RECORD: I have just noticed the article relative to consignments of whitewood logs, etc., on page 32 of your June 25 issue, and can only assert that what is said about Antwerp and Havre ports refers with the same force to Hamburg. The heavy consignments of American lumbermen to their foreign customers have injured the market so that conditions here are unsatisfactory now, and even fine logs are fetching low prices. Hamburg has never seen such a heavy stock of American whitewood logs as now. All sheds and yards are absolutely filled up, so that it has been necessary to enlarge the largest yards very considerably. If the American exporters of whitewood would not bear losses, they should not make further consignments in the present state of the market, or at all events not make consignments in immense quantities. Some six weeks ago an American manufacturer and exporter shipped to Hamburg a large consignment of poplar or whitewood logs, asking 83 marks per cubic meter, c. l. f. Hamburg for it; it was quite impossible for me to obtain that price at the present state of the market or to persuade any one to let me have a counter offer approaching his limit. Buyers asked to make a firm, reasonable offer laughed and said: "We can buy all we need from 45 marks to 72 marks." The shipper was not inclined to reduce his price according to the present situation of the market, and I must pass the lot.

Some days ago I saw the shipment still lying in the open room of the dock in the rays of the sun, so that the logs now here about six weeks will burst more and more. Until that date the dock rent was already more than 400 marks and if time of interest and damage by weather, etc., be considered, it is quite out of question at the present moment to get the price asked.

A further nuisance is that some people mark their logs with their full firm and domicile. The shipper of the before-mentioned lot did this, too, so that consumers remarked, "We know the exporter who has marked his firm, etc., on the ends of the logs: now we can buy directly and will have us the amount of the agent's commission."

If satisfactory business relations shall be continued between these American exporters and their agents here, shippers should only mark their logs with their initial letter, as the most prominent firms are doing it. I should be glad if you would submit this to your readers, believing it will be of interest to some lumbermen.

F. GUILLIAM SPINDLER.

Large New Lumber Company.

T. A. Green of Ontonagon and C. H. Worcester of Chassel, Mich., have purchased the interests of the C. V. McMillan Company and formed the Greenwood Lumber Company. Mr. Worcester is president and Mr. Green secretary and general manager, and these gentlemen control practically all the stock.

The transaction is a large one, involving about 15,000 acres of timber land, a sawmill and other property. Two-thirds of the land is west of Ontonagon, the rest east, while the mill has been one of the industries of the town for many years. Woods operations will be started at once, and work will consist principally in extending tracks and getting ready for great activity in future. The Ontonagon Railroad Company, which owns the line connecting the mill with the timber west of town, is not included in the deal, but is a separate institution.

THORNTON A. GREEN, ONTONAGON, MICH.

It will be continued under the management of Mr. Green, who virtually owns all the stock.

Messrs. Worcester and Green of the new company are both successful lumbermen, and are well known throughout the upper peninsula. Mr. Worcester is president of the Worcester Lumber Company, which is operating at several points in the northland. Mr. Green has been treasurer and manager of the C. V. McMillan Company. He came to Ontonagon in 1900, the year following the establishment of the business. Largely through his efforts the institution has been made one of the substantial, reliable ones of the upper peninsula, and there is much satisfaction locally over the fact that he is to continue as general manager.

Semi-Annual Pennsylvania Lumbermen's Association.

The seventeenth semi-annual meeting of the Pennsylvania Lumbermen's Association was held at Lancaster, Pa., on July 29, President T. J. Snowden of Scranton in the chair and 150 members present. Rabbi Isadore Rosenthal of Shavul Shomergin Temple, representing Mayor McCaskey, made the address of welcome. Vice-President S. C. Craver of Bloomsburg responding. Matters concerning mainly trade conditions took up the day's session.

On July 30, resolutions endorsing the step taken for the preservation of the forests, and one condemning as dishonest the practice, which is growing in the trade, of cancelling orders for material without the consent of both buyer and seller, and filling orders in the order of price,

News Miscellany.

lumbermen indebted for moderate transportation charges throughout the territory in which the C., H. & D. is a prominent factor.

Col. McLeod was in Chicago only a few weeks ago and attended the last Hoo Hoo confection held here. He was apparently in the best of health and his sudden taking off was a distinct shock to his Hoo Hoo friends especially. He was an exceedingly popular man, due to his cordiality, his extreme politeness, and his accommodating disposition. Not only had he hosts of friends among lumbermen and railroad men, but every lumber newspaper man held him in great affection, because he was at all times a fair friend. It will be missed by all of them

rather than in the order of the time of shipment agreed upon, were adopted. It was the sense of the meeting that an order upon place and accepted constituted a binding contract. The assistance of kindred business organizations is asked in formulating some plan for correcting these evils.

In Financial Difficulty.

F. M. Gealey was recently appointed receiver for the W. E. McMillan Company, Inc., of Pittsburg, on application of the Ward Lumber Company, the De Ran Lumber Company, and Lantz Brothers. In a recent explanation of the difficulties into which the company has become involved, Mr. McMillan stated that the company was formed about eighteen months ago with a capital of \$25,000; that it is a close corporation with himself representing practically the entire ownership and control of the company. The present receivership was forced by a combination of business troubles in which the company became involved, in addition to the general depression which has become involved. The company was caught hard in the failures of Gabbe Brothers of New York; E. E. Price of Baltimore; the Geisel Flaming Mill Company of Harrisburg, Pa., and the New York Lumber & Storage Company of New York City. In addition to these troubles the McMillan Company had advanced money on lumber contracts to four mills in West Virginia and Kentucky whose stock it was taking, and of late it was unable to move much of the stock on a cash basis. It also had some money invested recently in the export trade which is at present tied up. The company's assets at present figure \$25,000, consisting of lumber and accounts receivable; its liabilities are about \$18,000, and the receivership will be only temporary. It will continue business at the present office, 323 Fifth avenue, Pittsburg, and all new business will be done by the receiver on a cash basis. In three months it expects to be in good business standing again and have the facilities for doing a large lumber business.

Permission to Perforate Postage Stamps.

The following order has been issued by the Postmaster-General of the United States regarding the perforation of postage and special delivery stamps for the purposes of identification and to prevent theft.

"United States postage stamps, to be acceptable for postage, must be absolutely without defacement: Provided, That for the purpose of identification only, and not for advertising, it shall be permissible to puncture or perforate letters, numerals or other marks or devices in United States postage and special delivery stamps. The punctures or perforations shall not exceed one-thirty-second of an inch in diameter, and the whole space occupied by the identifying device shall not exceed one-half inch square. The puncturing or perforating must be done in such manner as to leave the stamp easily recognizable as genuine and not previously used. The use of ink or other coloring matter in connection with such puncturing or perforating is prohibited."

This privilege is the result of efforts of the Merchants' Association of New York, which has furnished to the Postoffice Department full information regarding the perforation of stamps in foreign countries—a practice which has been in vogue for many years, with considerable benefit to commercial interests and no annoyance to the authorities. In issuing the present order a machine having six letters was experimented with, the perforations making the letters not greater than a thirty-second of an inch in diameter, and occupying an area of not more than one-half square inch. A ten-die machine, run by motor and with a capacity of 1,000 stamps a minute, can be made for about \$100.

Succeeds R. F. Krebs Lumber Company.

Announcement comes from St. Louis that R. F. Krebs and J. L. Scheve have organized the Krebs-Scheve Lumber Company, succeeding the R. F. Krebs Lumber Company, large wholesalers of hardwoods for domestic and export trade, at St. Louis.

R. F. KREBS OF THE NEW KREBS-SCHEVE LUMBER COMPANY, ST. LOUIS.

Both gentlemen are experienced in the hardwood lumber business. Mr. Krebs began his career with the old Eau Claire Lumber Company of St. Louis, remaining with them until they sold out seven years later. He then traveled for the Chippewa Lumber and Room Company, and in 1890 formed a connection with what was then Steele & Hibbard. Fifteen years later with that excellent firm gave Mr. Krebs a good training in hardwoods, which, in 1906

J. L. SCHEVE OF THE NEW KREBS-SCHEVE LUMBER COMPANY, ST. LOUIS.

1907, he used to advantage as manager of the lumber department of the Ozark Coöperage Company, and since the spring of 1907 has been in business for himself.

The foundation of Mr. Scheve's thorough lumbering experience was saw-milling; then for twelve years he was actively and financially interested with the Bousack Lumber

Company, and for the past two years has been representing the W. D. Reeves Lumber Company of Helena, Ark.

The new firm has ample financial backing, and both gentlemen have a wide acquaintance among hardwood lumber consumers, as well as throughout the producing section in the South, so that a successful future for the new company is practically assured.

Building Operations for July.

Notwithstanding the circumstance that a national political campaign is just about to open, building conditions in this country continue to improve. Official building reports from forty-five leading cities of the country, including Manhattan, Brooklyn and the Bronx, received by The American Contractor, Chicago, for the month of July, show quite a decided gain as compared with the preceding month. The gain, as compared with July, 1907, is about three and one-half per cent, whereas last month the loss was 15 per cent. In March it was 37 per cent, in April 10 per cent, and in May 10 per cent. For the first time in many months New York appears on the right side of the ledger, the gain over July, 1907, being 23 per cent.

Receiver Appointed for A. M. Turner Lumber Company.

Attorney Elmer W. Moore, Frick bldg. annex, Pittsburg, has been appointed receiver for the A. M. Turner Lumber Company, with offices in the Union Bank building, Pittsburg. This connection was taken at the instance of four creditors, whose claims are as follows:

A. M. Turner, \$23,500; C. K. Hillenacs, \$10,500; The Hercules Paper Bag Co., \$4,000, and H. H. Hillenacs, \$5,000. The capital of the company is \$100,000. Its nominal assets are estimated at \$225,000 and its total liabilities at \$90,000.

A. M. Turner Lumber Company is one of the best known yellow pine concerns in Pittsburg. Its timber lands are in Pittsburg, Miss., and its president, A. M. Turner, is a thorough-going wholesaler who was for some years associated with G. W. C. Johnston, now president of the American Lumber & Manufacturing Company. The company was caught last year in a big Canadian railroad contract which for some reason resulted in a big suit. It also furnished a large amount of lumber for the Coney Island Amusement Company of Pittsburg, which has

been a defunct concern for several months. General stagnation of the lumber business in the South is given as the chief cause for the financial trouble of the company. Many of its creditors had threatened to bring suit and it was to offset individual action that the application for a receiver was made at this time. Receiver Moore states that by careful management the company will be able to pay every creditor in full and then will be in a position to resume business on a substantial basis.

Chicago Hoo-Hoo Prepare for Annual.

Thursday evening, August 4, the general committee which is preparing for the great annual to be held in this city September 8, 9, 10 and 11 held a meeting at the Auditorium hotel, to which all Chicago members of the order were invited. The sweltering weather caused the attendance to be somewhat smaller than had been expected, but those who were present when the meeting was called to order at 8 o'clock made up in strict attention to business and apparent aptitude for the affair in hand what they lacked in numbers.

It was shown that the financial end of the work is progressing in good shape, and the gentlemen in charge of this important part of the arrangements say that when the visitors arrive they will be in position to show them the time of their Hoo-Hoo lives.

As previously announced, the Auditorium hotel will be the headquarters for the business meetings and the general rendezvous. Rates at this hotel have been secured as follows:

One person in a room without bath, \$2 a day and up.
Two or more in a room without bath, \$1.50 a day and up.

One person in a room with bath, \$3.50 and up.
Two or more persons in a room with bath, \$2.50 and up.

Each additional person in room with bath, \$1.50 and up.

At the other hotels with which arrangements have been entered into, the rates range from \$1.50 a day up for each person. The hotel accommodations of Chicago are excellent and no one need fear not being able to get a comfortable room at a moderate price should his arrival be too late to permit of his being received at the Auditorium.

The following program has been arranged. It is, of course, subject to alterations, but these, if any, probably will be slight:

HOO-HOO ANNUAL PROGRAM, SEPTEMBER 8-11.
September 8—Registration at Auditorium hotel.

Afternoon, initiation of Osirian Cloister.

Evening, banquet of Osirian Cloister.

September 9—9 a. m., registration of visitors.

9:40 a. m., business session.

9:15 a. m., continuation of business session on board steamer Theodore Roosevelt.

9:45 a. m., trip to Michigan City, Ind., on steamer Theodore Roosevelt.

12:45 p. m., arrive at Michigan City.

1 p. m., luncheon at Conroy Island Cafe, bathing and other amusements, including exhibition by life-saving crew. Return on steamer Theodore Roosevelt via Gary, Ind.

September 10—9:00 a. m., business session.

2 p. m., ladies' automobile trip around park and boulevard system.

8 p. m., ladies' musicale.

9:00 p. m., conensation and session on the roof.

September 11—9:00 a. m., business session.

Afternoon, ladies' shopping tour.

Evening, Hoo-Hoo and their ladies at amusement park.

James M. West will be chairman of the committee in charge of the boat trip.

Irving McCreary will be chairman of the committee in charge of the automobile trip and the other amusement features.

Obituary.

James Strong, a prominent lumber merchant and manufacturer, and president of James Strong & Company, Inc., of this city, died suddenly on July 25, at Atlantic City, N. J., where he had been for some time for his health.

Mr. Strong was born at White Haven, Pa., where he received his early education, which was

supplemented by several terms at Wyoming Seminary. His first experience in the lumber business was acquired in White Haven, which offered so many facilities for embarking in this line of trade; from there, to his advantage, he removed to Williamsport, Pa., and thence, with still greater inducements, to Philadelphia, in 1880, where he had lived ever since, and where he had made for himself a name, not only as a man eminently qualified to attain the highest success in the business in which he was engaged, but as one scrupulously honest in all his dealings. He was a member and elder in the Lutheran Church, a trustee of the Theological Seminary at Gettysburg, Pa., and of Pennsylvania College, to which institutions he gave substantially of his means. To him no philanthropic enterprise appealed in vain.

Some Jolly Fishermen.

There is a jolly party of lumbermen in Canada chartered by Will McLean of the Wood Mosale Flooring & Lumber Company of Louisville and New Albany. Edward L. Davis of the Edward L. Davis Lumber Company, and A. T. McDonald of the Louisville Commercial Club, are at the camp of the McLean boys at Pytonag. It is always a case of many fish and general good rest when this party visits their lodge.

W. A. McLEAN, THE "BOSS FISHERMAN."

We understand Will McLean is the boss fisherman, don't know what kind of bait he uses, whether it is silver or otherwise, but do know that the bass and muscunelange take to the woods when he gets his Scotch knickerbockers on and gets busy. Take a look at him. No doubt Davis and the rest of the bunch will have just as big stories when they return, but here is *prima facie* evidence that McLean can get hold of fish no matter how he catches them.

Receiver Asked for Southern Company.

George Enck, president of the Engle Land & Lumber Company, has started proceedings to have a receiver named for his concern. The value of the property owned by this company is estimated of half a million dollars. It consists of 120,000 acres of hardwood timber,

double band sawmill railroad, etc. The West Michigan Furniture Company of Holland, Mich., is the principal stockholder.

The Engle Land & Lumber Company's affairs are in a rather chaotic state, both legally and financially. It seems that two big suits for the recovery of considerable sums of money have been enjoined from getting judgment until the receivership case is settled.

Miscellaneous Notes.

The plant of the American District Steam Fitting Company at Tonawanda, N. Y., was destroyed by fire July 25, and 1,500,000 feet of lumber burned.

Practical work now being done by the University of Wisconsin is bringing about remarkable results in the northern part of the state, where farmers are being shown how they can obtain profitable returns from land that has heretofore been undeveloped. They are transforming the cutover lands in the upper section of the state from a wilderness into a rich agricultural region.

The South Fork Lumber Company is a new concern in Lee county, Kentucky.

The Frost Veneer Sating Company of Sheboygan, Wis., whose plant in Antigo was recently destroyed by fire, has decided not to rebuild. Efforts are being made to have the concern reconsider its determination, as it was one of the town's valuable industries.

The Oklahoma Land & Lumber Company of Vernon, Tex., has been incorporated at Guthrie, Okla., with a capital of \$1,000,000.

The Fred A. Sass Company is a new Chicago concern which will manufacture and deal in mouldings. It is capitalized at \$50,000.

At Hoquiam, Wash., recently, the drykilns of the Coast Shingle Company, containing 4,000,000 shingles, were destroyed by fire, causing a loss of \$100,000.

The plant of the Michigan Manufacturing & Lumber Company at Holly, Mich., has resumed operations after the usual summer shutdown for repairs.

Three new industries—a butter dish factory, a sawmill and a chair stool factory—have recently been located at Sidnaw, Mich. They will consume about a million and a half feet of hard wood a year. The butter dish factory to be erected by William Beltner & Son of Traverse City, Mich., will be in operation by the last of the year.

The Hanson-Ward veneer factory at Bay City, Mich., has resumed operations after a month's suspension.

Charles Emmel & Rose Company is a new concern to enter the wood carving business at Boston, capitalized at \$20,000. Arthur Rose of Roseland is president and Walter Kennison of Jamaica Plains, treasurer.

The Santa Fe railroad has purchased 1,000 acres of land about thirty-five miles south of Hutchinson, Kan., on which it will plant catalpa trees for ties.

The Cleveland Woodenware Company has been organized to take over the business of the R. L. Frome Company of Howard's Grove, Wis., which was recently destroyed by fire. Veneer and furniture will be manufactured, as well as boxes.

The St. Louis Lumber Company has been incorporated at Portland, Mo., with a capital of \$1,000,000. C. E. Eaton is president and T. L. Croxson, treasurer, both of Portland.

Fire at Buc City, Ind., July 21, caused a loss of \$200,000 to the Gaskell lumber yards at that place.

A new lumber company for Jackson county Arkansas, was chartered the last of the month. It is styled the Schneider-Siegal Lumber Company, and is capitalized at \$47,000. It will deal in soft and hard woods.

The Mason-Featherton Lumber Company of Ashtabula, O., wholesalers of hardwoods, has dissolved partnership, the business being continued by R. C. Mason.

Claiming that improved business conditions justify them in so doing, all the big lumber mills along the Gulf & Ship Island Railroad will be opened within the next few weeks with full force. About 5,000 men will be re-employed.

The works of the Chicago Tie Preserving Company, at Mount Vernon, Ill., will resume August 1 after a shutdown of ten months. A full force of workmen will be employed.

The Baltimore & Ohio has sold 300,000 acres of hardwood timber in West Virginia for \$2,000,000. The land lies in a mountainous region, drained by the tributaries of the Great Kanawha.

New fence posts, patented by Col. W. A. Ollphant of Petersburg, Ind., will be used by the Evansville & Terre Haute System along its right of way, the road having purchased the right to manufacture enough to build 600 miles of fence. The chief features of the post are a block of concrete which goes into the earth, and an inserted post of creosoted wood, solidly anchored to the block with iron fastenings. The post seems to be practically indestructible.

The Hall City Hardwood Lumber Company, a newly organized concern, is putting in a fine hardwood mill at Hall City, Pa., and will have

it in running order within a month. The plant will have a daily capacity of 30,000 feet. The company will lumber some fine tracts of hardwood timber, and will commence operations as soon as possible.

The Goodman Lumber Company of Marinette, Wis., has commenced work on a new mill, lumber plant and town which will be built in the woods on the Soo line, ten miles from Dunbar. The Soo Railroad has already put in a siding and designated the station as Goodman. The company will construct a logging railroad, complete modern sawmill and large boarding house.

E. J. Young of Madison, Wis., and F. N. Norton of Medford, Wis., have purchased a tract of 5,000 acres of timber at Indian river.

On August 1 an immense fire occurred on the south wharf of the Sawyer-Goodman Company of Marinette, on the Menominee river. The total damage exceeded \$150,000, covered by insurance. An immense amount of lumber was consumed, the fire departments being practically powerless to stop the blaze.

The Belhaven Lumber & Manufacturing Company has been organized at Raleigh, N. C., by J. A. Wilkinson, William Schultz and others; capital, \$100,000.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

George O'Hara, the hardwood man of Calro, Ill., was in town a few days last week en route to the East, where he will join his family for a little stay at Cape May.

C. J. L. Meyer, formerly a millionaire lumberman and railroad president of Marinette, Wis., died recently at the age of seventy-seven years. His funeral was held at Fond du Lac.

T. S. Estabrook of the Estabrook-Skeele Lumber Company returned last week from a visit to his operations at Gould, Ark., where he was in conference with the local manager, S. G. McChelan.

E. F. Dodge of the P. G. Dodge Lumber Company, Fisher building, returned to the city last week after visiting his Nashville operations.

Chicago friends of V. P. Coe of Painesville, O., the well-known veneer machinery manufacturer, will be glad to know he is convalescent after a severe illness which kept him confined to the house the greater portion of last month.

R. S. Huddleston, secretary of the Otis Manufacturing Company, is back from a visit to the mill and main office of the company at New Orleans. Mr. Huddleston reports the mahogany trade in good condition.

Paul Johnson of the North Shore Lumber Company, Thompson, Mich., was a Chicago visitor last week.

F. R. Whiting, president of the Whiting Manufacturing Company of Abingdon, Va., and Philadelphia, Pa., was a recent visitor to this market.

Harvey Wiles of the T. Wiles Company, extensive flooring manufacturers of Chicago, is killing two birds with one stone by looking over affairs at his northern camps, and in the meantime doing a little fishing.

James D. Lacey, the well-known timber man, accompanied by his wife and his daughter, Mrs. Victor Thrane, spent last week at the celebration in honor of the Prince of Wales at Quebec, where they went in their new craft, the Tonopah. They are now cruising among the Thousand Islands, and have as their guests Mr. Hofstra of the Seacoast Lumber Company, New York, and his wife.

J. P. McParland, who conducts a large hardwood yard on Laflin street, has changed over his business somewhat and organized the McParland-Konzen Lumber Company, which has been incorporated with a paid-up capital of

\$50,000. Mr. McParland is the largest stockholder, and J. P. Konzen, the other principal, is well known to the trade as head of the lumber purchasing department of Kelley, Maus & Co. for the last eighteen years, so that he is particularly fitted to assume charge of the extensive activities of the business of the concern, while Mr. McParland will conduct the lumber end of the trade.

W. E. Trainer of the Trainer Brothers Lumber Company, wholesalers of hardwoods, is making a lengthy southern trip.

The F. F. Krause Company, capitalized at \$40,000, which will manufacture interior finish and woodwork and deal in lumber, is a new Chicago concern.

J. V. Stimson, the well-known lumberman of Huntington, Ind., was a recent caller at the Record office.

Ollie Cline, a prominent handle manufacturer of Hugh, Okla., was a Chicago visitor the last of the month.

R. M. Carrier of Sardis, Miss., was in the city the latter part of July.

The T. E. Stone Lumber Company contemplated a deal last week whereby they purchased all the stock and assets of the Stone & Heyser Lumber Company of Cincinnati, O., with a branch office at Memphis, Tenn., and assume all liabilities. W. E. Heyser, who had charge of the Memphis office, will be located at Cincinnati headquarters. The Stone & Heyser Lumber Company will go out of business and the Memphis office will be discontinued.

The Lumbermen's Association of Chicago has taken decisive action in favor of improvement of the Chicago river and the proposed deep waterway from the gulf to the lakes. The trade committee of the association was instructed to continue its efforts to obtain an unobstructed 200-foot channel from the head of the drainage canal to the mouth of the river, and to urge the city of Chicago, the drainage trustees, and the government that no more bridges be constructed over the main river unless the draws be 200 feet wide, and that no further money be paid on other channels until the main channel is completed. It urged, also, that the bridges now over the main river at points narrower than 200 feet be removed as speedily as possible, that all center piers be removed, that the river be straightened where there are obtruding parts, and that condemnation proceedings be prosecuted vigorously wherever property obstructs the 200 feet width.

BOSTON

The new factories and office buildings of the Heywood Bros. & Wakefield Company at Gardner, Mass., will be ready within a month. The new buildings cost about \$400,000, and are constructed of pressed brick with concrete trimmings, with the exception of the office building, which is of granite up to the third story. The various factories are connected by steel bridges.

W. F. Whitney & Co., manufacturers of chairs, South Ashburnham, Mass., suffered a loss of about \$15,000 by fire last month. The fire was confined to the company's storehouse.

Morris and James R. Hall of the Hall Lumber Company, Boston, have been spending the past two weeks in British Columbia and the State of Washington. They are expected home in a few days.

B. P. Wheedon of W. D. Young & Co., Bay City, Mich., has returned home from a trip East. He spent about two weeks in this city.

E. N. Eames of the Boston Lumber Company has returned from a business trip to Maine.

W. W. Bates of the W. C. Bates Company, Boston, has been away on a vacation trip for the past three weeks.

F. B. Reynolds of the Boston Lumber Company has returned from his vacation.

Mr. Haves, representing Scatcherd & Son, hardwood dealers, Buffalo, N. Y., has been a visitor in the Boston market recently.

L. F. Rollins of New York, representing F. M. Fardor & Co., Birmingham, Ala., was in the East last week.

The woodvener factory of Brown Bros., Winchenbe, Mass., has resumed operations after a shutdown of nearly five weeks.

Stetson, Cutler & Co., Boston, has closed its mills at St. Johns, N. B.

NASHVILLE

The Dixie Lumber Company, with a capital stock of \$100,000, is the latest addition to the lumber interests of Nashville. The two moving spirits in the enterprise are John J. Ward and J. G. Cunningham. Mr. Cunningham will be in active charge of the business. He has had much experience in the world of lumber and has been making his plans for many months, and during the recent financial stringency, when the market was down, he bought heavily. The company believe that the advance in the market which has come with the return of confidence, will bring a handsome profit for them on the stock already on hand. A site for the plant has been secured in South Nashville on the line of the Tennessee Central, and on this the necessary buildings will be erected. The executive offices of the company will be located in rooms 1104, 1106 and 1108 Stahlman building, the same ones in which are also located the offices of the Hardwood Manufacturers' Association and other lumber representatives and interests. A charter for the company will be taken out in a few days.

A special from Dover, Tenn., announces that J. H. Ellarson of Clarksville, Tenn., has bought a half interest in the A. M. Tippitt planing mill and lumber plant at Dover, Tenn. Mr. Ellarson, who is a trained lumberman, will take

entire charge of the new interests he has acquired at Dover. He will incidentally install quite a lot of new machinery.

A special from Hickman, Ky., announces that the Mengel Box Company is having a large tow boat built at Marietta, O., for the purpose of towing timber for the Hickman branch of the Mengel interests. A fleet of barges is also being built, also a large gasoline tow boat, the latter in course of construction in the company's yards. These facilities are necessary on account of the large increase in the company's business in the past few years.

While languishing in jail at Murray, Ky., on the charge of having pulled off a crooked timber land transaction in Mississippi and thereby defrauding F. M. Smith of Tennessee out of some \$1,500, J. M. Burgess still tried to do business with the outside world. A letter from a gentleman in Nashville written to Burgess at Hotel Latham in Murray, Ky., was intercepted by the authorities, and this letter disclosed the fact that the Nashville man was ready to pay down \$7,000 cash and the balance of the purchase money in one, two and three years. Burgess is said to have told Jailer Johnson that if permitted his liberty two or three days he would have no trouble in getting \$10,000 of the Tennessee man.

The large sawmill plant of Buchanan Brothers, of Waverly, Tenn., has been totally destroyed by fire. The mill was located on Blue creek, about ten miles south of Waverly. The origin is unknown. The loss is several thousand dollars, with no insurance.

The many friends of Hamilton Love, the popular young business man of this city, will be glad to learn that his little son, Hamilton, Jr., will be dangerously ill for many weeks with typhoid fever, is now out of danger.

Two painful injuries are reported in sawmills during the past week or so. In one Sam E. Sells, a prominent Republican leader of Johnson City, Tenn., suffered the loss of his hand in a planing mill of which he is proprietor at that place. Mr. Sells was recently chosen by the Republicans at a convention assembled as electors for the state-at-large. In the other accident, which occurred at Westmoreland, near Nashville, William Killian suffered a fractured skull. He will recover.

Quite an exodus of Nashville lumbermen has taken place since the city surrendered to the recent hot spell. John B. Ransom has gone to Canada and other Eastern points for a vacation and fishing trip. Sam Lieberman of Lieberman, Loveman & O'Brien, is away on a vacation.

Arthur B. Hanover and Mr. Ransom have left for a pleasure trip to northern and eastern points. M. F. Greene of the Davidson-Benedict Company has gone to New York. A. L. Hayes of the A. J. Hayes Lumber Company has gone to Savannah, Ga. John Love is still in Nova Scotia.

John S. Denton, secretary of the Southern Lumber & Manufacturing Company, has announced his candidacy for the office of state treasurer of Tennessee. This is a nice fat office, combining with it also the attendant position of insurance commissioner. The former pays \$3,500 and the latter \$1,500, about \$5,000 in all a year, and for four years.

What is regarded by many of the lumbermen as the turning point to a period of old times and renewed good times was furnished in the month of July just ended. July is ordinarily not regarded as a very good month by the lumber people, but this time it was unanimously held that the month of July just ended was unusually good, in fact a genuine surprise. An improvement had even characterized the June business, but its record was not a steady one. With July, however, a steady increase in business was noted all along the line. Prices have taken an upward tendency and lumbermen are beginning to realize that the worst is a thing of the past. The hardwood situation remains the same save for the stiffening in prices. Low prices which

would have been welcomed a few months back are now being turned down promptly by the lumbermen. The railroads operating out of Nashville report a tonnage which about equals the record this time last year, before the "late unpleasantness." The demand for quartered oak is fine and plain oak shows improvement, although still just "flat." Nashville dealers are positively refusing to dispose of any of their stuff at poor prices and are uniformly holding out for better ones.

BRISTOL

W. M. Ritter of the W. M. Ritter Lumber Company of Columbus, Ohio, and J. Moritzer, Jr., the latter general superintendent of all the Ritter operations in West Virginia, Tennessee and North Carolina, were in Bristol this week on business and left for Hampton, Carter county, Tenn., where they go to look over the company's extensive holdings at that place. The Ritter Company owns a large band mill at Hampton, which is running at full capacity. It has about fifteen miles of railroad and a large tract of timber land around.

Mrs. A. Arnold, wife of A. Arnold, a well-known lumberman and manufacturer of Bristol, died suddenly in the Memorial hospital at Richmond this week. Mr. Arnold was in North Carolina looking over a tract of timber at the time of her death, and it was not without great difficulty that he was located. The burial was in Bristol this week.

Special Chancellor A. N. Shoun of Greenville this week handed down an important decree in the case of Virginia Iron, Coal & Coke Company versus James Strong Lumber Company in the chancery court of Carter county at Elizabethton, awarding the Virginia Iron, Coal & Coke Company judgment against the James Strong Lumber Company in the sum of \$40,000. This suit, which has been pending for the past five years, has attracted much attention. The James Strong Lumber Company purchased from the Virginia Iron, Coal & Coke Company a 20,000-acre tract of timber in Carter county at \$20,000. After the purchase the late James Strong of Philadelphia built a double band mill here and began operations on a large scale. It was discovered, however, that there was an alarming shortage in acreage and that a large amount contained no timber whatever. When the first of two notes for \$20,000 each, given as a part of the purchase money and to secure which a vendor's lien was retained on the property, became due, payment was refused. An injunction was immediately obtained enjoining the James Strong Lumber Company from cutting more of the timber, with the result that the mills here were closed and later dismantled and sold. To a broad charge of fraud in the entire transaction the defendants in a cross-bill set up by the James Strong Lumber Company tied up the deed as a defense, declaring that while the price was arrived at on an average basis, there was a clause in the deed which made it a bulk sale for a lump sum of \$60,000. The court sustained this contention, though it is admittedly a close point, and the case has been appealed to the Supreme court of Tennessee for final adjudication.

Paul W. Fleck of the Paul W. Fleck Lumber Company of this city, who now lives in Philadelphia, and was formerly treasurer of the James Strong Lumber Company, was here this week in connection with the suit and looking over his company's business. "Things are picking up in the East and there is now a feeling of optimism pervading the hardwood trade," said Mr. Fleck. "The lumbermen think that business is being rapidly established on a much better basis and the foundation for even greater prosperity than the country has yet experienced is being laid." It is not generally thought that the presidential election will influence business either way.

The Spangler-Rhea Lumber Company has just been incorporated, with headquarters at Pennington Gap, Lee county, Virginia. The capital stock is \$25,000. The new company, which will do a general lumber manufacturing and wholesale business, is headed by H. O. Spangler, J. L. Rhea, and W. Pennington and others.

The Buckle Brass Lumber Company of Johnson City has established a branch office here and opened yards on the Virginia & Southwestern. Bristol will be the company's principal shipping point.

NEW YORK

George F. Montgomery, who was formerly associated with the International Mahogany Company, which failed some months ago, is again in the limelight in the local mahogany trade as president of the America-West Africa Trading Company, headquarters 68 Broad street, against which company a judgment for \$9,946 was entered last week in favor of Oliver & Co., on a bill for exchange for \$10,000 drawn by a Paris house and accepted by them November 20, 1907, which has not been paid. The summons was served on Montgomery. The America-West Africa Trading Company was incorporated April 5, 1906, with a capital of \$200,000, which was increased in July last year to \$300,000, for the purpose of conducting a mahogany business.

Secretary E. F. Perry of the National Wholesale Lumber Dealers' Association returned to the city last week from a trip to Chicago, where he was an interested attendant at the conference of the Illinois Manufacturers' Association for the consideration of the proposed general freight rate increase matter.

F. A. Kirby, general sales manager of the Cherry River Boom & Lumber Company, Scranton, Pa., spent several days in town last week visiting Manager W. W. Welch, of the local office at 1 Madison avenue. The business of the company is very good, considering all phases of the market, and Mr. Kirby desires a much better tone to conditions, as well as prices, and looks for a very fair fall trade.

The Public Service Commission in New York City has issued an order to the railroads to desist from further use of the requirements of Rule 1 of the United States Classification, which provides for the stenciling of each piece of lumber in less than carload lots, which ruling has been received with much gratification by the local trade.

A petition in bankruptcy was filed in this city on July 27 against John J. and Harry I. Noble, composing the wholesale hardwoods and manufacturing firm of Noble Bros. headquarters at the city and mill at Heniker, Va. The petition was made by three creditors. Noble Bros. were organized in Philadelphia in January, 1905, and removed to this city in April of this year, at which time there were rumors of financial embarrassment. Immediately after locating in this city a proposition was made by the firm to its creditors that they organize a corporation to be known as the Noble Bros. Lumber Company, with a capital of \$150,000, on which the creditors were to take stock for the amount of their claims, which totaled \$102,000, and that the corporation be conducted in the interest of the creditors in an effort to pay out. This proposition was accepted by quite a percentage of the creditors, but this action in bankruptcy as taken last week would seem to indicate that it was not agreeable to all. On July 31 the court appointed Walter B. Allen receiver with a bond of \$1,000, and on the same date a second petition in bankruptcy was filed against the firm in Philadelphia and J. E. Wilkinson and Robert A. Higgs, Jr., were appointed receivers in that city.

Schedules in bankruptcy of S. F. Minter, wholesale hardwoods, 1 Broadway, who recently failed to show liabilities of \$63,187 and assets of \$26,003. The receiver has issued a notice that, the first meeting of the creditors for the filing of claims will be held at the office of J. J.

Townsend, receiver, 45 Cedar street, on September 19, at 12:30 p. m.

The Atlantic Fox & Lumber Company of 396 Madison street, Manhattan, which purchased last spring the plant of the Merchants' Box & Lumber Company, 26 New York avenue, Jersey City, N. J., has a branch institution, has completely renovated the plant and annex, and is beginning operations. The acquisition of this Jersey City plant and the already large facilities of the company in New York will place it in a commanding position in the box and shoo-k trade of the district.

A. J. Phinney, manager of the Troopless Door Company, Buffalo, N. Y., was a visitor last week to the local sales office of his company at 18 Broadway. Business was reported as showing much improvement and Mr. Phinney looks for a very fair fall and winter trade. This company is continuously perfecting the extensive line of handsome hardwood veneer doors and interior millwork and some of the latest creations in this line can be seen at the local office and exhibition room at 18 Broadway. Manager E. P. Salmon will be glad to receive prospective buyers.

Charles F. Fischer, head of the C. F. Fischer Lumber Company, is building a handsome motor launch to be called "Kliffisher." The boat is 53 feet long and 14 feet beam, with a 60 to 70 horsepower engine. It is being finished throughout with selected mahogany.

E. J. Marsh of the Sea Coast Lumber Company, cypress wholesalers of 1 Madison avenue, has just returned from a southern trip, where he found conditions much improved, with prices tending upward.

The semi-annual meeting of the Lumber Underwriters, the well-known trade insurance organization, was held at 66 Broadway during the past fortnight, with a full attendance of the fifteen underwriters. Reports showed the organization to be writing an increasing line of business and that the fair and equitable provisions of its policy are being increasingly appreciated by the trade, as well as in the matter of the money saving feature through the writing of insurance at reduced rates.

Manager W. W. Lockwood of the local sales office of the Rice & Lockwood Lumber Company, 1 Madison avenue, left town this week for a fishing and pleasure trip. During his absence C. H. Rawson will look after things. This company has added to its Nova Scotia sailing fleet the new two-masted schooner "Jessie Ashley" which recently completed her maiden trip, arriving here on the 22nd ult. She will ply with the other vessels of the fleet between the mill of the Anthony Lumber Company, at South Maitland, N. S., which is owned by the Rice & Lockwood interests, and eastern ports.

Charles G. Horton, who was convicted last month in the local courts for fraudulent use of the mails in connection with numerous lumber transactions and sentenced to three months in jail and a fine of \$250, died in the Blackwell Island penitentiary on July 25 in the 67th year of his age, of diabetes. Horton had figured prominently for many years in local lumber circles under various aliases, under which, through the use of seductive literature and other methods, he secured lumber shipments from small operators throughout the country with intent to defraud, and although many attempts were made to bring him to justice this last effort was the only one successful. It was believed at the time he was convicted that, by reason of his health and advancing age, he could not survive his imprisonment.

A. B. Hammond of the Hammond Lumber Company, San Francisco, Cal., sailed from here for Europe for a three months' pleasure tour.

J. B. Wickery of 141st street, Bronx, has, together with L. W. Rivers, announced the incorporation of the Dixie State & Lumber Company with a capital of \$25,000. The third in-

corporator is H. C. Wickery. The location given for the new company was the same as that of the Wickery-Rivers Lumber Company.

The large sash, door and blind business of Kurlandski & Alpert, of Long Island City, has been incorporated under the same style with a capital stock of \$25,000. The incorporators are L. M. Kurlandski and M. and D. Alpert.

Peter A. Smith, head of the Wright Lumber Company, 140 West 38th street, Manhattan, is receiving the condolence of his many friends in the loss of his mother, which occurred last week.

F. R. Babcock of E. V. Babcock & Co., Pittsburgh, was a visitor to the local sales office of the company, 52 Wall street, Manhattan, during the fortnight, going over matters at this end of the line with Manager H. J. Gott.

J. A. Huihbar, formerly of the Hubbard Lumber Company, Paterson, who ceased business after their disastrous fire a couple of years ago, has organized the Seneca Creek Lumber Company with a capital of \$25,000 to conduct a manufacturing and wholesale business, to which end the company has bought a small tract of timber in West Virginia. Associated with him is R. G. Christopher of Allendale, N. J., and W. D. Stanton of New York.

Daniel Simmons, head of the Simmons Manufacturing Company, tooth saw manufacturers of Pittsburg, Mass., was in town for a day recently. He is summering at his fine residence, the Hammocks, Laneshurt, N. Y., with his family.

The Jordau River Lumber Company has been incorporated in Manhattan with a capital of \$300,000, by A. L. Luckhouth, A. F. Spaulding and B. T. Lyons, all of this city. No announcement has been made as to the operations of the company.

PHILADELPHIA

Schofield Bros. are still much absorbed in their preparations for activity at the Saltketchie mills at Schofield, S. C. Their planing mill is working full force. Robert W. Schofield finds it necessary to spend much of his time at the mill, pushing matters to the utmost. The expressed belief of this firm is that business is picking up. James C. Place, George Lanze, Jr., and W. V. Clark, salesmen for the firm, have gone to the West Virginia mills, in which the firm is interested, to sum up stock conditions there.

Robert C. Lippincott, while not over-enthusiastic as to much of a stride in trading, testifies that for the last eight or ten days things have looked more promising and that he is encouraged accordingly.

Charles L. Betts of Charles M. Betts & Co. has recently made an extended and most enjoyable trip through the eastern states and Canada. John A. Spalding has recently returned from a three weeks' visit to his old home in Nashua, N. H. Evidence of his native air and childhood associations have proved the best recreation he could have chosen. George A. Howes, the popular chairman of the office and entertainment committee of the Lumbermen's Exchange, is at Belmar, N. J. William P. Shearer of Samuel H. Shearer & Son will soon go for a sojourn to Deal Beach, N. J., where he intends to devote much time to sailing.

The Righter-Perry Lumber Company are cognizant of a favorable turn of business, and believe the fall will see rapid strides towards old conditions. Charles K. Perry is summering at Seaside Park, N. J., Frederick C. Righter at Cape May, N. J. Charles M. Hamlin is just back from a tour through New York state, where he found things somewhat more lively.

C. E. Lloyd, Jr., vice-president and manager of the Boice Lumber Company, Inc., is rusticated in his homelands at North Lovell, Me. The Miller & Miller Lumber Company attest to improved business conditions. J. Clark Miller of this concern discourses eloquently of a jolly time spent camping out at Beach Haven.

Lewis Thompson & Co., Inc., see potent signs of better times; inquiries are coming in and quotations are better in hardwoods.

George M. Spiegle & Co. are not staggered that business should lag at this time; summer is naturally the season of suspension. They have great hopes for fall.

The Tomb Lumber Company is not insensible to a gradual progression in trading. W. N. Lawton of this house is combing the eastern Pennsylvania territory for orders. H. B. Tomb is stationed at Jersey Shore, Pa., where they have their mills, for the summer.

Halfpenny & Hamilton seem coming prosperity. Benjamin C. Curtis, Jr., of this house opposes the forcing of the market at present, as it is his opinion that the stored hardwoods will prove a valuable asset, as prices will naturally go up at the first indication of settled good trading.

W. H. Fritz & Co. are far from contentions over business disappointments. They report an increase in inquiries and note a growing confidence in slow the line, this much they realize is a progression and argues well for the return soon of better times.

Among the recent visitors to the Lumbermen's Exchange were Mr. Shalter of Reading Lumber Company, Reading, Pa., and F. L. Cheney of Peacher & Barr, Pottsville, Pa.

The large plant of the Neale & Levy Ship and Engine Building Company, with all the belongings, was sold on July 28 at auction to Frank D. Summers, attorney for a bank at Camden, N. J., for \$50,000. The property is assessed at \$200,000. Mr. Summers, by sale, will assume a mortgage of \$27,000, and an irrevocable ground rent of \$101.00. The outlook for the general creditor is poor.

W. C. McConnell of Shamokin, republican candidate for state senator, with three of his fellow-townsmen, is inspecting a newly acquired timber tract in Maryland. The tract is the largest in the Dominion, containing nearly 5000 acres of timber land. The company in which the above mentioned gentlemen are heavy stockholders ships its timber to Liverpool, England.

H. S. Sackett, forest assistant Forest Service, United States Department of Agriculture, is visiting the various trade interests in Philadelphia, gathering data. Mr. Sackett has been calling upon the local lumbermen, and will extend his visit to all the principal cities.

The first Philadelphia furniture exposition, which was held at the Second Regiment Armory Building, during the three weeks ending August 1, has proved a great success. The object of the promoters of this affair was to enlighten the Philadelphia trade as to the extent that furniture manufacturing is carried on in this city, and, to the delight of the manufacturers,

buyers who in the past have been going to other large furniture centers, came to see, and much surprised and pleased, evidently, booked on the spot orders aggregating at least \$150,000. According to statistics gleaned by George W. B. Hicks, the city statistician, there is invested in the furniture and bedding manufacturing industry of Philadelphia about \$5,000,000 and the value of the annual product is close to \$7,000,000. It is estimated that about 30,000,000 feet of lumber are consumed by it annually. Great credit for the success of this exposition is due to William H. McMahon, chairman; Benjamin Ritter, treasurer; H. W. Hirsch, secretary; Charles E. Schwartz, E. D. Dougherty, A. R. Rossell, H. D. Brill and William H. Rogers.

The J. G. Burt Company, extensive car builders, have received a rush order from the Third Avenue railway of New York for 150 cars of the pass-you-ent-type, which will cost from \$3,200 to \$3,500 apiece.

Charles T. Shoemaker, well known in uptown social and business circles, died suddenly of a paralytic stroke on August 1. He was 69 years old. Mr. Shoemaker had been associated with the growth of the Henry Disston & Sons, Inc., for more than half a century, and during a good

part at that time had been superintendent of the mechanical department. He was an active member of the Masonic and Odd Fellows organizations.

Samuel B. Sretzer, aged 49, of Fernwood, Pa., died suddenly on July 20. He was proprietor of the wagon works at this place.

The State Forestry Commission has closed the deal for 7,000 acres of land near Shadle mountain, Snyder county, being the same from the Richards Budd estate, and from Monroe H. Kulp & Co. of Shamokin. This state buys the land for the preservation of timber.

BALTIMORE

The inspection question continues to engage the attention of Baltimore hardwood men, and the conference to be held September 23 in Philadelphia is being widely discussed. The Baltimore contingent, as a rule, are favorable to the endorsement of the rules adopted by the National Hardwood Lumber Association at its recent annual meeting at Milwaukee, and it is thought the Baltimore Exchange will take sides with the national association at the forthcoming meeting.

R. P. Baer, senior member of the hardwood firm of R. P. Baer & Co., returned last week from a two months' trip abroad with his bride. Mr. Baer visited the principal lumber centers of England, Scotland, Germany and Holland, conferring with the foreign brokers of his firm and obtained a very accurate insight into conditions abroad. As a result he advises strongly against shipping on consignment, as nearly all the foreign markets are greatly congested. Prices here are very low, and oak planks, he stated, were being actually less than the standing timber bringing in America. In reviewing the English situation Mr. Baer stated that he believed they are only waiting for conditions in the United States to become better before they make any preparations for active times. The decline in American business has hurt trade generally, and it is felt that as soon as American money circulates freely again there will be a revival in business. Mr. Baer was able to report a slight improvement in the foreign situation generally. He had an enjoyable visit with J. Van Hall, a former Baltimorean, at Twolke, Holland, and altogether he reports a most enjoyable and profitable trip.

The offices in the United States Division of Guaranty Building occupied for several years by J. H. Crauwel & Co., wholesale hardwood dealers, whose affairs were sent into the hands of receivers June 25, has been leased by Turner W. Isaac & Co., hardwood dealers. The new firm is made up of Turner M. Isaac only, there being no company. Mr. Isaac is a Baltimorean and has been for three years engaged in business on his own account, occupying offices in the Stewart building. He does a wholesale business, almost entirely out of town, and makes a specialty of poplar and oak.

Business with him, he stated, has been very fair, the volume of lumber handled in July exceeding that for the corresponding month of 1907.

The W. H. Bailey Lumber Company of Grafon, W. Va., has passed into the hands of receivers, W. H. Bailey, a member of the corporation, having been named by Judge Holt. There are judgments for \$9,000, besides other debts.

The Croft Lumber Company of Cumberland, Md., in which Dr. R. A. Ravenscroft, deputy supervisor of the port of Baltimore, is largely interested, holding the office of president, had a meeting last week and authorized the erection of a \$40,000 sawmill, with a capacity of more than 100,000 feet per day, at Pilecks, W. Va., near where the company owns an extensive timber tract.

An interesting vacation trip has just been completed by W. Eisenhaber and Daniel MacLean of the Eisenhaber-MacLean Company, dealers in hardwoods on Central avenue. In the

former's automobile the two partners started from Baltimore for the Catskill mountains, and the entire journey both ways was made in the car. They report a fair business at this time, though the demand does not exceed moderate proportions. The feeling in the trade, they state, is decidedly better.

A convention of Baltimore Hood-Hoo was to have been held July 25 at the Hotel Belvedere under the guidance of Vicegerent Snark John A. Berryman, but owing to the absence of many unblemished from the city it was decided to postpone the event until a more favorable time for a large attendance. Five candidates were ready for initiation.

Nathaniel W. James of the N. W. James Lumber Company of this city, and also interested in the Pigeon River Lumber Company of North Carolina, will start on an extended European tour this week.

Holger A. Koppel, Danish vice-consul and hardwood exporter, with offices in the Carroll building, sailed last Saturday for Europe, to be gone about two months. He will visit London, Liverpool, Bristol and other foreign markets, and will spend some time at his former home in Copenhagen, Denmark. He expects to give the foreign situation close attention and hopes to gain much valuable information as to the feeling in the trade abroad.

N. M. Offutt of the Tug River Lumber Company of Bristol, Va., was in Baltimore last week and called on a number of hardwood firms.

PITTSBURG

The Diebold Lumber Company had a narrow escape from losing its entire plant in Brushton avenue, East End, last week. Fire caught in the office and had not the firm been well supplied with Babcock extinguishers the loss would have been heavy.

The Acorn Lumber Company is pushing itself right ahead in the hardwood market, and President H. P. Lombard manifests no uneasiness about the ultimate future of the hardwood business. His trade this year has been steady and with thoroughly reliable firms.

The Babcock Lumber Company is running its plant at Ashlota, Pa., under full swing and along with the other Babcock interests has sufficient orders and prospects to guarantee it a good business for the remainder of the year. P. R. Babcock is prominently identified with the leading municipal improvements this summer, including the improving of Pittsburgh's waterways; E. V. Babcock spends much of his spare time looking after the interests of the Pittsburgh Country Club, of which he is president.

D. A. Smith of the Tri-State Lumber Company of Uniontown, Pa., was a recent caller in the city. The increase in activity in the coal and coke district is bringing new prosperity to this concern.

The C. P. Coughy Lumber Company has been filling its contracts for timbers for river work from mills in Washington and Butler counties, Pa. The company has used a large amount of oak this summer and has two contracts now for work on timbers in dams in the Ohio river which will keep it busy up into the fall.

According to J. J. T. Penney of J. G. McMillan & Co., there is a gradual improvement to be seen all along the lumber horizon. He finds that there is much more doing in West Virginia timber lands and believes that by fall conditions will be in fairly good shape.

Secretary O. H. Rectanus of the A. M. Turner Lumber Company announces that this company is doing an exceptionally large amount of business for the season of the year. The disappointing feature of this is that so little of the quoting results in actual orders, as prospective buyers seem to hang off until the last minute before signing up contracts.

A. C. Opperman of the William H. Schuette Company is putting in a few days in the surf at Atlantic City. He made a recent visit to North Carolina and believes that the lumber business is improving considerably.

J. L. Lytle, president of the J. L. Lytle Lumber Company, has been out on the road the past week hustling in business. The company has recently taken some very nice orders for worked stock to be delivered in the western market.

I. F. Belsley, manager of the hardwood department of the Wilson Brothers Lumber Company, is out of the city taking a new turn around the trade. This company finds conditions in general looking toward better times. W. E. Cornelia has been figuring on some very nice contracts for hardwood and is likely soon to pull some excellent business out of his calculations. During the past three weeks he has made some fine hardwood connections in West Virginia and Kentucky, and is returning to get right onto the hardwood stage with both feet when the fall trade opens.

The Railroad & Car Material Company is lining up a splendid lot of prospects, especially in maintenance-of-way lumber. The intimate acquaintance which its members have with the needs and methods of the leading railroad corporations in the country is one of the most forcible aids which any company could ask for.

The Newell Brothers Lumber Company cut 750,000 feet of lumber at its plant at Braucher, W. Va., last month. This was by far the best record that the company ever made. It has been very successful this summer in marketing its own stock.

Manager W. A. Clay of the Clay-Scheppe Lumber Company has returned to the scene of the company's operations in southern Pennsylvania, near Cumberland, Md. The company has been able to resume operations in all its portable mills as the heavy rains of the past ten days have provided sufficient water in the mountain streams, which were until recently very dry.

J. C. Parsons of the newly organized Myers-Parsons Lumber Company has returned from his Michigan vacation. Like other firms this concern is very busy quoting prices and fully expects that a fair proportion of these inquiries will develop into business after the usual mid-summer dullness is over.

The Buckeye Lumber Company is keeping up its prices in the eastern markets, and according to Manager Wickersham finds general conditions quite a little better. Oak has been its main stand-by in trade this summer.

The Henderson Lumber Company has been fortunate this summer in getting some good contracts for coal mining stocks. Mr. Henderson is convinced that with slightly lower prices and a liberal degree of hustling, a large amount of lumber can still be sold, and no firm in this district is so well prepared to furnish coal companies what they want on short notice as this concern.

The Croft Lumber Company, which is largely controlled by the Kendall interests of this city, elected the following officers recently: President, J. L. Kendall; directors, J. H. Henderson and S. A. Kendall of Pittsburg, George Browning, R. A. Ravenscroft, N. U. Bond, A. A. Doub, P. C. Barnes, D. J. Blackiston and J. W. Thomas. The company will build a steam sawmill to have a capacity of 100,000 feet per day, and also several miles of standard gauge railway at Pilecks, W. Va.

The State Reforestation Bureau of Pennsylvania has bought 7,000 acres of timber land in Snyder county from capitalists of Shamokin. Negotiations for this land have been in progress for several years and its final purchase by the state insures a large area for immediate reforestation. There is a considerable amount of timber on the tract, which will be carefully preserved.

J. N. Woollett, vice-president of the American Lumber & Manufacturing Company, is home from a three weeks' trip through the South and Southwest. "Business is better," he says, "and millmen are feeling fairly well. Stocks are stiffening up in prices. The cottonwood situation is improving steadily and looks very favorable for a good fall trade." The American is running his mill at Florida, Fla., and is busily engaged just now in cutting up two more barges of cottonwood for delivery from Mississippi throughout the middle states.

A receiver has been appointed for the W. E. McMillan Company, whose assets are \$25,000 and liabilities reported at \$18,000. The company has been taking the stock of four mills in West Virginia and Kentucky, amounting to about 40,000 feet a day and is said to have advanced money on these contracts which it could not realize on in the present market. The company is also reported to have been caught in four recent lumber failures. Mr. McMillan states that business will be conducted under the receiver, T. M. Gealey, on a cash basis, and that in a few weeks he expects to have things running in usual form, inasmuch as the receiver is only temporary. The company was formed early in 1907 with a capital of \$25,000 and has established offices in Baltimore, Md., and Williamsport, Pa.

BUFFALO

The Standard Hardwood Lumber Company is shipping in about thirty cars of chestnut, poplar and quartered oak from the Kentucky mill and is finding a market for it. The new yard is getting a lot of ballast in and will soon be ready for the stock.

It is the Batavia hardwood mill of the Scatterd interest that takes the lumber. Never a report but tells of the amount of new business it has taken lately. Mr. Scatterd has been East of late, rusticiating.

F. M. Sullivan has been taking matters easy most of the time lately and giving attention to his other business. The dock yard is especially active, taking in elm and ash, which have long been the specialties of T. Sullivan & Co.

The yard of A. Miller is still open to a supply of elm from Canada. Mr. Miller has taken some other hardwoods from southward of late.

O. E. Yeager finds maple one of his best sellers, though he sticks to quartered oak as the leader in the yard. It is never too plenty and may be very scarce this fall.

The Buffalo Hardwood Lumber Company is still bringing up oak and other hardwood lumber from the South, not forgetting that there has always been a sale for gum if it is handled right, though not many northern yards carry it.

A good general trade, is the report from the yard of F. W. Vetter, with a decided improvement of late. This is a report not to be had from every yard, but Mr. Vetter, who did not make it first hand, says he is convinced it is true.

The big picnic given to Crystal Lake by G. Elias & Bro. for their employees on July 25 was a great success, the numbers being swelled by the employees of the R. Laidlaw Lumber Company. Several hundred people attended.

I. N. Stewart & Bro. keep their yard well filled with cherry, though just this time of the year is called the dullest with them. They are always adding more hardwoods to their list and keep the business humming.

President Beyer of the Pascola Lumber Company has been on a trip to his Missouri oak mills lately and is prepared to do his part in furnishing the stock that is going to be wanted fast one of these days in that line.

Angus McLean is still spending most of his time in the spruce and cedar mills of the McLean interests in the St. Lawrence valley. The Memphis mill is not running yet.

SAGINAW VALLEY

C. A. Bigelow says that the lumber business is decidedly improved; that there is a much better movement in hardwood, and hemlock has advanced slightly. He says conditions are much more favorable and trade is better now. He looks for active business during the fall months, and as he is at the head of two plants at Bay City cutting over 40,000,000 feet a year, he ought to know. He says the Kneeland-Bigelow Company's plant will run day and night through the year and the Kneeland, Buell & Bigelow mill is being operated ten hours daily. The latter mill is stocked by Frank Buell and the former by Kneeland-Bigelow Company, which has enough logs to carry the mill along into September, when the firm will resume operations in the woods.

The flooring business has been somewhat slack of late, but is looking better. A number of firms have contracts and have not been affected much. One of these is W. D. Young & Co., who are having a good export business. A large modern hardwood mill is to be erected at Graying this fall, the plans for which and the organization of the company will be perfected in a few days.

N. Michelson is building a sawmill in Roscommon county near the Crawford county line. The main office is at Graying.

Saginaw Valley lumber shippers are up against the proposition of the railroads of this vicinity to advance freight rates October 1. The assumption of the roads is that this must be done, owing to increased expenses as the result of adverse legislation, or wages reduced. The Saginaw Valley Lumber Dealers' Association appointed a committee which addressed a letter to the traffic officials of the roads doing business in the valley and a meeting was held Tuesday at Saginaw. Some twenty local shippers and officials of the Michigan Central, Grand Trunk and Pere Marquette were present. There was a general discussion. The lumbermen to a man oppose the increase. They hold the lumber business in the valley has been built up to its present dimensions—over 370,000,000 feet annually on the commodity basis, and any disturbance in rates will seriously injure the traffic. They propose to carry their protest to the Interstate Commerce Commission if necessary. On the other hand, the railroads hold to the contention that a uniform increase of 9 to 13 per cent in the entire territory north of the Ohio river and east of the Mississippi will not injure the traffic of the country a cent's worth. The railroads have had employees in the state for weeks doing missionary work among employees and shippers in the effort to induce them to consent to the increase.

W. Chamberlain's sawmill at Belknap, Presque Isle county, was burned last week; loss \$2,800, with minor injuries.

The sawmill of Herman Hoelt & Son at Rogers City is cutting 30,000 feet of lumber a day.

GRAND RAPIDS

Walter C. Winchester has returned from an extended fishing and camping trip in northern Wisconsin. Mrs. Winchester and a small party of friends accompanied him.

W. O. Hughtart and Harry Widdelcomb left for Kalkaska August 6 on a fishing trip to the Mancelona river.

Some new orders for bolt furniture have been placed here the past week. These hotels are now under construction at Seattle, Wash., and at San Antonio, Tex.

G. A. Stowers of the Stowers Furniture Company, San Antonio, Tex., who was in the Grand Rapids market buying furniture recently, tells the HARDWOOD RECORD that he has a few pieces on his floor made of mesquite, and he believes that manufacturers will use this wood to quite an extent in the future. He calls the wood Texas

mahogany and it resembles mahogany, finishes well and has a nice figure. The chief difficulty with this, as with many of the new cabinet woods, is that the tree does not grow large, seldom exceeding a foot in diameter.

The next meeting of the Grand Rapids Lumbermen's Club will be held September 29. Secretary I. Preston Rice says that at this time a report will be heard from the committee on civic affairs appointed at the June meeting.

Dealers report a better feeling in trade. Brooks Brothers, who are putting in a large band mill at Petersburg, Va., placed their orders for machinery in Muskegon. They will cut lumber for the Virginia Box & Lumber Company, which has sufficient standing timber to keep the plant running for twenty years.

CLEVELAND

A scandal which bids fair to involve several county officials has been brought to light in connection with the sale to the county of large quantities of oak lumber which was never used for the purpose for which it was supposedly purchased, and which has disappeared mysteriously from view. The charge has been made by the Municipal Association, which charges the present county commissioners with paying for at least \$10,000 worth of oak plank for bridge repairs which was never used for that purpose. It has also been shown that the county received practically nothing for the heavy plank removed from scores of bridges throughout the county, and that the taxpayers are the losers by thousands of dollars thereby. Some legal action may be taken to recover on the missing lumber. That it was delivered by the lumber companies the county's records prove.

Contracts have been let within the past week for two new 10-story buildings for Cleveland, one a store and the other an office building. The county building commission which is erecting the county building in Cleveland courthouse has ordered prepared designs for the judges' thrones, jury seats and other hardwood paraphernalia for the new courthouse. Bids will be asked for this work in the course of the next sixty days. It has not been determined yet just what wood will be used, but that a handsome outfit will be purchased is assured by the fact that the commission has unlimited power to spend money for the new structure. Requests for specifications for the work, when issued, may be obtained by writing John Boyle, clerk of the courthouse commission, Garfield Building, Cleveland, Ohio.

The R. H. Jenks Lumber Company made several additions to its staff during the past week. C. R. Peterkin has been engaged to represent the firm in the Province of Ontario, and John C. White will perform a similar duty in eastern Michigan. He succeeds H. K. Follansbee, who recently resigned. Mr. White will have his headquarters in Detroit.

Fred E. Gary, a prominent hardwood manufacturer of Turrell and manager of the Baker Lumber Company of that place, visited Cleveland during the past week, renewing acquaintances. He formerly lived at Conneaut, near Cleveland. He left, with his wife, for a trip by the lake route to Detroit.

One of the lumbermen to make a call on the hardwood dealers during the past week was J. A. DeFaut of the Ferguson Lumber Company of Little Rock, Ark. He reports business rapidly improving.

Business with the Worden Lumber Company is nearing a normal point, according to the managers of this concern, which handles large quantities of hardwoods. The company has at present doing a good business in house shingle and hardwood porch columns.

Conditions in Cleveland are improving. Building permits for the month of July showed a total of 62 permits, to cost \$859,524, as against 543 permits during June, to cost \$242,150. Of the permits for June 252 were for frame build-

ings to cost \$426,328, brick and stone, 49 permits to cost \$133,050 and additions, 321 permits, to cost \$99,056.

The Advance Lumber Company notes that the hardwood export business is helping out the concern materially on total amounts to be put out this year. A number of good orders for hardwood have been received from abroad and are being cut at the company's mill at Bascom, La.

COLUMBUS

Kenneth McLeod, president of the American Hardwood Lumber Company, returned this week from a trip through northern Michigan. Regarding the future operations of his company, Mr. McLeod says that the company will start its mills as soon as general improvement in trade is more definite. He says that nothing will be done in August, but in September he expects that his company will be operating at nearly full capacity. The American Hardwood Lumber Company has 44,000 acres of valuable timber lands in Arkansas, composed principally of red and white oaks, hickory, gum and cypress. The company was organized last fall, shortly after the beginning of the panic, and decided not to operate its mills until business conditions become nearly normal. Its officers are much encouraged over reports of improvement in general trade, and believe that the time is near at hand when they can begin operations on an extensive scale.

S. D. Morgan of Kile & Morgan Company returned last week from Detroit, Mich., where he spent several weeks in the interests of his company. Mr. Morgan is much encouraged over the outlook for business with the furniture dealers and says that his company will soon be in the market for large quantities of lumber. Mr. Morgan is of the opinion that prospects are decidedly bright at Detroit for good business during the fall months. He left last Saturday in his automobile for a trip through eastern Pennsylvania and northern Ohio and will spend a greater part of the month of August at his cottage near Sandusky, Ohio.

H. C. Creith of H. C. Creith & Co. returned this week from a pleasure trip to St. Paul, where he attended a large Masonic gathering. Regarding business, Mr. Creith says that the market is decidedly better than it was six weeks ago, prices higher and the outlook good. He says that buyers realize that the bottom level of the market has been reached and are now after all the lumber they can get their hands on at the present market prices.

One of the most important events of the week was the announcement that the United States government will spend \$700,000 on new buildings to be erected at the Columbus barracks. These buildings will probably be erected within the next twelve months and will require large quantities of lumber in their construction. The building situation here shows considerable improvement, and it now looks as if activity would be witnessed in operations during the fall months. Prospective builders are convinced that building material will never be cheaper than it is now and are hustling to avail themselves of the opportunity.

The Powell Lumber Company reports an active demand for yellow pine and better inquiry for other woods, but that the general market will probably remain quiet until September. The Sawyers-Lynch Lumber Company says that business is picking up and that values are stiffer all along the line. It expects a gradual improvement from this on.

MILWAUKEE

Fire in the big lumber yards of the Sawyer-Goodman Lumber Company at Marinette, on August 1, burned over ten acres of yards and destroyed nearly 20,000,000 feet of lumber val-

ued at between \$200,000 and \$500,000. It is believed that the fire originated from a spark from the waste burner in one of the mills. A heavy wind was blowing all day and fire departments and fireboats were of no avail until the wind changed. All losses of the Sawyer-Goodman Company are fully covered by insurance. The mills will be opened day and night to again fill the yards with stock.

Wisconsin lumbermen believe that the new state commission, recently appointed by Governor Davidson to conserve the natural resources of the state, includes most satisfactory names, and that all the members will look to the forestry problem of the state. The commission consists of the following members: William Irvine, Chippewa Falls, lumberman; President Charles E. Van Hise and Dean E. A. Birge of the University of Wisconsin; George A. Whiting, Appleton, paper manufacturer; E. M. Griffith, Madison, state forester; Senator James H. Stout, Menominee, lumberman, and Senator H. P. Bird, Wausauke, lumberman. The new commission was appointed in accordance with the action taken at Washington at the national conference, and it will co-operate with the national commission of Joseph Ford Pinchot, chief of the federal bureau of forestry, in chairmanship.

Senator Isaac Stephenson, the millionaire lumberman, and Wisconsin's "grand old man," is making a successful fight for reelection to the United States Senate. Practically the entire lumber fraternity of the state is for him. The fact that he has had such remarkable success in the lumber industry, that he has never had a labor strike in his mills and that his plants have been operated when others were closed, have won the support of many lumbermen without regard to party politics.

The Filer & Stowell Company of Milwaukee, well-known manufacturer of sawmill machinery, is constructing sawmill engines for various lumbering companies over the country. Orders are now awaiting the building of a 250-h. p. engine for the Brooks & Ross Lumber Company of Souderton; sawmill machinery of 7,500 feet daily capacity for the Souderton Lumber Company of Sildell, La., and similar machinery having a daily capacity of 150,000 feet for the Bluff City Lumber Company of Pine Bluff, Ark.

The Pawling & Harmsfelger Company is putting out many large traveling cranes used for carrying lumber. One is now under construction for the Grayson-McLeod Lumber Company of St. Louis, the crane having 6,300 feet of track.

The Chicago & Northwestern Railroad will assist the state of Wisconsin in the creation of another great forest reserve in the northern part of the state. E. M. Griffith, Wisconsin chief forester, started the movement. An auxiliary police force will be created out of the track force of the Northwestern road in the vicinity of the reserve. The plan is attracting the attention of lumbermen all over Wisconsin, and it is believed that it will be a success.

The Milwaukee Center Company has been incorporated, to be located here. The capital stock is \$100,000 and the incorporators are Charles B. Quarles, J. A. Dietrich and Louis Quarles.

The new firm of John Jennings & Co., just organized at New London, has purchased a plant and will move the buildings to a newly acquired site, where other buildings will be erected and the manufacture of interior finish engaged in.

William Irvine of the Chippewa Lumber & Boom Company of Chippewa Falls has presented Irvine park in that city with sufficient money to erect a large pavilion. Mr. Irvine donated the land for the park some time ago.

Practically all of the chair manufacturing plants at Sheboygan are now in full operation, with prospects of a steady run. The Crocker Chair Company, operating the largest chair factory in the world, has resumed in both of its plants. The Phoenix Chair Company is again

running on a ten-hour schedule and the American Manufacturing Company's establishment is now operating on the same schedule. The Sheboygan Chair Company has once more resumed after completing its semi-annual inventory.

The W. E. Allen Lumber Company, recently incorporated to do a general wholesale and commission business, is now located in a new suite of offices in the Majestic building. W. E. Allen is president and James J. Fitzmaurice is secretary and treasurer. The company is incorporated with a capital stock of \$10,000.

S. C. Major of the S. C. Major Lumber Company, well-known hardwood firm of Memphis, Tenn., recently called upon the Milwaukee trade.

Senator J. H. Stout of Menominee, Wis., one of the best known lumbermen of Wisconsin and a member of the recently appointed Wisconsin conservation commission, was a recent Milwaukee visitor. Senator Stout believes that the question of forest conservation is one of the greatest problems now before the country. Senator Stout expressed himself as being in favor of granting to large owners of cutover lands some inducement in the form of lower taxation, in order that the work of reforestation might be encouraged.

O. Raymond, manufacturer of the Raymond Log Loader at Marinette, is meeting with considerable success in the sale of the machine. Two loaders were recently sold to the Interstate Lumber Company of Columbus, Miss.

The Frost Veneer Sealing Company of Sheboygan, whose plant at Antigo was destroyed by fire recently, has decided not to rebuild. Efforts are being made by the citizens of Antigo to rebuild the plant.

Loren Robeck, lumberman of Marinette, Wis., lately called upon Milwaukee dealers. Mr. Robeck reported that the lumber business in and around Marinette to be greatly improved, with every prospect of a successful season.

David M. Phinney, formerly a resident of Merrill, Wis., now a citizen of San Antonio, Tex., was a recent Milwaukee visitor. Mr. Phinney brought with him some six specimens of Mexican woods presented to him by the Mexican government. He is endeavoring to arouse American interest in the unlimited supply of the Mexican forests.

The Cleveland Woodenware Company, to be located at Cleveland, Manitowoc county, Wisconsin, has been incorporated to succeed the Frone Manufacturing Company, whose plant at Howard's Grove was destroyed by fire some weeks ago. The new company will erect a large plant at Cleveland and engage in the manufacture of cheese boxes and furniture.

CINNATI

T. B. Stone, president of the T. B. Stone Lumber Company of the Union Trust building, has returned from a successful business trip to the South. W. W. Stone of the company says that business has shown improvement, and with more confidence among the consumers there is little reason to look for anything but a continued increase in business.

J. W. Darling and J. B. Grant of the J. W. Darling Lumber Company left last week, the former for a business trip through the South, the latter for a cruise of the East. During Mr. Darling's sojourn he will visit the yards of the company at Joppa, Ill. R. M. Gilbert of the same company has returned from a northwestern business trip. He says that business with the company has been good and that prices on several items have increased during the last week. Both cottonwood and gum are in better demand now than for some weeks, with price a shade higher. The concern has recently leased larger office here.

Ben Dulweber, president of the Lumbermen's Club and of the John Dulweber & Co., left last week for a business trip through the northern states.

Dwight Hinckley of the Hinckley Lumber Company has returned from a business trip North. Mr. Hinckley will enter his last paper in the coming Carthage Fair events to be held the latter part of August.

George Littleford of the Littleford Lumber Company reports that the situation with his company during the past few weeks has shown no change, but there seems a much better feeling among the consumers in general. "Trade will continue on the present scale for some weeks, at least until the presidential election has been decided, and if William H. Taft is the successful candidate, I look for the market to display a more healthy tone."

"Trade with us during the past fortnight has been on a par with that of weeks previous, and just when a turn will be noted in the market is difficult to state," said J. West Graham of the Graham Lumber Company. "About the hardest thing I find to locate here is a cool spot, and until the weather offers more relief and the presidential election has been decided, I do not look for any material change in the situation."

E. L. Edwards of this city and of Dayton, O., left the latter part of the month for a trip to Montgomery, Ala., where he will take a look into conditions. He expects to be absent for several weeks.

A trip through the yards of the retailers reveals the fact that their stocks are anything but ample to meet a normal demand, and that it will only be a question of time when they will have to amplify their stock. Already some dealers have purchased small lots, but within the next few months their orders are expected to come in with more regularity.

The veneer business was better during the latter part of July than at any period this year, not that the actual transactions have been of larger volume, but because of the better feeling among the consumers in general," said J. N. Frohmiller of the Acme Veneer Company. "The cabinet makers and inside finishers seem to be enjoying a better business, and they in turn have made heavier demand upon the market with little or no regularity. The demand for the thick as good as the thinnest grades. After the first of November, I look for quite an improvement in the situation." The two-story structure of the Acme Veneer Company, at Eighth and Harriet streets, has been completed, and a fine display of stock is to be seen there. The company does a large business in veneers and in order to cope with the increase in its trade was compelled to make the improvement.

During the month of July 3,184 cars were shipped from here, as compared with 5,547 shipped last year. The receipts last month aggregated 5,713 cars, as compared with 7,746 cars last year. The fact that the shipments last month were not as large as during the month of June did not discourage the lumber dealers, but on the other hand they are jubilant over the good showing made. The month of June was the best veneer stocks are in good demand, the thick as good as the thinnest grades. After the first of November, I look for quite an improvement in the situation."

The Lockland Lumber & Manufacturing Company of Lockland, near Cincinnati, was incorporated last week at Columbus with a capital stock of \$15,000. J. C. Smith, Charles Evans, E. M. Woz, James K. Cole and U. R. Bass. The Dwight-Hinckley Lumber Company, located in the Fourth National Bank building, has opened a branch office at Cleveland, O., with M. St. Clair Shaw, the "athlete-lumberman" of the Owen City, in charge. The concern has been doing a very good business during the past few years, and Mr. Hinckley saw a good chance to extend his business. A deal has also been closed for the entire output of a southern mill.

"There seems a much better feeling among consumers in general," said William Dubmiller of Dubmiller Brothers, recently. "We have, during the past week, received several large

orders for future delivery and that looks very good, and leads one to believe that the situation here is slated for a general reaction in the very near future. The month of July with us was fair, but I look forward to a steady increase in the demand for hardwoods. Stocks in the yards of the retailers are very low, and it will only be a matter of a short time when they will be buying more lumber from the wholesalers. The demand at the present time is principally for urgent needs. After the election a decided betterment will manifest itself in the hardwood situation."

W. B. Hays, receiver for the Whorng & Hanna Company, bankrupt, says that the concern has been doing a fairly good business during the past few weeks, especially in poplar, all grades of oak and cypress. The concern received a shipment ofypress by water from Joppa, Ill., which amounted to 43 cars, and this was wagoned to the yards of the concern at North Fairmount. All mills of the concern are running full time.

C. P. McManis, a lumber merchant of Knoxville, Tenn., was a visitor to the Queen City during the past fortnight.

J. H. P. Smith of Ashland, Ky., dropped in on the trade during the past week trying to get some trade for his concern.

W. H. Dawkins of the Dawkins Lumber Company of Ashland, Ky., called on the lumber trade here recently.

Eugene Zugelert of the Present Lumber Company, dealers in hardwoods only, left last week for a vacation trip to Martinsville, Ind., where he expects to stay for two weeks. Max Schmitt of the same concern stated that trade with them has been rather quiet, but that he looks for an improvement within the next two months.

A dividend of 7 per cent was declared last week by Bankruptcy Referee Whitaker in the case of the E. M. Schantz Lumber Company. This is the first dividend declared by the concern since it has been forced into bankruptcy.

Thomas P. Egan, president of the Cincinnati Chamber of Commerce and of the J. A. Fay & Egan Company, woodworking machinery manufacturers, left last week for a month's stay in the East. During his stay he will attend the meeting of the Manufacturers' Association, afterward going to Atlantic City. His family went with him.

O. L. Wade, representative of Weston & Co. of Boston, with headquarters at Indianapolis, was a visitor in town during the past two weeks.

A. B. Bishop of the Standard Lumber and Manufacturing Company of Birmingham, Ala., was calling among the lumber trade during the past two weeks in an effort to get business for his concern.

William E. Delaney of the Kentucky Lumber Company has returned from a business trip to Williamsburg.

Carl F. Lunkenheimer, vice-president of the Lunkenheimer Lumber Company, the largest manufacturing concern in the Queen City, died at Pasadena, Cal., last week after a brief illness. His remains were shipped to Cincinnati and interment took place at Spring Grove cemetery under the ritual of the Masonic fraternity. Mr. Lunkenheimer was formerly manager of the concern and under his skillful direction it grew to what it is at present.

EVANSVILLE

Redna Young of Young & Cutsinger left this week for French Lick Springs for a short rest from the cares of business.

Work on the Evansville Furniture Exchange building will commence next week. The building is to be located at Fourth and Vine streets, and is to cost when completed, \$125,000. The building will have eight floors, including the basement, and will have marble staircases and wainscoting and the floors in the corridors. It will contain furniture display rooms and offices.

The lumber yard owned by Edward Gaskill at Burkett, Ind., was burned recently. The loss is estimated at \$20,000.

William Wycke, retired lumberman of Vincennes, Ind., committed suicide recently at that place by disemboweling himself with a sharp knife, after the manner of the Japanese harikari. Grief over the loss of his sight six months ago is believed to have been the cause.

A permit has been issued to the Globe Furniture Company, West Maryland street, to build a \$3,000 brick warehouse addition to its plant.

E. A. Deem of the Miami Lumber & Veneer Company, Dayton, O., was in the city last week visiting the trade.

A meeting of the creditors of the Rough River Coopers Company, Livermore, Ky., was held at the office of J. Bean at Owensboro, Ky., who is referee in bankruptcy. H. J. Beard of Livermore was appointed trustee. The assets of the company are \$7,500 and the liabilities \$17,000.

Building permits issued during July had a valuation double that of any month this year. As many permits were issued as in July last year, but the total valuation this year was \$162,258, compared with \$213,000 last year. The reason assigned for this is the fact that several permits for expensive structures were issued last year.

J. A. Thompson of Edinburg, Ind., member of the firm of Thompson, Thayer & McCowen, is in the city.

Daniel Wertz of Maley & Wertz, who is spending his vacation in northern Indiana, is expected home the latter part of this week.

With the factory buildings now practically completed the Milwaukee Falls-Evansville Chair Company will be in a position to open its plant about September 1. Manager H. Brury Boyd, Wis., arrived in the city this week. The firm will employ about three hundred men at the start and is a branch of the main plant located at Boyd, Wis.

John Wills of the Maley, Thompson & Moffett Company, Cincinnati, O., was in the city on business recently.

George McCarry, log hayer for Maley & Wertz of this city, was in town this week.

Jeff Barnard of the Central Veneer Works, Indianapolis, Ind., was here this week on business in the interest of his firm.

Frank Kramer, son of Louis Kramer, head of the New York Dimension Supply Company of this city, has been winning the American championship bicycle races right along, racing one a week at Madison Square, New York, at Boston and at Valhburg, N. J. He holds the world's championship.

ST. LOUIS

The following are the number of feet of lumber inspected and measured by the Lumbermen's Exchange of St. Louis for the month of July, 1908:

Chestnut	5,888	Feet.
Elm	5,858	
Cedar	2,597	
Poplar	47,794	
Cypress	157,913	
Quarter White Oak	42,886	
Quarter Red Oak	3,849	
Gum	10,829	
Walnut	60,244	
Maple	50,810	
Sycamore	9,774	
Hackberry	2,782	
Ash	6,630	
Cherry	40,963	
Cottonwood	2,913	
	55,498	
Total	513,770	

The receipts of lumber at St. Louis by rail for the month of July this year were 11,622 cars, as compared with 14,382 cars during the same month last year. This shows a falling off of

2,260 cars in receipts by rail as compared with last year. There were 430,000 feet of lumber received by river during July this year, as compared with 358,000 feet received by river last year. This shows an increase this year of 72,000 feet received by river. During July, 1908, there were 8,114 cars shipped by rail as against 9,596 cars shipped by rail last July. This shows a falling off this year of 1,482 cars. There were 98,000 feet of lumber shipped by river during July this year, as against 34,000 feet last July, a falling off of 266,000 feet.

A new lumber company, the St. Louis Lumber Company, incorporated under the laws of Maine, with a capital stock of \$1,000,000, was formed a few days ago. The incorporators are the stockholders and officers of the following lumber companies: Wilson-Hehels-Rolfes Lumber Company, Eau Claire-St. Louis Lumber Company, Vandewater Lumber Company, Louis Essig Lumber Company, Guttscheit-Michel Lumber Company, De Houtman Lumber Company, Wellston Lumber Company, Stephen J. Gavin.

The officers elected at a meeting of the Board of Directors held July 25, are: Chairman of the board, N. C. Chapman; president, J. A. Rolfes; vice-president and chairman of the executive committee, Stephen J. Gavin; vice-president and treasurer, Harry R. Swartz; vice-president and general yard manager, J. W. Putnam; secretary, Henry G. Rolfes; assistant secretary, Guy E. Jurden; assistant treasurer, W. H. Dulany, Jr.

Executive committee consists of Stephen J. Gavin, John A. Rolfes, Harry R. Swartz, J. W. Putnam, and Guy E. Jurden. The merging of the yards of the companies mentioned above will facilitate the handling of lumber by reducing expenses, eliminating the long hauls, etc. The new company will be a large buyer and will carry out a large stock of lumber. Some of the yards, it is said, when there are more than one in a given territory, will be dropped. A central dispatching office, probably in the Chemical Building, will be opened shortly.

The Atlas Lumber and Supply Company is a newly incorporated company, formed to do a general lumber and supply business. Joseph D. McAllister holds twenty-four shares of stock, W. C. Bland ten shares, and A. B. Cherry one share. The capital stock of the new company is \$5,300, fully paid.

R. J. O'Reilly, president of the O'Reilly Lumber Company, left last Sunday night for a month's vacation. He will spend it at Gloucester, Mass. Before leaving Mr. O'Reilly said that, while orders were coming in pretty well, they were small, but it showed that conditions were a little better and that the small dealers were inclined to buy. Inquiries were being in quite freely.

At the office of the Steele & Hibbard Lumber Company, it was said that business was rather quiet, although they were doing their share of it. J. Giedinghagen, the auditor of the company, returned August 1 from a couple of weeks spent on the Gasconade river, fishing.

G. H. Barnes, president of the George H. Barnes Hardware Lumber Company, has gone to Minnesota, where he will spend two or three weeks on pleasure.

The following circular was sent out to the trade on August 1:

"This will announce that the undersigned have organized the Krebs-Scheve Lumber Company, succeeding the F. Krebs Lumber Company. They will continue to do a general hardwood lumber business. Your patronage heretofore has been very much appreciated, and the new firm wishes to merit its continuance.

"Yours very truly,
"R. F. KREBS,
"J. L. SCHEVE.
"Krebs-Scheve Lumber Company,
"St. Louis, Mo., August 1, 1908."

Both R. F. Krebs and J. L. Scheve are well known in hardwood lumber circles. Mr. Krebs has been at the head of the R. F. Krebs Lumber Company and at various times has been with the

old Eau Claire Lumber Company, Steele & Hibbard and the Ozark Lumber & Coöperage Company, from which company he went into business for himself. Mr. Scheve has been with the Bonauk Lumber Company, and later with the W. D. Reeves Lumber Company of Helena, Ark. The new firm starts into business under the most auspicious conditions, with good financial backing and a wide acquaintance.

A son arrived at the home of C. E. Thomas of the Thomas & Proetz Lumber Company a few days ago.

William Kings, Sr. formerly with the R. F. Krebs Lumber Company, has accepted the position of assistant sales agent at St. Louis for the Lee Wilson Lumber Company of Memphis, Tenn.

A. J. Lang of the Lang Lumber Company is at his cottage at Put-In-Bay, Ohio, for the summer.

An inventory of the estate of Carl Lothmann, director in the Mechanical Planing Mill Company, filed recently for probate, shows the estate to be valued at \$34,571.21.

If existing conditions are any sign, E. S. Little of the Little Lumber Company says there will be a nice increase in his business during the month of August.

E. H. Liehrman, vice-president of the Charles F. Liehrman Hardwood Lumber Company, says there is a general quietness in the hardwood lumber business, although the business is very much better than he thought it would be a couple of weeks ago. Their July business was quite satisfactory and their August sales are starting in fairly good.

Theodore Plummer, president of the Plummer Lumber Company, says a slight improvement is noticeable in the hardwood business. Business is better than it was, but not what it ought to be. They are not looking after business, but of course, do not refuse it when it comes in without solicitation, and there is a good deal of that kind of business now coming in.

R. D. Sumner, formerly with the Massengale Lumber Company, but more recently with the Ozark Coöperage & Lumber Company as sales manager, has gone back to the Massengale Lumber Company.

CHARLOTTE

John H. Crank of Fredericks, Va., is now busy making estimates of certain valuable timber lands in North Carolina and Virginia, said to contain 70,000,000 feet of timber. The lands are being negotiated for by New York concerns, and details of the company's plans for developing the timber will be given later.

Washington, N. C., is the home of a new concern that will engage in the manufacture of staves principally. The name of the new company is the Atlantic Manufacturing & Stave Company and the principal stockholders are B. G. Moss of Washington and C. T. Hobart and John A. Watkins of Lima, O. The company has just purchased a site for its plant and it is hoped to be ready for operation this winter. The capital stock is \$250,000.

The Hetherton Lumber & Manufacturing Company of Blhaven, N. C., has been chartered with a capital stock of \$100,000 by J. A. Wilkinson, A. C. Opperman and others. The company will deal in timber lands, manufacture lumber, operate sawmills, etc.

The sawmill of the Charles Creek Lumber Company of Charles Creek, N. C., near Elizabethtown, was destroyed by fire recently. The company carried only \$1,000 insurance, but this does not cover half the loss.

R. C. Tonn of Chadbourne, N. C., has just been elected secretary and treasurer of the Clear Run Lumber Company, whose plant is located at Tomahawk, N. C., to succeed H. W. Fry, who resigned to engage in the wholesale lumber business at Asheville, N. C. The Clear Run Lumber Company proposes to install shortly

a band mill and a circular mill, which, when installed, will give the company a daily output of 50,000 to 60,000 feet.

One of the largest lumber plants of the entire South is now being built at Bolton, N. C., by the Waccamaw Land and Improvement Company. This company is capitalized at a million dollars. Already its shingle mill at Bolton is completed, its planing mill is rapidly nearing completion, and the main plant will soon be finished. This company owns extensive timber holdings in Brunswick and New Hanover counties, N. C. It also owns what is known as the Green Swamp Lands, embracing about sixteen square miles in Columbus county, N. C.

W. H. Bryant of Lumberton, N. C., has just sold his interest in the Carolina Lumber Company to Messrs. McAllister and McLeod of Lumberton, who propose to enlarge the plant.

In place of the plant that was burned some time ago, the Trown Williamson Land and Lumber Company of Cerro Gordo, N. C., has just completed a fine new plant. The output of their new band and planing mills amounts to about 75,000 feet daily.

The Whiteville Lumber Company of Whiteville, N. C., is replacing its plant which was burned some time ago, with a fine new one. The new plant is being erected by the Insurance company that had the old one insured.

The North Carolina Geological and Economic Survey will assist land owners to make their timber lands profitable. For this reason the State Forester will personally examine lands when requested to do so by the owners, provided there are at least 500 acres at one place to be examined. The forester will give advice and prepare plans showing the best methods of cutting and protecting timber in order to make the yields more profitable.

The bankruptcy proceedings of three creditors against the Crosses Lumber Company came up for a hearing at Asheville, N. C., a few days ago, before Judge J. E. Boyd of the United States District Court, and upon objection to the insufficiency of the verifications to the petition by defendant, the judge made an order sustaining the point. The petitioners were thereupon allowed to amend upon payment of costs and were given until July 27 to file, and the defendant until fifteen days thereafter in which to answer or plead. The petitioners claim that the lumber company, which operates in western Carolina, owes them about \$1,500 and is liable to bankruptcy on account of financial condition; the defendant insists that it has abundant unincumbered property to meet any judgment obtained and will sue for heavy damages on account of the filing of the petition.

LOUISVILLE

A. E. Norman of the Norman Lumber Company said: "We are busy; sold more lumber in dollars and cents in July than we did twelve months ago. We feel that plain oak is good property. We are selling it and wish we had more of it."

C. M. Sears, treasurer of the E. L. Davis Lumber Company, said: "We are busy; our mills are running both at Louisville and Glasgow. Glad to say June and July were better than any months this year. We go into August with more business on our books than we have had in previous months. Have a fair stock on hand and are taking care of our mixed car orders with the same attention that we did 200,000 feet orders in the past months. The consumer is our best friend now. He has to fill in his stocks and is giving us his orders. We can use more and give them prompt attention, but we are not dissatisfied with the situation, everything considered."

Over at the big Mengel plant there was an air of satisfaction which indicated that mahogany was a necessity and not a luxury any more. For the past few months business has

shown that mahogany is in demand, and on August 1 the orders on hand for August delivery were greater than any previous month for nine months, which encourages me to believe that trade will steadily improve," said C. B. Mengel, president of the C. C. Mengel & Bro. Company. "We anticipate starting our mill on night and day August 15, and have three carloads of timber coming in within the next few weeks; the Venus, from Belize, with 1,000,000 feet aboard, was due Sunday. The Cheswick and the Richmond are in with good cargoes from the gold coast of Africa."

The Mengels will shortly open a mahogany yard and warehouse in Chicago, where they will carry 500,000 to 750,000 feet of lumber and 2,000,000 feet of veneers, where they will be glad to take care of the mill in trade for the manufacturers of furniture and other material in the Chicago market. More information will be given in reference to this new branch in a later issue.

The Mengel people are now completing the shipment of 500,000 feet of Honduras mahogany for Uncle Sam's building department.

At a recent meeting of the Board of Directors some changes were made in the official staff of the C. C. Mengel & Bro. Company. The new officers, in addition to C. B. Mengel, president, and C. C. Mengel, vice-president, are J. Crepps Wickliffe, secretary, who was for several years manager of their South American operations and formerly connected with the freight department of the Illinois Central Railroad. Mr. Wickliffe succeeds A. L. Musselman, who has become the president of a new hardwood company in Louisville. Victor Lamb, who has been in the accounting department for several years and also one time connected with the southern operations, is the new treasurer. Julius Spicker, who has been on the job for a number of years in the sales and export departments, continues as manager of these important parts of the organization. H. W. Mengel is superintendent and director, as formerly. It is also learned incidentally that a new appointment by Governor Wilson connected C. R. Mengel as colonel. W. always ascribed him as "Colonel," but he is officially one now.

E. Carahan, vice-president and secretary of E. B. Norman & Co., is moving his family to Louisville, anticipating being in closer touch with the mill operations, although still looking after timber purchases in the mountains. Mr. Carahan has the reputation of being the best timber buyer in "Old Kentucky." He is a welcome resident to the metropolises of the state.

E. B. Norman & Co. are doing a fair business in specialties and with their special stock of lumber are able to take care of anyone in poplar, plain oak or hawthorn.

The Brown boys of W. P. Brown & Sons Lumber Co., Louisville, were in their happiest frame of minds when the Reicon representative dropped in to see them the other day, because "Pop" Brown had come down to visit with them. W. P. Brown, head of this concern, has been an "old-timer" in hardwood operating for years, with headquarters at Madison, and now living in Indianapolis. Mr. Brown is optimistic as to the situation; he tried to convince us youngsters that Indiana was going Democratic. The bunch not down back of a lumber pile and has not quite forgotten him yet. The Brown boys have a particularly well selected stock of oak and other hardwoods. Their thick lumber is well seasoned and in good supply. In their main yard fourteen cars were being unloaded at the same time, indicating their belief in the future of oak lumber.

Oak flooring from Louisville—that is, real oak flooring, the kind the Englishman likes best, was to be the talk of the Kentucky brand. The Kentucky Hardwood Flooring Company, with its new improved power plant will be able to manufacture more stock than ever when the demand requires.

The Southern Lumber Company, which spe-

cializes in oak, poplar and chestnut, reports increased number of inquiries from manufacturers, and more orders.

The Kentucky Veneer Works, which makes a specialty of mahogany veneers and, in fact, all kinds of veneer, and also handles hardwood lumber, will be glad to make up a mixed car of veneer and hardwoods. Manager McCracken reports improved business.

Gamble Bros., out at Highland Park, make a specialty of dimension lumber. It is kiln dried, and there is always a stock list of particular value to the buyer, for they can take care of his specialties.

Charlie Stotz of the Louisville Lumber Company has recovered from his recent illness and is again "on the job." Their stock list indicates that they also are specialists in mixed cars.

Speaking of mixed cars, the fact that many manufacturers have let stocks run low is quite an accommodation to the consumer, as he is able to buy mixed carloads, and Louisville is particularly well adapted to supply this business. Manufacturers are working in harmony, and each in turn, through their sales agents, would be glad to take orders, even if they include items not comprised in their own stocks, for some of their neighbors would undoubtedly have material and, therefore, mixed cars for Louisville trade are a specialty at this time. A look over the advertising pages, indicating the number of manufacturers and dealers of hardwoods in Louisville, will convince a buyer of the possibilities of this market.

Col. D. E. Kline of the Louisville Veneer Mills has been on the sick list, but he is pretty regularly on the job at the plant, looking after the increased number of orders coming in for both veneer and panels. They have plenty of good timber and, while not running full time, are in position to take care of their customers very satisfactorily.

MINNEAPOLIS

John Hein of the John Hein Company, hardwood lumber and copraage manufacturers of Tony, Wis., was a business visitor in the city last week. He says hardwood lumber stocks are smaller than usual in that section of the state.

C. F. Lusk of Stanley, Wis., was here a few days ago on business, particularly relating to hardwood. He is associated with the Northwestern Lumber Company and is also secretary of the Wisconsin Hardwood Manufacturers' Association.

Building operations in the Twin Cities are keeping up very close to the record of last year, which was the heaviest on record for Minneapolis, some of permits issued. Those issued for July in Minneapolis had a total estimated cost of \$945,000, compared with \$885,000 in July of last year. The sash and door factories have all they can do to get out their special orders on time, and a large share of their work, as usual, is calling for hardwood material, largely birch, this year.

S. C. Major of the S. C. Major Lumber Company, Memphis, Tenn., one of the well-known wholesalers of southern hardwoods, spent several days in the Twin Cities interviewing consumers of hardwood, during the last week of July. He was pleased to find greater activity here than at the time of his last visit.

D. F. Clark of Osborne & Clark, the local hardwood wholesalers, has been over in Wisconsin looking after some of their stocks.

F. J. Lang, sales representative of the Wisconsin Lumber & Lumber Company, Hermansville, Mich., is in Minneapolis for a short time and is occupying offices in the Lumber Exchange, from which he is conducting a campaign for their hardwood flooring and other products.

E. Payson Smith of the Payson Smith Lumber Company has gone with his family on a

short vacation trip to Isle Royale, Lake Superior.

George Pettibone of Louisiana, Mo., manager of the Louisiana State Company, was here a few days ago on his return from a vacation sojourn at one of the lakes in northern Minnesota.

The outlook is that there will be a resumption of demand for cull hardwood for box purposes among the Twin City box manufacturers this fall. The supply of low-grade pine is not heavy, and with an increasing like ordinary trade it will be reduced to the point of scarcity in a very few weeks.

ASHLAND

John W. Kitchen, treasurer of Vansant, Kitchen & Co., has just returned from a very satisfactory trip through Ohio. Mr. Kitchen reports receipt of some very good orders for poplar, and also advises that he received fifty per cent more orders on this trip than on any trip for several months, and believes that the time has now come when the consumer realizes the necessity of buying.

The Ironton Lumber Company of Ironton, Ohio, has closed its mill indefinitely. The company has on hand a large supply of lumber, and does not expect to do any more sawing until conditions improve, and some of the stock now on sticks has been moved. The company has been sawing practically nothing but oak, mostly kiln stuff.

W. L. Watson, general manager of the John W. Mahan Lumber Company, Mahan, W. Va., spent several days in this city last week at his home. Mr. Watson states that his company has been running steadily up to the present time, but is closed down now for two weeks for repairs, which is the usual custom. This company has a fine lot of poplar lumber on sticks, and owing to its optimistic feeling concerning the outlook, is making no special efforts to move any of the stock.

What will probably prove to be of great interest to timber owners in northeastern Kentucky is the discovery of papers that will very likely place in the possession of Miss M. P. McBlair of Bigbee, Nova Scotia, Canada, twenty thousand acres of fine oak and timber lands in Floyd and the counties, Kentucky. It has recently been discovered that Miss McBlair has fallen heir to this tract, and that she has advised the state authorities of her intention to bring suit for the purpose of gaining possession of her property. This tract is estimated to be worth more than half a million dollars, consisting of oak and timber.

R. G. Page of the R. G. Page Lumber Company of this city is on a business trip, calling on the trade in Milwaukee, Chicago and other cities. Advice from him brings very favorable reports, indicating an improvement in all lines of business.

The S. B. Reese Lumber Company of Farmers, Ky., has again started its band mill after a shutdown of several weeks. This company reports some very good orders on hand, and expects its present log supply to last several months.

The Kenova Poplar Manufacturing Company of Kenova, W. Va., is operating its entire plant full time, manufacturing bevel siding and mouldings, and has recently installed new machinery for the purpose of making boxes. Manager P. E. Way states that they have some very desirable orders for boxes, and more orders for high-grade siding than they will be able to supply for some time.

Fred Stone, the Detroit lumberman, is spending several days in this vicinity. Mr. Stone is buying several cars of lumber to supply his trade, and believes with reasonable assurance that a general improvement is beginning, and it will be only a question of time until business will be very satisfactory to the lumbermen.

X. Goodman, vice-president of the Licking River Lumber Company, with mills at Farmers, Ky., spent Saturday and Sunday at his home in Ironton, Ohio. Mr. Goodman reports the mill running steadily in all departments, with considerable orders ahead. He also states that they probably have sufficient logs to run them until the first of the year.

CADILLAC

Gas in retort house of the Cummer-Diggins Company caught fire July 30, causing a fire which destroyed the building. Loss is estimated at \$5,000. The company will rebuild at once.

G. von Platen and wife of Petoskey have returned home after being the guests of Mr. and Mrs. F. J. Cobbs here.

W. W. Mitchell and wife returned home after an extended trip in the New England states and New York. Mr. Mitchell is convalescing from a severe illness which overtook him at Hillsdale, Mich., two weeks ago. He is, however, much improved and will be out again soon.

Charles Odell of the Cummer-Diggins Company, and wife have returned from a trip covering Detroit and Cleveland.

F. A. Diggins of Murphy & Diggins is in Detroit on business.

Conditions in Cadillac are as good or a little better than when last reported. Practically all the manufacturers here are running full time and most of them with full forces. Prospects for fall trade, according to the majority of lumbermen here, are good, and indications are that business will show steady improvement from now on.

TOLEDO

The American Woodens Ware Manufacturing Company of this city reports a very fair business in tubs, pails, chudans and the like. Many of their products are extensively used in the eastern markets, a large order for cedar pails having recently been secured by them. This concern is doing an extensive export business, supplying their wares to South Africa and other foreign countries.

The National Fruit & Berry Box Company of Toledo recently incorporated with a capital stock of \$20,000. The incorporators are: Fred Wilson Webb, John P. Goodwin, Clem O. Meninger and Charles J. Collier.

The Rowland & Mitchell sawdust pile, which for years has been an annoyance and a menace to residents in the vicinity of Summer street, is again on a rampage, defying the efforts of firemen to extinguish it. At times the smoke from the burning debris is so dense and stifling that residents in the vicinity are compelled to flee from their homes for days at a time. Every effort to remove the menace has been unsuccessful thus far.

Following the issuing of a warrant for the arrest of Henry Gazell, secretary-treasurer of the defunct Farmers' & Merchants' Bank at Cleveland, the Federal Harris Manufacturing Company, producers of wood implements, filed a deed of assignment in the insolvency court July 27. The assets were given as \$45,000 and liabilities as \$150,000. The company was promoted by Gazell.

NORFOLK

Although there is reported some improvement in the foreign demand, there have been few visitors from abroad to Norfolk recently. The improvement in this respect has occasioned, in some instances, increased rates with the steamship companies, who gauge their rates oftentimes by the amount of cargo secured. The movement of vessels up the coast with hardwoods during the past ten days has been brisk, about eight boats having sailed.

Harvey M. Dickson, prominent hardwood wholesaler here, returned last week from Buffalo Lithia Springs, Va., where he has been the past two weeks with his family.

W. A. Reed, hardwood wholesaler of Philadelphia, was in the city last week on business.

Grover D. Smith, wholesaler in white pine, spruce, cypress and maple flooring at Montclair, N. J., was in the city last week. Mr. Smith intends remaining in this section for several days, when he will go farther south to study conditions and place some orders.

A plan which has aroused much interest in this section is that now put before the lumber trade in hardwoods, yellow pine, North Carolina pine, dimensions, etc., by the Lumbermen's Bureau of this city. This organization has as its director John L. Walker, recently secretary of the North Carolina Pine Association. In discussing the matter for this paper, Mr. Walker stated that the fact that the iron and steel, the cotton interests and other large industrial interests have been greatly benefited by their organization, suggested to him that the lumber industry, being third in size in the country, might reap a similar benefit. His organization furnishes its members with lists, if they be manufacturers, of what is wanted by the wholesale manufacturer with a list of what the manufacturer has. In addition, the bureau will furnish each member with a report of prices obtaining, this list being prepared monthly and being secured from both ends of the membership.

Mr. Field of Bemiss & Yosburgh, Pittsburg, Pa., was in the city last week on business. Mr. Field is in the market for a large quantity of gum lumber.

WAUSAU

What is said to be the largest lumber deal of the year in the United States was consummated a few days ago in Marinette when the Edward Hines Company of Chicago purchased the entire end of three sawmills, the two of the N. Ludington Company of Marinette, and the Ford River mill of Isaac Stephenson. The total amount of lumber sold was over 65,000,000 feet, and brought over \$750,000.

The largest lumber fire in the history of the Menominee river district raged Saturday, August 1, on the south dock of the Sawyer-Goodman Company, Marinette. From a small blaze in a single lumber pile it spread rapidly and was given impetus by a light wind. About ten acres of lumber yard was burned over and over 10,000,000 feet of lumber was destroyed, entailing a loss of about \$175,000.

R. C. Merryman of Marinette has sold to the Francis Beidler Company of Chicago 3,000,000 feet of timber, to be cut at the mill of the Merryman Manufacturing Company, Marinette. The Beidler Company has also purchased 1,800,000 feet of lumber of the Hamilton & Merryman Company, also of Marinette.

Stockholders of the Kandy Manufacturing Company of Grand Rapids recently held their annual meeting. G. J. Kandy, manager, reported the company's volume of business the past year was larger than it was the previous year. The company manufactures tables, etc. The following officers were elected: President, G. J. Kandy; secretary, J. L. Thompson; treasurer, P. J. Wood.

While seeking shelter under a tree from a severe thunderstorm recently near Emerson, J. W. Emerson, his son and nephew were struck and instantly killed by lightning. Two other sons escaped, though stunned by the bolt. Mr. Emerson resided at Prentice with his brother, D. W. Emerson, and was proprietor of a sawmill at Emerson. The two for years have dealt extensively in timber lands in Wisconsin.

State Senator Jas. A. Wright of Merrill has

announced his candidacy for reelection on the Republican ticket. Mr. Wright is engaged heavily in the manufacture of lumber in his home city. As the district is Republican there is little doubt of his election.

The John Jennings Company of New London recently purchased a block of property and an old factory in that city. The old plant will be repaired and enlarged and machinery installed for the manufacture of millings, girders, mop boards, stairways, etc. The company owns a saw and planing mill, a retail lumber yard, and will carry a stock of sash and doors.

The plant of the Frome Manufacturing Company, located at Howard's Grove, which was recently destroyed by fire, will not be rebuilt there, but will be located in the town of Cleveland, Manitowish county, on account of better shipping facilities. A new company has been organized as the Cleveland Woodware Company, capitalized at \$25,000. The incorporators are: Wm. Beltz, Cleveland; R. L. Frome, Howard's Grove; Edward Wright and A. H. Quehl, Sheboygan. The company will manufacture cheese boxes, veneers, etc., and will run on a larger scale than did the old concern.

The Yawkey-Bissell Lumber Company of Wausau has sold about 40,000 acres of land in Vilas county to the State of Wisconsin for a state reserve and park. The land is primarily for reforestation. State Forester E. M. Griffith selected the land with a view of providing a naturally prolific spot for propagation of new timber growth.

Officers of the Frost Veneer Company, which some time ago lost its plant in Antigo by fire, say they will move elsewhere. As an inducement for them to rebuild, the city has offered to remit the company's taxes for a period of six years. The offer may be accepted.

The Goodman Lumber Company of Marinette, Chas. A. Goodman, president, and Robert B. Goodman, manager, has commenced work on the new mill, lumber plant and town which will be built in the woods on the Soo line about ten miles from Ithamar. The Soo line has put in a siding and designated the station "Goodman." The company will construct a logging railroad, a modern sawmill and a boarding house with a capacity for housing 200 men. Other necessary buildings will be built and a site cleared for a town. The investment will amount to half a million dollars. The mill will be the most modern of any in Wisconsin. It will be erected on a concrete foundation with steel framework and corrugated iron siding. The only wood in the mill will be in the floor. It will be a two-hand mill with horizontal re-saw. The company has timber for from twenty to thirty years' sawing, consisting of hardwood, hemlock and pine. It is expected that sawing will begin in the spring of 1909.

The Bird & Wells Lumber Company of Wausaukee has recently added many improvements, including an improved edger, a new re-saw and exhaust fan system. The mill will be given a general overhauling so that it can run day and night when operations are resumed.

Lumbermen in Wisconsin say that the outlook at present is generally conceded to be better than it has been at any time during the last year. While most concerns are carrying large stock they are constantly filling orders and reducing the lumber on hand.

Daniel L. Kimberly and Wm. C. Wing of Neenah, John T. Conant of Milwaukee, and T. R. Foster of Vicksburg, Miss., are the incorporators of a \$100,000 woodware concern, which will soon build a plant at Vicksburg. Staves and stave goods will be manufactured.

C. J. L. Meyer, a former millionaire lumberman and manufacturer, died recently in Trinity hospital, Milwaukee, after a brief illness, aged eighty-six years. When the price of 1893 struck the country, Mr. Meyer's business affairs assumed a turn for the worse and thereafter everything he touched went against him. He tried to retrieve his fortune in Chicago by specula-

tion, but finally came to the end of his resources. A short time ago he applied to the Associated Charities of Milwaukee for admission to the county poor house, an institution to which he gave liberally in his wealthy days. When his destitution became known relatives and former business associates came to his rescue and cared for him until his death.

The Robert Brand & Sons Company of Oshkosh has purchased the plant of the Oshkosh Furniture Company. The plant consists of three

large buildings, with a total floor space of 70,000 square feet. The company proposes to make a number of improvements and additions, including the building of a drykiln 50x20 feet. An automatic sprinkling system will be installed as a protection against loss by fire. The Brand company was burned out last February and since that time has been filling orders from stock manufactured in leased quarters. The firm has been in business since 1896, and manufactures bank, office and saloon fixtures.

long compare favorably with that prior to the depression.

Everything points to a heavy freight movement next fall, when the crops are to be distributed, and the railroads will have need for all of their rolling stock. Much of this is at present out of repair, and, while some of the lines have lately felt impelled to curtail expenses, by the reduction of forces, the men dropped will have to be re-employed. While the acquisition of much material, with lumber as a large proportion, will be necessary. Stocks of hardwoods at the mills are very small, and any appreciable increase in the demand will create something of a scarcity.

No important concessions in prices are being made. Such a course would not accelerate the movement and would mean merely the sacrificing of profits on the part of the holders of stocks. Values have steadied somewhat of late and the inquiries are more numerous, although the actual demand is much the same. The export situation is practically unchanged, stocks abroad being large, the accumulations keeping prices at a low level. Notwithstanding this fact, some of the exporters have received quite a number of inquiries of late, the purpose of the authors of these letters evidently being to compare the present congestion and check any upward movement which might otherwise develop. All such letters, however, fall of their intent for the reason that the quotations in the domestic market are too high to permit of forwardings on the terms offered.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

There have been some very satisfactory sales made locally during the last fortnight. This business seems to cover nearly all lines. Furniture manufacturers have been buyers in comparatively small lots, but the aggregate of their purchases has been large. There is some little trade in car stock, some wagon trade, and a specially large number of orders placed by box and crate manufacturers. Local jobbers and manufacturers feel very good over the situation and anticipate a largely increased demand with the advancing season.

mid-summer dullness, but there is a better aspect and tone to things, and, while there may not be a normal fall trade, it is believed that there will be sufficient to not only pretty well absorb the offerings of high-grade lumber, but create a general advance in values therefor. This is particularly true in ash, high-grade poplar, quartered oak, basswood, etc.

The belief in much improved conditions in the fall is based not only on the general outlook, but also on the fact that stocks are low, and everybody is going to want lumber just as soon as the general improvement begins to strike home, and indications point that that date is not very far distant.

BOSTON

The market for hardwood lumber is gradually improving. Dealers have been anxiously awaiting reports from the furniture sales both in the East and West. The New York exhibit closed August 1 and the hardwood buyers have nearly all returned to their factories. Reports received in Boston from Grand Rapids are very favorable. With the outlook for a larger business values are growing firmer, but buyers today can still obtain stock at low prices. Manufacturers of interior house finish are only moderately busy, as a whole.

The piano trade is beginning to improve but manufacturing plants are not yet running full. Reports from the various salesrooms indicate they are selling more pianos than for several months.

The call for veneers is showing a slight improvement. Good figures in mahogany have been in very fair request. The veneer mills are running from four to five days a week, a few being reported on full time. White holly has been selling for export.

Quartered oak is firm although only the best will bring top prices. Demand at present is not active, but as offerings are not large an advance is predicted. Plain oak is in free offering with prices easy. Hickory is in moderate request with offerings light. Ash is well held. The better grades of whitewood are firm, but low grades are offered at concessions. North Carolina pine and cypress are not active, but manufacturers are trying to work prices up to a higher level.

NEW YORK

While the hardwood market at New York has not shown the same degree of either dullness or price deflection since the panic as some other classes of lumber, the volume of trade has, nevertheless, shown sympathetically marked reduction. Of late, it is gratifying to note that, while the volume of trade could be considerably larger, there is undoubtedly a general improvement all along the line, however slight it may appear to some, and, based on conditions, is such that a marked improvement is expected with the approach of early fall. Of course, at the present time we are in the midst of the

PHILADELPHIA

A gradual but sure reaction of late has been noted in the hardwood trade. Stocks have been allowed to dwindle so that buying, in many cases, has become compulsory, and a stiffening in quotations in some of the woods testifies to the fact that orders are beginning to come in. It is noticeable that many who have held strong pessimistic views are now feeling more encouraged over future prospects. It is believed, however, that conservatism will still be the rule in buying, and a normal state of affairs is confidently looked for by the first of the year.

The furniture manufacturers of eastern Pennsylvania have received a new impetus, as during the recent exposition here buyers, who in the past have thought it necessary to go to New York, Chicago, Grand Rapids and other furniture markets for their goods, placed orders here, estimated at a total of over \$150,000. The buying was conservative and there was the taking of considerable memoranda, but the reports from different sections of the country state that the consumer is once more purchasing articles which have been tabooed as too expensive luxuries since the recent panic. Trolley car building is holding fairly active right along. Packing-box and cigar-box factories have been running about even and are looking hopefully for an early revival of trading. Veneer men report things holding fairly steady. Taking the situation as a whole there has been considerably more hardwood lumber moving during the last fortnight than for some time. Though values are not strengthening generally, there is a tendency to stiffen in some woods, as basswood, the better grades of poplar and quarter-sawn oak, and a climb up the ladder is confidently looked for all along the line, in the near future.

BALTIMORE

The hardwood trade of this section continues to show a tendency toward recovery, although so far no very decided change has taken place. The requirements of the trade show considerable fluctuation, one week developing a relatively large number of orders that brings the total of transactions almost up to the most active period, and another leaving much to be desired. The general trend, however, is toward recovery, and there is every prospect that business will be more

PITTSBURG

A steady though slow gain in business is noted in hardwood circles in this city. If one-fourth the inquiries received would develop into business nobody would have any cause to complain. Pittsburg firms are doing much more, quoting now than at any time since last fall. There seems to be a certain number of responsible concerns coming to the market which have refrained from buying any lumber since hard times began, but peculiar as it may seem, these concerns are extremely slow in closing up their contracts. It is hard to account for this policy on the part of shrewd business men, for if indications account for anything they point to higher prices for hardwood before next January.

At present quotations are barely maintained at list figures. Poplar is the one exception to this rule and wholesale firms are able to get slight premiums now and then on first-class stock. The oak market is disappointing. Bill oak especially is weak and the stocks are larger than the market demands. Timbers are moving in better form but do not bring the prices they should with the increase in big construction work which is going ahead. At present chestnut is sagging below list and there is apprehension no life in the demand. The factory trade seems to be quite depressed, especially in Ohio and Indiana, and in the Middle West. These take about all the hickory, ash and elm that is available for current shipments. The market for finishing lumber of a high grade is slow as very few really good buildings have got to the point where they need lumber of this kind. There is somewhat of a gain in building operations, but it will not be sufficient in the lumber market for six weeks or two months in this district. The most encouraging feature of the situation for wholesalers is the large number of railroad and trolley operations which are going ahead rapidly and the increase in the number of industrial and mining plants which are resuming and which are buying more or less lumber for repairs and extension work.

BUFFALO

Hardwood lumber moves quietly, but there is every expectation that it will be better this fall than it has been at any time this year. A

local dealer said recently that in other localities were using as much lumber as this city, business would be about up to normal, for the city building, though not up to last year, is almost all in wood.

The box trade is slower than last year, which affects trade in low-grade stuff, elm, chestnut, poplar and basswood. As there is a surplus of low-grade hardwood in the yards the dullness of the box trade is of expected account.

The furniture factories are important factors in keeping trade down, not so much by their slack running as by their refusing to buy a board, so long as they have a stock of anything on hand that can be made to meet their wants. It is reported that they are now where they must buy if they are to go any further and as soon as they show any disposition to stock up, the end of the slack season will be very near.

The various woods go on much as usual, with quartered oak in the lead, in spite of the effort to turn out enough of it to meet the demand and lowering the price of plain oak to make it go. It is said that plain oak has declined in price more than any other lumber, and yet quartered oak could be advanced, if a move should be made in that direction.

The ash trade is quiet, though handlers of black and brown ash have all along been able to find places for it as house trim. Just now all the cheaper woods are suffering from the activity of all sorts of southern pine, till that has become so strong that it is going up. Maple flooring mills are making a fair season. In the yards the demand seems to be for thick stock mainly, as it is taking the place of ash and other more expensive woods.

A few dealers find sales for chestnut and birch, but they are still mainly at the bottom of the list. They will be needed before the end of the year, no doubt.

SAGINAW VALLEY

Locally the hardwood business is picking up. There is a better movement by rail and more inquiry. Thus far buying has been spasmodic in character and along the hand-to-mouth plan, but there is more doing now. The increase in business and inquiry appears to affect all grades of stock. Mills are generally in motion all through this section of the state and stocks are ample for all purposes. Prices are also appearing to be stiffening. The future is quite promising.

CLEVELAND

Hardwood dealers are looking to the building trades to help redeem the situation this fall. A number of factories are again in operation and are working chiefly on hardwood stocks, ordering only just enough to get along with. The building permits for July showed four times as much work started as during June. This means business this fall and winter for the hardwood trade.

Oak continues to be the hardwood most in demand, though maple flooring is keeping up well. Poplar, white pine, is not so much in demand in this as in other markets. For some reason Cleveland has never been a good poplar market. Ash is some better, but birch is away off. There is no demand for hickory.

COLUMBUS

Compared with conditions which prevailed a week ago, there is but little change in the market for hardwoods. Prices are stiffer, but there has been no material advance. One dealer reports inquiries for an unusually large lot of oak flooring and there is a good demand for other hardwoods, especially for future delivery, but wholesalers are not inclined to sell much at the prevailing low prices. The oaks are de-

cidely firm. Poplar continues strong and at times the demand was quite active during the past week. About gum and hickory there is but little new to be said. The market in general shows a better tone.

MILWAUKEE

The general lumber situation in Milwaukee and about the state is showing decided improvement, and the hardwood market is putting on a much brighter aspect. Inquiries and orders have increased to a marked degree during the past week. Stocks are beginning to move in the country yards because of the fact that dealers realize that now is the time to stock up in anticipation of the heavy fall trade that now seems inevitable. Wholesale dealers in Milwaukee are experiencing excellent trade in the hardwood field and there is every indication that the improved business has come to stay. Retail trade is just a little more quiet, owing to the fact that the busy harvest season is now on and farmers are delaying building for a short time. Prices show a tendency to become stronger and in some cases there have been advances. The general advances in the hemlock and yellow pine market have been influencing hardwood prices to a certain extent, according to some dealers. Box manufacturers in the city are experiencing a lively run of business, and orders for lumber in this line have been large.

The oaks are still at the top, with plain oak less active. The poplar market continues to hold its own. Basswood is in good demand, with supply light. Ash and rock elm are scarce and indications are that birch is higher. The flooring trade has been showing improvement and maple has advanced somewhat.

BRISTOL

That the outlook continues to grow brighter is the general opinion among the local lumbermen. It is believed that the foundation is now being laid for the greatest prosperity the country has ever enjoyed and that business is being established on a much better defined basis. The large amount of building operations throughout the coal fields of this section has given an impetus to the lumber industry which it otherwise might not have had and the impression is that the demand will continue to improve and business will be in much better shape this fall and winter.

There is still a large amount of idle cars, but the number is being gradually reduced and the volume of lumber business being handled is slowly increasing. About 75 per cent of the mills are running, with but a little more lumber in the yards than usual.

CINCINNATI

While the transactions during the month of July did not equal those of the month previous, there was a fair volume of business. A repetition of the month previous was hardly anticipated, and the lumber dealers here were much gratified to note the comparatively light depression. Usually the month of July brings on a sharp decrease in all grades of lumber, but this year the decline was not as large as usual. The demand has been very urgent and dealers are very encouraging, and few look for anything but an improvement in the general situation during the coming two months. The month of September is looked forward to as the banner month of the year, and after the election a decided improvement is anticipated.

The demand for poplar during the past two weeks has been very urgent and prices have been firm. All grades of oak have developed a much brighter outlook and a number of transactions were made at firm prices. The furniture trade is expected to get into the market in

the near future. As a general rule the situation is better now than it has been for several months, and confidence is gradually returning.

EVANSVILLE

The market for hardwood lumber is still improving and the month of July was the banner month of the year up to the present time. Building operations are looking up and it is considered certain that the improvement is substantial and will continue from this time on. The month of July is generally considered a dull month, but this year more improvement was noticed in July than any month this year. Prices are improving steadily and inquiries are improving in volume. Quartered oak seems to be the best seller and is one of the first woods to be affected by the increased demand as the stocks of quartered oak are considered light. The local mills have not nearly come up to their standard of output this summer and with the picking up of fall business the effect of the curtailment will be felt. The outlook of the furniture trade is better than at any time this year after the fairly satisfactory season at Grand Rapids and Chicago. Logs are a little more plentiful than formerly, and with fall coming on it is expected they will be.

ST. LOUIS

There has not been much betterment in the hardwood situation during the past fortnight, although some business is being done all the time. The better grades are most in request. Receipts of hardwoods in this market during the past month have only been about 80 per cent compared with last year's receipts. Fully half of the inquiries are for quartered red and white oak. In the South there is very little of this stock in any grade, and from present indications and from the opinions of the best informed hardwood lumbermen, during the next six months there will be a big business done in this wood. There is a big improvement manifest in poplar and the demand for it is good for this season of the year. Inquiries for all grades and thicknesses are coming in and there is a good deal of this stock moving. Ash offerings are plentiful and prices low, firsts and seconds being most in demand. The railroads are doing a little more buying and it will not be a great while before this wood will be showing an improvement. Plain red and white oak has stiffened up in price considerably in the first and second grade, as stocks are low throughout the South, and many dealers aware of this have raised their prices from \$2 to \$4 per thousand. No. 1 common has improved a little in price, due to the constant advance in firsts and seconds. There is little change in the cottonwood situation. It shows little or no improvement. There is a noticeable quietness in the grades second and No. 2 common. No. 2 common is the best item and it is being asked for freely. Gum continues to be a fair seller but has not shown much improvement in price, except sap clears and No. 2 common. These two grades appear to be getting scarcer and show a little upward tendency in price. Cypress continues to move fairly well, prices remaining about the same as in the past thirty days. Many dealers here are now taking vacations in expectation of having much better business this fall, when trade opens up about the first of September.

CHARLOTTE

The past two weeks has witnessed decided improvement in the hardwood situation in North Carolina, as well as other sections of the South. This is, in part, accounted for by the general revival of other lines of industry. Gum, poplar, oak, ash and other varieties of lumber are bringing better prices. On some grades of tim-

ber the advance in prices during the past thirty days has been anywhere from \$1 to \$3 per thousand feet. The splendid crop outlook, and the bright prospect for commercial and manufacturing business, have had the effect of inspiring general confidence.

There is a decided picking up in building activities. New enterprises have started up in various parts of this state, and a large number of old concerns are greatly enlarging their facilities.

Present lumbermen interviewed express the belief that this fall and winter, and especially the coming spring, will witness one of the most active periods in the history of the industry in this state. There is not such an accumulation of stocks as was the case some months ago. Inquiries and orders are pouring in more freely and, on the whole, the lumber business is greatly improved.

The furniture manufacturers of this state report for July the best business they have had this year; equally encouraging reports come from other lines. It is the consensus of opinion that the improvement shown during the past few weeks is of a permanent nature, and hardwood lumbermen of the Carolinas are making preparations for a busy winter.

LOUISVILLE

Louisville, the second largest producing hardwood market, shows quite an improvement as to increased number of orders and volume of money received for business done during the month of July. Some manufacturers report almost as much business in July this year as during the same month of 1907, which, of course, indicates that the local condition has improved. Other manufacturers report that June exceeded May in volume of business, and July evidenced a greater number of orders since the thunder cloud came up in October last.

Louisville is particularly well adapted to take orders. Some manufacturers report that stocks comprise hardwoods in all thicknesses, of regular lengths, and with its sawmill facilities it is in a position to cater to specialties in hardwood, and is a splendid stock depot for manufacturers using hardwood lumber. With the rail facilities in and out of Louisville no consumer of hardwoods can afford to neglect visiting Louisville when in need of anything from mahogany to gum, including all kinds of oak, both quartered and plain, and mahogany veneers and panels. A look-in at any of the yards indicates that the hardwood lumbermen of Louisville believe in the future and that their stocks will be dry and in condition to ship at any time.

One manufacturer, in talking of future business, said: "If my bank account was large enough I would buy all the white oak I could find, for I believe it is good property. It will be worth more every day from now on."

Everything is not rosy, however, at the Gateway to the South. Some hardwood men report business quiet, although they are not discouraged, as they have had increased business every month during the year, not as compared to the abnormal conditions of last year, but when considered with normal conditions of former years.

MINNEAPOLIS

There is a stronger feeling among the wholesale dealers of the Twin Cities, due to a resumption of buying operations by some of the larger consumers, who have been practically out of the market for some months. Some of the railroads are getting into the game, buying car material and also ties and timbers. The movement of oak is better all along, including planks and flooring, and some fair sized orders have been placed for factory stock. An advance in oak prices has been secured here, amounting to \$1 to \$2 a thousand. Birch is the most plentiful article in northern hardwood. Stocks of it

are lighter than last year, but owing to the small demand, prices have not been stiff, and are still rather weak. The fall trade is expected to reduce birch supplies to a low point, and large concerns having capital to put into it are loading up with stock, expecting to realize on an advance. Basswood is selling well for the volume in sight, which is small, and prices are stronger than ever, being as high as at any time in the history of the business here. Other northern woods are about out of the market, and northern oak is a hard thing to find, outside of one or two stocks.

Factory buyers are still working on a hand-to-mouth principle, but their plants are running about as usual and their needs will mean a good hardwood trade. Sash and door factories are taking an increasing amount of oak and birch, and have all the special work in hardwood that they can handle in the limited time allowed.

ASHLAND

The manufacturers in this vicinity report a general improvement in business, and an increase in both inquiries and orders received. For the past few months there have been many inquiries that proved to be not for stock wanted but simply for investigating the conditions, prices, etc. This, of course, makes it difficult to gauge business, but a sure indication is the orders that are being received by manufacturers of this vicinity.

High-grade poplar, quartered oak and basswood are mostly sought now, with prices firm. There is also quite an increase in the bills for plain oak and chestnut lumber. It has been reported that one manufacturer of this city received a large order for low-grade poplar. It is the general opinion now that prices are rock bottom, and consumers wanting to supply their needs must do so quickly, or pay advanced prices. Manufacturers of this vicinity are much encouraged over the present outlook, and are confident that it will be only a few weeks before conditions will be very satisfactory.

NORFOLK

The condition of the hardwood market in this city shows some signs of improvement, insofar as regards the foreign demands. The percentage of shipments made on consignment seems to have grown less, and although the recapitulation of exportations for the month of July is not yet available it will, undoubtedly, show that this disastrous trading was reduced in throughout that month. Prices with manufacturers and wholesalers in this section seem to be holding even with the tide, and if there is anything to be said regarding the scale it might be stated that it exhibits signs of strengthening. The demand from the consumers in Bremen, Hamburg, Rotterdam and Liverpool calling for hardwoods, while, as stated, showing signs of improvement, as contrasted with the past few weeks, also predicates a healthy fall business at more profitable prices.

Some of the dealers here state that domestic business has not been as dull as they had expected, and the number of those reporting improved conditions in their own operations is sufficiently large to warrant the above being a fair commentary. Cypress and cedar shingles are experiencing a strong domestic demand. On the local market values are off, but the demand for most of the hardwoods is fairly active.

TOLEDO

Like every other line of business the hardwood trade has suffered during the financial stringency of the past few months and has not yet wholly recovered. Building has picked up wonderfully in the past few weeks, the class of structures being of a higher class than those of the past few months. In the past week or

two there has been a marked improvement in hardwoods, especially flooring. The demand for quartered oak has been improving steadily. In the effort to adjust prices on oak last year, oak went up to such a height that very little quartered oak was put out, the mills finding it more profitable to saw plain. This year prices have been equalized and quartered oak is again strong.

Birch is fairly strong. Cherry is rarely called for, and ash and yew can now be bought at quite low figures. Cedar is fairly strong and considerable quantities are being used in the manufacture of pails, tree tubs, churns and the like. Ash, which showed some inflation last season, is again down to its normal price.

Local dealers in hardwoods are in fair shape so far as stocks are concerned. Dealers seem optimistic as to the future, predicting a good business for the end of the season.

LIVERPOOL

The turn of the half year has brought brighter prospects and, contrary to general expectations, the trade of this part seems to be fast resuming its proper course. There is no doubt that trade is still far from good, but the volume is distinctly stronger and, now that a turn for the better has come, we hope for its continuance. The lower import during the first fortnight in July has helped things considerably and, no doubt, the next few months will see higher prices all around. Shippers are strongly advised not to think of raising their quotations, as this would be very harmful. Oak planks of all kinds are held in large quantities and are selling at very low prices, but boards are not finding quite such a low level. Hickory logs of good quality are badly wanted, and the stock of prime whitewood is also low. There is plenty of inferior wood knocking around, which will only bring very low prices. The mahogany sales are scheduled to be held soon, and in view of the better conditions ruling, the wood should bring much higher values. Much wood was sold at extremely low figures at last sale, and it is thought that it will be a long time before so many bargains are again secured. Canary whitewood logs and lumber should not be shipped. Ash planks and logs are weak, but 3-inch and up 1s and 2s and large logs of good, hard, white quality should bring good prices. The smaller second growth wood and lower grade boards and planks are almost unsalable at any price.

1,000 ft. 5"x12"—10' to 16', 1sts and 2nds.
1,000 ft. 6"x12"—10' to 16', 1sts and 2nds.
5,000 ft. 10"x10"—10' to 16', 1sts and 2nds.
S. D. SMITH, Fort Wayne, Ind.

WANTED—HARDWOOD LOGS.

200,000 ft. 28" and up White Oak logs.
200,000 ft. 12" and up Walnut logs.
50,000 ft. 12" and up Cherry logs.
C. L. WILLEY, 1235 S. Robey St., Chicago.

OAK WANTED.

3 and 4 inch White Oak; also Mixed Oak; also 12x12 Timbers and Piling of all kinds.
CONTINENTAL LUMBER CO.
1213 Monadnock Bldg., Chicago, Ill.

LUMBER FOR SALE

FOR SALE.

2,000,000 feet dry gum.
5,000,000 feet dry 1" white oak No. 2 and No. 3 common.
1,000,000 feet 2" white oak common bridge plank, also timbers.
Write for prices.

BLUFF CITY LUMBER CO.,
Pine Bluff, Ark.

WANTED—ORDER FOR

Cottonwood box boards and first and second, also gum and common and better hickory fitches suitable for bending purposes.

Address BOX 92, McDonoughville, La.

WALNUT AND HARDWOOD LUMBER.

Crating lumber a specialty. Also walnut gun stocks.

E. H. FALL, Port Clinton, O.

FOR SALE.

Oak and Cypress, common and better. Cut of modern hand mill (steam skidders and loaders). Mostly White Oak—fine quality. Prices to suit present conditions. Address "OAK AND CYPRESS CUT," care HARDWOOD RECORD.

MACHINERY FOR SALE.

FOR SALE.

One three saw Stearns gang edger.
One two-saw trimmer.
One Mittle & Merrill box.
One 60-h-p. high speed automatic engine, 17"x12".
One Boening jointer for veneers and thin lumber.
One hand tapping machine.
One 30" Capital clipper.
One Prescott steam feed 80"x30".
One sink cut-off saw.
One 12-h-p. Story hoisting engine, 6 1/2 x 8 double cylinder and double friction drum.
For prices and particulars write "PHILADELPHIA VENEER & LUMBER COMPANY, Drawer 13, Knoxville, Tenn.

BUSINESS OPPORTUNITIES

FOR SALE.

An interest in a sawmill with plenty of timber back of it, cutting 25,000 feet daily, \$10,000 invested by practical man to operate the proposition; will mean a good, profitable deal. Mill will be sold outright or part interest by well-known hardwood concern. Address "Box 89," care HARDWOOD RECORD.

WOOD WORKING PLANT FOR SALE.

A capitalist having varied interests wishes to dispose of large, completely equipped, now running woodworking plant, hitherto making caskets, wardrobes, office desks, etc. Located adjacent largest city in Virginia. An excellent opportunity for a practical man who can devote his entire time. Satisfactory terms. JULES FEHR, 1123 Broadway, New York City.

CIRCULAR MILL FOR SALE

At Greenslade, Ind.; 70,000 feet capacity. Approximate cost, \$5,000. Will take \$1,200, but if desirable note. Good machinery in good order. Would sell the 60-h-p. engine and boiler separately. Address

BEN LUKENS, Carmel, Ind.

BAND MILL OUTFIT

For Sale, consisting of J Fay & Egan 6 ft. mill, with 3 block carriage, Knight dogs, Friction nigger, oscillating twin engine feed, 3 saw Tower edger, 2 saw trimmers and 1 swing shab saw. Filing room complete with B. T. & B. machinery. Three 25 horse power boilers, one 18 and one 20 horse power engine. All necessary shafting, belting, etc. Mill is in good condition, making an average cut of 20 M ft. per day of 10 hours on Oak and Poplar. KENTUCKY LUMBER CO., Cincinnati, O.

MISCELLANEOUS

FACTS FROM PRACTICAL MEN.

The HARDWOOD RECORD is always in the market for articles on any and every feature of the hardwood industry. It wants practical statements of fact from practical men who know how certain things can be done in the best way. Literary quality not essential. Liberal pay for acceptable articles. Address

Editor HARDWOOD RECORD.

BANKRUPT SALE.

In the District Court of the United States, for the Western District of Kentucky.

In matter of HOPKINSVILLE LUMBER COMPANY, bankrupt.—In bankruptcy.

Owensboro Division.

In pursuance of an order of sale entered by the trustee filed on September 1, 1908, at 10 o'clock a. m., at the plant recently conducted by the Hopkinsville Lumber Company, near the city of Hopkinsville, Ky., on a credit of six months, at public auction to the highest bidder, the plant and all the machinery contained therein, including real estate, consisting of about twelve acres of land. The purchaser or purchasers will be required to give bond with good security or pay cash.

This is a splendid opportunity for parties desiring to mill and planing and carry on a lumber business and contractor's business.

Hopkinsville is situated in one of the richest parts of Kentucky, and is an excellent location for a business of this sort. The plant is thoroughly equipped with good machinery.

For further particulars apply to PLANTERS' BANK & TRUST COMPANY, or HUNTER WOOD & SON, Hopkinsville, Ky.

RAILWAY EQUIPMENT

LOCOMOTIVES FOR SALE.

When you have to Shut Down Your Mill

TO WAIT FOR STEAM TO RISE, YOUR MEN LOAF AND YOUR MACHINES ARE IDLE. PRODUCTION CEASES, BUT

YOUR EXPENSES GO ON!

The Celebrated **Gordon Hollow Blast Grate**

WILL KEEP STEAM BLOWING OFF!

We have on file 500 TESTIMONIALS, of which the following are samples, the numerals refering to the numbers the letters bear in our booklet, where the names and addresses are also given:

"We were using ordinary grates. Found it impossible to keep steam. Put in your grate. Could then burn sawdust and green slabs, using one less furnace, and keep steam 'popping oil.'"—19.

"I can make one-half more steam with your grates than before."—159.

"We have been able to dispense with the use of one of our boilers since putting the grate in."—205.

"They seem to add one-third to our boiler capacity."—207.

"We make all the steam we require with two boilers with sawdust etc., that formerly required three boilers and all our slab wood, etc."—221

Let us ship you an outfit ON APPROVAL, subject to thirty days' exhaustive test. WE WILL PAY THE FREIGHT BOTH WAYS in the event of rejection.

Gordon Hollow Blast Grate Co.

GREENVILLE, MICH.

Manufacturers of the GORDON HOLLOW BLAST GRATE and the famous "TOWER" line of EDGERS and TRIMMERS.

WHO BUYS HARDWOODS?

Do You Want the List?

The Hardwood Record supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of consumers of those materials throughout the United States and Canada.

Specifically, the items of the bulletins recite:

Name of state and town
Name of concern
Name of buyer
Line manufactured

Kinds, grades and thicknesses of Lumber
Kinds and sizes of dimension stock
Kinds and thicknesses of veneers
Kinds, thicknesses and sizes of panels.

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber not used are removed, and the cards are filed in alphabetical order between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete roster of the hardwood requirements of all users, and is an invaluable adjunct to the sales department of every manufacturer and jobber.

This service is free to all advertisers, save the patent index cards which show at a glance the kinds of lumber used by each concern, and which are sold at \$3.50 a thousand, the state guide cards costing 75 cts. a set.

Write us about this service.

Having trouble with Band Saws?

A 64-page illustrated book FREE

If you are a user of a Band Resaw, Rip Saw or Pony Band Mill, you probably have had some trouble in keeping both saw blades and machines in good working condition—most users have had.

The illustration on this page shows a reduced reproduction of two pages taken from a 64-page book we have just issued, a large section of which is devoted to an illustrated treatise on "Fitting and Operating." It may contain a suggestion which will help you overcome your difficulty.

It is a more comprehensive work on the subject than you can buy at any price, but if you are a user of a Band Resaw, Rip Saw or Pony Band Mill, or if you are interested in any of these machines, we will gladly send you a copy FREE.

In addition to this large book, we have also issued a *pocket edition* of the section on "Fitting and Operating" for the convenience of the filer and machine operator. This will also be sent postpaid. Write for one of the books—*to-day*.

THE BERLIN MACHINE WORKS, BELOIT, WIS.

BRANCH OFFICES: New York, Chicago, Boston, New Orleans, San Francisco, Seattle, Spokane, Columbia, S. C.

It's Easy ATKINS SILVER STEEL SAWS

TOM J. RICKELL

Segment ground—thinnest at center of back. Of even gauge along the tooth edge, but gradually tapering to the center of the back. They run free and easy. Atkins Segment Ground Cross-cut Saws will

Cut 25% More Timber

than any other, because they have plenty of *clearance* and require but little set which makes them run fast and easy. By using Atkins inexpensive Saw Tools, Atkins Cross-cut Saws may be easily adjusted so as to do the most work.

Made of SILVER STEEL, they hold their edge. The most economical Saw and undoubtedly the best for you to buy. In use generally where the finest saws are appreciated.

Most jobbers carry our Saws in stock for immediate delivery or they may be ordered through us at Indianapolis or any of our branches. We have interesting booklets on this subject which we should be pleased to send you.

No. 217 Continuous Feed Glue Jointer

After long and costly experiment, we have produced a continuous feed glue jointer that has proven a wonder in furniture factories and other establishments working in hardwoods, because of its excellent work, ease and quickness of adjustment, rapid feed and large capacity. It has many exclusive features that place it far in advance of any other continuous feed machine on the market.

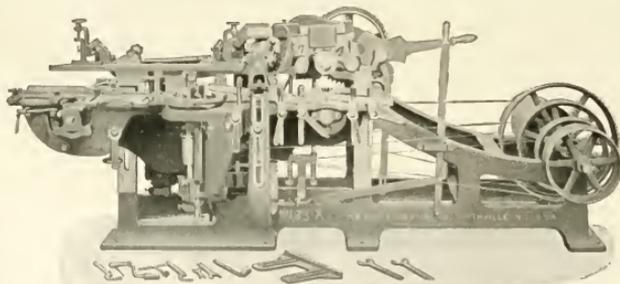

FEATURES: Frame is cast in one piece—absolutely rigid. The entire mechanism is completely enclosed. All bearings are oiled from the outside without stopping the machine. Feed consists of a traveling chain composed of detachable links which oils itself automatically. A Gib is provided running full length of the chain—not part way only—insuring perfect alignment. Cutter heads are located in center of the machine lengthwise, one on either side. This machine is carefully tested before shipping, and is guaranteed to produce a perfectly fitting joint. Write for descriptive circular.

**SMITH of
SMITHVILLE**

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding sticker of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular

McGIFFERT and DECKER patent Steam Logging Machinery,
DULUTH, MINN., U. S. A.

THE GREATEST VARIETY OF WORK IS PROVIDED FOR IN THE

**No. 107
Combined
Moulder,
Planer &
Matcher**

Here combined in a single machine are the advantages of the individual Moulder, Planer and Matcher; here is a machine which because of its unusual weight, its efficient hold downs, its suitable platens and adjustments does the work for which two different machines are frequently required.

It is full of new features and Distinctive Characteristics such as

VERTICAL ADJUSTMENT of side spindles from above the frame while running.

QUICK ADJUSTMENT of all bottom bars for more or less opening as may be desired.

PARALLEL ADJUSTMENT of top pressure arms, simultaneously.

INDEPENDENT ADJUSTMENT of either end.

SEPARATE ADJUSTMENT for the pressure shoes.

PARALLEL HOIST for bottom cutter head from working side, and independent adjustment of either end from the same point.

HINGED END TABLE which may be quickly swung down without disturbing the guides, and may also be vertically adjusted.

FEED operated by friction clutch controlled from either end of machine.

Published Semi-annually in January and July

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States and Manitoba.

The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

MILLS AND YARDS IN TENNESSEE

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

WRITE US ABOUT IT

Michigan Trees and Mitchells Products

Under this title we have made a booklet to show by illustrations the principal varieties of trees in our forests, to describe the character and uses of the different woods, and to explain our products and the form in which they are offered to the trade. We want to send you a free copy of the book and also our dry stock list of Michigan hardwoods.

Please Write Us

Advertising copy must be received five days in advance of publication date. Advertising rates on application.

General Market Conditions.

There is a manifest unanimity in the nearly fifty reports from HARDWOOD RECORD market reporters located in practically every hardwood trade center of the United States received for this issue. They all say that improved conditions prevail, that inquiries are numerous, and actual trading is fast bringing the hardwood business back to normal conditions. It has been the most active fortnight in hardwood sales and purchases that has been witnessed for nearly a year.

The volume of business, which manifestly will increase as the season advances, is not confined to the good end of standard hardwoods, but there is a large movement of both common and cull lumber. Box and shook manufacturers are taking on large quantities of stock, not in anticipation of orders to be received, but for orders actually in hand. Some manufacturers are reporting that their sales are up to their full capacity to make shipments. Quarter-sawed oak and poplar are still the leaders in activity, but plain oak is a good second. The movement of all southern woods is fair to good. Business in maple, birch and basswood is stronger than it has been for many months, and with the comparatively short stocks of these varieties in first hands, shipments will soon be up to green lumber.

Trading in mahogany and other foreign woods, and in cherry and walnut, is showing a marked increase, indicative of the demands of the high-class furniture trade. Most of the furniture factories have now started up on full time and they are showing very little accumulation of stock in their warehouses. There is every reason to believe that there will be a good demand from this source all through the remainder of the year. Manufacturers of hardwood doors and interior finish are generally busy, as there is a large amount of building going on in the Middle West, notably so in Chicago.

Investors are apparently taking advantage of a low range of values and are putting their money into permanent improvements on vacant real estate. There is still a wide disparity in values from different producing sections. In some cases there is an almost unbelievable

variation in asking prices, but it is believed that the market will settle down to an even scale before very long.

Both oak and maple flooring factories are reasonably busy and most of them are running on full time. The specifications for hardwood flooring seem to be increasing month by month, and of necessity the call for softwood floors must be lessening.

The veneer and panel people have had a renaissance of good orders during the last month, and additional machines are being started up to supply the demand. These people are very much encouraged over the outlook and look for the year to close strong.

The handle trade is still a good deal demoralized. The smaller manufacturers, and some of the larger ones, are apparently out for business regardless of profit. The situation is not at all alluring for this line of trade, and will not be until manufacturers are content to let the demand catch up with the supply and ask a living price for their goods.

With the increasing volume of lumber trade and the general shortage and broken condition of stocks, it is safe to prophesy that the hardwood market will achieve added strength as the months go by, and that the year will close with very firm values.

Wood Preservation Progress in Favor.

Processes of timber preservation have entirely altered the face of many problems in the lumber industry. When this idea was first introduced into the United States, manufacturers were naturally loath to take the matter up in its experimental stage, even though if properly handled, it gave promise of decreasing the cost of labor and of supplies to the consumer, by enabling him to greatly prolong the life of the stock purchased; moreover, the process promised assistance to enthusiasts on the forestry question, inasmuch as it would tend to lessen the demand upon timber products to a considerable extent if once perfected and popularized.

Today, however, this experimental stage has been passed, and wood preservation treatments are now carried on successfully and at the same time kept within the bounds of economy. Repeated experiments and investigations on the part of government experts and others have determined to a nicety the particular kinds of treatment adaptable to the various species of wood; the variations necessary when the wood is to be put to certain specified uses; and, above all, time enough has elapsed since these investigations were put under way to determine definitely the percentage of gain in durability possessed by woods thus treated and tried out for a given number of years, as compared with others of the same character tested under like conditions, but without previous preparation.

Several worthy results have become apparent since this process of wood preservation has become a matter of practical rather than conjectural usefulness. A new and constantly widening market has been created for many varieties of timber not formerly considered commercial factors; certain large consumers are gradually breaking away from their prejudice and determination not to purchase or even consider any except the few well-known timbers which long usage and tradition have set aside as the only available ones for their purposes—with the result that lesser-known, cheaper and more easily obtainable woods are being substituted; and not only are results as good, but in many cases they are better. However, the one great desideratum which buyers of all commodities constantly seek—the lessening of annual outlay, is attained; and once these

telling points, particularly the last, are proved to a consumer, he is, of course, won over.

Thus the wood preservation scheme struggled along for some years without any great apparent results, but now that time has proved the soundness of the theory, the practice is rapidly growing in favor, plants are being installed and followers gained continually.

The Hoo-Hoo Annual.

During the second week of September local Hoo-Hoo and Chicago lumbermen generally will join hands in entertaining the annual gathering of the order of the Great Black Cat. The details of the entertainment and the program are recounted in another part of this issue of the RECORD. It goes without saying that Chicago will do its best to give the lumbermen's pet order the best time it ever had at any of its annual functions.

There is going to be entertainment galore, not only for the members themselves, but for their wives, daughters and sweethearts, and if everybody does not have a good time it will not be the fault of the committee of arrangements, which has spent a great deal of time and money in plans for the

Lumber Failures.

Optimists had hoped that the series of lumber failures which has overtaken the trade during the period of "panic" were at an end, but unfortunately during the last fortnight quite a number of hardwood lumber concerns, notably in the jobbing element, have been forced to the wall, and there are serious rumors about some others being in hard straits.

A series of failures has overtaken not only the lumber trade, but corollary lines, such as the furniture, wagon and other trades. The North Carolina element of the furniture trade has been hit hard for some weeks. It has now grown to be a question if more failures are not going to follow. The period of non-trading and liquidation that has prevailed for some months has exhausted the resources of a good many of the smaller concerns, and with the renewal of business they have no money with which to do business.

The banks are scrutinizing woodworking and lumber paper very closely, especially in the East, and they are not nearly so generous with their loans and discounts as they have been in the past. This is especially true with regard to concerns that have not been able to clean up their entire bank indebtedness during the last few months, but have been renewing their obligations. Many banks are insisting that their patrons shall "show their hands" before increasing their loans.

This situation is the only menace in sight to increased activity in the lumber trade, but it will probably act as a restriction to extreme activity in that line for some little time to come.

Selling Lumber by Mail.

Selling lumber by mail is a logical and businesslike proposition. Transactions made in this way have distinct advantages. Primarily the contract of sale is in written form, and no argument can arise covering what a traveling man verbally represented when the spe-

cific grade is set forth on the order blank and all discussion is recorded in black and white.

Again, the system presents marked economy. Analysis will show that a lumber salesman receiving from \$1,500 to \$1,800 per annum, with expense account attached, will cost the manufacturer or jobber approximately \$2 for every call he makes for the purpose of selling lumber. A like sum will cover the expense attached to the sending out of sales letters to forty prospective customers. Therefore, if the letter is a good one, a correspondence salesman has a forty-to-one chance against the man who does business by personal visits, at the same outlay. There is nothing in the system of selling lumber by mail which is deprecatory to the work of traveling salesmen. They are an absolute necessity to the trade, but their business can be amplified and materially assisted by the skill of a capital office salesman.

Selling lumber by mail is still in its infancy, but with the analysis of annual requirements by kinds, grades and thicknesses that is now obtainable through the HARDWOOD RECORD bulletin service, it is a feasible, practical, economical business proposition and today a great many leading manufacturers and jobbers are reducing their traveling sales force and spending a good deal of money in letter-writing and postage, to their manifest advantage.

Pariahs of the Forest.

In the wonderful evolution that has overtaken the lumber industry it is remarkable to note how the pariahs of the forest are coming into their own, and are being recognized as available commodities for the making of lumber. It is within the memory of men of fifty that Norway pine, now well-nigh extinct, was looked at askance by the average user of lumber. Red gum, now a widely distributed and generally used hardwood, only a few years ago was passed by by cruisers as being entirely unworthy of estimating. Tupelo ten years ago was an unknown lumber commodity and now it is being manufactured and utilized by the millions of feet. Beech, only a short time ago regarded as an undesirable wood even for fuel, has now grown to be one of the standard hardwoods of the North. Within twenty years millions of feet of hemlock timber have been slaughtered for bark alone, and left to burn in the slashings, being regarded as worthless for lumber purposes. Today hemlock sells almost on a par with yellow pine values. Even that veritable outcast of the forest, balsam of Gilead of the North, has been made into lumber for the past two years and commands a price that shows a stumpage value of from three to five dollars a thousand feet.

The extravagant and wasteful American lumbermen are fast learning that every tree that grows out of the ground has a commercial value, and when they get around to the practice of conservative lumbering and of utilizing woods "waste" they will have learned the first lesson in husbanding their forest inheritance. Great Britain, the Continental countries, and even Russia have long since learned to economize their timber wealth.

GRINDING AN AXE AT CAMP

(See Supplement Illustrating Woods Operations.)

One detail of the work at every lumber camp is keeping the axes sharpened and the cross-cut saws filed. Alongside of every camp shanty is the familiar grindstone, and many an hour is spent by the choppers in keeping their axes at a proper "edge" for the day's work. Nearby is usually a crude little shack with a primitive saw bench erected at one side, where the jellers and cross-cutters are as frequently seen filing their saws. In fact the old grindstone is one of the hardest-worked machines employed in all woods operations.

The illustration accompanying this number of the HARDWOOD RECORD is typical of the daily scenes at lumber camps. The photograph from which the original drawing was made was taken on the property of the Cummer-Diggins Company, near Cadillac, Mich., and the veteran woodsmen at the grindstone are a couple "old-timers" who have been in its employ for many years.

The drawing is the work of the RECORD artist, Tom J. Nicholl, and is not only characteristic of the Michigan woods, but is extremely true to life. It has been preceded by three others, showing two choppers cutting the "kerf," two lumber jacks cross-cutting, and a huge log being skidded from the woods to the railroad. The series will be followed by others equally typical of lumber operations from the forest to the sawmill.

GRINDING AN AXE AT CAMP

Pert, Pertinent and Impertinent.

A Reasonable Longing.

Oh! I long for the day when we'll have, well perfected,

A flying-machine that will curvet and soar
That a chap may climb into when worn or dejected,

When he feels the old earth is a troublesome bore

Which he fain would escape from; sans guide-books and maps, he'll

To some favored spot all reposeful repair.

Oh! How gladly I'll welcome that day; for, perhaps, we'll

Be able to visit our castles in-air!
Roy Farrell Greene.

Saved from the Train.

Bud Applegate's hog got loose one day.

And wandered on the railroad track.

While Bud was hunting all around,

A-thinking for to bring him back.

The hog he went a-snootin' round,

Although he should have better knew:

For there he was on the railroad track.

With the fast express train just about due.

And all of a sudden there she come,

And the whistle gave an awful yell;

But the hog just kept a-rootin' aroun',

And heeded not his funeral knell.

Bud Applegate was a-runnin' up,

An' I'm telling you no lie;

He says I'll save that dad-burned hog.

By Heck, if we both must die.

Bud hit the hog with his big club,

An' made him squeal and prance;

An' then as the train a-nearer came,

Bud kicked him in the pants.

The hog went scootin' off the track,

But I will have to state

That when that train did come along

'Twas the last of Applegate.

They picked him up in baskets

An' buried him hit by bit;

An' though this happened a month ago,

The funeral's lastin' yet.

Broke Even.

"How much did your vacation cost you?"

"Figure it out—I spent \$60 and gained twelve pounds!"

Nit!

Because a cat is not fond of water it should not be inferred that the black cat order of Hoo-Hoo is a prohibition organization.

Make It Easy as Possible.

"Will you be true to me while I'm gone?"

"Of course, but don't be gone long, will you dear?"

Same Thing.

A man who sits around and waits for an easy job would be a huge grafter if he had the opportunity.

If It Works.

The only successful combination of business and pleasure—the sugar-coated pill!

To Be Thrifty.

Friendship like a farm, needs constant cultivation.

As She Sees It.

When a man argues with a woman it seems that he doesn't know what he is talking about—from her point of view.

The Worm Turns.

She buys a gown

The best in town,

Expende three hundred dollars,

While he, the worm,

Can only squirm,

And turns his cuffs and collars.

—Hoo-Hoo Balletin.

Easy.

"I'm gunning for railroads," said the trust-buster.

"Then come with me," whispered the near humorist.

"I can show you some of their tracks." Kansas City Journal.

Could Eat, But Couldn't See.

A Parable.

All day within the canyery

The Brown twins sit on chairs,

And every now and then

To watch that pair pare ears.

In the drinking well

Which the plumber built her

Aunt Eliza fell;

We must buy a filter.

Helpful.

When the whole blamed world seems gone to pot,

And business is on the lam,

A two-cent grin and a lifted chin

Helps some, as he helps some.—Selected.

A Helpmeet.

A writer of verse tore his hair with a curse.

For never a word rhymed with mouth;

But his hisping wife said, very tactlessly, "Fred,

You're a dunth; I could find one at worth."

Ubiquitous.

Under the spreading lemon tree.

The village knocker stands;

And unto all who come that way.

The fruit thereof is wrote.

Was It Pope or Shakespeare wrote "The Sermon on the Mount"?

—J. W. Foley.

Conservative Forestry.

Picture from Judge.

"I always has ter shudder when going throo dese woods!"

"What fer?"

"I'm afraid dese trees is too poor fer lumber, den tink uv all de wood here dats got ter be sawed and split!"

Hoo-Hoo.

Shakespeare mentions

"a harmless, necessary

cat." It's not to be

supposed the bard

referred to Hoo-Hoo, but

it's yet to be determined

that Hoo-Hoo is either

harmless or necessary.

Slanderous.

"Bitter says he isn't

going to drink a drop

while his wife is

away!"

"That's queer, isn't

it?"

"Well, you know it

doesn't agree with him

anyhow, and that's the

time he needs it least."

A Worthy Substitute.

If Hoo-Hoo does not

conclude to plant trees

on Arbor Day, it might

compromise by planting

Anheuser-Busches.

An Innovation.

officiating at his first

funeral wished to give

friends an opportunity

to view the remains,

and not liking the use

of hackneyed phrases

announced: "The con-

gregation will now

pass 'round the hier!"

And Not Criticized.

There would be less

trouble in this world

if people were only per-

mitted to be happy in

their own way.

AMERICAN FOREST TREES.

SEVENTY-SEVENTH PAPER.

Balm of Gilead.

Populus balsamifera—Linn.

The balm of Gilead is a name sometimes applied not only to the tree with which this sketch deals, but to one of the firs—the *Abies balsamea*. However, the two need not be confused, inasmuch as the latter is one of the conifers—our well-known Christmas tree in fact, while the true balm of Gilead is a member of a great family comprising the poplars and willows, and is closely allied to the former, as its botanical name indicates.

The tree is known as balsam in New Hampshire, New York, Wisconsin, Michigan, Minnesota, Nebraska, Montana, Ohio and Ontario; as cottonwood in Idaho; as poplar in Wisconsin and Minnesota; as balsam poplar in New Hampshire, Vermont, Nebraska and Minnesota; as *tacamahac* in Minnesota; as *baumier* in Quebec; as rough-barked poplar in the Hudson bay district; the name Gilead, which is its most common and should be its only designation, is applied to it in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Michigan, Nebraska, Minnesota, North Dakota and Ontario.

In the northeastern parts of Canada and this country one variety of the balm of Gilead is often cultivated as a shade-tree, and from these artificial plantings seedlings have sprung up and spread, until the tree has become to some extent spontaneous. It is somewhat different from the common form, however, in that it has wider spreading branches, and forms a broader head, with larger, coarser, gland-tipped teeth, extremely sticky and pubescent.

The balm of Gilead grows in low river-bottoms and on the borders of swamps, often on land that is inundated. Its range is from Labrador and along the Mackenzie river westward to the Alaskan coast; south into northern Montana, Idaho, Oregon, Nevada and Dakota, and eastward through central Michigan and Minnesota into New York and the New England states. It seems to be the dominant species along streams tributary to the Mackenzie and through the prairie country of British Columbia, in fact reaching its greatest development—a height of a hundred feet or more, and diameter of six or seven feet—in the valleys of the Mackenzie and Yukon rivers. It is the largest tree of

northwestern America, and towards the Arctic regions the most conspicuous type of vegetation.

Balm of Gilead may at once be recognized by its odorous, resinous leaf buds, which are particularly fragrant in the early springtime.

Says Rogers in *The Tree Book*: "The fragrant wax that saturates the winter

imagine. The buds freeze solid, but it does them no harm. They are adapted to it. In the far North the Indian uses the balsam of balm of Gilead trees to seal up the seams of his birch-bark canoe, and of dishes and other utensils made of the same material."

The leaves of the tree are sturdy-looking and of a light-olive shade, heart-shaped and sharply serrate. Their stems are slightly pubescent, and about an inch long. The flowers appear before the leaves, in March—the pistils becoming four to five inches long before their fruit ripens; they are green in color, as are also the stamens; they have large red anthers. The fruit is a small oblong seed, pointed at the apex.

The bark of balm of Gilead is light brown tinged with red, rough and becoming broken into broad, deep plates on old trees.

Balm of Gilead is an excellent tree to plant for shade or ornament, and as a shelter belt. It is hardy, compact and erect, and of even, clean growth. It is easily transplanted and a quick grower; moreover it is a handsome species, but has the one fault of becoming decrepit and somewhat unsightly early in life, though possibly not so soon as the Carolina poplar, nearly all of whose good traits it possesses. The tree was planted on the borders of the famous lagoon at the World's Fair in Chicago, and its rich foliage and shape gave just the shade and appearance desired.

The heart wood is light brown, the sapwood nearly white and very thick. A cubic foot weighs about 26 pounds when dry. The timber is easily worked, but is suitable only for inferior grades of work, such as the manufacture of boxes, pails, excelsior, etc.

In all the range of growth of balm of Gilead it has been manufactured into lumber to no considerable extent save during the last year or two, and is now produced chiefly in the northeastern portion of the lower peninsula of Michigan, in the northern peninsula, and in northern Wisconsin. Altogether this product will probably not aggregate from twelve to fifteen million feet during the year 1908. Thus far it has been sold almost exclusively to box-makers, by whom the lumber is used as a substitute for poplar in making small packages. The average

MATURE FOREST GROWTH BALM OF GILEAD.

buds and coats the young leaves in spring gives this tree its name. The bees find it as soon as the sap stirs and the wax softens. Quantities of it are collected and stored in hives against a rainy day; for this is what bees use to seal up weather cracks in their hives. It is known to bee keepers as propolis. The service this wax renders the tree is to prevent the loss of water from the buds, and not 'to keep the buds from freezing,' as some people fondly

manufacturer of northern hardwoods gets but a small quantity of balm of Gilead logs, and many do not even pile the wood sepa-

GROUP OF BALM OF GILEAD.

rately, but put it in with cull lumber of other varieties.

The wood is very easily affected by the atmosphere and owing to its weakness of fibre will stand very little exposure to the weather. In fact, after it is piled out of doors for two years it "dotes" to such an extent as to almost disintegrate, and becomes of practically no value. While balm of Gilead contains a fair percentage of clear lumber, averaging about twenty logs to the thousand, owing to its physical defects and paucity of stand it probably will never cut any considerable figure in the commercial woods of the world. In 1907 it brought \$16 per thousand feet. The fact that it is a very fast growing tree accounts largely for its physical defects.

The individual specimen shown in connection with this article is from a photograph made by the editor of the RECORD on the north shore of Grand Island, in Munising bay, Lake Superior. The gentleman standing beside the tree is Thomas B. Wyman of Munising, forester for the Cleveland Cliffs Iron Company. Mr. Wyman has been engaged with this great iron and timber corporation for several years, and has general charge of the company's forestry and timber operations; he is a graduate of the Schenck forestry school at Biltmore, N. C. The group of balm of Gilead trees, with a birch tree in the center, was also pictured on Grand Island, and is unusual, as the growth rarely occurs in groups, but is scattered through hardwood and cedar stands in individual specimens. The half-

tone engraving of the leaf shows all its characteristic features; it is pictured a little less than actual size.

LEAF OF BALM OF GILEAD.

The Utilization of Hardwoods.

Article X.

Chairs.

The Presidential chair is, at this time especially, a subject of general interest, and therefore of much discussion. It is not the purpose of this article to tell how the "Big Stick" might be wielded most advantageously, but rather how it might be cut up into smaller pieces and utilized. We believe, after having seen a few of the many different styles of chairs turned out by the modern manufacturers, that, for every possible use a separate type of chair is on the market today.

The manufacture of chairs is of national importance. This is due to the fact that in this line especially convict labor is employed to a surprisingly large extent. In Kentucky many of the state convicts are engaged in this work, as also those in the prisons of Detroit, Mich. Of course the very cheapest grades of chairs are made by these men, because such types do not require any great skill in manufacture.

The kinds of lumber used in the making of chairs follow closely the prevailing styles of other furniture. In the days when walnut was the principal wood used in the base and casing and in the furnishing of the house, the majority of chairs were made of this ma-

terial. Later followed cherry, birch, and then oak, although the finest chairs made during all these periods were of mahogany,

CAFE CHAIR, SADDLE SEAT.

and in fact, these still bring the highest prices. The cheaper grades of chairs for many years were made of Michigan, or soft

elm, and this wood is still largely used, but when, a few years ago, elm scored such a marked advance in price the manufacturer began substituting gum for it, and today millions of feet of gum are being consumed in the manufacture of chairs alone.

Following the modern theory that there is no such thing as waste, the chair manufacturer has opened to the sawmill man a source of revenue which formerly was entirely overlooked. This is in regard to dimension stock. Not many years ago the refuse and waste lumber of an ordinary mill was considered an irredeemable loss, being only fit for burning; today even the smallest pieces are cut into dimension stock by means of the rip and cut-off saws, and shipped direct to the chair factories. This is especially true of the mill whose output is largely oak, and in fact numerous dimension mills have lately been established at points where low-grade oak can be readily concentrated. Although if cut into ordinary boards such lumber would undoubtedly be cull, yet when only small dimension stock is required many first-class pieces are obtained. That such a system is entirely practical is shown by the fact that during the recent "hard times" the mill catering to

the dimension trade had plenty of orders and was able to keep on running when other saw-mills were forced to shut down.

Another recent source of supply for the chair manufacturer in the way of quartered oak especially has been through the many small stave and heading factories, which cut up stave "bolts," as pieces of timber in the form of quarter logs are called. In the past these "bolts," which may be seen lying in numerous piles along any railroad in an oak-producing territory, were sold to stave men almost exclusively, but now the factories which supply chair, handle, furniture and wagon stock use them to a very great extent. The method employed to cut the bolts is such that the result is almost perfect quarter-sawn oak, with more of the broad "splashy" figure showing than could be obtained from an ordinary piece of quartered lumber cut into the same dimension.

It is, perhaps, no exaggeration to say that fully 75 per cent of the lumber now purchased by chair manufacturers comes to them in the form of dimension stock, and there is little doubt but that this system will increase rather than diminish among all furniture and wood-working establishments. This is explained by the fact that in the long run it is usually cheaper to buy dimension stock, for with it the manufacturer only pays for what he uses, thus suffering no loss from down-fall or freight charges on refuse lumber and sawdust.

BENT BACK ROCKER, SADDLE SEAT.

In the manufacture of chairs every piece of lumber is thoroughly kiln-dried before it is sent into the factory. Here these pieces pass to the various machines, which turn out the separate parts. On account of the many round spindles, legs, arms and other parts of chairs, the lathe is an important factor here. Many of these lathes are automatic and require only one man to do the work that formerly could not be accomplished by twenty. The most modern machinery is also used in the mill work, and many beautiful designs are made in a single operation.

The very best chairs, however, are all hand-carved. It is true that the bulk of this work is done by machinery, but the delicate finishing touches must be made by an expert hand-carver. These men receive very good wages and are well worth what is paid them, for some of the chairs which they turn out are exquisite. An idea of what is accomplished in this line may be obtained from

As in the case of carving, however, it is customary, especially in finishing the better class chairs, to sandpaper them again by hand.

In assembling the different parts, wooden joints, fastened together by glue, are used wherever possible. This work is done by men each of whom has become adept in his particular operation so that little time is

VICE PRESIDENTIAL CHAIR IN UNITED STATES SENATE, FURNISHED BY JOHNSON CHAIR CO., CHICAGO.

the accompanying illustration of the magnificent hand-carved chair occupied by the Vice-President in the Senate at Washington.

The sandpapering process is of considerable importance. Here, again, machines do most of the work, reaching some portions of different parts which one might think were only accessible to human hands.

wasted during the process of construction. It is very interesting to watch a chair, during the period of assembling, passing from one man to the next, gaining some new part in each step, and finally assuming its completed form.

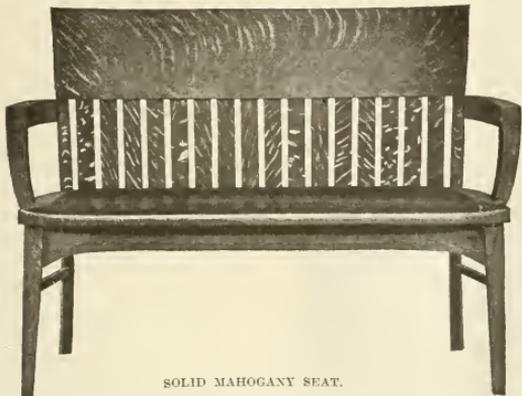

The shellacing and varnishing is less complicated than that of a table or desk. In

fact, the plain wooden chair which is not upholstered is dipped bodily into a large tank of varnish, set upon a stand to drain, and then retouched with a brush, the entire operation being performed in a remarkably short time. The number of coats of shellac or varnish which a chair receives very naturally depends upon the grade of the chair. There are various styles of finish, such as weathered, early English, or golden oak, birdseye maple or imitation mahogany, with either a polished or gloss finish. The very best chairs are made of oak, walnut or

is not only an adornment to any office, dining-room or boudoir, but is a source of genuine comfort, which is more than can be said of many other articles of furniture which rank high in regard to "show." Along this same line, though of vastly simpler workmanship, is the making of the cane seats and backs for the cheaper grades of chairs. This cane comes in the form of wide rolls, which are cut into the proper sizes and fastened by means of narrow strips of wood, which are nailed or glued to the rest of the chair.

plain or carved, depending upon whether the chair is of cheap or expensive style.

Another peculiar type is the café chair, which is pretty because of its simplicity. Besides the office chair, which is a very common type, there are billiard, carriage, hall, jury, typewriter, students' and innumerable other kinds of chairs, which, as the say-

SOLID MAHOGANY SEAT.

solid mahogany, with a polished or dull Mission finish. The latter especially is quite popular.

Another important factor in the making of a first-class chair is the upholstery. This is done by skilled laborers, who also devote their entire energies to this style of work alone. The best hair and other materials for padding are used, as well as the finest leather, which covers it all. As everyone knows, an elaborate upholstered chair with a springy seat and soft cushioned back

The dining chair, in its many different forms, is perhaps the most common type. Most of these chairs are without arms and differ from one another chiefly in the style of back and seat used. These backs are often quite elaborate and are usually cut so as to display the splashy figure in the wood. The ordinary wooden saddle-seat is used more extensively than any other kind, although the cane and leather-bottom chairs are also very popular. Arms are nearly always in the form of two pieces and are

ing goes, "Are just the same, only different."

In rockers the difference is more marked and some very unique designs are made, one of which is shown in an accompanying illustration.

For the use of the cuts illustrating this article, including that of the Vice-President's chair, the RECORD is indebted to the Johnson Chair Company, which is one of the largest chair manufacturing concerns in the country.

CLARENCE BOYLE, JR.

BEAUTIFULLY CARVED ARM CHAIR.

Of Interest to the Handle Trade.

A Tribute.

NASHVILLE, TENN., July 27.—Editor HARDWOOD RECORD: It was with no small degree of interest that I read the article on "The History of the Handle Business," by Col. C. D. Gates of Louisville, Ky., in the May 25 issue of the HARDWOOD RECORD, and having awaited patiently, action from others contributing to this history, and finding the same not forthcoming we shall "break the ice," with the hope that some of the hundreds of handle men scattered throughout the North American continent may "fall in" and give us, through the columns of the HARDWOOD RECORD, some letters on "Handle History." Quoting in part from Colonel Gates the following paragraph:

"In looking over the records of these different companies I find they had a very pleasant and consistent habit of declaring semi-annual dividends ranging from eighty per cent to one hundred per cent a year, notwithstanding that the prices which we are now receiving for handles were about the same as the prevailing prices in 1880, 1881, 1882, 1883 and 1884. All the old manufacturers retired with large fortunes. The men connected with the early manufacture of handles were men of great ability, force, dignity and power, and if they were to enter one of our association meetings every member present would readily understand why they received dividends of eighty to one hundred per cent on their business, while most of us are satisfied with a meager eight to ten per cent."

We think the paragraph does the handle men of today an unintentional injustice, as we feel confident the leaders in the handle world today could more than duplicate the work of their predecessors, notwithstanding the great abilities of those early pioneers. When we take into consideration the conditions prevailing in the earlier days of the business and compare them with the present we can readily comprehend why it was possible for one generation of handle makers to pay eighty to one hundred per cent dividends and the others eight to ten per cent. It was the writer's pleasure, as well as privilege, to know these old-time makers of handles, and no one holds their memory in higher esteem, but as we worked at handle making as a boy

under some of the most prominent old-time makers, and are still in the "push," we believe we can very readily account for the big difference in dividends paid.

Until the year 1880 we venture the assertion that seventy-five per cent of the handles manufactured came to the mill on wagons, and such a thing as shipping in by rail sawed and turned handles, as well as timber, was but little known, and as a consequence the first cost of material to the old maker of handles was twenty-five per cent less than now. Then again the prices paid per cord was considerably less, and owing to the plentitude of hickory only such stock as would make good, clean handles had to be worked, while today, with scattering timber and scarcity thereof, more timber must be worked in order to secure the same number of handles. Twenty years ago it was a common thing to find trees that would make from two to three hundred good handles, while the handle maker of today considers himself fortunate if he can do half as well.

Then again the old-time maker did not attempt the high-class workmanship to be found in the handle of today, neither was he compelled to have invested in "stocks" thousands of dollars to carry him through seasons of the year not suitable for timber working, and also keep himself in position to fill car orders with as great dispatch as his predecessor did hundred dozen lots. The first handle salesman I ever saw came into headquarters one Saturday evening, after being out for one week, and he had booked sixty-two orders during that week, ranging from two dozen to eighty dozen each, and as he seemed especially proud of the eighty-dozen order, I have always thought since it must have been a big one for the times.

In those good old days the shape and finish of handles were much easier than now, and if trade got dull with a manufacturer he shut down his plant and let his men scatter, but in this day and time the expert workman must be cared for, or else when trade revives the manufacturer cannot compete with his competitor—who keeps experienced help—in workmanship and finish of goods.

But the real expansion of handle making dates back only a few years, and as it largely concerns Colonel Gates, we take it for granted your readers will be interested in a brief sketch of the leader of the largest handle producing establishment in the United States.

Colonel Gates is quite a young man yet, and twelve years ago, when he assumed the position of manager of the Turner, Day & Woolworth Manufacturing Company, he was considered—by the knowing ones—too young a man for that important position, but his movements since have caused these knowing ones to go away back and sit down. In 1897 Colonel Gates was offered his choice of position as postmaster at Louisville or collector of internal revenue for that district through his friend, Congressman Walter Evans (now judge of the federal court), but Colonel Gates, knowing his Uncle Albert Day's health was

bad, refused to leave him and the men who had come up under him while acting as assistant to his uncle, as he realized fully that a new manager would not likely have the consideration for the men who had grown up in the business that he would. In less than six months Colonel Gates had to assume the management or let it pass into a stranger's hands, and bucking on his armor, he took hold of the business, and from that day to this has served as manager and president. When he took hold of the Turner, Day & Woolworth company it had about thirty lathes, while today it has several divisions with that number in them, and its sales are six times greater than they were in 1897.

Colonel Gates is intensely loyal to his men, and demands the same in return. How well he is appreciated by them can best be illustrated by an action taken by the workmen in the Louisville factory a few months after the panic of last October. The "order file" at

CHARLES D. GATES OF LOUISVILLE, KY.

Louisville was practically bare, and the workmen knew it, and a shutdown seemed inevitable, but Colonel Gates instructed his mill superintendent to keep the men at work and he would go out himself and get orders. The men didn't do a thing but make up a purse among themselves and buy him an elegant gold watch, chain and charm, and while they are not studded with diamonds and he has much finer, yet some of his relatives tell it on him that he takes those his men gave him and puts them under his pillow at night before retiring. The best part about the matter is that Colonel Gates got the orders and kept them at work, but to do this he slept half of the nights between December and March on Pullman cars, traveling from Canada to the Gulf and from the Atlantic to the Pacific, and to crown the result he was able to pay his stockholders on July 1, 1908, the usual semi-annual dividend and place a respectable sum in the surplus account.

In his directory he has four men that commenced at the bottom of the handle ladder,

and in his executive committee of five members he has two men, one that commenced by punching the keys of a typewriter and the other as a boy marking handles.

Should our handle brethren take hold and "tell us things" we may at some later date take our pen and jot down other items.

"OLD HICKORY."

Identifying Woods by Common Names.

CHELSEA, MASS., AUG. 3.—Editor HARDWOOD RECORD: Will you kindly inform me through your paper the difference between rock elm, gray elm, soft elm and water elm; also between bay poplar, yellow poplar, tupelo gum and red and white (sap) gum—C. B. Roberts.

This question savors of the very difficulty referred to in an editorial in the last issue, regarding the impossibility of knowing exactly what woods are referred to when only a local name is given. For instance, take the first question: Rock elm proper—if such a phrase is permissible—is the hard variety known as *Ulmus racemosa*, of Michigan and Wisconsin notably, although the same term is also applied in different localities to *Ulmus crassifolia*, *Ulmus pubescens* and *Ulmus americana*—all the well-known varieties of the family, with one exception. As to gray elm, the tree referred to is probably the *Ulmus americana* of the North. Water elm is a term sometimes applied to the same tree and also to another variety, *Ulmus alata*; according to its locality. The true water elm is *Planera aquatica*, belonging to another genus of the same family and having a wider range of growth; the tree has a nut-like fruit instead of a winged seed, and soft elm is probably applied to this tree more than to any other elm.

As to the gum varieties—bay poplar and tupelo gum are terms applied to the same tree, the *Nyssa sylvatica*, as it is known botanically. Red gum and white or sap gum refer to the red gum lumber of commerce—"sap" being a grade of that lumber, and meaning the sapwood or light, colored wood. Yellow poplar is the *Liriodendron tulipifera*. Thus it will be seen that none of the three belong to the same family, and have but a few characteristics in common.—Editor.

Wood Production in Germany.

Germany receives the credit of being the most thoroughly scientific of all nations of the world. She does with her limited resources what younger nations will soon be compelled to do in self-protection; she conserves them.

When our wood supplies, stored up from 100 to 500 years, are within sight of their end, and sawmills that have been moved from the white pine belt of the North to the yellow pine belt of the South, thence to the Pacific coast for their last stand, Germany's scientific forestry policy will receive better recognition.

We do not think of moving a prism mill about from one wheat field to another, as the fields in turn become exhausted. After one crop is harvested another is coming on. So it must be with the sawmill and the crop of trees. If it takes fifty years to raise a tree of a given species, then one-fiftieth of the forest may be cut each year, provided it reseeded or is replanted—and the sawmill stays at the same place and the workmen live in their permanent soil homes nearby. The "lumber shanty" will be a thing of the past; raising trees a business like raising wheat.

Selling Lumber By Mail.

In an editorial in this issue of the RECORD the logic of selling lumber by mail is briefly discussed. The average men engaged in the hardwood lumber business has never entered very thoroughly into a sales system by mail. That such a method is a perfectly logical one is demonstrated beyond question by the success of the great mail-order houses of the country, which sell every conceivable piece of merchandise

trade for distribution of his product, must also be analyzed.

For the past three years the HARDWOOD RECORD has been engaged collecting and collating information covering all these particulars, and has published up to this date thirty bulletins, giving the names of wholesale consumers of hardwoods, names of their buyers, their line of manufacture, together with the annual quantity of the

service is finally complete it will show the name and address of practically every hardwood buyer in the United States. This list of names is also selected with due reference to credit rating, and while the responsibility of every concern is not guaranteed it is not the intention to list any house that has not a fair capital and is not in good commercial repute.

The several paragraphs of each bulletin are cut out and pasted on a patent tabbed index card, which, when complete and filed in alphabetical order by towns, between state guide cards, shows at a glance the buyers of every kind of hardwood manufactured in this country. Thus far about 600 buyers of ash are listed, 575 buyers of basswood, 200 buyers of beach, 550 buyers of birch, 60 buyers of butternut, 175 buyers of cherry, 445 buyers of chestnut, 225 buyers of cottonwood, 400 buyers of cypress, 325 buyers of elm, 350 buyers of gum, 275 buyers of hickory, 325 buyers of mahogany, 650 buyers of maple, 1,200 buyers of oak, 150 buyers of walnut, 650 buyers of poplar, 100 buyers of sycamore, 10 buyers each of persimmon, dogwood, locust and holly; 600 buyers of dimension stock, 500 buyers of veneers and panels.

With this information at hand a manufacturer or dealer in hardwoods is able to address an intelligent letter to buyers on the subject of selling them any variety of lumber. He knows approximately what the buyer requires, and this enables him to gauge his offerings in accordance with the requirements of the prospective customer.

It is not an economical proposition to write these vast numbers of buyers individual typewritten letters, but it is logical for the man having in charge the lumber

SPECIMEN INDEX CARD.

(Showing clipping from bulletin pasted thereon and useless numbers removed.)

manufactured exclusively by this system. There is no line of trade in the country which has developed as has this business; but it will be noted that the success of these enterprises has been based entirely upon a liberal use of the United States mails.

During the last few years quite a number of important hardwood manufacturers and jobbers have engaged extensively in exploiting their lumber and effecting sales through the medium of the mails. The larger number of them, however, have taken up this method of sales in a very illogical and haphazard way, and hence have not achieved the results that they would had they first analyzed the proposition with care and then executed it with discretion and thoroughness.

There are certain "tools" necessary to proper and profitable exploitation. Primarily it must needs be ascertained "who is who" among lumber buyers. With that information must also be obtained showing approximately the quantity of lumber of every kind, grade and thickness purchased by all lines of trade. What constitutes legitimate trade for manufacturer and jobber in hardwood lines, i. e. how far a man is justified in going in the consuming

various kinds of lumber, dimension stock, veneers and panels used by them. Up to date the RECORD has expended approximately \$30,000 in securing this information, and is continuing it to the end that when this

SOUTH DAKOTA

Key

1	Ash	12	Hickory
2	Basswood	13	Mahogany
3	Beech	14	Maple
4	Birch	15	Oak
5	Butternut	16	Walnut
6	Cherry	17	Poplar
7	Chestnut	18	Miscellaneous including
8	Cottonwood		Dogwood, Holly, Locust,
9	Cypress		Persimmon, Sycamore.
10	Elm	19	Dimension stock
11	Gum	20	Veneers and panel stock

sales department to write one letter covering one kind of wood and have this letter forwarded in duplicate form to every buyer of this particular wood. The most successful salesmen carrying on a mail-order sales system follow out this plan minutely. They will write today a letter devoted exclusively to the subject of ash, describing in detail their offerings of this wood. Tomorrow and day after day they will address the buyers of basswood, oak, beech, poplar, etc.

In an extensive correspondence campaign where it is desirable to use a duplicating machine of some sort, the RECORD recommends that the best type should be employed to give the work the exact similitude of a personal, typewritten letter. This is accomplished perfectly by the Writerpress, a very simple and moderate priced machine manufactured by the Writerpress Company of Buffalo, which has been employed in this office for more than a year with great satisfaction, in soliciting this information from buyers of hardwoods and for general exploitation work in connection with advertising and circulation. The machine is a practical repeating typewriter, without delicate adjustment or complicated parts, and the repair bill on the one employed by the RECORD has thus far been nil. An office boy or girl can learn to use it in thirty minutes' time and can prepare a thirty-line letter inside of an hour, which can be reproduced at the rate of 2,000 an hour. The ribbon of the machine is made to exactly match any typewriter ribbon, so

THE WRITERPRESS IN OPERATION.

that it is possible to fill in one of these duplicates and still retain the appearance of an original, personal letter. More than a score of HARDWOOD RECORD advertisers are employing the Writerpress in connection with this system of exploitation, and all are enthusiastic over it.

Selling lumber by mail by means of the plan outlined in this article enables a manufacturer or dealer to widen his field of operations to a vast extent at a very moderate cost. It will be found that the average cost of every salesman's call on a prospective customer is approximately two dollars, while the average cost of soliciting a customer in this way is approximately five cents. In other words it is a forty-to-one proposition in favor of the mail-soliciting system, so far as cost alone is concerned. It is by no means contended that even the forceful, most attractive letter is as able an adjunct in booking orders as is the personal visit of an intelligent salesman, and consequently the introduction of this system should by no means supplant traveling salesmen; but their number can be materially reduced by the assistance rendered through an active campaign of letter-writing. A few of the largest manufacturers and jobbers in the country advise the RECORD that since they have introduced this system of sales they have cut their traveling force down to one or two men, and are sending these out simply on special and important prospective deals.

The RECORD will be very glad to supply full details of the cost of its lumber bulletin and card index system, in connection with advertising, and complete information and a catalog of the Writerpress can be obtained from its manufacturers, the Writerpress Company, 520-524 White Building, Buffalo, N. Y.

Munising—A Model Michigan Manufacturing Town.

On Lake Superior, 425 miles straight north of Chicago, is situated the bustling and beautiful town of Munising, Mich. The village has a population of more than 3,000 and lies nestled beneath the timber-clad hills of the beautiful land-locked Munising bay. This bay is doubtless the finest harbor on the chain of lakes, as it has deep water room enough to float the entire fleets of the Great Lakes, and is protected at its entrance by Grand Island, with a deep water passage on either side of it to Lake Superior. From east to west Munising lies about midway between Sault Ste. Marie and the Keweenaw peninsula. It is the county seat of Alger county. While not a new town, as it has been a center for iron and lumber production for many years, it is only during the last few that it has achieved importance in a business way, and has become the commercial metropolis of this section of the upper peninsula of Michigan. Its business future is assured from the fact that more timber is tributary to it than to any other town in Michigan. It has unsurpassed shipping facilities by lake, and most excellent rail transportation by way of the Munising railway, which connects with the east and west lines across the upper peninsula and also with the Chicago & Northwestern, and Chicago, Milwaukee & St.

Paul roads. Back of the town lie immense agricultural, grazing and fruit growing lands, which are fast being settled up by farmers, stock raisers and horticulturists.

In a manufacturing way Munising boasts of one of the largest pulp and paper mills in the country, three saw and shingle mills, a large tannery and cooperage plant, and here is also located the veneer factory of the Great Lakes Veneer Company, of which Burdis Anderson, president of the National Veneer & Panel Manufacturers' Association, is the moving spirit. There is shown with this article an engraving of the new and model buildings comprising the plant of the Great Lakes Veneer Company, as well as a view of the drive end of the two great 100-foot automatic driers built especially for Mr. Anderson's plant by the Philadelphia Textile Machinery Company. The entire equipment of the plant is excellent in every detail. The floors and foundations are of solid concrete and the framework is entirely steel-and, making it about as near fireproof as buildings of frame construction can possibly be. The vats for steaming logs are also concrete, as well as the rooms in which birdseye maple veneers are bleached. The equipment of the plant includes the regulation log cutting-off saws, as well as a "barker" for removing the bark from

logs and rounding them into shape for the veneer cutters; three Capitol Machine Company's rotary veneer machines, together with clippers and machinery for working up cores into lumber, etc., etc. It is the expectation of this concern to eventually add a large panel plant to its veneer business. The company has a source of supply for the incomparable birch of the northern peninsula, birdseye maple, black ash, elm and basswood, that will insure it a stock of logs for more than a quarter of a century, and with its economical method of manufacture and low freight rates will make it an important factor in the veneer business for years to come. At the present time the plant is running on full time, being well supplied with orders at satisfactory prices.

Burdis Anderson, president of the Great Lakes Veneer Company, is also president of the Munising Business Men's Association, a strong organization which is seeking to build up new manufacturing industries in this beautiful northern town. The association is holding out every inducement with the aid of the village government for woodworking plants to locate there and share in the advantages of the vast timber supply lying back of it, which can be drawn on at very low prices, as well as the excellent and low freight advantages possessed

ALONG THE LAKE SUPERIOR SHORE OF GRAND ISLAND.

PLANT GREAT LAKES VENEER COMPANY, MUNISING, MICH.

by it. The Business Men's Association is particularly seeking small woodworking industries, but there are other lines of manufacturing utilizing iron and other materials which will be gladly welcomed.

One of the great allurements of Munising is its magnificent summer climate and the picturesque of the entire surroundings. Lying just east of the eastern entrance to Munising bay are the famous pictured rocks of Lake Superior, one of Nature's greatest wonders. At the entrance to the harbor is the 14,000-acre game preserve belonging to the Cleveland Cliffs Iron Company—Grand Island. This island abounds in attractive natural scenery of great diversity and there is found unmolested great numbers of nearly all kinds of northern wild animals—the caribou, elk, moose, half a dozen varieties of deer, bear and numerous small animals. Wild game birds also abound throughout the preserve and are very tame. One can almost kick out of the trails coveys of quail. The song birds are also very numerous, and about seventy-five varieties make their homes on Grand Island. The preserve is stocked with the Black Game of Sweden, capercaillie, Hazel grouse, sharp-tailed grouse, willow grouse, as well as native partridge, wild turkey, ring-necked and black-necked pheasants. The island is well equipped with excellent roads which run

around the shore, and in some places are two or three hundred feet above the waters of Lake Superior, affording a splendid view of the surrounding island and the mainland. Beside the finished roads there are many trails leading to all parts of the island. In nearly the center of the island lies Echo lake, a mile long, to which come the herds of deer, elk and moose for water. Smaller lakes also abound on the island.

While hunting and fishing are not permitted on the island, Munising on the mainland, twenty minutes distant by launch, is the center of the greatest game hunting and fishing region of the entire upper peninsula. The numberless streams and lakes are filled with trout, salmon and bass. The summer climate of the region is ideal. The Weather Bureau reports show that during July, 1907, the mean temperature was 65 degrees; in August, 63 degrees; in September, 57 degrees. Hence this region is a favorable resort for those afflicted with hay-fever.

The village of Munising is equipped with all modern conveniences found in the larger cities. It has a fine courthouse, excellent school buildings, and well-built business blocks. Part of the structures are made of the famous Lake Superior vari-colored sandstone, and others are of brick. The town is the terminal of the Munising Railroad, which has various lines connecting with all the

principal lines penetrating the northern peninsula. The business of the town is conducted on a substantial financial basis and the First National Bank of Alger County is the chief banking institution of the section.

The Beach Inn is a delightful hotel set almost on the very shore of Munising bay and has very attractive appointments and cuisine. At Williams Landing, on Grand Island, is situated the Hotel Williams, rebuilt from an old fur trading post of the John Jacob Astor Company, which makes a model, old-fashioned, homelike stopping place for summer visitors. In connection with it on the shore of the lake are a number of log cottages, equipped with wood fireplaces, which have been attractively arranged and furnished for the convenience of hotel guests.

On Trout bay, an inlet of the island within a few miles of Williams Landing, have been built several handsome cottages equipped for housekeeping, which will comfortably accommodate ten persons. Each of these has fireplaces in both dining-room and living room, with accommodations for servants. In other parts of the island summer cottages have been arranged for rental during the season.

Munising is reached from Chicago in one night or one day, by the C. & N. W. R. R. to Little Lake Station, where that road connects with the Munising Railroad; or by the Great Lakes to Mackinac, where connection

DRIVE END, SHOWING APRONS, VENEER DRYERS, GREAT LAKES VENEER COMPANY.

WILLIAMS LANDING AT GRAND ISLAND, MUNISING BAY, THE GREAT GAME PRESERVE.

is made at St. Ignace with the Duluth, South Shore & Atlantic, which connects with a division of the Munising road.

Business men who contemplate a change of location, or persons seeking a delightful summer outing, can find no more attractive place

than Munising and its surrounding country. Burdis Anderson, president of the Munising Business Men's Association, will be glad to correspond with anyone interested in his town, whether from a business or pleasure viewpoint.

On all woods not named above the inspection fee shall be 60 cents per thousand feet.

Inspectors shall be entitled to reasonable compensation for traveling expenses, hotel bills and time when their duties necessitate such trips. Inspectors shall also be entitled to extra compensation for inspecting badly mized lots.

Members are requested to enclose check to salaried inspectors to cover railroad and hotel expenses when ordering salaried inspectors to do work necessitating such expense. This will prevent delay and the National Hardwood Lumber Association guarantee a correct accounting of all such advances to the salaried inspectors.

The book also contains the estimated weights of timber as recently adopted by the association, as follows:

How to Obtain National Inspection.

The National Hardwood Lumber Association, through its secretary, Frank F. Fish, has just issued a fifty-six page pamphlet covering the rules for the measurement and inspection of hardwood lumber as revised and adopted by it at its annual meeting held in Milwaukee June 11 and 12 last, which rules took effect August 1, 1918.

The HARDWOOD RECORD often receives inquires from its readers as to the steps to be taken to secure National Inspection. A preface to the above pamphlet makes this matter entirely clear, and is herewith reproduced:

APPLICATIONS.

All applications for National Association Inspection must be made to the secretary or a licensed inspector of the association by a member of the association.

It should be thoroughly understood by each member that this association possesses no authority to impose its inspection in any of the markets, except through the mutual agreement of parties at interest; therefore, unless it is explicitly stated in the contract of sale or purchase, that the lumber concerned in the transaction is subject to National Inspection, such inspection cannot be insisted upon by either buyer or seller, and can only be made available by the mutual consent of both parties after a dispute has arisen. It is, therefore, absolutely necessary in any transaction involving the sale or purchase of lumber, in which a member of this association relies upon the efficacy of the inspection department of the association, for the just protection of his interests, that it be clearly stated in the contract of sale or purchase that National Inspection is to prevail. The following form for such a clause in contracts of that nature is recommended:

"The lumber to be inspected according to the rules and regulations of the National Hardwood Lumber Association by a National Inspector, who shall issue the official inspection certificate of said association, certifying to the amount and grade of lumber so inspected."

With the foregoing clause in a contract, lumber may be inspected either at point of shipment or at destination. The point of inspection to be governed by the convenience in securing the services of a National Inspector.

ORIGINAL INSPECTION.

A member requiring the services of a National Inspector may make application direct to the inspector who is most convenient to the point where the inspection is to occur. A list of National Inspectors, together with the address of each, may be obtained on application from the secretary.

When an inspection by an authorized inspector of the National Hardwood Lumber Association is completed, the inspector shall deliver to the member requesting the inspection a certificate in duplicate, certifying to the amount and grade of lumber so inspected. This certificate is final for settlement as between the seller and buyer in all cases where an agreement as to the application of National Inspection exists between the parties.

The expense of the inspection at the rate per M. for different kinds of lumber, set forth in a table below, may be divided between buyer and seller, or may be borne by either, according to special agreement; but a bill will be rendered

by the secretary against the member calling for the inspection, which bill is due and payable upon demand.

Inspectors are required to inspect the full amount of lumber as contained in an original shipment, and they are expressly forbidden to apply National Inspection to a portion of a shipment after selections have been made therefrom.

Only members of the National Hardwood Lumber Association can obtain an Original National Inspection.

RE-INSPECTION.

Should either party to the transaction involving an original inspection be dissatisfied with the result of the same, it is within his right, whether a member of the association or not, to call for a re-inspection, provided stock is intact.

This class of inspection can only be obtained by applying to the secretary.

Upon application for re-inspection of a lot of lumber for which a certificate has been regularly issued by a National Inspector, the chief inspector should proceed to reinspect the lumber in person, or by a deputy, other than the inspector making the original inspection. If the reinspection results in a difference in favor of the party complaining of more than 4 per cent in money value from the original inspection, the party complaining may obtain the amount of such difference directly from this association. If the difference does not exceed 4 per cent, the party demanding the re-inspection shall pay all expenses connected therewith. All applications for re-inspection shall be made within ten days from receipt of lumber at destination, provided the original inspection be made at point of shipment; or within ten days from date of original inspection, if same is made at destination.

It will be noted that original inspection under these rules is made only for members of the National Association, but that reinspection can be called for by both members and non-members if the lumber was originally sold under National rules and bore original inspection by one of the association's licensed inspectors.

The fees for the measurement and inspection of lumber under these rules are also shown in the pamphlet, as follows:

These very complete little booklets will be furnished for ten cents a copy, on application to F. F. Fish, secretary of the National Hardwood Lumber Association, Rector building, Chicago.

Beaumont Spoke & Handle Company.

The Beaumont Spoke & Handle Company of Beaumont, Tex., a newly organized concern, has received its charter, and the plant will start up as soon as the installation of machinery is completed, which will probably be within a couple of weeks. It will begin operations with a force of about thirty men and will make about 6,000 handles per day, also a large number of spokes.

The transportation facilities of Beaumont and its proximity to accessible hardwood timber lands make it an excellent location for a factory of the kind, and the company was offered every inducement by the Chamber of Commerce to locate in Beaumont, rather than in other sections which were considered.

The following officers have been elected: E. B. Baldwin, president; W. A. Priddle, secretary; W. C. Tyrrell, treasurer; Theodore S. Cooley, vice-president and general manager; the board of directors are E. B. Baldwin, W. C. Tyrrell, Jr., George W. Carroll, W. A. Priddle and Theodore S. Cooley.

Will Rebuild Veneer Plant.

The Frost Veneer Seating Company has decided to rebuild its plant at Antigo, Wis., and has commenced cleaning up the debris caused by its destruction, and is excavating for the new buildings. The work will be pushed along rapidly, and Superintendent Calhoun expects to have the new plant running in October. It will be about the same size as the old one, but equipped with the most modern machinery and facilities for manufacturing high-class veneer.

The city of Antigo is much elated over having prevented the owners from rebuilding their plant at some other point, as was originally contemplated; but the community spared no effort to retain the industry, which is a valuable one for any town to maintain.

Use of Hardwoods in Automobiles, Sleighs and Bicycles.

The construction of automobiles is of interest to lumbermen—only with regard to the bodies and wheels, however, as the rest of the gear is of metal in practically every case. From the construction point of view the automobile is a combination of carriage and locomotive engine, whether the propelling power be gasoline, electricity or steam. At first the automobile was used only for pleasure, and the body and wheels of such vehicles follow the general characteristics of carriage construction, but the entry of the autotruck into commerce has necessitated the use of the heavier woods that belong to wagon building.

As the wagon and the carriage have already been treated in this series of articles it remains only to consider aspects of automobile body and wheel building that are more or less peculiar to this form of vehicle. Automobiles have not yet reached the variety in construction and employment of the horse-drawn vehicle, but, as is well known, its manufacturers and friends look forward to a time when it will have wholly superseded the horse. In the carriage line it has been applied to most forms except the hearse, and it will probably be a long time before undertakers will adopt it, for the spectacle of a motor breaching down, or the chassis getting out of gear, never do conduce to maintaining the ceremonial gravity of proceedings; the "chug, chug" and the odor of gasoline would be other disagreeable features of the "auto-hearse;" and long-hallowed custom is always a serious obstacle for the progressive man to buck against, especially when religion stands back of the custom. Yet it is known that some automobile men are figuring upon this very thing, so that the "autohearse" may eventually become a reality.

The automobile has already been applied to the uses of the retail delivery wagon and the large delivery truck, and in the form of a three-wheeled motorcycle has brought into being a new type in the shape of the little delivery auto, which has proved very useful, but which in its common form contains little or no wood.

When one hears the word "automobile" the picture that comes into one's mind is a pleasure car, as it is in this field of vehicle employment that the horseless wagon has thus far attained its chief development, and even here the auto has by no means ceased to be regarded as a curiosity. In the carriage auto, as in its horse-drawn prototype, lightness is sought, in so far at least as it is consistent with strength. The bodies are usually made with ash framework and poplar panels, as in carriage construction, but pressed steel and aluminum panels are said to be growing in favor. Roofs for limousines and other roofed autos of the pleasure type are often made of wood in three layers, the under side being mahogany and the two upper poplar. Ma-

hogany, and sometimes birch, are used for window frames in limousines and for trimmings. Wooden wheel rims, when used in the steering gear, are generally of a single piece of maple bent to a perfect circle.

Most carriage autos have wooden wheels with metal hubs. The wood employed is almost always hickory, though ash is said to be sometimes substituted. Auto wheels must be solid, and therefore the spokes and rims make up in thickness what they lack in other dimensions. Oak, the wood universally utilized for spokes and generally for rims in heavy wagons, is never used, as hickory possesses an obvious advantage in standing the heavy jolts which the auto is constantly receiving. The wheels are often "dished," but the practice is not universal among automobile makers, for reasons which it is not necessary to enter into here. Automobile wheels are of the same size front and back, as the mode of steering is different from that which is universal in wagon and carriage building, and also because the method is thought to secure better distribution of load. Racing cars often have solid disks for wheels, which in such cases are of metal. The object of this is to avoid "windage" or the effect of wind upon the spokes, which is said to seriously retard the speed of the car. Wire wheels were formerly used for autos of all descriptions, but these have been practically abandoned.

Motor frames are sometimes of wood with iron armor, but the use of wood in any form is the exception.

The automobile industry as a market for hardwoods is a product of the last few years, though private vehicles driven by steam and other means are of much older origin. So far as we know they were first thought of by the monk and scholar Roger Bacon, who lived in the thirteenth century, and is not to be confounded with Sir Francis of the same surname, who was a contemporary of William Shakespeare. Bacon foresaw the time when we would be able to "propel carriages with incredible speed without the assistance of any animal."

Our English cousins will tell us that vehicles on runners should be called "sleds" or "sledges," and that "sleigh" is a barbarous Americanism, but we believe it is our privilege to modify John Bull's speech as we choose.

Sleighs and sleds vary in construction and material according to their uses. Sleighs derive their construction from the carriage. Hickory is the gear material and the runners should be of bent hickory. Bodies generally have ash framework and poplar panels, except that dashboards are frequently made of basswood, which is preferred by some high-grade makers because it submits more readily to the bending process than does poplar, and sleigh dashboards are generally handsomely

bent in graceful curves. Red gum is also much used for bodies.

Farm and mountain bob and delivery sleds are made of heavier material. The runners are of oak, bent or sanded, just as in heavy wheeled vehicles the wheels are more likely to be of oak than anything else. Other gear parts are generally of rock elm and maple. The box may be a wagon box temporarily shifted from the wagon gear for the season, or a lighter box of the delivery type, and often, as in logging operations, no box whatever is needed.

Lumber enters more largely into the construction of the modern bicycle than the average man realizes, although steel and iron are the chief materials in it, as they represent a combination of great lightness and strength that wood does not possess. If the history of cycle-making had followed the lead given by the first maker bicycles would be all-wood vehicles today; for the pioneer bicycle, made early in the nineteenth century, was entirely of wood. It was an extremely crude affair, propelled by the rider pushing his feet against the ground.

All-wood bicycles have not been manufactured much the past few years, but a cycle called the "Hickory," with frameword and wheels of that sturdy timber, was made not so very long ago by the Hickory Bicycle Company, a concern practically owned by the Pope Manufacturing Company, whose position in the cycle business is well known. Handle bars are still made of bent hickory, and of bent maple also, though steel is by far a more common material. Hickory is also sometimes used for the wheel-rims, but the favorite wood is maple, with elm as second choice. Ninety-five per cent of the cycle wheel rims made are of wood. Until recently the proportion was even greater—ninety-nine per cent—but there is now a tendency toward more extensive use of steel. The objection to hickory as a wood for wheel rims is that it warps more readily than maple or rock elm. Handles, or "grips," to employ the trade name, are usually of maple wood, with steel core and leather covering. Cork grips, once popular, are no longer used. Saddles in high-grade vehicles are of laminated wood covered with hair and leather.

On ladies' bicycles the guards are as often of wood as of metal. The metal guard has come into wide use during the past year or so, and about fifty per cent of ladies' wheels now being turned out are supplied with these.

Bamboo tubing is said to have been made, but a well-known bicycle man, whose experience goes back over many years, says he never has seen it, and believes that if such a tubing was ever put upon the market it was some other wood finished in bamboo style for a "talking point."

A Hard Lesson in Softwood.

When Charles Prehistoric of Ducktown heard that there was going to be a hardwood timber famine before many cycles had rolled by, he decided that the thing for him to do was to get rich quick. After pondering the matter for some length he smiled broadly several times. Then he drew \$500 from his bank and bought a measly little tract of yellow pine timber property in Buncombe county, near Ducktown. Then he went into the grafting business extensively. He cut out a lot of the pine branches on said property and grafted hickory, oak and poplar sprouts upon the trees.

Then he waited for several seasons, but eventually inserted an ad in a trade paper for a buyer of the property. Very quickly came a buyer by the name of Smith to view the timber. Smith was a hardwood lumber dealer from Friendsville, and though quite shrewd and sharp, never suspected others of being so. As a result he bought the alleged hardwood forest from Mr. Prehistoric without having examined it minutely. He simply gazed down upon it from a neighboring hillside, and offered \$5,000 for the bunch.

Of course Prehistoric took him up at once, and accepted the proposition on the spot, for the deal exceeded his wildest expectations.

"Stung!" said Smith, when he finally entered the forest for the first time and observed the deception that had been prac-

So grafting a moustache upon his countenance he shut down his hardwood sawmill and journeyed over to Ducktown to see Mr. Prehistoric again. Now Prehistoric was about to build a fine residence with the proceeds of his recent sale, and of course was in the market for hardwood finish.

"O Greetings, sir!" said Smith, as he presented himself, disguised. "Can't I sell you something in the way of fine hardwood trim?"

REVENGE IS SWEET.

I believe I can make you a better price than anyone else."

"Sure," said Prehistoric. "I want a couple thousands worth. When can you f. o. b. it?"

"At once, sir. But I should like to be advanced \$800, which I shall need to get it out."

"Do you guarantee this lumber?" asked Prehistoric.

"Most certainly," said Smith. "I'll write you out a guarantee that it will be as good as I could get out of the whole forest!"

So Smith wrote the guarantee while Prehistoric wrote the check. He seized it eagerly and made tracks back to Friendsville to hasten preparation of his \$2,000 order. He planned alleged hardwood floors, he built up hardwood panels, and eventually had it f. o. b. car at Friendsville. Then he procured a can of paint and a big brush.

"Revenge is sweet!" he muttered, as he belacked the side of the car with the legend—

TO CHARLES PREHISTORIC,
DUCKTOWN.
HARDWOOD LUMBER FROM THE
FOREST SOLD TO SMITH BY
PREHISTORIC.

Then Smith smiled vehemently and said aloud that he had been taught a salutary lesson, and it would be a cold day in January when he would get beaten again in such a manner.

"What does salutary mean?" asked the foreman.

"It means getting a hard lesson on soft lumber!" replied Smith. —G. D. JAMES.

News Miscellany.

The Hoo-Hoo Annual.

Within a few days Chicago will have the pleasure of entertaining visiting Hoo-Hoo brethren from all parts of the United States and Canada, gathered to attend the seventeenth annual, Sept. 8 to 11. Most of the arrangements have been completed, and it is planned by the Chicago contingent to give the visitors the best the city affords.

August 4 the general committee which is pre-

paring for the gathering met at the Auditorium hotel. It was shown that the financial end of the work is progressing in good shape, and the gentlemen in charge of this important part of the arrangements say that when the visitors arrive they will be in position to show them the time of their Hoo-Hoo lives.

As previously announced, the Auditorium hotel will be the headquarters for the business meetings and the general rendezvous. Rates at this hotel have been secured as follows:

AUDITORIUM HOTEL AND ANNEX, HOO-HOO HEADQUARTERS.

PREHISTORIC EXTOLS THE PHYSICS OF HIS FOREST.

gled upon him. "This certainly teaches me a lesson; I should have become more familiar with the flora and fauna of my purchase. I am practically a beaten man! But I will not be beaten long! I am honest as the days are long in June. But of course I can be sharp and out of sorts when occasion demands."

One person in a room without bath, \$2 a day and up. Two or more in a room without bath, \$1.50 a day and up. One person in a room with bath, \$3.50 and up. Two or more persons in a room with bath, \$2.50 and up. Each additional person in room with bath, \$1.50 and up.

At the other hotels with which arrangements have been entered into, the rates range from \$1.50 a day up for each person. The hotel accommodations of Chicago are excellent and no one need fear not being able to get a comfortable room at a moderate price should his arrival be too late to permit of his being received at the Auditorium.

A program for events has been made out by the general committee, which will be followed as closely as circumstances will permit. It includes an all-day trip to Michigan City, Indiana's famous lake resort, September 9.

The exclusive use of the beautiful excursion steamer "Theodore Roosevelt" has been secured, and will leave Chicago for Michigan City about

The steamer "Theodore Roosevelt" is regarded as the finest passenger boat on the Great Lakes. It is so large and powerful a boat that it matters little what sort of weather is encountered, as it easily rides the strongest gales, so that none need be afraid of seasickness. The vessel is 283 feet long, 40 feet broad, carries 3,500 people and has a speed of 24 miles an hour. Its cost was over \$325,000. It has five decks and carries a crew of 112 persons. It is the only boat on the lakes that has wireless telegraph connection with Chicago, communication being available between the boat and shore at all times. Its appointment and furnishings are unsurpassed.

The "Theodore Roosevelt" has promenade 12 feet wide, a large social hall for dancing, two large cabins, several smoking rooms and carries a band and orchestra of its own.

The following is the outline of business and entertainment as submitted by the general committee:

STEAMER THEODORE ROOSEVELT, ON WHICH HOO-HOO WILL MAKE ITS EXCURSION.

9:45 a. m. This excursion should prove of great interest, not only to the visiting Hoo-Hoo and their families, but to the Chicago Hoo-Hoo and their ladies as well. On account of this trip it will be necessary to hold the annual concatenation on the evening of September 10, when the largest, best and most unique concatenation ever witnessed in Chicago will be held in the magnificent banquet room on the ninth floor of the Auditorium hotel.

A thousand of the most prominent lumbermen on the American continent will attend this concatenation and there will also be present all the members of the Supreme Nine, as well as several members of the House of Ancients, and ex-members of the Supreme Nine. All Hoo-Hoo are urged to attend and meet old friends or get better acquainted with Hoo-Hoo brethren, and to bring one or more kittens.

Although the entertainment of ladies will include automobile rides, a shopping expedition and theater party, probably the excursion to Michigan City will be the great entertainment feature of the gathering. The opening session of Hoo-Hoo will be called, according to the constitution of the order, at 9:09 a. m., September 9, at the Auditorium hotel. This session will be necessarily short and adjournment will be taken to the steamer "Theodore Roosevelt," where the session will be continued morning and afternoon. It is expected to reach Michigan City at 12:45 p. m. There lunch will be served in Washington Park, after which members of the order and their ladies will be entertained in divers and sundry ways. The steamer will probably leave Michigan City about 4:30 or 5 o'clock, and the party will be landed in Chicago early in the evening.

PROGRAM.

- Tuesday, September 8.
 - 10:00 a. m.—Registration of visitors, Auditorium hotel.
 - 2:00 p. m.—Osirian Cloister initiation.
 - 8:00 p. m.—Osirian Cloister banquet.
- Wednesday, September 9.
 - Registration of visitors, Auditorium hotel.
 - 9:09 a. m.—Opening session, Auditorium hotel.
 - 9:45 a. m.—Steambant excursion, steamer "Theodore Roosevelt," to Michigan City, Ind.
 - 10:00 a. m.—Continuation of first business session on board steamer "Theodore Roosevelt."
 - 12:45 p. m.—Arrival at Michigan City.
 - 1:00 p. m.—Luncheon at Covey Island cafe, followed by bathing and other amusements, including exhibition by life-saving crew.
 - 5:00 p. m.—Return by steamer "Theodore Roosevelt," via Gary, Ind.
- Thursday, September 10.
 - 9:09 a. m.—Business session.
 - 2:00 p. m.—Ladies' automobile trip around park boulevard system.
 - 8:00 p. m.—Musical for ladies, Auditorium hotel.
 - 9:09 p. m.—Annual initiation and session on the roof, ninth floor, Auditorium hotel.
- Friday, September 11.
 - 9:09 a. m.—Business session. Election of officers. Shopping tour for ladies.
- Evening—Hoo-Hoo and ladies to spend evening at amusement park.

Memphis-Nashville Lumbermen's Ball Game.

At the ball game between the lumbermen of Memphis and Nashville, played at Red Elm Park on August 22—the final of a series of three—Memphis came away with the big end of the tally, and by virtue of its victory becomes the owner of the handsome cup offered by the

American Lumberman to the club which won two out of the three contests, and it also falls heir to the title "the biggest hardwood lumber market in the world." Nashville has been laying claim to this distinction for a long while, and it was decided that the supremacy of the one city over the other would be determined by which was able to play the best ball with teams selected entirely from lumbermen or persons identified directly with lumber firms or corporations.

The crowd was an exceptionally large one considering the bad day. It began raining about noon and poured for a long while. The ground was in most unsatisfactory condition, but this did not prevent the two teams, from putting up about as good a game of ball as was ever witnessed on the historic turtle-back diamond at Red Elm Park. Both teams played fast, snappy ball. The players threw a great deal of zest into their work. The fielding was good and the work with the willow not bad.

The contest developed increasing interest after the sixth inning. Memphis had made three runs up to that time, Nashville none. In the seventh Memphis did not score, while Nashville put two men over the plate. Memphis was again shut out in the eighth and in that inning Nashville sent one man home, thus tying the score. The crowd fairly went wild with enthusiasm, waving hats and handkerchiefs in the air and calling on the band engaged for the day to produce some of its liveliest music.

Memphis was equal to the occasion, however, and in the ninth made three runs, Nashville could do nothing when the last opportunity presented itself and Memphis came away winner by three runs.

The Memphis team fairly outplayed the boys from Nashville. They had a better pitcher in the person of B. Tully, who handled the ball as though he had been playing a professional game for years. He kept his hits widely scattered and Nashville would not have made as many runs as it did had it not been for one wild throw which paved the way for two runs. The Memphis players had done consistent practice work, and this showed strongly in the game they put up.

There was no quibbling over decisions. Umpire Fitzsimmons, one of the Southern League umpires, officiated, and handled the indicator most satisfactorily. The Nashvilleites said after that they had no kick to make, Memphis winning because of superior playing.

The day was full of pleasant events. The Nashville delegation arrived on time and was tendered a most rousing reception at the station. The visitors were carried over the city in a special car and luncheon was served at the Country Club. The game was called promptly at the time appointed. In the evening a banquet was tendered visiting lumbermen at the Hotel Gayoso. The loving cup was presented to the Lumbermen's Club of Memphis during the progress of the banquet by J. E. DeFeaugh, editor of the American Lumberman. J. W. Thompson accepted the cup on behalf of the club and fitting remarks were made by members of the Nashville delegation. The visitors were geyed unmercifully during the evening, but took everything good naturedly, and the occasion was a most pleasant one for all concerned.

Opens Chicago Yard.

The Brittingham & Young Company, a well-known lumber house of Madison, Wis., has been carrying considerable hardwood stock in Chicago for some time, but has now arranged for a yard of its own, where it will carry from 10,000,000 to 15,000,000 feet of northern hardwoods. The yard will be located south of Twenty-second street, on Thompson, and includes the dock space formerly occupied by the John Brittingham Lumber Company, and lately forming a part of the yard of Francis Boidier & Co. The lease extended to Brittingham & Young by

the latter concern includes a good office building, two lumber sheds and 600 feet of dockage. The Madison company will take possession at once, and expects to be in position to transact local business before this issue of the Record is off the press.

The Brittingham & Young Company reports that it is doing a large business, and finds conditions very satisfactory. It carries large stocks of hardwood lumber at various mill points both north and south, and has recently purchased the season's cut of the mill of T. N. Okerstrom at Fort Wing, Wis., consisting of 5,000,000 feet of white pine, 2,000,000 feet of hardwood lumber, and 2,000,000 lath.

Petition in Bankruptcy Filed.

William H. Wood, a lumberman of Cambridge, Mass., has filed a petition in bankruptcy showing his liabilities to be \$478,490, and assets \$216,000. About half the liabilities are represented by endorsed papers, while \$1,655 represent taxes, and \$109,381 are unsecured. The assets include real estate, encumbered, \$84,500; \$11,316 cash; \$8,196 in notes and bills, and \$45,000 stock in trade.

The number of unsecured creditors is about seventy, the principal among whom are the following concerns, with amount due each: W. D. Noyes, Boston, \$2,826; St. Croix Paper Company, Boston, \$2,150; Wyman, Allen Lumber Company, Boston, \$5,190; Rufus Deering Company, Portland, Me., \$1,025; Shepard, Morse Lumber Company, Boston, \$1,281; W. L. Clement Lumber Company, Greensboro, N. C., \$1,950; F. H. Todd & Son, Calais, Me., \$3,000; Jones Hardwood Company, Boston, \$3,918; H. M. Hickford, Boston, \$2,836; J. E. Henry & Sons Company, Lincoln, N. H., \$35,653; James Murchie & Sons Company, Calais, Me., \$5,794; Deerfield River Company, Wilmington, Vt., \$5,979, and the Dwight Lumber Company, Detroit, Mich., \$2,310, all for promissory notes, and the Northern Lumber Company, St. Johnsbury, Vt., \$4,373, for merchandise.

An Unusually Fine Cuban Mahogany Log.

In reviewing a recent hardwood sale held by C. Leary & Co. at Liverpool, the *Timber Trades Journal* states that the feature of the gathering was the great request for Cuban mahogany, and the strong competition which occurred among buyers to secure this wood. The highest figure realized was obtained for a fine log of Cuban growth containing rose and mottle, 15 feet long and about 24 inches at the butt. Bid- ding was spirited and protracted, and the victor in the contest for possession of the handsome specimen secured it for 17s 3d. A statement was made at the sale that the above-mentioned price is a record for the last fifty years, but the *Journal* believes that within the last twenty-six or seven years a log of Cuban mahogany about 15 feet long and 24 to 30 inches in width brought at public sale 21s per foot, and solicits its readers to verify this contention if possible.

New Hardwood House at Chicago Heights.

C. L. Hartwell & Company is the name of a new hardwood concern which will engage in the manufacture, jobbing and exporting of lumber, wood stock and woodware at Chicago Heights, Ill. The company intends to specialize in the hardwood line for both domestic and export trade.

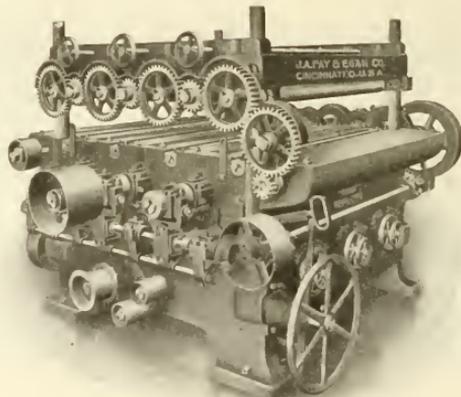

C. L. Hartwell, the head of the new company, has had long experience in the manufacturing line from the stump to the finished product, having been engaged for many years in the manufacture of handles. He is thoroughly familiar with lumber, dimension material, wood stock, turned work, etc., and consequently is peculiarly fitted to give his customers the best there is in grades, quality, workmanship, etc.

The excellent reputation which has always followed the output of handles from the plant of Hartwell Brothers at Chicago Heights will undoubtedly be maintained in the new line which one of them has elected to enter.

Memorial to President Cleveland.

Last month the San Jacinto National Forest, covering portions of Orange, San Diego and Riverside counties, California, was named the "Cleveland National Forest" in honor of President Cleveland, who established it, together with twelve others, in 1897; by the same proclamation this great timber tract was consolidated with the one known as the Trabuco Canyon National Forest, and both now stand a perpetual monument to the foresight and conservative policy of Mr. Cleveland.

On signing the proclamation making the above changes, President Roosevelt addressed the following communication to Mrs. Cleveland:

IMPROVED TRIPLE DRUM SANDER. MANUFACTURED BY J. A. FAY & EGAN CO., CINCINNATI.

"My Dear Mrs. Cleveland: It has recently been my privilege to sign a proclamation changing the name of the San Jacinto National Forest to the Cleveland National Forest. May I express to you the great pleasure it gave me to take that action—a pleasure mingled with a keen sense of the loss to our country and to our citizens in the death of President Cleveland.

"On February 22, 1897, President Cleveland signed the proclamation creating the San Jacinto Forest Reserve, in southern California. The date, February 22, was no mere accident, since the signature of the proclamation was timed to coincide with the birthday of our first president.

"President Cleveland was one of the first to recognize the need of forest preservation, and the creation of the San Jacinto and other forest reserves, with a total area of 25,686,320 acres, was one of the results of his foresight in this direction.

"Throughout his life he took great interest in conserving the natural resources of the nation, and I particularly regretted his inability to attend the meeting of governors in May, because the meeting was in part the fruit of the seed he had sown years before.

"The name of Grover Cleveland will always be prominently identified with the movement to protect the forests of the United States, and it seems to me eminently fitting that one of the forests which he created should bear his name throughout all time.

"Sincerely yours,
"THEODORE ROOSEVELT."

A Triple Drum Sander.

The accompanying illustration represents the J. A. Fay & Egan Company's improved triple drum sander. It is designed with a view of overcoming all undesirable features associated with machine-sanded work, such as snake-lines, furrows and waves, faulty feed, frequently causing veneered work to be sanded through, concave or dubbed cornered.

The success of this plan is secured by the oscillating movement of its three drums laterally across the material. The drums carry three grades of sandpaper; the third, or last, being the finest, gives a finish to the work, after which it is dusted thoroughly by a rapidly revolving brush. When the sandpaper is worn out the drums can easily be re-covered by any practical workman. They are equipped with a device for placing the sandpaper about

them and giving it the proper tension in the shortest possible time—a point of advantage not found on any other sander of this class.

The feeding mechanism consists of eight powerful rolls—four above and four below the platen. The frame carrying the upper feed rolls can be elevated automatically or by hand wheel to receive material up to eight inches in thickness. The rolls are driven by a train of heavy expansion gearing, insuring a perfect steady feed.

This is the only sander whose upper feed rolls and bed can be elevated above the drums to give access to them in case they should need repairing. All levers and hand wheels are convenient to the operator. In conclusion it may be said that this machine practically finishes the work ready for the filling room or for varnishing.

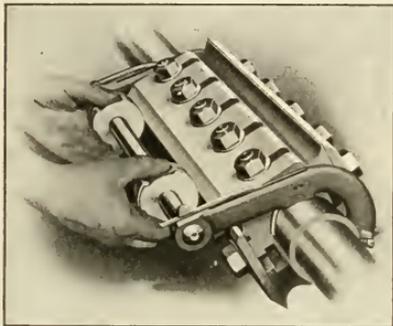

Further detailed particulars concerning this machine may be obtained by addressing the J. A. Fay & Egan Company, 414-434 West Front Street, Cincinnati, O., who will be glad to send you full description by return mail.

Economical Working of Lumber by the Use of the Wedge Platen.

Experience has demonstrated that wherever possible it is advisable to work lumber face down with the top and bottom heads cutting before the matchers. The matching is then gauged from the finished or face side, the chips fall from the face, and the face cut being fixed, the surplus stock is removed from the poorer side by the top head—it being acknowledged that

when one side is perfect in the rough state a light or moderate cut by the bottom head, working face down, is less liable to develop defects than when a heavy cut is taken from the face side.

When stock is worked face up and the bottom head cuts first, the amount of stock which the bottom head is set to remove is sure to be taken, regardless of the fact that the stock in a rough state may not be as much thicker than finish size as the bottom head is set to cut, thereby spoiling the piece; while in working face down with the wedge platen device hereafter described no cut is taken from the back unless

S. A. WOODS WEDGE PLATEN.

there is more surplus stock than is needed to clean the face.

When surplus stock is taken from the face side the average cut is heavier than that which is taken by a fixed cut, thereby causing the knives to wear faster and to require more frequent sharpening, and the trouble is intensified by the fact that in working face up and taking the surplus cut with the top head, which also

working face up, the sap is preserved, while the heart is thrown away. There is no doubt that working the average heart face strip face down will prevent from 10 to 15 per cent lowering in grade. The same statement applies in working any stock when it is desirable to remove the surplus from the poorer side.

Aside from saving stock and keeping up the grade, working face down provides for smoother work, faster feed, less frequent stoppage of the machine and less sharpening of knives.

These and other facts have led the S. A. Woods Machine Company of Boston to so design their machines as to meet the conditions in the best possible manner. The outcome has been the Woods wedge platen, which is recognized by experts as the greatest improvement applied to Woods planing machines in recent years.

It provides for instantly changing the cut of the top and bottom heads, distributing it as desired, without altering the finished thickness of the material or location of matching, and permits of finishing face down, securing all the advantages attending this method. The general design and method of adjustment is shown in the accompanying illustrations.

The platen or bed-plate before the bottom cutter-head is secured on a heavy wedge, which is connected to a frame—fitted on the rails forming a part of the sides of machine—that supports the bottom feeding-in rolls, the latter also resting on wedges. This frame when moved toward or away from the cutter-heads—an adjustment accomplished by the turning of a screw at the feeding-in end of machine—raises or lowers the rolls and wedge platen simultaneously, the relative location of each remaining unchanged.

In construction and arrangement the mechanism is the simplest possible, and there are abso-

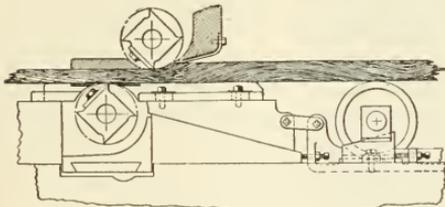

lutely no parts to get out of order or require same, which makes it possible to keep the bars very close to the cut, thus preventing the clipping of ends and making a more even surface.

When working face down the top head acts as a roughing agent on the back of the stock, reducing it to an even thickness and leaving a dressed surface for the bar over the bottom head, which, with the additional advantages of having always a uniform cut and the convex side to work on when heavy cut is taken by top head, makes all conditions favorable to bottom-head work, and of course all work is governed by the conditions under which it is done.

When any kind of lumber is being dressed on both sides it often happens that on account of thin spots or unevenness in the rough surface it is desirable to take the least possible amount from the under side, as it might be less objectionable to have an occasional rough spot on both sides than to have one side always perfect and frequent rough spots on the other. The wedge platen permits of adjusting the machine to distribute the cut in such cases. It also makes an instantaneous adjustment possible when it is necessary to change from double to single surfacing, or vice versa.

As to the uniformity of lumber, one lot is likely to vary in many respects from another, even if both came from the same sawmill. Some shrink more than others, some will twist more, and sometimes the saw leaves a rougher surface than at others, all of which serve to make a difference in the amount of cut absolutely required to produce a perfect surface. In running several lots of such lumber through the ordinary machine more or less of the output would be of an inferior quality, unless time was taken to readjust for each variation, and this would not be practical. The wedge platen permits of distributing the cut to overcome the above and obtain the best results.

Ordinarily, when an operator discovers his machine is out of adjustment and is not producing the best work, he considers the time and trouble that will result in changing the machine for the better, and then concludes that the work the machine is doing is good enough and lets it go. But with the wedge platen the adjustments are concentrated at one point, and

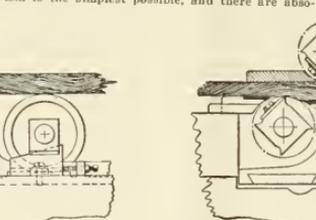

PLATEN ON LINE OF CUT.

does the finishing, the knives which dull quickest are those which make the finish surface.

When stock is closely sawed it frequently happens that rough spots will be left on the side dressed by the top head, while the bottom head is sure to have a full cut; therefore if stock is being finished face down a perfect face is assured, all unfinished spots being left by the top head on the back. When barked strips are being worked by this method the surplus is removed from the bark side. The bottom head working the face is certain of a full cut and removes only a sufficient amount to give a perfect surface, thereby leaving a maximum amount of imperfect stock to be removed from the bark side by the top head. By working in this manner one perfect face is assured and the largest possible percentage of double face.

When heart face is being worked face down the surplus stock is removed from the sap side, thereby leaving all the heart, less the amount required to clean the face side; whereas in

PLATEN BELOW LINE OF CUT.

attention. The wedge platen saves labor, saves stock, increases the capacity of the machine, assists in the production of a higher grade of lumber, provides for maintaining a machine in proper adjustment and working order, and inspires the operator to higher attainments. Its introduction into planing machinery marks a great advancement in such equipment.

The bottom head, located near the center of the main frame and surrounded by so much metal as is the case of the Woods machine, is certainly running under more favorable conditions than a top head which in every case is held in place by boxes clamped to a pair of posts which are commonly called cutter-head stands.

The opening between the bars, before and after the bottom head, is much less than between the bars of the top head, as no allowance has to be made for a yielding pressure or variation of cuts, and the relative position of the bottom head and bars is always practically the

made by the turning of a single screw. It is all so easy that the change is made as a natural course.

The wedge platen is embodied in all of the leading sizes of planers and matchers and double-surface planers manufactured by the S. A. Woods Machine Company of Boston, Mass.

New Smith Cutting-Off Saw.

The H. B. Smith Machine Company, of Smithville, N. J., has recently developed a very fine cutting-off saw of the railway style, in which the saw is drawn into the work by hand. A picture of this new tool is herewith shown.

It is particularly advantageous in sawing off long or heavy timbers, which cannot be conveniently moved to the saw.

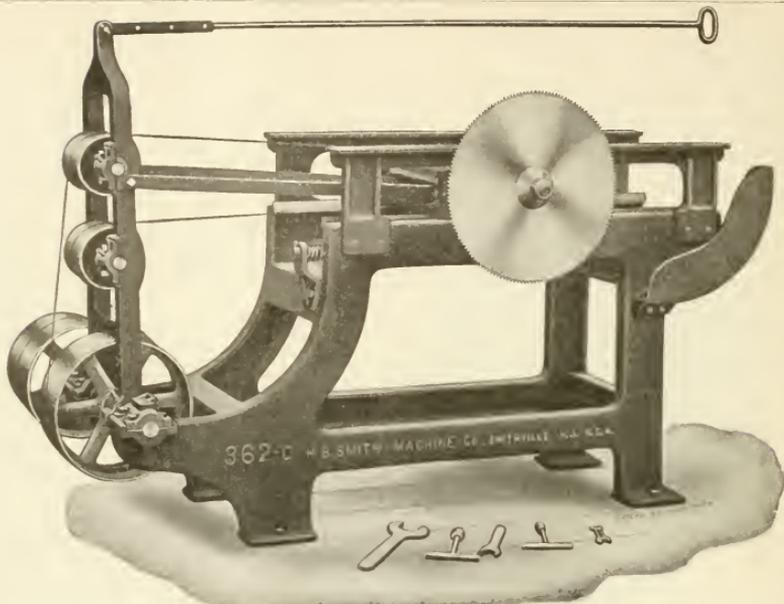

The frame is of modern design, being cast whole and internally ribbed, which, with the broad girts, makes a rigid sup-

port for all the working parts. Provision is made to support a wood table to cover the mandrel, on which a fence can be fastened, also stops, etc., for gauging the material being sawed.

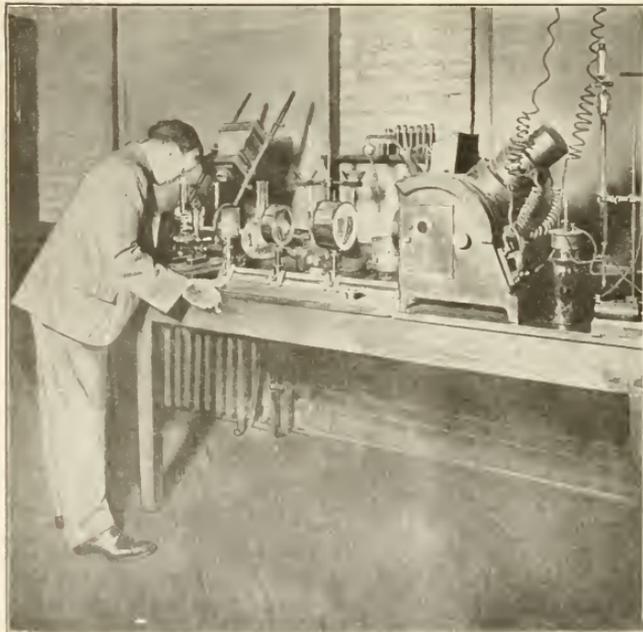

The mandrel is of high carbon machinery steel, $1\frac{1}{4}$ inches where the saw goes, and $1\frac{3}{8}$ inches in the bearings, and is belted strong enough to drive a 20-inch saw. The bearings are of ample length, babbitted, and connected by a yoke.

The yoke is fitted with adjustable ball-bearing rollers, which are grooved to fit the ways, hence the movement of the saw, which is 30 inches, is not only very easy but likewise perfectly accurate, consequently this machine will do the most accurate kind of work.

The swinging frame is the Smith method of belting the movable saw. This swing frame is provided with idle pulleys, so placed as to maintain the same tension of belting regardless of the position of the saw. It is hinged to extensions of the boxes, concentric with, but not on the shaft, thus insuring great durability. The top of this frame is pro-

NEW TYPE CUTTING-OFF SAW, DEVELOPED BY H. B. SMITH MACHINE CO.

VIEW IN ATKINS' LABORATORY

vided with a rod and handle by which the saw is drawn through the work. This swinging frame is counterbalanced by two long springs, one in front and the other in the rear, both of which come in contact with the yoke, so as to make the movement equable and easy.

The 20-inch saw is provided with each machine. The countershaft is attached and consists of a substantial steel shaft, a driving pulley, a fast and patented loose pulley, with bearings babbitted and self-lubricating.

Fourteen feet of 5-inch belting are required for belt from the driver to the pulley on mandrel. The machine weighs 600 pounds and occupies a floor space of 3 feet by 6 feet 10 inches. The manufacturers will supply further details on request.

Some Worth-Knowing Pointers About Saws.

Probably the average mill man by no means appreciates the extreme care and detail work necessary in order to perfect and manufacture saws of uniform quality. Manufacturers who have made their product a standard article have spent endless time and enormous amounts of money in securing the maximum of excellence combined with absolute uniformity.

F. C. Atkins & Company, Inc., of Indianapolis, whose saws are known from one end of the world to the other, probably have their method by which this end is attained, down to as near a point as it is possible to reach. Through their system there can be no variation. A list of given specifications may be duplicated immediately, so that a buyer who places an order to "send a saw like the one ordered six years ago" knows it will bring an exact replacement not only as to size, gauge, teeth, etc., but as to temper as well. This wonderful accuracy is made possible by keeping an ex-

haustive record of each saw made, covering all the essential details.

Silver steel, from which all the Atkins blades are manufactured, is prepared from an exclusive formula, the constituent parts being the finest elements obtainable, and so blended that the highest efficiency is secured. There are special formulas for each class of blade, and certain specifications of manufacture which must be adhered to by the steel workers, each of which represents years of patient, intelligent investigation and practical experience. Once a high standard is obtained it is rigidly adhered to. Each order for steel is accompanied by given specifications and with the positive condition that it shall be subject to a variation of not more than 5 per cent or it will be rejected. All plates are analyzed upon arrival and the analysis recorded, after which they are classified according to their several degrees of excellence.

For the purpose of analysis the Atkins company maintains a thoroughly equipped laboratory for chemical, physical and microscopical examination. Through the use of powerful lenses each plate is examined for consistency, a portion is then dissolved in acid and its composition obtained. It has been possible thus far to know to an absolute certainty not only the processes of manufacture that have been used, but the exact proportions of each constituent part. No "guesswork" is involved. A factory with its record card, on which complete data is endorsed after every process through which it passes. In the smithing department no man is permitted to serve until after four years' apprenticeship, and only then under the most careful supervision. Thus uncertainty is reduced to a minimum, and not only is this true in one department, but in all. Formerly the process of tempering was guided entirely by the eye of the furnace man, but the Atkins process removed the least liability of uncertainty in this direction. Through the use of the pyrometer and other exclusive methods, tempering becomes virtually automatic. Given the size and type of plate, absolutely fixed rules are applied, which are certain of results.

The It will be seen that the duplication of a former saw—a matter which means much to the millman—means only a reference to the very accurately recorded history of its predecessor, and the execution of similar processes under like conditions.

Miscellaneous Notes.

On August 17 J. L. Strickland and others were a very animated concatenation at Greenville, Miss., at which time eight kittens were initiated into the mystic rites of the I. O. O. F.

The Wisconsin Veneer Company's plant at Rhinelander is now running with a full crew and three machines in operation.

W. H. Walker, a prominent lumberman of Woodbury, Tenn., was killed last week by a piece of scantling which flew out of the planer in his mill. It struck him on the head, killing him instantly. Mr. Walker was one of the most prominent men in the county in which he lived. He was about fifty years of age. His wife and a brother, J. B. Walker, survive him.

The United States Chair Company's factory at Cory, Pa., was damaged by fire August 9 to the extent of \$25,000.

The Portage Lumber Company of Portage, Mich., has decided to suspend operations for the present. A considerable amount of timber already cut will be hauled to Grand Marais and sawn and the mill will conclude the company's activities for the time being.

The Empire Logging road, known as the St. Croix & Duluth, near Superior, Wis., has been sold to the Mississippi, Hill City & Western and will be received to the hardwood district around Hill City, Minn.

The International Eucalyptus Association of

California has filed incorporation papers, and will engage in planting, growing and selling eucalyptus land for the purpose of encouraging the use of the wood as a staple market article. J. A. Slagbarg is removing from Kendallville to Auburn, Ind., to establish a handle factory.

Fire recently destroyed the factory and equipment of the West Virginia Door Company at Parkersburg, W. Va., and for a time threatened the entire lower section of the city. The loss reached about \$150,000.

A forest fire recently raged near Boyne City, Mich., for several days, covering more than a thousand acres and destroying several thousand dollars' worth of hardwood timber. The Saginaw Wheelbarrow Company of Saginaw, Mich., has completed arrangements whereby it will add a line of wood novelties to its output, pushing the manufacture chiefly during the portion of the season when the wheelbarrow trade is dull.

The Atwood Lumber & Manufacturing Company is rushing work on its new sawmill and manufacturing plant at Park Falls, Wis. It is said that the company has about 900,000,000 feet of stumpage which will be handled through the plant—principally hardwoods. Aside from a saw and planing mill, a veneer plant and sash and door factory will be built.

The Beaumont Nursery Company of San Bernardino, Cal., will supply 1,000,000 young eucalyptus trees for a Tulare concern to plant upon 1,500 acres of land.

Fire in Kellogg Brothers Lumber Company's yard at Nekosha, Wis., caused a loss of about \$2,000 recently. Several apparently incendiary fires have been started in this yard of late.

The plant of the Gale Chair Company at Grandville, Mich., was damaged to the amount of \$20,000 a few days ago.

The sawmill and lumber stock of the Chas. Creek Lumber Company at Elizabeth City, N. C., was destroyed by fire last month; loss, \$5,000.

The S. A. Woods Machine Company of Boston, Mass., are furnishing new equipment for a number of plants, among them that of the Kaul Lumber Company of Birmingham, Ala., and Graves, Manbert, George & Co. of Buffalo. The company has recently installed a planer and two matchers for the John Schroeder Lumber Company of Milwaukee, and filled an important export order for the Oriental Timber Corporation, Ltd., Melbourne, Australia. The latter is a new concern organized to manufacture lumber on a large scale, and operates both saw and

planing mills, the latter equipped entirely with Woods machines.

The large mill and general store owned by the Grandin Lumber Company at Eagle Rock, Pa., were destroyed by fire August 15. The loss is estimated at \$25,000, and only by a hair's breadth 1,000,000 feet of lumber stored near the burning portion of the plant was saved.

The lumber yard belonging to James A. Martin at Johnson City, Tenn., was destroyed by fire August 15. The loss was about \$25,000. It is thought the fire was of incendiary origin.

Manufacturers of brooms are seeking out alder timber in Washington, where there is an abundance of it within a radius of three miles of the town of Sulan, and it is expected that a broom handle factory will be located there in the near future.

The Oss lumber mill near Swanton, Md., was entirely destroyed by fire August 15. The loss was about \$5,000.

The Latta Manufacturing Company of Portland, Ore., has become affiliated with the Grand Rapids Show Case Company, and eventually the latter plans to absorb other similar enterprises and increase its capital stock to about \$1,000,000. The Lutke concern was the leader in its line on the coast, having been in the business twenty-five years.

The F. J. Shields Lumber Company, capitalized at \$10,000, has been incorporated at St. Louis.

T. J. Robinson, a lumber dealer of Little Rock, has filed a petition in bankruptcy, with liabilities of about \$3,000.

The Perkins-Crichlow Lumber Company of Rutherford county, Tennessee, has filed articles of Incorporation. D. F. Perkins of McMechen is one of its organizers.

A new source of Iguum vitis supply has been discovered by foresters in the Philippines, where throughout the southern islands trees of much larger size than those of Jamaica, have been found, some of them running forty-five inches in diameter, as against six to eight in the Jamaican forests. This wood is becoming scarce and as it is very popular for certain purposes, the new source of supply will be welcomed.

The Berlin Machine Works, through W. H. Payne of their Columbus, S. C., office, has recently been awarded the contract from the Waccamaw Lumber Company of Bolton, N. C., for their entire planing mill equipment, consisting of eight heavy planers and two band saws. This equipment has the capacity of handling the output of a mill cutting 125,000 feet per day.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

W. H. Russe and George D. Burgess of Memphis were among recent visitors to this market. They were en route to Michigan for a vacation among the lakes.

Fickie, Bell & Co., 14 Dale street, Liverpool, England, are sending out a neat little card bearing the legend, "Buy Now! Send in your orders for mahogany, Circassian walnut and all fancy woods."

J. S. Trainer of Trainer Brothers Lumber Company left on August 12 with his family for two weeks' outing at Mackinac Island.

John M. Dickson of the John M. Dickson Company, Memphis, was a visitor among his friends in the Chicago trade a few days ago. Mr. Dickson may not rebuild his recently burned mill at Memphis, but is considering an Arkansas location.

T. J. Christian of Maley & Vertz, South Bend, Ind., was in town recently, calling on the trade, and left here to visit his customers in the Wisconsin field.

W. S. Darnell of the Darnell-Taenzler Lumber Company, Memphis, was a caller at the Record office August 16. Mr. Darnell was en route to join his family at Mackatawa Beach, Mich., where they have a summer cottage.

Walter H. Crim of C. M. Crim & Son, manufacturers of hardwood at Salem, Ind., was a recent Chicago visitor.

Frank F. Fish, secretary of the National Hardwood Lumber Association, is making an eastern trip in the interests of his organization. He expects to visit all the large hardwood markets of the East.

E. W. Lord, manager of the Chicago Veneer Company of Blue Ridge, Ky., spent some days with relatives in Evanson recently. Mr. Lord was formerly located at Robey street and Blue Island avenue, but some years ago removed his plant to its present site.

H. B. Levitt, president of the Levitt Lumber Company, has been making a southern trip, including a visit to the company's plant at Hollywood, Miss., which has been in operation about two months.

E. B. Lombard of the Railway Exchange has

returned from a summer outing with his family at Cape Cod, Mass.

W. H. Greble, manager of the Gilchrist interests at Memphis, has been taking an extended vacation trip in the North.

W. O. King of W. O. King & Co., one of Chicago's well-known hardwood concerns, has been spending several weeks on the Pacific Coast.

Rudolph Sondheimer of the E. Sondheimer Company, Memphis, Tenn., was a Chicago visitor a few days ago. Mr. Sondheimer was on his way north to join his family at one of the Michigan summer resorts.

The Southern Cypress Manufacturers' Association has just issued a neat little booklet called the "Book for Buyers of Cypress and Tupelo Lumber," which is well calculated to assist in extending the field of service for these two valuable timbers. The association announces that the book is far from complete, and that in dealing with woods of such varied adaptability as cypress and tupelo, it expects to be able to work upon it indefinitely, making new editions from time to time. The booklet will be sent to those interested, on application to Secretary Geo. E. Watson, New Orleans.

The steamer "Rosevelt" will be chartered by the Hoo-Hoo entertainment committee for a trip to Michigan City, Ind., and return, September 9. The "Rosevelt" is a floating palace, carrying 3,500 passengers, with every adjunct to contribute to comfort and enjoyment, and many special features will mark the trip of the Hoo-Hoo crowd.

C. L. Hartwell of C. L. Hartwell & Co., lumber manufacturers at Chicago Heights, has just returned from a month's outing in northern Michigan, which has been spent in fishing and general recreation preparatory to taking up an active campaign for fall business.

Charles B. Willey, manager of the Memphis mill of C. L. Willey, will leave next week for a six weeks' hunting tour in Montana.

F. W. Mitchell of the Barrett Mitchell Lumber Company, South Bend, Ind., hardwood jobber, was a Chicago visitor last week.

J. S. Williams, wholesale hardwood dealer of Evansville, Ind., who handles the output of the Lucas Land & Lumber Company of Waverly, Tenn., was in Chicago a few days ago visiting the trade.

W. L. DeWitt, sales manager for the Estabrook-Skeele Lumber Company, has been visiting the company's mills at Masonville, Mich., this week. E. E. Skeele has returned from his vacation trip to White Lake, Mich.

Wood Deal, with J. D. Lacey & Co., has returned from a visit to the property of the Pigeon River Lumber Company near Newport, Tenn., in which concern he is an officer.

M. F. Ritzenhouse of the Ritzenhouse & Embree Company is still cruising about the lakes in his steam yacht and having an ideal summer outing.

W. H. Simpson, manager of Upham & Agler's Cabin business, has been visiting the Chicago office of the firm.

NEW YORK

Frank T. Holloway has been elected trustee of the Wetts Lumber Company, 673 South Tenth Street, Newark, N. J., with bonds of \$15,000. Involuntary petition was filed against the firm recently, with liabilities of \$25,000 and assets of \$15,000.

Captain A. P. Bigelow of A. P. Bigelow & Co., south of West Fifty-fourth street, Manhattan, and John F. Steeves of Church E. Gates & Co., large retailers at 138th street and Mott avenue, are off on a fishing trip to Canada.

The New York Wood Manufacturing Company has been incorporated in Brooklyn to manufacture trim, sash, doors, mouldings, etc., with a capital of \$10,000, and will operate in Brooklyn.

The creditors of the Matt Haven Lumber company, 137th street and Fifth avenue, Man-

hattan, have received settlement for their claims of 40 cents on the dollar, according to the agreement recently effected between I. L. Cohen, its proprietor, and the creditors of the company. Among the prominent hardwood visitors during the fortnight were T. A. Washington of Hunt, Whetzel & Smith, Nashville, Tenn.; Gardner J. Jones of the Jones Hardwood Company, Boston, Mass., and F. W. Mowbray of Mowbray & Robinson, Cincinnati, O.

Merabon, Schuette, Parker & Co., 1 Madison avenue, have just added to their selling staff through the appointment of Booth Curtis, who will assist in the representation of the firm in the Metropolitan district.

A. J. Bodder, the hardwood retailer of Twenty-fourth street and Eleventh avenue, is rustivating on the Jersey coast.

George M. Stevens of the Stevens-Eaton Company, 1 Madison avenue, is spending a fortnight at Monticello, N. Y., with his family.

Halfpenny & Hamilton, wholesalers and manufacturers of Philadelphia, Pa., announce the closing out of their New York office at 154 Nassau street, and hereafter will conduct business through Philadelphia headquarters.

Secretary E. F. Perry of the National Wholesale Lumber Dealers' Association has been sojourning with his family on a motor-boat outing on the Hudson river in Mr. Perry's motor-boat. They went to Albany, and thence to Saratoga and Lake George, returning last week.

Gouverneur E. Smith, hardwood wholesaler at 17 Battenay place, left last week for a month's stay in the White mountains of New Hampshire. Lewis Dill, prominent Baltimore lumberman and ex-president of the National Wholesale Lumber Dealers' Association, passed through the city last week en route to the Georgian bay district, Canada, for a brief vacation.

Stone & Hershey, the well-known wholesale house of Newark, N. J., has incorporated under the same style with a capital of \$100,000. Associated with Messrs. E. E. Stone and C. S. Hershey in the new corporation will be Mr. P. S. Bauveist and E. E. Faith, who have been associated with the firm for some years past in a clerical capacity.

Robert W. Higbie, prominent hardwood manufacturer and wholesaler of 45 Broadway and head of the R. W. Higbie Lumber Company, has just returned from a visit to his hardwood operations at New Bridge, St. Lawrence county, New York, where his family are rustivating for the summer. The operations of the company at that point, which are conducted on 30,000 acres of very choice hardwood lands, are running along in fine shape, turning out some choice stocks of birch, beech and maple.

C. T. Kelako, representing Hansen & Co., leading lumber merchants of Copenhagen, Denmark, recently returned from a trip abroad, arriving in this city. Mr. Kelako of the American representative of the above company, making his headquarters at New Orleans. The firm of Hansen & Co. has been in existence for 125 years.

The Straasburg Manufacturing Company, hardwood manufacturers and the manufacturers of the well-known Shenandoah Brand of hardwood and parquet flooring, interior woodwork, etc., with plant at Straasburg, Va., have opened a New York selling office at 112 West Thirty-first street, Manhattan, and are now closely enter to the trade of the Metropolitan district. The company operates sawmills in Virginia and West Virginia, and is most advantageously situated to cater to the wants of buyers in this section.

BUFFALO

Angus McLean is preparing to move to Montreal, as he has to spend so much of his time looking after the McLean mills in the St. Lawrence valley. The Haines Lumber Company, of which the stock is owned by the McLeans, is to move its yard to North Tonawanda next spring.

J. B. Wall has been on a recreation trip up the lakes. The company reports a good business and does not propose to wait till after election, for it looks as if the trade would need more stock before that time.

J. N. Stewart & Bro. have sold so much cherry this summer, when the wood is mostly dull, that they have been putting in more lately to make up the reduction. No surplus stock of any sort is the report from that yard.

J. N. Scatcherd has been east quite awhile and says he is not up on the situation except that he finds that the Scatcherd hardwood door mill at Batavia is calling for more stock right along. It has always had a big trade.

The laying off of F. M. Sullivan this summer to take care of the throat trouble that developed last spring, seems to be about over, as he is getting well of the difficulty. The yard is active, both in lake and Pacific coast operations.

There is always a good assortment of hardwood lumber in the yard of A. Miller, for he is a good buyer as well as seller, always digging out either something of the like in Canada or elsewhere.

The new yard extension of the Standard Hardwood Company is so filled up with solid soil excavations that it fairly looks like a fortification. It is to get a further layer of cloders next, though it ceased to be low land some time ago.

Vicegerent Frank A. Beyer will hold a consultation on August 26 and give a river party next day to the same interest. It reports that there are new kittens beginning to enter their voices, trying to get in, from every side.

O. E. Yenger quite agrees with the people who say there is none too much hardwood lumber anywhere and he keeps up his assortment as usual, with an eye on as much outside stock as he can. It will be needed before long.

The yard of F. W. Vetter is showing the usual assortment and the sales are still reported to be good, though it might be a hard job to find more lumber in a hurry if the expected increase of demand should develop soon.

PITTSBURG

H. T. Lincoln of the firm of Bemis & Vosburgh is spending a two weeks' vacation in the East. Mr. Lincoln is handling the receivership of the Cheat River Lumber Company, and hopes to be able to bring some financial order out of the apparent chaos in that concern's affairs.

I. F. Balesy, hardwood manager of the Willson Brothers Lumber Company, is putting in his vacation in the wilds of "York state." The Willson company reports no change in prices or general demand.

The Myers-Parsons Lumber Company of the Farmers' Bank building, states that it is doing considerable business in stock orders, but that there is no special gain in inquiry along any line. The company is getting well established in this district as a successor of the Parsons-Cross Lumber Company.

Manager S. A. Seaman of the C. F. Caughey Lumber Company is at Atlantic City for a week or so. Scarcity of water has stopped operations in several of this company's country mills, but it has recently resumed operations in one of the Washington county mills which has been closed all summer.

W. R. Cornelius has been in the East for three weeks and is also rounding up the millmen in West Virginia and Virginia. He has strengthened his connections in those states and is adding every month to his ability to fill first-class orders for hardwood lumber.

W. P. Craig of William Whitmer & Sons, Inc., is doing the trade in Buffalo. The Whitmers find that the spruce is looking up a little and they expect that the increase in demand from the window-glass companies for boxing purposes will make this wood a good seller after September 1.

J. V. Babcock is spending several weeks with his family at Fulton, N. Y. Fred R. Babcock is at Spring Lake, N. J., with his family, and O. H. Babcock has recently returned from a long trip through the Northwest, where he went to look over the white pine situation.

J. C. Northwood Lumber Company, which recently had its mill burned at Shrayock, W. Va., is getting things in shape to rebuild and meanwhile is operating with several portable mills. The power plant of the company was not damaged.

S. A. Kendall, vice-president of the Kendall Lumber Company, has gone to Oregon to look over the properties of the Kendall interests near Roseburg. They are planning to develop about 20,000 acres of Oregon fir and pine lumber this fall and winter.

J. R. Edgett, president of the Interior Lumber Company, has returned to Pittsburgh and will make headquarters here for some time instead of traveling through the South. He will work the trade in the city and immediately west of Pittsburgh.

The C. P. Caushey Lumber Company has been doing quite a nice business in wagon stock and locust posts. Its chief work this summer, however, has been in supplying white pine timbers for the dams which are being constructed in the Monongahela, Allegheny and Ohio rivers.

The West Virginia Lumber Company is disposed to look upon the situation very favorably, inasmuch as it finds many real good customers who are still in the market for lumber. The company has added to its force of salesmen and is letting no business go by which it is possible to land.

The German Company notes a little improvement in the export trade, but finds that, in general, the market is devoid of features. Quotations do not advance and customers, Mr. Geratons says, are slow to close up for stock.

The Webster-Keasey Lumber Company is one of the few busy concerns in Pittsburgh this month. Its mills in Butler, Venango and Indiana counties are running and are getting out a large amount of oak and hemlock. Its sales lately have been mostly of oak and the prices received were quite satisfactory.

H. V. Curll Lumber Company says, in spite of the large amount of figuring done, there is a dearth of really good orders placed. Poplar is a leader in its trade and holds its own remarkably well, considering general conditions.

J. B. Flint, president of the Flint, Erving & Stoner Company, has been dividing his time this summer between the Pittsburgh office and his summer home in Canada. The company's operations at Lunenburg, W. Va., are going ahead steadily and its output of lumber will be very large this year.

Down at the offices of the American Lumber & Manufacturing Company things are badly broken up by the vacation microbes working overtime. J. N. Woodlett, general manager, with his wife, is at the convention of the National Box Makers' Association at Detroit and will incidentally take in a few lake trips before he returns. E. B. Montgomery, secretary of the American, is putting in two weeks up in Canada. L. B. Oehmichen, treasurer of the American, has taken upon himself a very enjoyable and strenuous vacation contract, for he is spending a two weeks' honeymoon over the Canadian line. The wedding occurred a few days ago and the fortunate bride is Miss Georgetown de Vallay of Pittsburgh. Congratulations are being showered upon the couple, for L. B. is not only a hard worker but a mighty good fellow and his bride is a most charming young lady.

PHILADELPHIA

The office and entertainment committee of the Lumbermen's Exchange, George A. Howes, chairman, has announced that the usual annual outing of the exchange has been arranged for

September 16, 17 and 18. It will comprise a trip by the Pennsylvania, West Shore, Ulster & Delaware, Catskill Mountain and Otis Elevating railroads, to the Catskill mountains, a return via the last two roads to Catskill Landing, a sail by daylight down the Hudson River and then home via Pennsylvania Railroad. Great pains have been taken to provide an entertainment so attractive of nature as to remain long an agreeable memory in the minds of those who have participated.

The semi-annual meeting of the board of directors of the Pennsylvania Lumbermen's Mutual Fire Insurance Company was held on July 28. Reports of the secretary, treasurer and auditors were read. The result of the last six months' business, which is shown below, was highly satisfactory.

Insurance in force July 1, 1908.....\$9,448,312
Insurance in force December 31, 1907.....\$8,362,755

Increase first six months 1908.....\$1,085,557

Premiums in force July 1, 1908.....\$ 217,084

Premiums in force December 31, 1907.....101,111

Increase first six months 1908.....\$ 115,973

Investments in force July 1, 1908.....\$ 261,342

Investments in force December 31, 1907.....220,501

Increase first six months 1908.....\$ 40,841

Surplus in force July 1, 1908.....\$ 221,502

Surplus in force December 31, 1907.....189,062

Increase first six months 1908.....\$ 32,440

Cash assets in force July 1, 1908.....\$ 320,044

Cash assets in force December 31, 1907.....284,618

Increase first six months 1908.....\$ 35,426

Total assets in force July 1, 1908.....\$ 981,297

Total assets in force December 31, 1907.....857,952

Increase first six months 1908.....\$ 123,345

The fire losses of the company for the first six months have been very low. The company is returning 35 per cent of the premiums to its policyholders by way of dividends. Justin Peters, manager of this company, with his family, have a cottage for the summer at Ocean City, N. J.

H. Hazard & Co. report very respectable orders coming in, consequently are not sighing over conditions. They are adding spruce and hemlock to their list of woods. Up to this time they have handled principally hardwoods and yellow pine. Mr. Hillman of this firm is arranging to spend his usual summer outing at Barnegat bay, where he will indulge in his heart's content in his favorite pastime, sailing and fishing. The ears of his many friends will be ringing with some startling narration in the piscatory line when he returns.

The Flite & Arbelo Company are not swamped with orders, but nevertheless take an optimistic view of things. They do special sawmill work for the yards and are seldom without a modicum of responsible work. They are hopeful for fall improvement.

E. V. Babcock & Co. testify to improved conditions in trading and are enthusiastic as to prospects for fall.

Paul W. Fleck Lumber Company has no complaint to make as regards number of inquiries and orders, but states that values in low-grade lumber, owing to accumulation of stock, remain uncertain.

Charles L. Meeley reports trading for the times reasonably brisk. In the early part of the season he could not say as much. Mail orders are beginning to come in, and during his trip recently through northern New Jersey and New York he was well backed some fair orders.

The Henry C. Patterson Company reports a gradual increase of sales during the last few weeks and that business is assuming a more hopeful aspect.

On account of increasing business Frank T. Rumberger has removed his office to the more commodious quarters of 408 and 409 Harrison building.

Kirby & Hawkins Company reports an increase of inquiries and regards the outlook quite promising, with a fair disposition to contract ahead at present prices, but as there is a probability of an advance in prices there are others who will have a word to say on the subject. Mr. Kirby is arranging to spend a two weeks' vacation among the beautiful Brandywine hills, in Chester county.

W. W. McCormick remains unruined as to the vacillation of present trading. He meets uncontrollable conditions philosophically and lets things take their course, which he is far-seeing enough to know they will do anyhow; he reports more inquiries coming in for high-priced lumber and feels that business is progressing as fast as could be expected when one considers how tangled have been its wheels.

Owen M. Bruner Company is seldom discontented over the variations in trade, as it is sure always to get its share. Mr. Whelpton of this house is absent on a trip through Canada. He will take in Niagara Falls as he goes along.

James Strong & Co., Inc., is by no means incredulous as to the prophecy of the near approach of more prosperous times.

Charles Este Company states that its total sales for July have equaled those of same month of last year. The company is handling just now some fancy foreign woods, of which moa, koa and sara are fine specimens from Australia; also some phenomenally large and very superior white pine planks from California.

Among the recent visitors to the local trade were I. D. Miller of I. D. Miller & Co., Hivawsee, Va., and A. D. Williams, president of the Red Lick Lumber Company of Marlinton, W. Va. R. A. and J. J. Williams state that their total sales for July have aggregated close to normal figures of a year ago. They are sanguine that the fall will see a marked advance in trade.

On August 1st the fire destroyed the works of the West Virginia Veneer & Door Company at Parkersburg, W. Va., and the large plant of the Parkersburg Ice Company and twelve residences; damaged the Baltimore & Ohio Railroad bridge over the Ohio river and for a time threatened the entire lower section of the city. The loss is estimated at \$150,000, with insurance about one-half.

BOSTON

The George D. Emery Company of Chelsea, Mass., recently received a large cargo of mahogany and Spanish cedar logs. The company has a good stock and is prepared to take care of a more active business when it comes.

O. C. Skinner of the O. C. Skinner Lumber Company, hardwood dealers, Boston, has returned from a short vacation trip.

M. N. Wilson of the Wilson Lumber Company, manufacturers of hardwoods, Eikins, W. Va., visited the trade recently. Mr. Wilson had a few bargains to offer and felt it was a good time to come to Boston to look the field over.

M. W. Hart, hardwood lumber dealer of Boston, has been spending week ends in New Hampshire this summer.

George H. Davenport of Davenport, Peters & Co. is away on his vacation. William A. Bacon of this company has been summering at Kingston.

William H. Wood of the William H. Wood Company, one of the best known lumber dealers in the East, filed a voluntary petition in bankruptcy this month. The liabilities are \$478,491 and the assets \$216,005.

Charles D. Butler of the Berkshire Lumber Company, Pittsfield, Mass., is on his way to Alaska to hunt big game. This is Mr. Butler's second trip to that section of the country.

Frank B. Witherbee of the H. M. Hickford Company, Boston, is on a vacation trip and will not return until the first of September.

Alfred J. Bond of Bradford, Pa., a large dealer in hardwoods, was in Boston last week.

Charles C. Batchelder, treasurer of the Boston Lumber Company, left late last week on a three weeks' canoe trip on the Alleghese river, Maine.

BALTIMORE

The National Lumber Exporters' Association has been exceptionally busy of late working to advance the interests of shippers of stock to foreign countries, and various matters have been under consideration. The committee appointed to take into account the conditions at Antwerp, regarding which port numerous complaints have been made, has completed its work and prepared a report, which sets forth the various objectionable practices that have been found to exist there. It was ascertained that there had been frequent complaints on the part of the brokers as to quality, short measurement and for other alleged reasons. In the invention of which the Liverpool contingent has been especially fertile. Shipments would be objected to for some supposed defect and in various ways the brokers would endeavor to cut down the price of stocks, so as to bring the return on a shipment to the level the quotations might have attained. In fact, Antwerp had become almost as unreliable a market as Liverpool. The committee recommended in its report that exporters stop making consignments and forwarding lumber only on the basis of weight measurement. It was also suggested that all cases of undue exactions be reported to the association, in order that suitable action can be taken, and that the Antwerp brokers be notified of the decision to have every case of this kind thoroughly sifted. Copies of the report have been sent to all the members by Secretary E. M. Terry, and the Antwerp brokers also have been notified.

A total of 500 circular letters have been sent out to associations, shipping concerns and individuals interested in the export trade, soliciting their opinion on the expediency of the proposed movement to obtain a uniform ocean bill of lading. It will be remembered that the matter came up for consideration at a meeting of the N. L. E. A. transportation committee at the Baltimore Chamber of Commerce June 24 last, and that a special advisory committee was named at that time, consisting of representatives from a number of organizations of export shippers, to obtain the views of various bodies concerned, and the present canvas is the result. The returns will be carefully gone over and upon them the course to be pursued will depend. If it appears from the replies that shippers generally favor a uniform ocean bill of lading, the committee will proceed to outline a method of procedure.

The subject of shipping lumber on consignment, which has been under consideration for some time past by the N. L. E. A., has been brought prominently into the foreground once more by the reports of members who recently visited Europe and saw for themselves the conditions that prevail in the principal markets abroad. They found such congestion nearly everywhere that they became strongly impressed with the necessity of putting the strongest possible check upon forwarding without orders. The action taken at the annual meeting for the association in New Orleans last January, when it was resolved to notify foreign brokers that persistent encouragement of shipping on consignment might result in the severance of relations with the N. L. E. A. members, does not seem to have been sufficiently effective, and an energetic campaign against the practice is now being inaugurated.

J. O. Emmer, assistant secretary of the N. L. E. A. with headquarters at New Orleans, has been assigned to become secretary of the Gulf Coast Lumber Exporters' Association of Mobile. His resignation is to be effective September 1.

Secretary Terry of the N. L. E. A. has completed

a circular giving car service, terminal, switching and other charges at all the ports from Montreal to Galveston, Tex. The information is compiled from the rate tables of the various railroad lines, and presents in easily comprehensible form the precise data which shippers of lumber desire to have at their command. The compilation has entailed much labor, and will be in the hands of members in a short time.

The National Lumber Company, wholesale and commission dealers in hardwoods on West Falls avenue, sent out to creditors a circular letter this week, asking them to assemble for the purpose of considering the affairs of the company, as the latter is unable to meet its obligations. The letter states that the company has sustained heavy losses through the failure of James H. Cranwell, several months ago; the Wilson & Kenney Company at Towson, Baltimore county, Md.; Sobie Brothers, New York, and others. The National company is virtually owned by W. E. Peregay, who was at one time president of the Baltimore Lumber Company.

Among the visiting lumbermen here within the past week was A. T. Fuller of the George D. Emory Company of Chelsea, Mass., who succeeded in taking orders for a lot of mahogany.

Hardwood men here are not in the slightest degree alarmed over the decision to enlarge the Harlem & Hollingsworth Company's plant and its remodeling for the construction of steel cars, and by similar action on the part of the Fullman Company. They say that while these concerns have been large consumers of fine hardwoods, the change will have no effect upon the demand, since the uses of hardwoods are constantly expanding in other directions, while the supply is getting smaller, if anything, so that a ready market will be found for all the desirable stocks which can be turned out.

It seems certain that the combination of piano manufacturers, which includes the Knabe Company of this city, the Chickering and others under the name of the American Company, with a capital of \$12,000,000, will prove of benefit to Baltimore, since this city is made the headquarters of the concern, and all of the advertising will be done at this end also. It now looks as though the purchasing agent will have his chief office in the Monumental City, and it follows that the hardwoods used will be bought through him.

CHARLOTTE

Hackney Brothers, extensive wagon manufacturers of Wilson, N. C., will in the early fall open a branch of their manufacturing plant at Washington, N. C.

The manufacturers of furniture is rapidly becoming one of the most important industries in North Carolina. The annual report of the Bureau of Labor and Printing for the year 1907 has just been issued, and the statistics it contains relative to the furniture manufacturing industry in this state indicate a growth in this line without a parallel.

One hundred and four furniture factories reported to the bureau. These have a total stock of \$5,757,000.00, and employ 10,858 horse-power. Number of employees employed in these factories is 6,549, whose highest average daily pay is \$2.49—twelve cents more than the previous year—and whose lowest average daily pay is \$1 cents, an increase of six cents over the year 1906.

The Knabe Lumber Company, with main offices in Philadelphia, has just begun operations with their planing mill at Ellenton, Va. An evulsion a few days ago at William R. H. Smith, near Dracon, N. C., killed Henry Gilbert and Fred Jackson, while William Field, owner of the mill, is not expected to live from his injuries, and his son, Hugh, is also in serious condition. Too high boiler pressure is supposed to have been the cause of the ex-

losion. The boiler was thrown fifty yards and demolished, and the engine was completely wrecked.

The plant of the Lamb-Fish Box Company of Winston-Salem, N. C., has just been completed. The plant has a daily capacity of 11,000 boxes. Red gum and oak, the timber from which the boxes are to be made, will be brought from the company's extensive timber holdings in the southwestern hardwood belt. L. C. Hancock has charge of the plant at Winston-Salem.

Stockholders of the Kincaid Veneer & Lumber Company of Salisbury, N. C., will meet September 7 to act on a resolution adopted by the board of directors, which deems it advisable for the benefit of the company that it should be dissolved, the plant sold at public auction and the proceeds divided pro rata among the stockholders. J. M. Kincaid of Salisbury is president of this company.

The Parrish Furniture Company of Durham, N. C., has gone into bankruptcy and the goods will be sold to satisfy debtors as far as possible. Amount of liabilities and assets is not yet ascertained.

The Carolina Woodworkers Company has just opened its plant at Raleigh, N. C., and has begun making all grades of furniture. J. G. Eal is president of the company.

The large planing mill of the Skillman Manufacturing Company, located at Kenbridge, Va., has just been completed and operations will commence at once.

The Greensboro Table & Mantel Company of Greensboro, N. C., has been declared bankrupt. H. C. Hood has been named as permanent receiver. The former secretary and treasurer of this large concern, M. L. Bloomberg, has been arrested and placed under \$1,000 bond, pending trial on the charge of misappropriation of the company's funds.

The large new brick dry-kill of the C. M. Betts Lumber Company of New Sumpter, S. C., is about completed and is in every respect much better than any other of the kind in the South. Buildings have been erected and the plant, when completed, will have a daily capacity of 75,000 to 100,000 feet. J. W. Allen is manager of the plant, which is one of the largest and most successful in South Carolina.

A suit involving timber lands lying in Jackson county, North Carolina, valued at \$100,000, has just been decided. This was the case of the Highland Forest Company vs. Jackson Owen and about a hundred defendants to clear the title, and have the latter declared in unlawful possession. The decision is in favor of plaintiff and the defendants must vacate.

The Appalachian Railway Company has been chartered for the construction and operation of a railroad from Whittier, N. C., into the Great Smoky mountains, in western North Carolina and possibly on into Tennessee. Capital stock is \$100,000, with power to increase. This is to be strictly a lumber road and will open up over 200 miles of one of the finest kind of virgin timber land, rich in all grades of valuable hardwoods. The promoters are local and northern capitalists.

CLEVELAND

Local lumbermen, including some of the largest hardwood dealers in the city, are complaining bitterly against the provisions of the new building code which went into effect some time ago and which bars lumber piles within a distance of 100 feet of any house or tenement. The code was passed primarily to govern new buildings and new conditions but it is being enforced against the present lumber yards to a degree that is causing much hardship and which some dealers say will eventually compel them to move out of the city or abandon business altogether. A committee of the Cleveland Wholesale Lumbermen's Association had a conference with the fire chief and the building

inspector and asked that the distance be cut down to forty feet, but this was refused. The wholesalers say they will have an amendment submitted to the city council changing the ordinance in that respect. It is believed that it will pass.

Cleveland is to have a great new store. The John Hartness Brown building on Euclid avenue, which has been under roof for four years, but which has never been finished, is to be completed at once for the new lessee, the John Chaffin Company of New York, backed by a syndicate which controls some of the biggest stores in America. The announcement is made that the immense building is to be elaborately fitted up with wabogany furniture and is to be floored with quartered oak flooring throughout. The furnishings and appointments will be of the very finest.

George S. Gynn and C. A. Krauss of the Krauss-Gynn Lumber Company spent several days recently visiting the lumber districts in northern Ontario.

Cleveland has a new box company, located in the flats adjoining the plant of the Gill Lumber Company. A concrete block mill is being erected and already considerable stock is being turned out. The concern is to be known as the Banner Box Company and as soon as incorporated its backers will be announced.

Frank H. Christian of Alpena, Mich., was a visitor at the offices of the Cleveland trade during the past week.

Announcement is made that the Cleveland Lumber Company has been merged with the Saginaw Bay Company, the latter assuming full control hereafter. The concern has been re-organized with L. H. Doman remaining as secretary and manager, and Albert Barth as vice-president. O. W. Prescott, W. H. Prescott and C. H. Prescott, Jr., are new directors of the company. The Cleveland Lumber Company was affected by the recent failure of a Cleveland bank, so a meeting of creditors took place with the result that the Saginaw Bay Company took charge of the plant and yards. The Cleveland company has had one of the best located yards in the East End for several years and has done a large trade.

Will Martin of the Martin-Barrios Company reports that conditions are materially improving. While the orders are for comparatively small quantities of stock they are coming with much greater regularity.

Business with the Advance Lumber Company is improving, according to F. T. Peitch of that company. This is particularly true of the hardwood market, which has shown more strength during the past month than for any period since the panic struck the company.

COLUMBUS

A change was announced this week in the personnel of the F. McDonnell Lumber Company. F. McDonnell, who for years has been a stockholder in the company and general manager, has sold his holdings in the company to E. N. Huggins, who now has complete control. E. N. Huggins, F. McDonnell and F. A. Benua were the organizers of the company and the principal stockholders at the start, but both the latter have sold their stock to Mr. Huggins, who will guide the future affairs of the company from this on. Mr. McDonnell will open offices at 210 South High street and do a strictly commission lumber business in the future. The F. McDonnell Lumber Company has a large tract of valuable timber lands in Tennessee and will continue to do business in the future as it has done in the past.

The McLaughlin-Hoffman Lumber Company announced this week that it would soon open offices at Meridian, Miss. Charles H. Wagner of the company left several days ago for that place with a view of opening an office for the purchasing of yellow pine. B. F. Becker, who for some time has been representing the company in

this district, will have charge of the offices. This company reports business as moving along steadily and says that prices are higher, especially on the better grades of lumber. It has done a good business this week and has several large contracts pending.

The General Lumber Company has its men on the road but so far they have only been taking orders in a small way. The company is doing a fair business but it is not as large as it usually is at this time of the year.

The W. M. Ritter Lumber Company continues to receive good orders and the volume of sales is in advance of expectations for this time of the year. This company has advanced prices on several grades of lumber and is receiving a goodly number of orders at the higher level.

The Sowers-Leach Lumber Company states that orders are coming in with more regularity and are not so difficult to close as they were several weeks ago. This company says that business is gradually improving, prices firmer and expects steady gains from this on.

The C. T. Nelson Lumber Company reports business as picking up all along the line. The company is doing a good wholesale business, but it says that retail dealers are complaining of a quiet trade.

The Powell Lumber Company notes continued improvement and the outlook is better but in certain grades of lumber there is but little doing. It expects better business during the fall months.

Kenneth McLeod, president of the American Hardwood Company, is at Jackson, Mich., this week on business relative to his company, which will probably begin to manufacture some time in September. This company has a large tract of hardwood timber lands in Arkansas.

CINCINNATI

The Kentucky River Poplar Company, a large concern located at Lexington, Ky., will move its present headquarters from the blue grass region to the Queen city the latter part of this month. President Roberts visited the Queen city the middle part of the month and engaged office room in the Union Trust building, where the local offices will be located. The concern has three large mills, located at Frankfort, Valley View and Irvine, Ky. After the local headquarters are well established arrangements will be made to establish a yard here. The Queen city has become quite a lumber center during the last ten years, and no less than fifteen new concerns have moved their headquarters here.

The Ault & Jackson Company have been doing a fair volume of business during the past fortnight. A. V. Jackson has left for a business trip north.

B. F. Dulweber of the John Dulweber Lumber Company left last week on a business trip.

The K. and P. Lumber Company, one of the largest exporters of this city, have made arrangements to reopen their three southern mills on August 24. About 300 men are already at work constructing a railroad into the woods at Owsley county, Kentucky, which is in the vicinity of their three mills. The new railroad will be stretched out into the large timber tract of the company, and the work on this project is expected to be completed on or about August 24. Max Kosse, who is in charge of the local headquarters, is in the South at the present time making every preparation for the re-opening of the three large mills. The Louisville & Nashville road connects with the branch being erected by the company. T. B. Shoe, who is in charge of local headquarters in the absence of Mr. Kosse, stated that the export trade has been showing up much better with all grades of hardwoods, while the local trade is rather slow, but an improvement is looked for within the next few weeks.

Dwight Hunkley of the Hunkley Lumber Company returned from a southern trip last week, where he completed a deal for the entire

output of a southern mill. The company has been in existence but two years and during that time has been doing a very good business. The Cleveland office, recently opened, is also doing well.

Lee Wilson & Co. of Memphis, Tenn., have filed an intervening petition in the involuntary case against the Wiborg & Hanna Company. The Memphis firm filed claim for \$3,339.93.

The T. B. Stone Lumber Company consummated a deal the middle of the month by which it bought all of the stock and assets of the Stone & Heysler Lumber Company. The Stone & Heysler Company has an office located at Memphis and this will be continued under the new management. W. E. Heysler, who had charge of the Memphis office, will make Cincinnati his headquarters.

S. W. Richey of Richey, Halstead & Quick says that all grades of hardwoods are showing up much better, especially plain white oak. The demand for poplar is very urgent and that fact, combined with the general scarcity of the wood, makes prices very firm. A gradual improvement is now looked for in all hardwoods.

The Lewin Lumber Company with yards at Langdon and Florence, N. Carolina, is doing a much better business now than for several weeks, principally in the building lines. A small fire in the yards recently did a trifling damage to a small pile of lumber.

George Littleford of the Littleford Lumber Company, who has just returned from a southern trip, stated that conditions in the South are more favorable than last month, and give promise of regaining strength right along. The local trade in poplar and plain white oak will not show up well until late in the fall, presumably after the presidential election.

E. O. Robinson of Mowbray & Robinson notices a slight increase in the volume of business within the last two weeks, particularly in poplar, quartered oak and plain white oak. Generally speaking, the situation here is slated for a considerable change within a short time.

J. Watt Graham of the Graham Lumber Company has returned from a southern business sojourn. During his stay in the South he canvassed both the states of Kentucky and North Carolina.

Fred W. Mowbray of Mowbray & Robinson has returned from an eastern and northern business trip. During his visit in the East he called on a number of the representatives of the company.

J. Levy of the Little Lumber Company, Philadelphia, Pa., was a caller among the local lumber men during the past fortnight.

J. H. Roberts of the Kentucky River Poplar Company, Lexington, Ky., one of the largest concerns of its kind in the blue grass region, was circulating among the local lumber trade during the past week, in an effort to get a line on the situation and dispose of some of his concern's holdings in poplar and other woods. E. L. Knight of the Woodbury, Tenn., was in the Queen city during the past fortnight, and called on the lumber trade.

Gregory H. Stewart of W. H. & G. S. Stewart left last week for a business sojourn through the South.

The J. A. Fay & Egan Company, one of the largest woodworking manufacturing concerns of the country, at a meeting of the board of directors, held recently, declared a quarterly dividend of 1 1/2 per cent on both the common and preferred stock. It was also stated that the concern was doing a fairly good business.

S. D. Spenna of the I. M. Asher Lumber Company said that trade with them has been picking up and the situation in general is growing much better. I. M. Asher, president of the concern, left last week for a trip to the mills of the company in the South, and will also tour the state of North Carolina while away.

G. A. Huggins of the Shrimpton Lumber Company has returned from a business trip through the south and central states.

J. McCollough of the Finlay & McCollough Lumber Company of Meridian, Miss., called on a number of the local lumber dealers during the past week.

William A. Sayers of the Sayers & Scoville Canebrake Company left the latter part of August for a trip to Ireland, his native country. He expects to be away for several months.

George M. Morgan of the Nicola, Stone & Meyer Lumber Company says that trade with them continues rather quiet and featureless.

Thomas J. Moffett of the Maley, Thompson & Moffett Lumber Company said that conditions in hardwoods are gradually showing an improvement, but at the present time there is a fair volume of business being transacted. Things will look much better after the month of September has passed.

S. Subcock of the Acme Veneer Company says there is a fairly spirited demand for the higher grades of veneer, especially Ciresian walnut, cherry and mahogany and also quartered oak, while the others are about steady. The future in the veneer business is very encouraging. John Frohmiller and Harry Hartke of this concern left last week on a business trip.

W. E. Jones of the William H. Perry Lumber Company has returned from a northern trip and was much elated with the sentiment among the northern people. The local trade is picking up and more inquiries are being received each week and incidentally a few more orders. W. B. Wolfe of the company left for the South on a business trip.

E. F. Dulweber of the John Dulweber Lumber Company said that hardwoods were fairly active and prices were being held up remarkably. Frank Pittman has returned from a business trip South in the interests of the company.

W. E. Delaney of the Kentucky Lumber Company has returned from a business trip to Williamsburg, Ky.

Ralph McCracken of the Kentucky Lumber Company said that the situation was growing much better each week, especially in the building lumber. All of the mills of the company are still idle, and will not resume operations until a tide hits the Cumberland river and more logs are received. The concern did not cut as much timber this year as usual, and are relying on their present stock for the fall and winter trade.

Chasler E. Korn of the Farrin-Korn Lumber Company has returned from a business trip to the South. The feeling there is very bullish and trade promises to be better than was generally expected. M. B. Farris, who is resting at his summer home in Michigan, dropped into town recently, but did not stay long, as the weather was not agreeable.

C. Cunningham of the L. W. Radina Lumber Company says that trade appears to be growing much better.

H. D. Reimeler of the Reimeler Lumber Company says trade has been rather quiet with them during the past few weeks. L. B. Eiswick of the concern has returned from a southern business trip.

G. A. Eckers, general superintendent of the Parkersburg Mill Company of Parkersburg, W. Va., was a visitor in town lately.

W. A. Croft, general superintendent of the Nicolette Lumber Company of Nicolette, W. Va., called on a number of the local lumbermen during the past fortnight.

W. S. Perry of the Whiting Lumber Company of Philadelphia, Pa., was around town for a week or more getting a line on trade. He left the latter part of the month for a trip farther North.

Edward McGaire, a lumber inspector of C. Crane & Co., met death near Middletown last week, being struck in the back by a C. I. & D. train. His body was found several squares away from where the accident occurred.

A building boom has struck Cincinnati, and statistics show a 2 per cent increase in the months of June and July over the corresponding

months of last year, which were regarded as the highwater mark for that time of the year. While the earlier months of the year indicated a falling off, Cincinnati has not felt the depression in real estate and building which other cities have experienced.

William H. Stewart, receiver for the Enterprise Lumber Company, gives notice that the First National Bank is demanding the payment of interest due it as well as its share of the 20 per cent dividend to be declared. The bank holds a claim of \$12,500 against the Enterprise Lumber Company.

The International Coopers' Union will hold its annual convention here during the latter part of the month.

J. H. Doppes, president of the Doppes Lumber Company, left the middle of the month for a vacation trip to Michigan.

H. L. Michle of the Michle Lumber Company said that they are doing a very good business, and that there seems good reason to look for an increase in the volume of trade.

William Duhlmeier of Duhlmeier Brothers finds that trade has been rather slow during the past two weeks, but expects an improvement in the situation soon. William Guelker of Duhlmeier Brothers has returned from a business trip through the South, looking up stocks there.

W. E. Shrimpton of the Shrimpton Lumber Company says that they have been doing a very good business since the first of July. Building material demand has been good, and the out-of-town trade has also shown decided increase. Reports from the South are encouraging and indicate that the supply of poplar is very limited, which will eventuate in prices going higher.

Benjamin A. Kipp says trade has shown a gradual improvement since July 1. Re-manufacturers' stocks are badly depleted and it will soon be in the market if their business warrants it.

TOLEDO

A new Toledo corporation which will in all probability prove to be a good hardwood consumer is the National Fruit & Berry Box Company, which was recently organized with a capital stock of \$200,000. The company is about ready to install its equipment and E. G. Straude of the Straude Manufacturing Company of Minneapolis was here last week for arranging the details of equipment. The following officers have been chosen: President, C. L. Lewis; secretary and general manager, C. O. Mlinzer; vice-president and sales manager, F. W. Webb. These, with J. Chamberlain and J. P. Goodwin, constitute the directorate.

Governor Harry of Ohio has revived the old forestry bureau of the state, which for several years has been inactive. The new commission just appointed consists of Dr. Millikin, J. B. Biedler and W. R. Lazebny. The commission will cooperate with the forestry bureau of the state agricultural experiment station in the conservation of Ohio timber lands.

At a meeting of the creditors of the Kipper Brothers Furniture Company, bankrupt, held on Tuesday of this week in Toledo, Adm Schauss was removed as trustee of the company property. Attorney C. A. Aten was appointed to fill the position.

INDIANAPOLIS

The Braman-Veue Lumber Company is building five new lumber sheds.

Contracts for a filing cabinet system for the auditor's department of the Postoffice Department at Washington, D. C., has just been awarded to the Furnas Bank Fixture Company of this city.

F. M. Platter, manager of the North Vernon Lumber Company, North Vernon, has returned home after a two weeks' visit to Atlantic City and other eastern points.

I. M. Ley, an Oakley lumber dealer, lost his

home by fire about ten days ago. The cause has not been determined and the loss was almost total.

Fred Stone of Detroit has finished a visit to lumber mills in southern and central Indiana, during which he bought several carloads of stock.

George A. Kocher, Jr., well known in this part of the country by reason of his connections with John A. Gauger & Co. of Chicago, is preparing to open a lumber yard at Williams, O.

The Capital Machine Company has opened its new plant at Roosevelt avenue and Rural street, where the company is manufacturing a line of veneer machinery. The concern has a plant, including a number of large brick buildings, equipped with modern facilities.

It is stated that the business of the Walnut Lumber Company and the National Veneer & Lumber Company is to be conducted separately, although they will soon occupy the same yards on West Michigan street and will be under the same management.

W. H. Starnes, secretary of the Indianapolis Lumbermen's Club, states that the club will have its first fall meeting early next month and that the meeting will conclude with a banquet. It is probable that the meeting and banquet will be held at the Commercial Club.

Building operations so far during August have been almost 100 per cent better than they were during the same month of last year. Not in many years has there been so much building as at present, and the hardwood dealers are getting full benefit of it.

Perry Hatt, Indiana representative for John B. Jansom & Co., Nashville, Tenn., with headquarters at Hillsboro, has been nominated for treasurer of Fountain county.

The Long-Kelght Lumber Company, one of the largest of the local hardwood concerns, has been having a nice business during the last few weeks. It is carrying a large stock and has found conditions somewhat improved.

The Southern Lumber Company and the Central States Lumber Company, both closely allied, have begun the erection of a large number of dwellings, which are to be sold on the partial payment plan. The houses are modern and are being built on the ninety lots the companies recently purchased.

Fredrick M. Bachmann, president of the F. M. Bachmann Company, veneer manufacturers and lumber dealers, is expected to return early next month from a several weeks' tour of Europe.

F. C. McGrayer, formerly with the Robison Lumber Company of this city, has taken a similar position with the Greer-Houghton Lumber Company and has been assigned to northern Ohio territory.

W. H. Starnes, sales manager of the Robison Lumber Company in this city, is visiting the mill connections of his company throughout the South and will be away for some time.

Eldon L. Dynes, president of the Dynes Lumber Company, is taking a few weeks' vacation at Bass lake, where he has a cottage. He will return about September 1.

The Interior Hardwood Company has been having a splendid business recently and has a nice lot of orders on hand. The company now has a large force of employes at work and recently completed some improvements to its plant.

MEMPHIS

The L. H. Gage Lumber Company, with western headquarters at Memphis, states that it has begun getting out timber for its big mill at Earl, Ark., and that it will begin operations about October 1.

W. H. Starnes, Lumber Company is running its hand mill at Reison, Miss., and is going ahead with its logging work.

The Inker Lumber Company at Turrell, Ark., has closed down its plant and it will remain out

of commission all this month. This company has considerable timber on hand and this will be cut up when the mill resumes. Nothing is being done in the woods. In fact, the company has sold practically all of its logging teams and is making no effort whatever to get out additional timber.

The car situation does not show any serious development so far. There are apparently plenty of cars to meet all requirements of the trade, but it is feared that there will be much difficulty on this score later this season. Aside from the enormous volume of cotton traffic, which will begin to move liberally during the next thirty days, it is a well established fact that the railroad companies operating through the Memphis gateway have, one or two exceptions, allowed their equipment to run down to very unsatisfactory condition. There are very large numbers of condemned cars, and while the railroad shops have generally resumed and are now running on full time, it will be impossible for them to get all their equipment repaired in time for the demands to be made upon them. Some members of the trade believe they see ahead of them one of the most serious car shortages in this territory, and they are urging buyers to make purchases of lumber for immediate delivery while such delivery can be effected.

E. E. Tazewer, vice-president of the Darnell-Taenzler Lumber Company, has just returned from Europe. He has been suffering with rheumatism, but is considerably better and is able to be at his office. Mr. Tazewer was somewhat unfavorably impressed with the trade situation in Europe, not only as affecting lumber but other lines of business. He lays particular emphasis upon the unusually large number of unemployed. The Archer Block Mills Company at DeValis Bluff, Ark., has closed down for the season. It has cut up its supply of timber on hand. As soon as the sap goes down in the trees it will resume operations.

Arrangements have virtually been completed for the merger of the Mobile, Jackson & Kansas City Railroad and plans are now under way for making an extension from the northern terminus at Middleton, Tenn., to a junction with the Chicago & Eastern Illinois.

Memphis has bright prospects for locating a plant for the manufacture of bridge and construction steel, to cost approximately \$250,000. J. K. Graham, general manager of the Virginia Bridge & Iron Company, Roanoke, Va., is looking over the field and has expressed himself as highly pleased with Memphis.

Norval Osburn of Seanna, O., is at Huntington, Tenn., for the purpose of erecting a veneer plant. Work has already begun on the building. Machinery will also be installed for the manufacture of egg cases and other similar products.

Work has begun on the new coffin factory at Huntington, Tenn., which will be operated in connection with the plant of the Huntington Wood Manufacturing Company. The two concerns will give employment to more than fifty persons.

The stockholders of the Ware & Goodwin Poultry Coop Company have decided to increase the capital stock from \$10,000 to \$25,000 and to greatly increase the machinery used in the plant. The company is located at Trevenant, Tenn. Arrangements are also being made to install a veneer plant for the manufacture of egg cases. The machinery therefor has already been secured. The company will add a box factory by the end of the year for the manufacture of fruit and vegetable crates.

The E. Sondheimer Company, through its attorney, has filed suit against D. Strother, a prominent sawmill man of this city, who operates a plant at Proctor, Ark. The complainant alleges that the defendant's mill is depreciating rapidly in value because of lack of necessary money to make repairs. The total indebtedness of Mr. Strother, it is alleged, is about \$35,000. The E. Sondheimer Company and Bar-

ney & Hines are the largest creditors. In the suit the E. Sondheimer Company asks that the document be regarded as a general creditors' bill and that the other creditors be enjoined from securing attachments against the mill. Chancellor Heiskell has issued an injunction to that effect. The complainant also asks that a receiver be appointed to take charge of the mill and other properties of the defendant.

George D. Burgess of Russe & Burgess has returned from a trip to New York, Atlantic City, Chicago and other points.

O. M. Krebs, manager of the McLean Hardwood Lumber Company's plant at New South Memphis, has gone to the Pacific coast and will be absent from the city the remainder of this month.

George W. Fooseh, secretary of the Robertson-Fooseh Lumber Company, is back from his vacation spent at New York, Atlantic City and other points.

John W. Farley, attorney for Russe & Burgess, has filed suit in the circuit court against J. H. Lay by which a collection of \$1,650 is sought. The amount is alleged to be due on an account for lumber, and an attachment has been issued against the property of the defendant.

The prediction is made that within six weeks normal conditions will prevail at the shops of the Missouri Pacific system, which means that all of these plants will be in operation with a full force of employees.

NASHVILLE

Three coaches of yelling, cheering, confident Nashville lumbermen left Nashville Friday night bound for Memphis. The occasion was none other than the invasion of the Bass City by the Hook City people for the purpose of annexing a great ball game to be played at Ired Elm Park in Memphis for the cause of sweet charity. The most important feature of this human cargo, therefore, was the ball team aboard, and each and every member of the squad seemed duly impressed with the gravity of the situation and entirely aware of the great responsibility each pair of player-shoulders carried. The Nashville and Memphis lumbermen played a capital of times last season and broke even on the deal. This being the deciding contest, naturally aroused unusual interest. The ball team was in charge of Edward B. Martin of the Southern Lumberman. It included the following personnel: Mays, catcher, of Lieberman, Loveman & O'Brien; Britton, pitcher, of Davidson-Benedict Company; Ralston, first base, John B. Ransom & Co.; Litchfield, second base, Standard Furniture Company; Marshall, short stop, Nashville Hardware Flooring Company; Wolk, third base, John B. Ransom & Co.; Beckner, left field, A. H. Card & Co.; Taylor, center field, E. & N. Manufacturing Company; Sherrod, right field, Standard Furniture Company; substitutes, Osborn of John B. Ransom & Co. and Dewes of A. H. Card & Co.

Announcement is made that Huntington, Tenn., is to have a veneer plant in the Norval Osburn of Seanna, O. Work has also begun on the new coffin factory, which will be run in connection with the Huntington Wood Manufacturing Company. The citizens of this hustling little town are also after the establishment of a chair factory.

Columbia, Tenn., just south of Nashville on the Louisville & Nashville, experienced a disastrous lumber fire this week in the loss of the Riverside Planing Mill on Duck river. The entire plant, together with a large amount of valuable timber, burned to the ground. The total loss foots up about \$20,000 to \$25,000, with something like \$5,500 insurance. This was one of the most important enterprises in the county seat of old Maury and its loss will be keenly felt there, as it worked a large force of men and turned out much finished product.

The institution will be rebuilt at once. The origin of the fire was not discovered.

Millard Fillmore Green of the Davidson-Benedict Company is back from a vacation of several weeks at Chautauqua Lake, where he took his family.

A. L. Hayes, the well-known Nashville stave man, has gone to Cincinnati, Cleveland and other points on a business trip.

A. Loveman of the firm of Lieberman, Loveman & O'Brien, is spending his vacation in Canada on a fishing trip.

T. H. Dunlap of the Dunlap Lumber Company, Nashville, recently suffered the misfortune of losing his motor car at Ferris, Ind. He and Mrs. Dunlap left immediately to attend the funeral. W. V. Davidson and J. N. Hicks of the Davidson-Benedict Company, made a trip this week to the Monterey territory to look after business.

Work has been resumed at Murfreesboro, Tenn., on the erection of the new red cedar pencil factory at that place. It was started last fall but abandoned on account of the panic. The foundation is finished and the lumber is in place. A large force of carpenters is at work on the new building. Over 100 people will be employed in the factory.

A champion poplar tree is reported to have been brought to Humboldt, in Gibson county, Tennessee. The small end of the butt cut measured five feet in diameter and the tree contained eleven 10-foot cuts without a limb in any one of them, 9,000 feet of lumber in all, two big carloads of logs. There was scarcely a blemish on the tree.

ASHLAND

W. H. Dawkins, president of the W. H. Dawkins Lumber Company, has returned from a business trip through the East, calling on the lumber trade in Cleveland, Buffalo, Philadelphia, Washington and several other cities. Mr. Dawkins is very optimistic in regard to future lumber business. The company has its bad mill at Ironton closed down and will very likely not be ready to start until about the first of September. Edward H. Hays of the company, who has been away on his vacation for the last two weeks, has returned, having visited Virginia Beach and several other points in the East.

Mr. Martin of Hildreth & Martin Lumber Company, Columbus, O., was a business visitor in the city this week. Mr. Martin will make a trip through West Virginia looking after several mills that are sowing under contract before his return to Columbus. Mr. Martin advises conditions in Columbus somewhat improved.

R. G. Page, secretary of the Licking River Lumber Company, has returned from a business trip through Indiana, Michigan and Illinois. He reports having found conditions similar to all other lumber manufacturers, the stocks being very low. He secured some very desirable orders for bill oak and sound and square-edge planking.

The Ashland Lumber Company were compelled to close their mill again this past week on account of the river being so low that they were unable to get logs. They will not resume operations until there is sufficient water to bring in another supply of logs.

Frederick Pischel, vice-president and general manager of the Pischel Lumber Company of Salt Lick, Ky., was in the city this week, en route from its extensive operations near Salyersville, Magoffin county, Kentucky, to Cleveland, O., where he expects to purchase a complete set of mill equipment which his company will at once install in its large timber tract. This company has had years of experience in lumber and timber operations, and as its present holdings of white oak stumpage are of the best quality and unusually well adapted for this particular line in the lumber business, the undertaking is an assured success. They expect

ST. LOUIS

to cut almost exclusively beech keg staves in all standard dimensions. Their timber tract is several miles from the railroad and they expect to haul their staves and load at Paintsville, to be shipped via the Chesapeake & Ohio Railroad.

W. H. Vansant of Rush, Ky., was a business visitor in the city this week. Mr. Vansant is running his mill steady, and expects to for some time.

N. Goodman of the Licking River Lumber Company, Farmers, Ky., spent several days here and in Ironton, O., this week.

W. J. Fell, the large stove operator of Salt Lick, Ky., was in the city this week, looking after business interests and also on his way to the new tract of timber which he lately purchased on Big Sandy river. Mr. Fell is one of the largest and most successful stove manufacturers in this state, and with his new timber supply he will be in excellent position for handling a large amount of the stove business.

C. W. Peters of H. C. Creith & Co., Columbus, O., was a business visitor in the city this week, calling on the various lumber dealers. Mr. Peters expected to make a trip through West Virginia looking after some business interests for his firm before returning to Columbus.

R. H. Vansant of the Vansant-Kitcher Lumber Company is spending several weeks at Atlantic City.

The Wright-Saulsberry Lumber Company has not definitely decided as to location of its new mill, but expects to build now in the near future. Other locations will be considered outside of Ashland. Since the fire which destroyed the company's mill it is having large amounts of logs sawed by the Kenova Sawmill Company of Kenova, W. Va., and Whisler & Searcy of Ironton, O.

J. L. White, the lumber dealer of Salt Lick, Ky., was a visitor in the city this week, calling on the lumber dealers.

The Clearfield Lumber Company of Morehead, Ky., is operating its mill very steadily, also the new logging road recently constructed from Morehead to Paragon, Ky.

W. O. Hugbart, secretary of the Union City Lumber Company, Grand Rapids, Mich., was a business visitor in the city this week, looking for bill oak and various kinds of lumber, and also was en route to one of his company's mills near Mt. Sterling, Ky.

S. M. Bradley, the lumber dealer from Morehead, Ky., was a business visitor in this city this week. Mr. Bradley reports business improving and is satisfied that the next thirty days will bring about a marked change in business.

J. H. P. Smith, president of the Hardwood Lumber Company, is spending several days on a business trip through the East. Mr. Smith is reporting to his office some very desirable orders, and finds that more buying is being done at this time than for several weeks.

Another very important railroad project which has been in the minds of capitalists for several years will materialize in the building of a standard gauge railroad from Johnson Junction to Flemingsburg, Ky. This railroad will extend into the finest milling fields of Morgan county, as well as several large timber operations. It will leave only twelve miles of road to be constructed to connect Hillsboro with Morehead, Ky., where the new line would meet the Morehead & North Fork Railroad, thus affording an outlet to one of the greatest coal fields in that section. The rails for the construction and the contracts for the road have already been secured, work to begin at once and completed as early as possible. It is also understood that the rolling stock has been well considered, and the new line will be as well equipped as any short road to the country. Capitalists behind this project are of Louisville, Ky. Attilla Cox, president of the road; S. S. Bush, general manager; R. L. Dudley of Flemingsburg, superintendent.

The well-known yellow pine lumber company, the Alf. Bennett Lumber Company, will add a hardwood and cypress department to its business on September 1, and it will be in charge of E. L. Page, formerly of Kansas City. Mr. Page recently has been with the Louisiana Red Cypress Company, at Cedar Rapids, Iowa. The new department will be entirely distinct from the yellow pine department. A general hardwood and cypress business will be done. It will take over the sale of the Walnut Lake and Cypress Company of Walnut Lake, La., now being handled by the Alf. Bennett Lumber Company exclusively. The business of the Forbes-Everts Lumber Company, who are dealers and manufacturers of hardwoods, with St. Paul, Minn., as the headquarters, will be handled by the new department. The Alf. Bennett Lumber Company is now the local agents. Additional office room has been secured, not only because of the addition of the new department, but because the yellow pine business of the company has materially increased.

E. H. Luehrman, vice-president of the Charles F. Luehrman Hardwood Lumber Company, reports a good demand for all hardwood items. This is particularly true of red gum, an item the company is making a specialty of.

Richard J. O'Reilly, president of the O'Reilly Lumber Company, is now enjoying himself at Gloucester, Mass., where he went a couple of weeks ago to spend his vacation.

A recent visitor in the city was A. G. Wetmore, president of the Southern Hardwood Lumber Company of Memphis, Tenn. He made his headquarters while in the city at the office of the E. C. Moore Lumber Company, the selling agents of his company.

E. C. Dryden, secretary and treasurer of the Farley Lumber Company of Tuscaloosa, Ala., manufacturers and wholesale and retail dealer in hardwoods, pine and cypress, was a visitor in the city on business recently.

After several months spent in California, with his bride, Theodore M. Plummer has returned to Mercedes, Tex., where he has a ranch. Mr. Plummer is well known to the hardwood lumber trade, having been the secretary of the Plummer Lumber Company, of which his father, Theodore Plummer, is the president.

E. W. Blumer of the Lothman Cypress Company who has been out on the road in the interest of his company, has returned after quite a successful trip.

The Garetson-Greanon Lumber Company reports better sales during the past few weeks than has been the case for some time, although their business has been excellent. W. W. Dings holds the position now on there will be considerable of a betterment.

The New Madrid Hoop & Stave Company of St. Louis have filed articles of incorporation with a capital stock of \$4,000, fully paid. The object of the corporation is to deal in and manufacture hoops, staves, etc. The officers are Edward Schaperkötter, vice-president of the Schaperkötter Coopers Company, and William A. and Louis H. Schaperkötter, the latter being secretary of the Schaperkötter Coopers Company.

The Robert J. Schoenbaum Company, East St. Louis, has lately filed articles of incorporation with a capital stock of \$10,000. The incorporators are Lorenz Bellinger, Emma Schoenbaum and Robert J. Schoenbaum.

The Cooper Carriage Woodwork Company of St. Louis filed articles of incorporation a few days ago. The capital stock is \$70,000, one-half paid. The incorporators are: L. M. Cooper, who holds 50 shares; Eva J. Janney, 28 shares; F. M. Spent-Is, 5; all of St. Louis; D. N. Cooper, 3; Samuel Jones, 20; Joseph Williams, 5; Edward J. Truesdale, 20; James S. Patterson, 30; D. P. Cooper, trustee 45 shares; all of Youngstown, O.; Bridget Conway, 7; Mary A.

Smith, 10; William Creed, 20; Harry McGeehan, 10; Bruce R. Campbell, 30; Daniel B. Cooper, 4; D. P. Cooper, 405; John Pearce, 5; W. A. Morrison, 10; W. H. Wilson, 5; all of Struthers, O.; D. P. Cooper, trustee for John W. Gearly of New Bedford, Pa., 28. The object of the corporation is to deal in wooden and iron novelties.

The Steimke Manufacturing Company of St. Louis filed articles of incorporation a few days ago. The capital stock is \$10,000, fully paid. The incorporators are Diedrich Steimke, who holds 50 shares; Henry D. Steimke, 40 shares; and Harry A. Walden, 10 shares. The object of the corporation is to conduct a general planing mill and woodworking business. They are located at No. 3016 Gravois avenue.

MILWAUKEE

Involving the question as to whether or not estates of persons owning property in Wisconsin who die in other states where inheritance taxes are levied, should be taxed in Wisconsin under the inheritance law, a decision has been handed down in the Milwaukee county court in regard to the Cameron estate, consisting largely of stock in the Tibbits-Cameron Lumber Company of Milwaukee. The estate in question was left by Mary Tibbits Cameron, formerly of Milwaukee, who died in California, leaving an estate of nearly \$300,000. Objection to the payment of a second inheritance tax was made by Adrian Cameron, son of Frank J. Cameron, vice-president of the Tibbits-Cameron Lumber Company. The case was decided against the Cameron estate and the Wisconsin law is sustained. The case has attracted wide attention.

State Fire Warden and Forester E. M. Griffith of Wisconsin and Chief Assistant Forester F. R. Moody recently met at Spooner, Wis., with about 100 officials and employees of the Omaha Railway to discuss the problem of coping with forest fires in the lumber country. The officials of the road are entirely willing to co-operate with the state in the matter and assured the state foresters of enthusiastic support. Fire wardens have already been appointed in a number of northern lumber counties and section foremen in many cases have been sworn in as officers to guard against fires. It is announced that railroad companies will abandon the practice of burning off ties along the right of way and will adopt all precautions as suggested by Forester Griffith.

The Robert Brand & Sons Furniture Manufacturing Company of Oshkosh, which suffered the loss of its plant by fire last winter and considered several propositions of removing from Oshkosh, has decided to remain in that city.

Due to the efforts of the citizens of Antigo, Wis., and the Antigo & Scenic Company has decided to rebuild the plant at Antigo, Wis., recently destroyed by fire. Work has already been started in clearing up the ruins of the former plant and building operations will soon be under way. The new plant will be the same size as the old one, but the facilities in the way of equipment and arrangement will be modern and better. The company in the past has employed some sixty men and it is expected that this number will be retained.

Five of the seven amateur thieves who have been troubling timber owners along the river near Frairie du Chien, Wis., for the past year have been arrested and have been bound over until the November circuit court under \$1,000 bonds each. The men are Frank Langford, Harry and Lurry Strong, James Clancey and James Hucheman, all of Lansing, Ia.

Capt. Lloyd G. Harris, president of the Lumbermen's Exchange of St. Louis, with his family, is spending a part of the summer at Lake Park, Milwaukee. Before the Civil war, Captain Harris was a resident of Milwaukee. Captain Harris is strong in his declaration that St. Louis is the largest hardwood market in the world.

The schooner Robert L. Fryer recently brought a record breaking cargo of lumber to Milwaukee. A total of 817,000 feet was carried by the schooner which arrived from Duluth.

Two carloads of basswood lumber were shipped recently from northern Wisconsin to London, where it will be used in the manufacture of musical instruments. Lumbermen in the district say that they can remember the time when basswood was used only for firewood.

Wright Bros., proprietors of the mill which recently burned at Marinette, are planning on rebuilding their plant with many additional facilities and larger quarters. Arrangements will probably be made with the Chamber of Commerce at Marinette for the securing of the Witbeck site. The Wright Bros. agree to employ the minimum force of forty men and to remain in operation for twenty-five consecutive years.

The big mill of the Bird & Wells Lumber Company at Wausaukee, Wis., will again be placed in operation after a close down of several weeks. Demand for lumber has greatly increased with the company and indications are that the mill will operate for some time. Extensive repairs were made while the plant was closed.

The heirs of the late H. E. Merryman, the wealthy lumberman of Marinette, have presented to the city the plot of land known as Shield's Park. The city has accepted and will change the name to the H. E. Merryman park.

Myrman & Larson at Chippewa Falls are engaged in the work of "submarine" logging in the Chippewa and Yellow rivers. The men have a contract to raise 7,000,000 feet of the 60-60,000 feet of logs that are supposed to be in the rivers.

The No. 2 mill of the Sawyer-Goodman Lumber Company at Marinette is again in operation and is busy filling some of the empty space in the big yards left by the recent disastrous fire. Fully 1,000 feet of tramway have been built since the conflagration.

When the Trow mill at La Crosse finishes the 2,000,000 feet of lumber now on hand, the plant will be closed and the last sawmill at La Crosse will be no more. The mill was erected in 1888. The present cut will last about a month and a half.

The South Side Millwork Company, to be located in the town of Greenfield, Milwaukee county, has been incorporated with a capital stock of \$10,000 by Norman Pederson, Christian Erickson and Peter Pederson.

The Koch Woodware Company has been incorporated in Milwaukee to take the place of the bankrupt Koch & Loeber Company. Capital stock is placed at \$50,000 and the incorporators are E. J. Koch, Albert C. Koch and John A. Dummer. Operations of the new company will be carried on in the plant of the former company.

MINNEAPOLIS

Stocks of northern pine lumber showed up much larger August 1 than a year ago, as was expected on account of the light shipments during the first half of the year. The report was made at the semi-annual meeting of the Northern Pine Manufacturers' Association in this city August 11, by Secretary Rhodes. Stocks on hand August 1 amounting to 963,132-499 feet, as compared with 895,584,465 feet on January 1, and 755,227,818 feet August 1, 1907. Lath on hand August 1 amounting to 128,297-652 pieces, as compared with 199,754,835 pieces on hand January 1, and 178,230,965 pieces August 1, 1907. Shipments by the northern pine mills for the first six months of the present year were shown to be 441,708,427 feet, a decrease from the corresponding period of last year, of 47.8 per cent.

F. Osborne of Osborne & Clark has been absent for several days looking after their re-

F. J. Lang, who has been maintaining temporary offices in Minneapolis as sales representative of the Wisconsin Land & Lumber Company, has returned to the main office at Hermansville, Mich.

Three agents of the government forest service, W. B. Hunter, G. B. Wing and W. B. Wooden, have established headquarters in St. Paul for their work of making a census of the standing timber in the lake district, including Minnesota, Wisconsin and upper Michigan. This is part of the general work of the bureau which is endeavoring to cover the entire country in this way.

The Delta Land & Timber Company has been incorporated at Minneapolis with a capital stock of \$300,000 by W. V. Field, Clark Hempstead, G. H. Porter, O. W. Kerr and W. A. Coon, all of Minneapolis.

George H. Tennant's hardwood flooring plant in southeast Minneapolis was almost wiped out by fire about noon, August 19. The loss, about \$30,000, is largely covered by insurance. The mill proper, two warehouses and two dry kilns were consumed with their contents, and that included a considerable quantity of finished flooring in the warehouses and lumber in the dry kilns. The blaze started by sparks from the engine room flying into shavings in the mill. They flared up so quickly that forty men at work in the building had barely time to get out with their lives. By the time the fire department had arrived the other buildings had caught and there was no hope of saving any of them. The brick office building was the only structure saved. Mr. Tennant will rebuild.

George S. Agnew, who branched out into the wholesale business for himself last fall, is utilizing the motorcycle to reach his Twin City customers, and since March 1 has covered 2,900 miles on his steed. He has material for a book on his touring experiences. Mr. Agnew says that trade is showing a slight improvement, and that the feeling is decidedly better.

A. S. Bliss of the Payson Smith Lumber Company perpetrated a surprise on his friends the evening of August 19, when they were invited for a party and Mrs. Bliss at a theater party and wedding supper following. The new couple had kept their intention a profound secret and were married quietly in the afternoon at the residence of Rev. J. S. Montgomery, with only the necessary witnesses present. The bride was formerly Mrs. Edna Easley, an estimable young woman with many friends in Minneapolis. Mr. Bliss took a holiday the next day with the full consent of his office force.

E. Payson Smith of the Payson Smith Lumber Company is absent for two or three weeks on a business trip to New York and other eastern points.

CADILLAC

Murphy & Diggins lumber mill began operations Monday after a shutdown of two months for repairs. The mill will run full force for an indefinite period, giving employment to many workmen.

A. F. Anderson's mill at South Boardman, which has been closed for repairs for a week, began running Monday.

The St. Johns Table Company has resumed operations with orders that will keep it busy for some time.

The roof is being put on the new Cummerville office building on North Mitchell street. With the granite front and the roof, the building is one of the most attractive on the street and will be a great addition to that part of the city, being located directly opposite the City Hall. When the interior is finished, some months hence, it will make one of the most complete office buildings in Michigan.

Acetate of lime is beginning to move again. Trade in this line has been quiet for some time, but is now picking up.

SAGINAW VALLEY

That there is a decidedly better feeling among lumbermen goes without saying. Fully fifty lumbermen were asked during the last ten days as to conditions, and the invariable reply was that "there is a much better feeling and a little more lumber is selling, with considerable inquiry, but it is still somewhat slow."

All of the plants are manufacturing and selling lumber. Walter D. Young was quoted last week as saying that orders are now coming in right along, better in fact than before for months. The plant of the firm is running with a full crew.

D. W. Briggs said Friday: "There is a marked improvement in the feeling as to trade, and we all look forward to a steady improvement during the fall and winter. There is no excess of stocks and the goods will be wanted very soon."

James Cooper of the Briggs & Cooper Lumber Company, and more than a quarter of a century in the lumber business in the valley, leaves next week for British Columbia, where he will locate. Business and health considerations are the guiding influences. He will locate at Nelson, near which Messrs. Briggs and Cooper have purchased 8,000 acres of heavy timbered land. It is not decided if the company to be organized will erect a mill. Mr. Cooper has lived in Saginaw nearly all his life and has been popular as a citizen and business man. The company has handled Michigan and southern hardwood many years, being one of the largest hardwood firms in the state. They bought at southern points by the million feet and shipped it direct from the mill to their customers, and they handled 25,000,000 to 30,000,000 feet annually here in the valley.

C. A. Bigelow is on a trip down the St. Lawrence. Both of the mills he manages are running steadily.

R. Hanson & Sons of Grayling have begun the construction of a hand sawmill at that place of 40,000 feet daily capacity. It will be modern throughout. The firm has enough hardwood timber to stock the mill twenty years.

T. D. Douglas & Co. are putting the finishing touches on a new sawmill at Lovells to replace one recently destroyed by fire.

S. F. Derry & Co. have put their Oqueoc sawmill out of commission and it is being dismantled. The machinery is being moved to Millersburg, where the firm is erecting another mill. The Oqueoc plant manufactured about 2,000,000 feet.

A. W. Decker & Co. have bought the McKay sawmill at Grayling and will operate it. The mill is a small one. It has quite a stock of logs on hand and will convert the same into lumber.

Hoelt & Son of Rogers City have finished their stock of logs and have shut down the mill for the season.

The Lobdell & Churchill Company at Onaway has been making some extensive improvements to its plant. The output of the firm last season was 12,000,000 feet. This year the cut will hardly reach last year's figures.

The Richardson Lumber Company's sawmill at Bay City is making a fine record the first year of its going into commission. It is cutting out some very handsome lumber. The wisdom of the company in locating its plant on the Saginaw river instead of up in the interior is evident. All the refuse can be disposed of at a good profit in the river towns and involves no expense in getting rid of it. Market conditions are always more favorable here than in the interior.

DETROIT

"There seems to be a general improvement all along the line in the hardwood trade," said Thomas Forman of the Forman Company to

the Record man. "Prices are bracing up in fine style, inquiries are good, while many orders are coming in. The improvement is not confined to local trade, either, as inquiries show that conditions are improving all over the country."

The Thomas Forman Company this week received several cargoes of maple.

"There is a slight improvement in the hardwood trade," said William Brownlee of Brownlee-Kelly Company, "and I look for the market to brighten up soon."

Many of the lumber boats which have been laid up here for want of cargoes have gone back into commission to go to northern points for cargoes.

Frank F. Fish, secretary of the National Hardwood Lumber Association, was at the Hotel Pontchartrain this week. He conferred with the temporary committee of the local hardwood men relative to early plans for the big convention in Detroit next summer. Mr. Fish and the local members of the association are confident that the convention here will be the best ever. Detroit has many natural advantages, situated as it is on one of the finest rivers in the world, and the entertainment feature of the convention is to be played up strong.

Frederick M. Sibley, Jr., general superintendent of the Sibley Lumber Company, was married this week to Miss Mabel M. Besenger. After the ceremony and the wedding supper the couple left for the Georgian bay district, where they will spend their honeymoon. They will make their residence at 300 Harbor avenue, this city.

George Whipple, president of the Advance Lumber & Shingle Company, a well-known Michigan lumberman, was married this week to Miss Nelle B. Tetreau of St. Ignace, Mich.

The Dwight Lumber Company of this city is interested to the extent of \$2,310 in the failure of William H. Wood, Cambridge, Mass., one of the largest lumber dealers in the East. Wood's liabilities totaled \$500,000 and the assets \$200,000.

GRAND RAPIDS

The Charles Dregge Lumber Company, with offices in the Widdellcomb building, has been succeeded by the Dregge-Grover Lumber Company, and the business of the former company in Michigan hardwoods will be continued and extended in both manufacturing and wholesale ends. The new member of the company is H. B. Grover of this city, a cedar operator on quite an extensive scale in both upper and lower peninsulas for the past fifteen years. The new company will operate extensively in cedar along the Soo and the Duluth and South Shore lines, in addition to its hardwood operations elsewhere. General offices will remain in this city, with Mesara, Dregge and Grover, Chicago.

One of the prettiest lines of furniture shown in the market during the past season was the chamber suit pieces brought out for the first time by the Carrollton Furniture Company of Carrollton, Ky., made of red gum quarter-sawn. A beautiful figure having the appearance of onyx was obtained by quarter-sawing the cores of selected logs, and the new furniture wood is given the name of "Kyonzy." The company has been very successful in treating the wood so that there is no difficulty from twisting.

The Wilson Saw Company of Port Huron has completed a large addition to its factory and will increase its working force September 1.

W. W. Mitchell has given the city of Cadillac title to twenty acres of land, to be used as an addition to Maple Hill cemetery.

The John F. Ott Lumber Company of Traverse City is removing its log boom, which was constructed across the Boardman river many years ago.

G. W. Perkins of the Perkins Lumber Company has been appointed a member of the special board of trade committee to report to that

body a definite plan of action for securing a deep waterway from Grand Rapids to Lake Michigan. The matter of securing a canal across the state to Saginaw is also being considered.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

Local trading has materially increased during the last fortnight. Jobbers have bought very freely, not only in anticipation of the immediate evidence of local call, but from actual orders. Local woodworking institutions are all reasonably busy and there is every prospect of a good volume of business for months to come. Among the large purchases of late have been the low grades of both northern and southern stocks that have been bought by box and crating manufacturers, and there is also a fair volume of trade in No. 1 common and better. All the local manufacturers and jobbers view the situation very optimistically. Chicago has passed through the ordeal of hard times with distinct credit, and there have been practically no failures in the hardwood fraternity here, and there are no rumors prevalent of financial embarrassment on the part of local lumbermen.

NEW YORK

The hardwood market at New York shows very little change from that as last noted. Business for the most part continues of the hand-to-mouth order, although it is readily appreciated that there is a considerable improvement all along the line. This improvement is not large and does not embrace all branches of the hardwood consuming trade, but here and there, and notably among the local manufacturing trade, there is undoubtedly an increasing tendency to buy. This tendency is increasing with the approach of the fall, not only by reason of the fact that buyers have been sailing very close to the wind on their stocks in hand, but also by reason of the increasing appreciation of the stocks of good hardwood lumber of the better grades as neither plentiful nor available at bargain prices. While there is considerable competition and ample stocks in the way of low-grade hardwoods, high-grade stock is not plentiful at prevailing prices, nor likely to be for several months to come, which is leading the holders of good grade stock to appreciate more and more every day not only the necessity but the opportunity of realizing fair prices for stocks in hand, as well as the impossibility of replacing stocks previously bought at panic prices.

Of course, taking the situation in its minutest details, there is much in the way of pessimistic arguments forthcoming as to the current and prospective business conditions, but after dissecting the situation and taking out the channels in which hardwood must enter, it is wise to state that so far as hardwood lumber is concerned there is nothing to fear in either present or prospective conditions on the part of those who will take the trouble to inquire into the actual and prospective values of good hardwood lumber at the present time. As one prominent dealer said recently: "Talk about your bargain prices in Wall street; I would just as leave have a million feet of high-grade hardwoods at today's prices as a thousand shares of bargain stock in Wall street."

Summing up the situation as a whole, there are two phases which strike right home, the first is that if any one is a holder of good hardwood lumber he's got a bull asset, and if he is a short buyer, he had better get aboard the bull band wagon.

BUFFALO

The hardwood trade is quiet but hopeful, with some of the dealers reporting what looks very much like a sale not far away. It is found that there are lumber buyers who do not pay their bills as promptly as they did and as they are, as a rule, solid financially, there is a suspicion that they are buying more than they were and putting in stock against a time of need.

It is agreed that there is not a good showing made by the hardwood sawmills. Not only has stock been allowed to run down at many of them, but they are often short of logs and are waiting for something to turn up that will provide a supply. For the most part they are not in position to meet any sort of an increase of demand and it is confidently and fairly predicted that if the demand does increase very much this year there will be very dizzy prices in most hardwoods.

From the upper Ohio valley, not only in Ohio, but in West Virginia, come reports that the big popular concerns there are for the most part idle, so far as new stock is concerned, some of them piling out operations by going into general fire hardwoods, just to see how the future of poplar is going to turn out.

A survey of the hardwood yards here finds that the stocks are fine as to distribution, but that nobody has a surplus of anything. It is even said that plain oak is not what it was and will run out with the rest, almost as soon as quartered oak does. All that the dealers have to fall back on is the old notion that they have always found lumber enough and they still hope to do so for awhile yet.

There is a representative of the Government Forestry Bureau going the rounds of the city lumber offices who makes no hesitation of stating that there will be next to no lumber left in a comparatively short time unless something is done to cut out the waste and go to raising timber. So far the only Buffalo dealer who is making any move towards a perpetual forest is E. V. Dunlevie, who is picking up a big tract south of Savannah, Ga., with the idea of only cutting as much as is of good size and keeping the whole tract growing.

There was a story that the hardwood dealers were putting down prices, but they deny the charge very emphatically. They met last week to talk over an invitation from Philadelphia to join in a kick against the new inspection rules of the National Association, but the view here seems to be unanimous that the new rules are pretty good, and if anyone goes to the Philadelphia meeting on September 26 it will be to oppose any action.

PHILADELPHIA

Strange to say, August, which is conceded to be the dulllest of the dull summer months, has made the leap of the season in hardwood trading, as there have been more sales and a steadier and more dependable activity throughout the lines. It begins to look as though the wheels of prosperity had begun to turn, and that a steady progression will be the story from now on. The textile mills and other large labor-employed plants are increasing their hours and adding to their staff, which is tantamount to a proclamation of better times for the working man. Building work has held up well during the last fortnight and considerable of it is being planned for the future.

The merging of the Bethlehem Steel Corporation and its allied concerns, with the Harlan & Hollingsworth Company, ship and car builders, of Wilmington, Del., for the purpose of carrying on extensively the building of steel passenger and freight cars in the latter city, and which means increased investments and the enlarging of plant and capacity is an indication unmistakable of a return of confidence in financial conditions. Stocks at yards and first hands are not too heavy, with the exception of summer grades and culls, and there is prospect of an early diminution of the latter, now that there is considerable buying of this material by box makers. Upper grades of all hardwoods maintain good prices, with a tendency to rise higher, as inquiries are rapidly increasing and some really good sales are being consummated. The prospect of a car shortage, from reports coming in, bids fair to become a reality, and those who have not forgotten past struggles with this barrier to trade are quietly replenishing their stocks. The furniture factories are waking up and buying has begun all along the line. Taking an all around view of things the prospect for good business is more flattering than for a long time back.

PITTSBURG

To line up the exact shade of improvement in the Pittsburgh lumber market, from week to week is very difficult prospect for the summer. The flurry of enthusiasm that overlook local wholesalers early in July subsided very quickly, and it must be admitted that the gain in business has not been so marked as dealers hoped for at that time. This week reports in general show that things are in a very quiet state. Considerable buying of stock orders is being done, but the orders are all small and there is no disposition to engage in a general buying movement.

The demand from the yards in this immediate vicinity is small and mixed carload lots have the preference in the business. Very little can be said as to the improvement in the demand for building lumber in any district which is supplied from the Pittsburgh market. Excepting the coal mining operations and railroad and trolley projects, there is nothing to excite any particular degree of buying interest. Building projects in the city are looking better, especially in a prospective way, but they are not going to ripen soon enough to do the lumber business very much good before late in the fall. Three examples of this are to be seen just now, namely: the letting of the contracts for the 25-story Oliver skyscraper and the 12-story May building and the taking of bids for the 25-story First National Bank building. These projects and others of less importance are bound to bring about a good demand for hardwoods a few months later, but for the present they will do nothing to relieve the stagnant condition of the market. Prices of hardwoods are stationary, with stocks not accumulating to any great extent. White oak and poplar are the two exceptions to the general rule.

White oak is in good demand. In fact, the best grades are scarce enough to warrant wholesalers in asking prices a little above list. Poplar is keeping the same steady gait in quotations which it has held for more than a year and there is little prospect for any weakening in demand or prices. The minor hardwoods, which are used extensively by the factory trades, are selling fairly well, but not in sufficient quantities to push up the market price. Country mills in general are running except in cases where scarcity of water has stopped their operations.

BOSTON

A more optimistic feeling prevails in the hardwood market, but the consensus of opinion

is that the recovery from the dull period is not as rapid as it was thought it would be. Many anticipated a good demand by the first of September, but they realize now that the date of renewed activity is still several weeks off at least. Boston dealers about all agree that there is a steady gain in business. Inquiries are much more numerous and for larger lots, but actual purchases are still confined chiefly to immediate wants. More activity is reported from manufacturers of furniture. The latter have booked good orders and are reported as running their plants with a larger force and more hours a week. Most of the veneer manufacturing plants are running. Dealers report a fair demand, but state it is uneven. Business for a few days will resemble old times, only to be followed by a quiet period again.

Prices are gradually hardening a little. Low grades are still easy and buyers can place orders for large or small lots at low prices, but the better grades are well held and in some instances at higher prices. The call for quartered oak is fair. Some dealers are holding 1-inch ones and call at higher prices than others and can make sales. We have heard of sales from \$80 to \$85. Business at the top figure has not been large. The call for plain oak is not brisk, but prices have stiffened on good stock. Offerings of chestnut in this market are fairly large and a few shippers are anxious to sell and have named low prices. This does not appear to induce free buying, however. Ash is well held for the most part. Hickory is in good call, with stocks small. There is very little change in whitewood, cypress or North Carolina pine, although some manufacturers are holding for better prices.

MEMPHIS

Crop conditions in the Memphis territory are magnificent. The outlook is for the best cotton crop in the Memphis district in recent years. All advices also indicate that the yield of corn will be above the average. With the splendid crop prospects the South should be exceptionally prosperous during the coming season, and about the time that the crop is ready for sale is a very low price for cotton. Having interests in the city take a most cheerful view of the financial outlook as a result of the bright prospects, and there is an optimistic feeling in all quarters on this account. Lumbermen are also pleased with this development, which means prosperity among the agricultural element and which increases greatly the buying power in lumber, but more particularly in the products made therefrom.

Production of hardwood lumber continues on a most limited scale and there is no prospect for any decided change in this respect soon. Most manufacturers are disposed to remain close to shore and are running only on partial time at best. It is probable that not more than 25 per cent of the productive capacity of the Memphis territory is engaged at present. Now and then a company begins getting out timber in the belief that trade conditions are improving enough to justify such action, but such is the exception which proves the rule of inactivity along this line. The statement is made on the most conservative authority that the amount of logging in progress in the Memphis territory is the smallest in ten years at this period. Manufacturers appear to be a great deal more interested in disposing of the stock they now have on hand than in putting more lumber on sticks. Furthermore, they believe that standing timber is worth more to them in the woods than it is as cut up lumber. It is a rather noteworthy fact that, with all the depression which has prevailed in hardwood lumber in every part of the country, there has been virtually no reduction whatever in the price of desirable standing timber and timber land.

The demand for hardwood lumber is moderately active, but there is some discouragement

over the fact that business is not increasing with greater rapidity. The general outlook, however, appears brighter to the local lumbermen, and they are hopeful that the delayed reaction will come very soon. Buyers are finding increasing difficulty in picking up bargains, as most of the cheap lumber has been sold. The stock here now is in rather strong hands and there is no disposition to press anything for sale. Prices are holding fairly steady as a rule and there is a slight advancing tendency in evidence in some directions. The export demand is very light and not much improvement is expected from that quarter in the near future. Reports of trade conditions abroad are very discouraging not only in lumber but in other lines, and this is looked upon as a rather serious feature of the foreign situation. Attention is called to the report elsewhere giving the views of one of the larger lumber brokers in Liverpool. The trade here does not expect much improvement in that quarter soon. The domestic trade is furnishing all the improvement noted. There is an excellent demand for the higher grades of plain and quartered red oak as well as white oak, but the movement in the lower grades is only moderately large. The demand appears still to be rather light, while there is considerable accumulation of both common and cull. The movement in ash is slow, though there has been some business put through recently in black running in thickness from one to four inches. The general run of ash is slow and prices are not altogether satisfactory. There is not much doing in cypress, either, while the movement in poplar is restricted by the small amount available. Prices on poplar are good. Gum is not selling at all freely in any grade, and it is not expected that there will be any large quantity going forward until the advance in yellow pine has reached a point where this lumber does not play such an important part as a substitute for gum. This is the view some of the prominent members of the trade here take. The demand for cottonwood in the higher grades remains slow and the volume of business is small. Holdings are rather full, but there is not any great quantity available at concessions from the recent prices thereof, most holders believing that values will be better and that the wise thing to do is to hold. There is an abundance of white pine offered for sale in the open market and the tone on the lower grades is perhaps a shade better than that on the higher. The production of hardwood lumber is very light and there is no indication of a decided increase soon. Manufacturers are staying close to shore and what develop into a strong factor is the small amount of timber being cut in the woods. Logging operations are exceptionally light and in the event of bad weather this fall there may be some trouble among buyers on this score.

SAGINAW VALLEY

Lumber is moving some and there is a much better tone to the market. This is the general sentiment of the trade. All are talking optimistically. There is considerable inquiry for flooring and plints are all in motion. One or two manufacturers report orders coming in freely the last two weeks. Stocks are not excessive and prices are not being tinkered much.

NASHVILLE

This is vacation time with the lumbermen as well as with other mortals, and admittedly this gladness, any season has had its effect in decreasing somewhat the volume of business that would otherwise be done. At the same time there are no evidences of a setback in the steady improvement which began six weeks ago and has continued uninterrupted. The hardwood market is firm, with a tendency to strengthen prices on the lower grades. Poplar and oak are still in excellent demand and at high prices.

too. There has been no noticeable increase in the hardwood output during the past week or two. On the contrary, a few of the river mills have worked up all their supply of logs and are at present "out of bait." Cypress is in heavy demand. In fact, the hardwood market shows a most optimistic tone, with approaching fall looking good.

TOLEDO

Hardwoods can scarcely be said to be developing strength as rapidly as some other lines of lumber in this market. While there is a fair call for hardwoods, no one seems inclined to buy very far ahead. The retailers for the most part are filling the holes in their stocks by wagonload lots from the wholesale yards. There has been no slump in the demand and the call for building material is growing stronger, but there is no rush in any line. Box plants are proving good customers, while vehicle plants are running about as they have been. The general tone of the market is somewhat better, for there will be quite an outlet for hardwoods for building purposes before the season closes. It is only the past few weeks that there has been even a prospect along this line here, and the work has not yet progressed sufficiently to affect the market materially. There is still a good demand for poplar, which is being worked in many places as a substitute for white pine. Prices are holding up well and there is little prospect of a decline. An advance is looked for in several lines. Receipts have been lighter than last year at this season, but they have shown some increase lately and shipments are very prompt.

CHARLOTTE

The hardwood situation in North Carolina continues to reflect healthy signs of improvement from the slump caused by the "red" a few months ago. In conversation with prominent lumbermen of this state more general expressions of confidence in the early return of normal activities are heard, and most of the men interviewed are confident that by fall business will almost be back to a normal basis again. The revival in building operations has accelerated demand for various grades of lumber, and market quotations reflect gains of anywhere from \$1 to \$3 per thousand feet. The unusually good crops this year have added to the general feeling of confidence, and lumbermen are expecting their part of the general optimism. New concerns are being chartered every few days in this state, and old ones that have been closed down are resuming operations. Manufacturers report that most of their accumulation of stocks has been disposed of, especially furniture manufacturers, and that orders for goods are forcing full-time operations. There is not such a congestion of stocks in the yards as was the case several months ago, and the big increase in freight business during the past few weeks indicates the picking up in shipping operations. Inquiries and orders for goods in larger quantities are coming in more freely, and, taken as a whole, it may be said that the situation in this state is decidedly improved over that a few months back.

BALTIMORE

Though no decided upward movement has yet taken place, the hardwood situation is regarded as showing a steady improvement, and a feeling of confidence prevails in the trade, that the remaining months of the year will bring a fair amount of business. The range of values is as a rule somewhat staidler, and the demand is slowly picking up. Many of the manufacturers have been compelled to increase their output as stocks at the mills are generally very light.

Yardmen seem to be buying more liberally and show an interest in the relatively low quotations current. No extensive stocking is yet to be reported, but the needs of consumers are on the increase, and conditions are more favorable than they were. In various instances mill men who contemplated shutting down toward the end of the summer for a general overhauling of machinery have decided to postpone this work as long as possible, in order to turn out an adequate supply of lumber. It is considered a promising sign that the car building shops are beginning to receive contracts for new rolling stock. With these establishments once more in operation it is felt that other big consumers will set all set forward. The one weak spot is the export trade, which continues to suffer from extensive congestion and from a depression in prices that makes the exporters hesitate about forwarding stocks almost under any circumstances. The extensive holdings abroad serve to prevent recovery, and brokers are using the accumulations to beat down prices until these are lower than on this side of the Atlantic, although the transportation and other charges must come out of the returns. No relief is likely to be experienced until the forwarding on consignment is discontinued by common consent, and this will probably happen when the domestic situation improves to such an extent that manufacturers can dispose of their output at home and at far better prices.

CLEVELAND

A better tone to the hardwood market has been noted here during the past week. Orders are coming in with pleasing regularity and industries which have been quiet for months are showing signs of life. This is particularly true of the chair business, which has taken a hump forward in the last fortnight. One big factory at Bedford near Cleveland and another in this city are again operating and calling for supplies of hardwoods. There is also more strength shown in the wagon trade. The desk business is still dormant but sewing-machine cabinets are being called for in greater quantities.

Quarterned oak holds the limelight for keenness of demand, with basswood as probably its nearest competitor. It being used for moldings of various kinds. Poplar and plain oak are called for in the order named. There is also more demand for hickory, ash and elm than there has been for months.

The planing mills are all busy, according to report, and more building has been gotten under way during August than was recorded even a year ago. The call for the finer lines of finish and flooring is quite good.

COLUMBUS

Regarding the lumber trade in Columbus, there is but little new to be said. Business runs by spurts, some weeks good orders coming in, while in others the trade is decidedly quiet. For the month of August a majority of the local companies so far have done a good business, while others have not been so prosperous. During the past two weeks there has been a noticeable increase in business and the trade seems to be picking up all along the line. Retail dealers are kicking somewhat on the advance in prices, but the jobbers say that conditions justify the advance.

The fact that prices are advancing is sufficient evidence that business is improving in Columbus and there is a better demand for all grades, especially for future delivery stock. Some of the retail dealers are trying to get all the futures they can buy and seem to believe that the low point of the market has been reached. General business is at a standstill, because so many people are out of the city on their vacations and will not return until in September. This condi-

tion is not unusual for this time of the year, as August is generally a dull month in Columbus for all kinds of trade. Collections are satisfactory and hills are being paid with about the usual regularity.

There no longer seems to be any doubt in the minds of Columbus lumbermen that the low point of the market has been reached. The oaks and chestnut are about \$2 higher than they were a month ago and continue to show an advancing tendency. Yellow pine is up, especially on the cheaper grades, but dealers are predicting a decline in that lumber before the close of the year, as manufacturers are turning out considerable pine in the Southwest and the demand promises not to be so active during the fall months. The kind of houses that are now being built call for the higher grades of lumber and the railroads, which are the largest consumers of yellow pine, are not in the market at this time. New structures that are now going up in Columbus call for the higher grades of lumber and it is expected that the demand for yellow pine will be right during the next twelve months. Prices on nearly all grades of lumber are decidedly stiff and show an advancing tendency.

CINCINNATI

A slight improvement was again noted in the hardwood situation during the past fortnight, not that the demand has been of much greater volume, but because of the better feeling displayed by consumers. The demand for poplar has been the deadlier of the market for some time, and has lessened the available supply here to almost a minimum; a great many of the local dealers are anticipating an increase in the demand. A general scarcity is also looked for. Several of the local concerns here loaded up on that item during the early part of the year and naturally are not as much wrought up over the situation as those whose supply is rather limited. The demand for plain and quartered oak has also shown a much better tone during the past two weeks, and the daily output is larger than for weeks previous. The demand for cottonwood and all grades of gum has been fairly strong during the last fortnight, due to absorption by box manufacturers. They are buying some cypress also, and some pine is being used. The furniture dealers are still holding off from replenishing their stocks and the demand from this element is only for urgent needs. However, dealers are confident that they will soon be into the market for larger quantities of these items used for the manufacture of furniture, and until that time no particular change is expected in the situation. Generally speaking, however, the average dealer is of the opinion that trade will increase materially after the first of September.

INDIANAPOLIS

There has been a decided improvement in the local hardwood market during the last month and prices are advancing. This is especially true of quartered oak, while other lines of hardwoods have also been greatly in demand.

Curtailed production in hardwood mills, the holding off of buyers, and stock levels almost depleted and the unexpected demand for hardwoods has resulted in present conditions. Mills are disposing of much of their surplus stock and dealers are finding ready buyers for their stock. The advance in price so far has been slight, but is encouraging, and before many months it is predicted that hardwood prices will be back to where they were before the financial stringency of last fall.

ASHLAND

General conditions in this market appear to be taking on more favorable appearance, al-

though prices are not making any noticeable advance. The buying and placing of orders is being more freely done than for several months. Consumers are placing rush orders for small amounts, which is a sure indication of immediate need of the stock. This condition continued will certainly cause an advance in price and especially in the higher grades of oak and poplar. It is also a fact that these grades in hardwood are becoming scarce and stocks considerably broken. Several buyers from the North have called on the manufacturers of this city the past week, indicating that there is some little stir in the markets and that stock is needed. Representatives who travel for the manufacturers of this vicinity advise they find the stocks of the consumers materially decreasing, and especially with retail yards and planing mills. From the fact that the per cent is small, compared with former years, the amount of lumber that is being cut and put on sticks, the demand is sure to far exceed the supply in a few months' time. This is a condition that is confronting the lumber consuming markets and one that will not be realized by them until they are in actual need of lumber and find that there is a great shortage in dry stock.

ST. LOUIS

While the hardwood situation is showing little change for the better as far as the volume of business is concerned, there is a more hopeful feeling. A good demand is reported by retail dealers for red and white pine and quartered oak. These items are the only ones there is any particular call for. There is also some sale right along of ash and poplar and also for gum. The latter item is in request occasionally by boxmakers. Stocks in the local yards are rapidly being depleted. The hardwood cut is very small and the dealers feel certain that higher prices will soon prevail and not only that but lumber will be very scarce. Steady prices are now prevailing and are firm.

MINNEAPOLIS

Dealers in the Twin Cities are expecting an improved demand from the factories soon and rather look for business in the large centers to hang on longer than usual. There is an unusual amount of residence building just being put under way or contracted, due to the feeling that prices of material are at a low point and are to go higher next season. This will give the sash and door factories some late orders to handle and will probably protract the demand for hardwood material.

There is a better feeling in the lumber trade in all branches, and while the volume of business is not heavy, it is coming now from channels that have been very quiet, and promises better things. The railroads are buying some stock and are soon to be in the market for more. Oak is showing greater strength than for some time and is getting stronger right along, prices being marked up again just a few days ago. Northern hardwoods are scarce and stiff in price, with the exception that there are fair stocks of birch still in wholesale hands. Birch has been moving well in proportion to the volume of it, and is thought to be about due for an advance this fall.

MILWAUKEE

Additional improvement and new life have been noticed in the hardwood situation during the past two weeks. Sales are substantially larger and inquiries have increased to a marked degree, which convince dealers that the coming fall trade will be heavy. Retailers have been finding that local trade is somewhat in excess of country business, owing to the fact that the farmers have been experiencing the busiest time of the whole year, but now report that

as farmers are finding more time, business is again looking up. Wholesalers in the hardwood field are still finding trade to their satisfaction, owing to the fact that dealers are still replenishing their low stocks. While hardwood prices in Milwaukee have not materially increased, the market displays a stiffening tendency. Mills and manufacturing plants in the city have been slow throughout the entire season about placing substantial orders, although dealers say that now this class of trade is showing improvement. The sash and door plants of Milwaukee, which a few weeks ago seemed to be experiencing a revival of trade, are again rather quiet. The building demand and the call from the retailers seem to be the hopeful factors in the hardwood situation at the present time.

Oak, cypress and maple are leaders in the trade, with oak still in strongest demand. Maple has been displaying considerable improvement during the past few weeks owing to the increased want. Birch is off somewhat and the call is less than a few weeks ago. Ash and elm are at about the same stage. Basswood, while it is never in very strong request in Milwaukee, is gradually picking up. Poplar is in fair demand and good prices are being obtained.

BIRMINGHAM

One of the large hardwood deals of the season has just been closed by the Oden-Elliott Lumber Company, calling for 1,000,000 feet of poplar. Half the shipment will go to a Wisconsin firm and the other to an Ohio house. Shipments will begin at once.

Aside from this there has been little activity in the Alabama hardwood market. Oak is in poor demand and the output has practically ceased. Quotations on oak, however, show a slight advance, No. 1 and No. 2 selling around \$27.50, No. 1 common at \$17.50 and No. 2 common at \$9. Poplar is the only item that shows any strength, and for this wood demand is fairly active and prices slowly advancing.

In general, the hardwood market has felt only slightly the increase in quotations noted in yellow pine, which is up from 50 cents to \$4 a thousand feet. As this market continues to improve it is believed the hardwood cut and hardwood prices will be bettered. At present most of the cut is being made by yellow pine mills, which take the patches of hardwood which crop out in yellow pine areas.

DETROIT

General conditions in the lumber trade are improving in Michigan. Spenking especially of western Michigan, trade is fairly good and orders are coming in more freely. One of the best indications is the shortage of cars, and the railroad men predict that the shortage which is already apparent in the South will cover the entire territory. So the "get busy" and building campaigns are working and will aid in getting things started.

Local manufacturers of hemlock lumber report more orders during the last two weeks than for some months past.

Northern hemlock has been slow for some time, first on account of the cutting of price of yellow pine and again by the depression of trade in general. With the advance in price of yellow pine and the curtailment of cut of last fall and winter, the chance for hemlock is improved and consequently orders are coming in.

LIVERPOOL

Brighter prospects tend to permeate business circles and the hardwood situation is more promising. Shippers, however, should be cautious and not put a damper on the increasing trade by demanding higher prices, as the market is not in a position, as yet, to stand any increase.

Oak planks and boards remain extremely weak as also is poplar and walnut—consumers here demanding a reduction in price before placing orders. Several good orders for oak scantling cut to dimensions could be obtained by shippers if they could see their way to meet buyers, but at present prices asked no business can possibly be put through, as there is a big glut of home-grown timber at the moment and British saw-mill proprietors are eager for orders at lower prices than are being asked now in the States.

Some weeks ago I referred to the low stock of hickory and ash and my remarks were ridiculed in many quarters. During the past fortnight several big consumers have come into the market who have previously been holding back, the result being that there is not at the present moment a single hickory log of prime quality in first hands. I do not know of any first-growth ash of large size on offer, though the small second-growth wood is to be found in abundance. Shippers having hickory or large ash by them should ship to this market as record prices will be obtained. The mahogany situation shows little change, with a slightly firmer tendency, the two sales held last week bringing forward a representative company of buyers who paid slightly higher figures for their purchases. Ash planks and pitch pine should on no account be shipped as both are unsalable. Satin walnut is not finding a ready sale, but we anticipate a rapid revival in the cabinet trade. Birch planks and logs will undoubtedly soon bring better prices, as stocks are low. We advise shippers not to be scared from this market by reports of bad trade, as the noted improvement which has set in has undoubtedly come to stay.

LATER.—Considering the period of the year trade can be said to be fairly brisk. The extremely low prices which have been ruling during the past six months are now a thing of the past, and higher prices are being obtained for all classes of lumber than were in existence five weeks ago. Hickory is badly wanted and high prices can be obtained for wood of any description, while a tremendous rush would follow the import of a prime panel. If shippers have any of this wood by them they should ship immediately to this port, as they would realize a handsome profit. The same remarks may be applied to large white ash, but to a somewhat lesser degree, and good values can be obtained. The small second-growth ash is also rapidly recovering from the excess of import which took place last year, and if offers were made of a reasonable nature, buyers could now be found. Wagon oak planks are still very weak, the market still being far too much overdone in sizes which are quite unsalable. Poplar in all sizes and grades is doing more favor, while the log should now bring good prices. Round oak logs of good sizes, quality and white in color should bring fair values. Birch is also firmer, under the reduced import and smaller demand, while maple flooring is not in active request owing to the slackness in the Laneshire manufacture districts—no mills being built. Mahogany is firmer, with a probable rise in values ruling for this commodity. English consumers are far-seeing enough to be laying in large stores of this wood and buyers are strongly advised to buy well ahead, as at present prices a large purchase could not be much out. Shippers should not be timid or nervous of the state of trade of the past six months at this port, as conditions are nearly normal again.

SOUTHERN IRON & EQUIPMENT CO.,
Atlanta, Ga.

RAILS AND LOCOMOTIVES.

All inquiries for industrial railway equipment listed before RECORD readers will find ready response.

HARDWOOD RECORD, Chicago, Ill.

MISCELLANEOUS

BANKRUPT SALE.

In the District Court of the United States, for the Western District of Kentucky. In matter of HOPKINSVILLE LUMBER COMPANY, bankrupt. In bankruptcy.
Owensboro Division.

In pursuance of an order of sale entered hereon, the trustee will, on September 1, 1908, at 10 o'clock a. m., at the plant recently conducted by the Hopkinsville Lumber Company, near the city of Hopkinsville, Ky., sell, on a credit of six months, at public auction to the highest bidder, the plant and all the machinery contained therein, including real estate, consisting of about twelve acres of land. The purchaser or purchasers will be required to give bond with good security or pay cash.

This is a splendid opportunity for parties desiring to run a planing mill and carry on a lumber business and contractor's business. Hopkinsville is situated in one of the richest parts of Kentucky, and is an excellent location for a business of this sort. The plant is thoroughly equipped with good machinery. For further particulars, apply to HANSEN'S BANK & TRUST COMPANY, or HUNTER WOOD & SON, Hopkinsville, Ky.

FACTS FROM PRACTICAL MEN.

The HARDWOOD RECORD is always in the market for articles on any and every feature of the hardwood industry. It wants practical statements of fact from practical men who know how certain things can be done in the best way. Literary quality not essential. Liberal pay for acceptable articles. Address
Editor HARDWOOD RECORD.

**SMITH of
SMITHVILLE**

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding sticker of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular.

**No. 217
Continuous
Feed
Glue
Jointer**

After long and costly experiment, we have produced a continuous feed glue jointer that has proven a wonder in furniture factories and other establishments working in hardwoods, because of its excellent work, ease and quickness of adjustment, rapid feed and large capacity. It has many exclusive features that place it far in advance of any other continuous feed machine on the market.

FEATURES: Frame is cast in one piece—absolutely rigid. The entire mechanism is completely enclosed. All bearings are oiled from the outside without stopping the machine. Feed consists of a traveling chain composed of detachable links which oils itself automatically. A Gib is provided running full length of the chain—not part way only—insuring perfect alignment. Cutter heads are located in center of the machine lengthwise, one on either side. This machine is carefully tested before shipping, and is guaranteed to produce a perfectly fitting joint. Write for descriptive circular.

J. A. FAY & EGAN CO. 414-434 W. Front St. **Cincinnati, O.**

It's Easy ATKINS SILVER STEEL SAWS

Segment ground—thickest at center of back. Of even gauge along the tooth edge, but gradually tapering to the center of the back. They run free and easy. Atkins Segment Ground Cross-Cut Saws will

Cut 25% More Timber

than any other, because they have plenty of *clearance* and require but little set which makes them run fast and easy. By using Atkins inexpensive Saw Tools, Atkins Cross-cut Saws may be easily adjusted so as to do the most work.

Made of SILVER STEEL, they hold their edge. The most economical Saw and undoubtedly the best for you to buy. In use generally where the finest saws are appreciated.

Most jobbers carry our Saws in stock for immediate delivery or they may be ordered through us at Indianapolis or any of our branches. We have interesting booklets on this subject which we should be pleased to send you.

BRANCHES: Atlanta, Chicago, Memphis, Minneapolis, New Orleans, New York City, Portland, San Francisco, Seattle, Hamilton, Ont.

High Speed—High Grade

Both these factors of efficiency are to be found in the

Woods No. 24 Special Fast Feed Planer and Matcher

and in the work that it turns out.

HIGH SPEED and HIGH GRADE in the machine and its output are made certain because each knife in the cutter-head does its full and equal share of the work. Four cuts per revolution with a four-knife head means a finish four times finer than when only one knife does the work. It means faster feed for the same result and finer finish. The Woods Radial Knife-Setting Gauge—that sets all knives alike to a thousandth of an inch—makes this possible on this machine as it does on all other Woods machines to which it is applied.

The Raymond Log Loader

Operated by HORSEPOWER, GASOLINE or STEAM

(Patented August 23, 1904)

THIS is the first and only practical machine which is a money-saver for loading sleighs, trucks, etc. I place them on approval and with a guarantee to do the work of loading logs for less than half the expense of the old ordinary way. They have given universal satisfaction all over the United States.

By using the Raymond Log Loader and the Phoenix Mfg. Co.'s Patent Stake Pockets, bunches of logs can be picked up and swung into the stakes by inexperienced men in one-third the time that almost a double crew of experienced men can do it in the old way. This is the first rear end swinging crane sleigh loader, in combination with a double pole sleigh, ever invented.

Maple and Oak Flooring a Specialty

WHO BUYS HARDWOODS?

Do You Want the List?

The Hardwood Record supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of consumers of those materials throughout the United States and Canada.

Specifically, the items of the bulletins recite:

Name of state and town
Name of concern
Name of buyer
Line manufactured

Kinds, grades and thicknesses of Lumber
Kinds and sizes of dimension stock
Kinds and thicknesses of veneers
Kinds, thicknesses and sizes of panels.

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber not used are removed, and the cards are filed in alphabetical order between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete roster of the hardwood requirements of all users, and is an invaluable adjunct to the sales department of every manufacturer and jobber.

This service is free to all advertisers, save the patent index cards which show at a glance the kinds of lumber used by each concern, and which are sold at \$3.50 a thousand, the state guide cards costing 75 cts. a set.

Write us about this service.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in January and July

It contains a carefully prepared list of the buyers of lumber
in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of
meeting obligations. Covers the United States and Manitoba.

The trade recognizes this book as the authority on the lines
it covers.

A well organized Collection Department is also operated and
the same is open to you. Write for terms.

A Suggestion for September

AN OVER-STOCK—OUR LOSS—YOUR GAIN

We have a stock of approximately--

300,000 6x20 No. 1 Heart Rived Cypress Shingles

500,000 7x24 No. 1 Heart Rived Cypress Shingles

This is a much larger stock than we ordinarily care to have on hand and in order to reduce it to a minimum basis, we will, until the over-stock is exhausted, name some attractive prices. If you now need or anticipate a future want for all or any part of this stock, of as choice a product as is on the market today, you will make a big mistake by not allowing us the opportunity of quoting you our rock-bottom prices.

G. W. Jones Lumber Co.

Appleton, Wis.

Mitchell Brothers Company

CADILLAC, MICH.

Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawed Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Advertising copy must be received five days in advance of publication date. Advertising rates on application.

General Market Conditions.

Reports from practically every hardwood center of the United States appearing in this issue of the RECORD are almost alike in their general characteristics. They show a gradual increase in demand, and sale and in some cases the volume of business is back approximately to normal.

The trade of the chief eastern cities seems to respond slower to the general trend of conditions than in any other section of the city. Business in Boston, New York, Philadelphia and Baltimore still lags. There is comparatively little life in it, but the dealers in those cities are encouraged to believe that trade will be better as the season advances.

The prodigious amount of money in Europe and the United States available for business purposes, and to a considerable extent unemployed, of course raises the question whether activities are to be largely increased in the immediate future. The approaching election apparently is having little or no effect on business resumption. There is less interest on the part of the business public in political affairs this year than has been in the presidential campaign for many years. The result of the Vermont election adds encouraging features to the Republican party success which gives it moderate encouragement, but it is an event on which the conclusion as to the rest of the states can scarcely be based.

A vast deal of money for investment purposes is going into bonds at the present time, and it is especially notable that there is a demand for timber bonds. Investors have the good sense to see that this class of security is unimpeachable and pays a very fair rate of interest.

The leading banks in twelve European countries and the banks of New York hold in specie, mostly gold, \$2,680,000,000 against \$2,365,000,000 at this time last year. This is an increase of \$325,000,000 in the form of money which in effectiveness is three or four times as great as the same total in credit instruments. The aggregate of gold in bank in the United States is now far in excess of the total of any

preceding year and is rapidly increasing. New York banks now hold some \$34,000,000 more in gold than they did a year ago. However, apparently the mere existence of a great quantity of money in the banks does not necessarily insure a rapid business expansion. All along the line, however, the situation is hopeful and it is believed business will close, not only in lumber but in all other lines of manufactured production, with manifest strength and will perhaps approximate the condition that prevailed a year ago.

While there is no danger of a severe car shortage still the railroads are using up their idle cars rapidly. Last week the Pennsylvania Railroad reported a decrease of 8,000 in the number of its idle cars within a fortnight. In business in general the purchase and distribution of commodities still indicate timidity.

The trade in cement is still comparatively slack; for iron and steel there is a steady but moderate demand; the furnace capacity of the country in operation is about sixty per cent. The demand for structural steel is the most notable output of the steel mills. It is made up of a multitude of small orders from many sources. Railroads are buying but few rails but are ordering some bridge material. Building operations throughout the country are back to about normal. The operations in Chicago are especially noticeable and it is estimated that twenty-five miles of street front are now in process of improvement by permanent structures.

On the Subject of Advertising.

There are three legitimate and practical forms of advertising for the hardwood man:

The first and the most forceful form of advertising is when the competent salesman secures a personal interview with a prospective customer and threshes out carefully with him the details of the proposed trade. This system of advertising of necessity is expensive and it often happens that the visit is so inopportune as to preclude the possibility of a thorough handling of the subject.

The second and perhaps the next best form of advertising is the constantly repeated friendly letter to the person from whom it is deemed desirable to secure business. This is comparatively low cost advertising, and while a considerable portion of this correspondence may be passed over hurriedly at the time a man opens his mail it is a system that has great merit for its business-getting qualities. With most men a forceful, diplomatic letter secures some sort of a response. In many cases it paves the way to a lot of good business.

The third legitimate form of advertising for the hardwood man is in the trade newspaper when it is in a good class circulation.

These three forms of advertising work admirably together and handled out in a systematic and sensible way assist each other in sales results.

Unfortunately the majority of lumbermen have never given enough attention to their newspaper advertising to get the returns that they could out of it. If they would devote a little study to the subject they would find that the buying of blank space in lumber newspapers and saying that they are in the hardwood business at "Big Ditch, Indiana," does not constitute good advertising.

Lumbermen can well take an advertising lesson from the dry goods merchants, who are among the best advertisers in this country and advertise a few items they have to sell in every issue of the publication with which they do business. Lumbermen should list a few items at a time and not too large quantities.

In advertising as well as in any other business it is well to talk about one thing at a time. You can get a man's attention to one subject when you can't secure it for a dozen.

If they will follow this plan the complaint that advertising does not pay would very promptly cease.

The lumberman who says advertising does not pay simply does not know how to advertise.

The crux of the whole matter is that simply buying advertising space in a newspaper does not constitute good advertising. The publication must needs have the co-operation and support of the advertiser to make these expenditures profitable. Bear in mind at all times that a lumber newspaper can not sell lumber—it can simply assist to that end, but it can assist in a marked degree, if it has the co-operation of the sales department.

Hardwood Record as a Business Aid.

Every trade paper has one thing to sell and that is advertising space.

A few trade papers have both space and circulation to market.

The exceptional trade newspaper, especially referring to the lumber newspaper, has space, circulation and business information to supply to its clients. Of this latter class is the HARDWOOD RECORD.

Too much direct advertising results should not be expected from the moderate investment usually made by members of the lumber trade in their newspaper advertising. A good deal of the benefit accruing from this form of exploitation must be regarded as "general." It familiarizes the name of the institution to the buying public. This is particularly so with the advertiser who simply says, "My name is So-and-So and I am in the hardwood business in a certain town." Of necessity this sort of exploitation is not specific. The advertiser who gets the best results is the one who lists one, two or three items of stock he has to sell, in a prominent way, in one issue of the paper and in the next one advertises something else. This is genuine advertising. It would even be better if prices were attached but in many cases this is not desirable.

It must be recalled that a lumber newspaper can not actually sell lumber no matter how broad its circulation may be. All it can do is to call attention to the fact that the lumber is for sale. The actual selling must be done by the individual himself.

In addition to this service the HARDWOOD RECORD has been employed for several years in securing and collating in concrete form a list of the hardwood buyers throughout the United States, together with the details of their annual requirements by kind, grade and thickness of lumber; by kinds and sizes of dimension stock, and by kinds, varieties of sizes and thicknesses of veneers and panels. This specific information placed in the hands of the sales department of any lumber institution gives it an opportunity to write intelligently to the prospective customer on the subject of selling him lumber. If these letters be carefully prepared they contribute largely to the aggregate of sales. This service, when properly handled, can be made even more profitable than the newspaper advertising itself. This service is supplied without charge to advertisers. It is information that every manufacturer and jobber of lumber needs in his business. Furthermore, as a business aid to the trade the RECORD attempts to supply information to its patrons pertaining to every feature of the hardwood trade. When a client asks for information it is ordinarily found in the very complete records embraced within a card index system and is promptly supplied; but if the information is not at hand, it is an extraordinary inquiry where it is impossible to obtain it and to supply it with promptness.

It is this distinct co-operation and ability to supply business information to its clients that makes for the high standing of the RECORD with the manufacturing, jobbing and wholesale consuming trade of the country.

Fire Insurance.

Fire insurance authorities allege that only an average of sixty cents out of every dollar of premium received is used to pay insurance fire losses. This statement undeniably refers to the old line companies which have the preponderance of insurance business in this country.

Therefore when the responsible lumber mutual companies return to the insured premium dividends of thirty-five cents out of every dollar received for insurance it shows that lumbermen are only paying five cents on every dollar for the business expense attached to their fire protection. This is certainly an admirable showing for the lumber companies.

Unfortunately the fire loss in the United States as compared with other civilized nations of the world is altogether too great. During the last year the per capita loss in this country has been three dollars as against thirty-three cents in the principal European countries, including Great Britain, France, Germany and Italy, or nine times more fire waste and interruption of business—which insurance cannot cover—in the United States than western Europe. There are certain conditions in these countries which operate to effect a lower fire loss than would be possible here, viz.: the larger use of non-combustible materials, due to high cost of lumber and better building codes, and conditions which make these people more careful of small savings in all their affairs and invariably more cautious than we have yet become. With due consideration of these facts still the fire loss in the United States is outrageously greater than it should be.

Fire Menace in the North.

The entire range of country of northern Minnesota, northern Wisconsin and northern Michigan during the last few weeks on account of lack of rain has become one gigantic tinder box. Minor fires and some of considerable size in the timber slashings and even in the green timber are prevailing. The lumbermen in these regions are aware of the gravity of these dangers and are taking every precaution to avoid fire losses in their timber. However, the territory is so vast and the timber area so dry that it is a herculean task to protect themselves against the danger of severe losses.

The situation as far as drought is concerned is about the same as it was in the fall of 1894, when the tremendous fire devastation occurred in northern Wisconsin. Today, of course, there is not the quantity of timber standing that is liable to fire loss that there was at that time, but still the possibility of immense damage is imminent. Every timber owner is on the alert and is watching his camps and surroundings very closely. It is sincerely to be hoped that rains will put an end to this danger within a few days. However, in default of a heavy rain-fall incalculable damage is likely to ensue which is liable to result in the loss of not only much good timber property but farm buildings, crops and even towns.

In Michigan a considerable fire is raging in the old slashings between Pionning and Roscommon. The whole country is ablaze. Fears are expressed that the town of Roscommon may be destroyed before the fire burns itself out.

Several million feet of hardwood and hemlock lumber in the vicinity of Houghton and Ontonagon, Mich., have been burned during the past few days from woods' fires.

Holding Down the Output.

The leading manufacturers of both Michigan and Wisconsin are pursuing a remarkably conservative policy in regard to their proposed lumber output for the next year. They feel that in spite of the considerable revival in demand that it would not be a safe proposition to prepare for a large hardwood output for the year to come. The majority of them are making plans for their logging operations that will involve only about half of the usual quantity they produce. The feeling is generally prevalent that it is a much safer proposition to have an assured demand equal to an excess of the supply than to by any possible chance overload the market.

It is to be hoped that southern operators will take this same view of the situation and hold down production to assured demand. Current hardwood values do not warrant any man in taking any great chances on the immediate future. At present stumpage values an overstock of hardwoods during the next few months will mean doing business at a loss rather than a profit. Continued conservatism in production is most earnestly recommended.

The hardwood manufacturing associations of both Michigan and Wisconsin, after having analyzed the situation carefully, have by resolutions urged this policy of conservatism on its members.

Pert, Pertinent and Impertinent.

Maud of the Muck Bake.

Maud Muller on a summer's day
 Baked the meadow sweet with hay,
 Her pake not a man of wealth,
 All that she had was rugged health.
 Sighing, she said: "Confound the luck,
 I think I'll go to raking muck."
 Because she tolled a wild unrest
 And an eager longing filled her breast,
 "Why should I have to work," she cried,
 "While others scorn me in their pride?"
 "With riches they have never earned
 Their backs on me are proudly turned.
 "The good Lord never planned things so.
 "There's something rotten here below."
 "An Ida Tarbell I will be
 "And whack the plutocrats," said she.
 The Judge appeared upon the scene.

Bringing an odor of gasoline.
 He stopped to huzz the girl a while;
 She was plump, and he liked her style.
 She knew that he possessed a wad;
 He thought: "How sweet a name is Maud!"
 He spoke of railroad stock he had;
 The maiden listened and was glad.
 "In two years, if my luck is fair,"
 He said, "I'll be a millionaire."
 "I travel on passes through the land"—
 Maud sweetly said: "Oh, ain't that grand?"
 "As far as rebates go, I'll say
 "That I regard them as O. K."
 "A block of Standard stock I claim—
 "No matter how I got the same."
 "Now, tell me, Maud, and tell me true,
 "Don't I look rather good to you?"

Her face against his breast she hid,
 And gladly answered that he did.
 Today she is the Judge's wife
 And lives in style, enjoying life.
 And oft she wonders in her pride
 Why people can't be satisfied.
 "Why," she complains, "do critics pitch
 "So foolishly into the rich?"
 "Why do they ever scold or sigh
 "Because the things they need are high?"
 "Wise Providence has planned affairs.
 "We rich, alas, have many cares.
 "But while we nchly bear the strain,
 "Why should the ones below complain?"
 Of all wise words, the best by far
 Is: "Take things meekly as they are."
 —Chicago Record-Herald.

Rare.

Honest men are about as scarce as quiet women.

Doesn't Work.

Few people make a success of being good on the installment plan.

Pleasant Company.

You can always tell a really sensible man by the way he agrees with you.

Never Comes.

Speaking of the "age of discretion"—we just about reach it when it is time to shuffle off this mortal coil.

Sometime.

That man never lived who was so wise that a woman couldn't fool him!

Fine Business.

If rents are too high in your neighborhood, hire an amateur cornet player to move in.

Have You?

Many a man has a klick coming that never reaches him.

Perish the Thought.

Isn't it the fickleness of men that makes them interesting?

The Difference.

Flattery is harmless to the woman who doesn't flatter herself.

Assistance Galore.

Show a disposition to be an easy mark and everybody will help you make good.

Don't Worry.

Just make the most of what may come each day, and hear your troubles in a cheerful way; and just at fate whenever she proves unkind, remembering she's a woman and must change her mind.

To enjoy the present—this appears to be the aim and end of all philosophy. So let's remember 'twas a wise man said "Live while we may; it will be a long time dead!"

Would Spoil It All.

"Maybe your husband objects to your going to that summer resort because he thinks you might flirt with some of the men there. Why don't you tell him there are no people there but women and girls?"

"If I do that he will insist on going, too, not once."

Business Is Business.

The government licenses a man to distill whisky; then the courts license other men to sell it; then the municipalities employ policemen to run in the men who drink it; then the judge who grants the license sentences the men who drink the liquor to go to jail; and the men who make it and the men who sell it point with pride to the business that grows out of the manufacture and sale.

Home From The Annual.

"For heaven's sake where have you been, and what's happened to you?"

The Cynic.

A cynic is a person who knows he is the real thing, and sees that all others are merely imitations.

Seldom Fooled.

A girl often refuses a man because she feels sure he will soon propose again.

Genius.

Genius consists in doing the right thing without being told more than seven times.

Seek Respect.

Inspire respect for yourself and confidence in the goods you sell if you would be successful.

Believe in Yourself.

If you don't believe in yourself how can you expect others to believe in you?

Do It First.

Never lose a good customer. If you have an undesirable one quit him—don't let him leave you.

Looks Like It.

Apparently some men get married for the purpose of having someone to drive them to drink.

Try It.

If you really want to do some good work as a reformer, figure how much time you waste every day—then get busy.

Some Valuable Foreign Woods.

ARTICLE V.

More About Ohia.

The HARDWOOD RECORD recently published an article on ohia wood, the new tie timber, under its series covering foreign timbers—

FRONT END OF MILL, SHOWING ROUGH CHARACTER OF LOGS.

contributed by H. C. Haner, who is at present engaged in building a mill and getting out the logs at Pahoa, Hawaii. The trees present a very odd sight in the forest, owing to their peculiar root formation, and the method of felling them by jerking down with ropes and pulleys is a peculiar one. Mr. Haner did not secure pictures of the standing timber, but has just forwarded a new bunch of photographs, herewith reproduced, taken in the mill yard and vicinity, with the following information and explanation:

IRREGULAR SHAPED LARGE OHIA LOGS.

"Some idea of the general shape and character of the ohia logs may be obtained from the view which shows the starting of the log yard at the mill, the misshapen log in the foreground showing the effect of the growth of the ca-ca vine, mention of which has previously been made. This tree, though scaling over 300 feet, will not saw into a single piece of 6x8 for ties, but will have to be cut into inch strips, owing to its twisted shape. The 8-foot log on top of the pile will square into four ties and make more lumber than the other log sixteen feet long.

"Another cut shows two of the logs at closer range; the outer conformation can be noted, from which it will be seen that the product of the mill in inch strips will be large in proportion to the number of 6x8 8-foot ties actually cut. This log, like many others, is star-shaped and will square up only two ties in the body of the log.

"In the view looking toward the camp may be seen the general run of the short lengths. Most of these logs were cut into 8-foot lengths for hewing, but owing to near approach of sawing, it was decided to bring them to the mill. We now have quite a large supply of them piled up in the log yard, where they are drawn up into a heap with a donkey engine and wire rope. The log-dump shown is the beginning of a skidway which will be about 500 feet long.

"The logging crew is composed of Hawaiians, Japs, Koreans, Portuguese and other nationalities. It was thought at one time that it would be possible to secure a crew of Japs for the millwork, but their propensity to do everything backward would make them a dangerous quantity in anything but a double cutting band mill, for they would be sure to try to cut with the back of the saw. One of them took some measurements for belting lately, and he did it by commencing at the end of the steel tape and measuring back toward the unit figure.

"In addition to such timber resources as this island has of its own, the Pacific contributes many derelicts from the coast, some from big rafts that have broken up at sea, and the logs have found their way to many shores. One of the cuts shows a round log on the eastern point of the island which is about ten feet above mean tide now, having been thrown into its present position by one of the storms that occasionally, but not often, come this way. The log is five feet in diameter at the small end and thirty feet long. It is sound and shows no ill effects of its long journey, but is bleached white from exposure to the salt spray. A curious feature of the surf on this island is that on all sides and at all times it rolls toward the shore; it would seem as if one side of the island would show smooth water for part of the shore line, but it does not.

"Nature seems to have made amends for her cruel treatment of the land in covering it

with streaming flows of lava, for out of the black mass of bare rock grow the cocconut and the palm, the mango and the alligator pear, with wild fruits and trees, shrubs and

GENERAL RUN OF OHIA LOGS AVERAGING 125 FEET TO THE LOG.

vines, all of which have edible fruits, or flowers. While the fishing is hazardous at times, the sea yields an abundance, and the wild hogs furnish meat in plenty for those who care to hunt them on the sides of Mauna Kea, or the wild turkey on Mauna Loa. At such times as the volcano at Kilauaea is active it can be seen from the mill, and while lumbering may have great drawbacks here—as it usually does in a foreign, undeveloped country—the panoramic view from this spot, when the air is clear, is the memory of a lifetime."

A WANDERER FROM A FOREIGN SHORE.

ERNEST BERRY NORMAN,
LOUISVILLE, KY.

Builders of Lumber History.

NUMBER LXXI.

Ernest Berry Norman.

(See Portrait Supplement.)

One of the distinctly "live wires" in the hardwood manufacturing and distributing trade of the country is Ernest Berry Norman, president and treasurer of E. B. Norman & Company, Louisville, Ky., whose portrait forms the supplement of this issue of HARDWOOD RECORD.

Mr. Norman is not only a well-known figure in the hardwood trade of Louisville, but he and his house are well known throughout the entire Middle West. He was born in Normandy, Shelby county, Ky., on July 22, 1875. He received his education in the ward and high schools of Louisville and after finishing at these schools attended the University of the South at Suwanee, Tenn. After leaving college he entered his father's lumber office at Louisville, where he remained for three years, receiving the incalculable benefit from the thorough training with that dean of the Louisville lumber trade, A. E. Norman.

It had always been Mr. Norman's ambition to become a lumber manufacturer and he left the employment of his father to go into the hardwood sawmill business. He engaged with a company operating a sawmill at Louisville and acquired an interest in the business from time to time, and soon became vice-president and general manager of the institution. He eventually obtained control of the plant belonging to this business and organized his present corporation of E. B. Norman & Company, Inc., and engaged specially in the production of white oak and yellow poplar. He completely rebuilt the sawmill acquired, so that it has a capacity of about 30,000 feet daily, which is often increased to twice that amount by both night and day operations. To the sawmill he added a planing mill and box shoo factory with extensive yards in the vicinity of Shelby and Fulton streets.

The members of Mr. Norman's present company are himself, president; R. Carnahan, of eastern Kentucky, vice-president, and A. E. Lanning, superintendent. Mr. Norman has the general financial and sales end of the business, Mr. Carnahan the stumpage and logging end and Mr. Lanning immediate charge of the operations of the plant.

The output of the company's sawmill is about 15,000,000 feet annually and about 5,000,000 feet are consumed in the box factory and planing mill. The source of supply of this important plant is the upper Big Sandy and Kentucky rivers, the logs being floated to the Louisville mill by means of these streams and the Ohio river in numerous log floats during the season. A large portion of the timber reaches the sawmill in long lengths, which enables Mr. Norman and his associates to supply heavy and long timbers for ship building, construction and heavy engineering jobs. They also produce a great deal of high-grade oak and poplar lumber.

The company usually carries in stock fully one-half its annual output.

Mr. Norman was married in 1896 and has two sons, seven and ten years of age. He had the serious misfortune of losing his wife by death in 1902. He is a member of the Broadway Baptist Church, the Penderbiss Club, the Tavern Club and Country Club. In politics Mr. Norman is a republican. He is a prominent member of the National Hardwood Lumber Association. Personally, he is one of the most charming men, alert, active

and foreful. He is an enthusiastic automobilist and combines pleasure with business in the expert use of a touring car. His social instincts are very marked and he is a universal favorite with business men of all classes of Louisville. His host of friends all know him as "Berry."

Mr. Norman's business affairs are conducted on a high plane and his achievements in the hardwood trade, while already considerable, only augur for his future success and a development in excess of even his present high standing in the trade.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.]

Wants Apple Wood.

CINCINNATI, O., August 24.—Editor HARDWOOD RECORD: Can you give me the names of any sources of supply of apple wood boards? We have an inquiry for some of this stock but do not know of anyone who furnishes it.

— & Co.

The correspondent has been given one or two addresses, but anyone else who has some of this stock to dispose of will be put in communication with him on request.—EDITOR.

Wants Gum Flooring.

The RECORD is in receipt of the following letter from a well-known lumber house and has supplied the inquirers with the names of several manufacturers of gum flooring. Should other readers of the RECORD desire the address of this concern they can have it on application.—EDITOR.

GREENSBORO, N. C., Aug. 29, 1908.—Editor HARDWOOD RECORD, Chicago: We would appreciate it if you could put us in touch with some good concerns who manufacture gum flooring. We want to buy 1½"x4" square edge, ends matched, all redwood. One face to be clear of all defects and to be thoroughly dry. We would want a sample car and if satisfactory could use 650,000 feet in the next twelve months. This is for floors that are very damp and we could not accept any sap or other defects in the lumber. We would want same delivered on a Boston rate of freight. We have no connections that can get this out and if you can refer us to any good reliable concern that could manufacture it we will greatly appreciate it.—

Trouble of the Sawmill Man.

The RECORD is in receipt of a note from a well-known Kentucky hardwood manufacturing house which operates several sawmills throughout the state, in which the writer says: "Talking about troubles of the sawmill man, what do you think of the attached? This is a sample of labor conditions in Kentucky."

Enclosed with the letter were daily report sheets of one of his sawmills which read as follows:

August 17—Could not get hands—gunning saw. Fair begins.

August 18—Could not get hands. Fair at Louisville.

August 19—Gone to fair—can't get hands.

August 20—Gone to fair—everybody—myself too—one day.

August 21—Gone to fair.

August 22—Can't saw—everybody trying to sober up—we will get to work the 24th all O. K.

Seek Source of Lumber Supply.

NEW YORK, Sept. 5.—Editor HARDWOOD RECORD.—The Pan-American Commercial Company, S. A. No. 1 Esclavo street, City of Mexico, Mexico, are desirous of reaching direct a reliable firm exporting flooring and siding lumber with a view of placing some orders.—L. M. RODRIGUEZ & Co.

Combined Subscription Offer.

On page 13 of this issue of the RECORD will be found a subscription offer covering several leading trade newspapers that can be secured in connection with the RECORD at a combined price that makes a subscription for any two of the publications very cheap.

The RECORD has many subscribers who are directly interested in the furniture trade, and therefore it offers in connection with the RECORD a subscription to the Furniture Journal, a very handsome, well-edited, semi-monthly publication, which is the leading magazine in the country devoted to that branch of the industry.

Other clients of this paper are also interested in the cooperage or box industry, and therefore it offers a combined price with that standard exponent of the box and cooperage industry—the Barrel and Box.

Other clients are interested either in manufactured stone building material or in stone, marble and granite, and it therefore offers in conjunction with the RECORD either the Concrete or Stone issues of Rock Products at a low price.

To such subscribers of the RECORD who are interested in machine woodworking it commends the combined offer of the Wood Worker of Indianapolis, which is a foremost journal for this class of trade.

For the benefit of the women of the household it distinctly commends the Woman Beautiful Magazine, the handsome new household publication which is of interest to every beautiful woman and every woman who seeks to be beautiful. The wives and daughters of lumbermen will all be interested in this publication which, in the nine months of its existence, has reached a remarkable circulation.

Specimen copies of any of these publications may be had on request.

Semi-Annual Meeting Wisconsin Hardwood Manufacturers.

The semi-annual meeting of the Hardwood Manufacturers of Wisconsin was held at Wausau, Wis., on Wednesday, September 9.

The meeting was held in the pavilion of the street railway park in the suburbs of Wausau. C. A. Goodman, president of the association, was in the chair, and George H. Chapman, secretary, presided.

Mr. Chapman read the minutes of the annual meeting that was held in Eau Claire in January, and his report was approved. On behalf of himself and treasurer, B. W. Davis, Mr. Chapman reported that the association had \$898.52 on hand, with \$552 accounts receivable, a total of \$1,360.52. He estimated the normal expenses of the association for the remainder of the year at \$1,500. He reported that three assessments had been made on the members during the year, and he

C. F. Lusk, chief inspector and assistant secretary, made a report on the work of the inspection bureau of the association. He stated that the Bureau of Grades had made 258 inspections during the year, of which 148 were mill inspections and 110 covering actual shipments. The quantity of lumber involved in the shipments was 630,000 feet.

The matter of the policy of taking out a membership in the National Association of Lumber Manufacturers was discussed, but was put over until the next annual meeting.

A brief discussion prevailed over current rate of wages to be paid woodsmen during the coming season, but no definite agreement was made. It was brought out in the discussion that labor was reasonably plentiful.

The matter of the defeat of the National Wholesale Lumber Dealers' Association and allied association in the car-stake controversy with the railroads was discussed at some length.

W. A. Holt gave the present status of the suit, and an attempt was made to get an expression of the members present whether it was to the best interests of the lumber trade to carry the fight against the railroads in this particular to the supreme court. From the fact that the hardwood trade was comparatively little interested in flat car shipments, it was deemed wise that the association should not take any part of this expense on its own hands, but that individuals interested in the case should contribute whatever they thought best to the cause.

On motion of A. R. Owen the rules of the National Hardwood Lumber Association as amended at the Milwaukee meeting in June were adopted as the official rules of the Wisconsin Hardwood Manufacturers.

J. C. Knox, secretary of the Michigan Hardwood Manufacturer's Association, on invitation of the chair made a brief address covering the work of the neighboring association. Mr. Knox stated that his association was paying particular attention to the matter of freights and was watching with considerable concern the prospect of the insistence of the railroads on higher freight charges.

George H. Chapman, secretary of the association, addressed the members on the subject of increased membership and invited their earnest cooperation to the securing of every available hardwood manufacturer in the state as a member of the organization. He also urged upon the members the immense desirability of prompt response to the secretary when information was asked for, especially covering stocks on hand. He explained in detail that this was one of the most valuable features of the association work and that it depended on its individuals whether they would have the benefit of this information.

President Goodman spoke earnestly on the subject of conservatism in hardwood produc-

tion for the next year. He stated that the revival in demand should not make members too optimistic and think that there was going to be a very large volume of trade for the next six months; that a conservative policy should still be pursued and that the output be held down to 50 to 60 per cent of normal.

Chief Inspector Lusk announced that trade and shipments were reasonably active, and particularly so in birch.

On motion of George A. Holt a vote of thanks was given to the Wausau hosts for their

DELIGHTFUL ENTERTAINMENT.

A committee of Wausau lumbermen consisting of W. C. Landan, chairman, F. H. Pardoe and J. S. Alexander provided a very elaborate entertainment for the visitors. The

C. A. GOODMAN, PRESIDENT.

thought that the revenue from this source would cover the expenses for the year. He stated that the present membership was sixty-two and that every effort was being made to induce every hardwood manufacturer of the state to join the association.

He further stated that, based on the figures at hand, the hardwood output represented by the present association members was 136,000,000 feet. However, he thought that this estimate was under rather than over, and that the total output of the members during the year was approximately 150,000,000 feet.

Agreeable to previous notice and on resolution, article 13 of the constitution of the association, providing that assessment be levied upon the quantity of lumber manufactured, was changed to read "on the quantity of lumber sold and shipped." Paragraph was made to include shipments of all character, including meal sales.

Geo. H. CHAPMAN, SECRETARY.

meeting, as before stated, was held at the pavilion of the street railway park, and at one o'clock a delightful luncheon was served in the same building. The guests were taken from the hotel to the park in a dozen automobiles owned by Wausau lumbermen, and after the meeting adjourned they were conveyed to the baseball park, where a game was played between the Wausau and Eau Claire teams. It was a lively game and every one thoroughly enjoyed it. After the ball game the party was taken in automobiles all about the beautiful city of Wausau, and the many fine public and private buildings, homes, etc., were pointed out to the visitors.

There were present:

C. F. Lusk, chief inspector, Owen, Harry X. Carter, Daniel Shaw Lumber Co., Eau Claire.

R. B. Goodman, Goodman Lbr. Co., Menominee. Geo. H. Chapman, North Western Lumber Co., Eau Claire.

E. J. Wellmuth, American Lumberman, Chicago.
 H. H. Stole, Stearns-Borland Lbr. Co., Tripoli.
 A. B. Bird, Inspector, Owca.
 Art. A. Curtis, Brooks-Ross Lbr. Co., Schofield.
 F. J. Hayden, Mississippi Valley Lumberman, Minneapolis.
 Henry H. Gibson, HARDWOOD RECORD, Chicago.
 Chas. E. Martin, Dells Lumber & Shingle Co., Eau Claire.
 J. E. Gillett, Dells Lumber & Shingle Co., Eau Claire.
 C. J. Winton, Thief River Falls Lumber Co., Thief River Falls.
 W. A. Holt, Holt Lumber Co., Oconto.
 Chas. A. Goodman, Sawyer-Goodman Lumber Co., Marinette.
 J. H. Johannes, Jacob Mortinson Lumber Co., Wausau.

E. M. Morrill, Bundy Lumber Co., Bundy.
 J. S. Alexander, Alexander-Stewart Lumber Co., Wausau.
 F. W. D. Timlin, Wheeler-Timlin Lumber Co., Wausau.
 G. W. Sexsmith, L. Sexsmith, Wausau.
 C. C. Yawkey, Yawkey-Bissell Lumber Co., Arbor Vitae.
 W. W. Gamble, Wausau Lumber Co., Rib Falls.
 G. B. Heinemann, B. Heinemann Lumber Co., Wausau.
 W. E. Gooding, Gooding-Mylrea Lumber Co., Wittenberg.
 W. G. Norton, Norton Lumber Co., Kitebie Miss.
 Frank Fountain, Fountain-Campbell Lumber Co., Donald.
 John R. Davis, John R. Davis Lumber Co., Phillips.
 E. M. Arpin, Arpin Hardwood Lumber Co., Grand Rapids.
 E. H. Beve, B. P. McMillan & Bros. Co., McMillan.
 B. W. Davis, John R. Davis Lbr. Co., Phillips.
 J. C. Knox, Secretary Michigan Hardwood Manufacturers' Association, Cadillac, Mich.
 B. F. Wilson, Star Lake Lbr. Co., Star Lake.
 Andrew Oelhaefen, John Oelhaefen, Tomahawk.
 E. C. Dawley, Wheeler-Timlin Lumber Co., Wausau.
 A. M. Pavanto, G. W. Jones Lumber Co., Appleton.
 F. K. Bissell, Rib Falls Lumber Co., Rib Falls.
 W. J. Campbell, Fountain-Campbell Lumber Co., Donald.
 F. H. Fardo, Fenwood Lumber Co., Wausau.
 A. R. Owen, Owen Lumber Co., Owen.

Semi-Annual Meeting Arkansas Hardwood Manufacturers.

The association idea among Arkansas hardwood men was given considerable stimulus, as the result of the semi-annual meeting of the Arkansas Hardwood Manufacturers' Association, which convened for an all-day session at the Hotel Marion in this city, Wednesday, September 2.

The meeting was the result of a call issued by the veteran hardwood manufacturer, Judge L. Lippman of Newport, who has been president of the association since its first attempt at organization a year ago. A call had been issued for a meeting in the early part of August, but for some reason the proposed convention failed to materialize, and in his opening remarks before the convention Wednesday, Judge Lippman frankly admitted that he had issued the second call with much misgiving, fearing a repetition of the result in August.

But he as frankly admitted that he was gratified at the response which followed the second call; for, although the attendance was not, perhaps, what it should have been out of a possible 500 members, still it is known that most associations in states where the manufacturers are now thoroughly organized, have had a hard pull for the first few years, and this fact was not overlooked by the chairman in his address.

"I feel that we are now well on the way to a thorough organization," said President Lippman, "and as a member and officer of the association I desire to emphasize the fact that we manufacturers of Arkansas are going to become a compact working body, whose efforts at solving some of the present day problems in the hardwood industry in Arkansas will be effectively felt. I am willing to go anywhere, do anything, or give sanction to any movement that will hasten and perfect our organization.

"The need of organization impresses itself more emphatically every day, in almost every channel of the industry we are developing. We can achieve together that which we will never be able to accomplish working in a haphazard, disintegrated fashion."

The morning session was taken up chiefly with an able address by Lewis Doster, of

Nashville, Tenn., secretary of the Hardwood Manufacturers' Association of the U. S. Mr. Doster is denation of the dispensers of information on "association work," and the address he delivered to the Arkansas hardwood men on this subject was an evident stimulus. He deals with facts in a very telling way, and believes in "system" above all else. He knows the hardwood industry like a book, and his running story of how the manufacturers' association is working out some of the really big problems in association work was both timely and refreshing:

Secretary Doster's Address.

Mr. Chairman and Gentlemen of Arkansas: It is my desire at this time to thank the manufacturers of Arkansas for the honor and privilege of addressing this meeting, in this important section of production in the hardwood industry.

In the United States government report for the year 1907, Arkansas ranks sixth in the production of all woods, which are shown in detail as follows:

	1907.	1906.
Poplar	2,700,000	5,224,000
Red Gum	238,821,000	148,019,000
Raswood	60,000	550,000
Elm	11,522,000	11,522,000
Hickory	30,443,000	23,241,000
Oak	304,911,000	218,896,000
Sycamore	3,570,000
Cypress	33,058,000	38,780,000
Beech	10,000	500,000
Cottonwood	76,372,000	92,610,000
Ash	23,871,000	26,771,000
Tupelo	3,942,000	3,306,000
Maple	1,622,000	2,067,000
White	58,000	4,905,000

Arkansas ranks in production in 1907 by different woods as follows: It leads in red gum; it ranks second in cottonwood and ash; it ranks first in hickory, firch in oak. Therefore you can see that Arkansas ranks high in well-known dependable woods.

My attitude in discussing organization work and the methods to pursue in the same, may be broader than is necessary, but fearing to leave out some points which may assist you will cover in detail all of the features and the conditions which we have worked out up to the present.

ASSOCIATION HARDWOOD GRADING.

Beginning with the association work, I will take the most important subject first, and that is the grading of lumber.

Was there ever a time in the history of the hardwood business when the manufacturer of lumber needed protection more than at present? This association has made a great study of grades, and has at last formulated a set of grading rules which can be thoroughly and correctly interpreted for the benefit of the consumer as well as the manufacturer, whereby the question of disputes has been reduced to a minimum. At no time can this question of disputes be absolutely eliminated, but we have never been in better shape to keep down complaints than at present. There will always be differences of opinion between two lumber graders, but we find that the number of complaints being referred to the inspectors, who are studying in a more systematic manner this important subject.

I might state that all complaints pass through my office, and we find the largest majority of these complaints are caused by the mixing of grades. Fine and medium grades are mixed where manufacturers will ship on an order for part of a car of 1 and 2 and the balance of No. 1 Common, or No. 2 Common, or a percentage of No. 2 Common "thoroughly mixed." This is all sold at the highest grade on such shipments. As was stated before, the inspection of lumber is becoming more of a study and the consumer is studying the question carefully, and so it is caused when these mixed grades arrive at a higher valuation than should be placed upon them.

The association takes a vigorous stand against such policy for two reasons: (1) It is a very pronounced cause for complaints; results in delay in shipment, and causes a lot of ill-feeling between the customer and the shipper. (2) It is not fair and square to the consumer to be put to such annoyance. The grades of lumber should stand as they are in the book. One and 2 should be all 1 and 2. No. 1 Common should be all No. 1 Common, and so on down, and when the manufacturers insist on placing their shipments on that basis they reduce the opportunity of delay in settlement for a car, and create a pleasant feeling towards the consumer. This is what we are all looking for to maintain proper business relations with the trade, and which is of value to the producer when such can be maintained.

MILL INSPECTION.

To illustrate how our association handles cars in dispute and the grading subject, we have an inspection corps kept under salary at all times, paid out of the dues of the members. The first question arises as to how the manufacturer can ship in accordance with the grades and how the inspectors can be taught their lesson in interpretation. Our corps of inspectors is placed at the disposal of the members at any time they desire to visit the mills and to explain the methods of grading; we watch the manufacturer; we watch the trimming and edging of lumber; we watch the cars as they are stacked, cored and then loaded out into cars properly graded. All of this instruction is free to the members of the association, and at various times visits are made and reports issued regarding the condition of the members' mills, and which is of value to the producer as at their plants they are under the call of the manager.

RE-INSPECTION.

After the lumber is shipped, if a question of dispute arises, we have inspectors located at various points all over the consuming territory for the purpose of representing the interests of the consumer; but the inspector is only placed there when the request comes from the member, and if the lumber is shipped in accordance with the rules, and no dispute arises, it is finally settled according to the inspection. I can quote you more fully from a clause which is used in the grading manual of the association, which makes this plan of action a legal and concrete success and which is as follows:

"On lumber graded according to the rules of the United States, and all quotations are based on official rules, and rules will be cheerfully furnished on application. In case of dispute on grade or measurement, it will be re-inspected by the official graders' Association of the United States, which shall be final."

This method the consumers find that we have seen who are absolutely impartial in their findings and represent the interests of the manu-

factor, and at the same time give the purchaser all he purchased, and as the publisher has been such a diligent visitor the methods of grading, and that he at all times follows out the decisions laid down in the various rule books which I would be glad to distribute to those present, and to answer any questions which arise in the details of grading.

Now, to make this a success, every manufacturer of hardwood lumber should give his industry the benefit of his knowledge, having his interests protected in the future. As this is the day of organizations, and industrial organizations, it is a goodly way the interests they represent, our part of the industry—the timber end of the business—must organize and stand with the mills. It is the duty of each of us and should have every sawmill man who is ready to ship lumber to the market, in our association with the interests of this bureau. However, there are other benefits which I will take up, subject by subject, all of which a member of this association becomes privileged to receive.

COMMERCIAL REPORTS.

In line with the method of grading, I will take up the subject of our Commercial Report Department.

It is known too well, from our last year's experience, that the manufacturers of lumber have not been content with the reports which have been made in the details of negotiations, and so many unfair methods have arisen, that the sawmill man has had the opportunity did present itself, he was almost afraid to allow his lumber to go into the market for fear of the results which his tools would give his legitimate profits and more besides, owing to the small margins on which lumber was handled.

It is to give a system by which all of our members can obtain the information regarding the treatment accorded by the purchaser of lumber. This is not a mere report and treats largely of the methods of settlement. When a member asks for a report on a certain purchaser, or prospective purchaser, we send that inquiry out to all members of the association with a list of questions asked, as to the manner in which the goods were handled. The reports have been just, whether discounts and time of payment have been in accordance with the contract, and whether the lumber was of the grade and various other inquiries, all of which being answered and returned to this office, are compiled and sent to the members of the association. This is one of the main features of the association, following in line with the first subject discussed, and the members of the association are benefited from among the largest operators in a legitimate and legal manner.

BOOK OF BUYERS.

Last year we compiled after considerable expense, but for the benefit of our members, which I have with me for your perusal, which shows divided—the different sections of the country; and the various cities, and the points to which the kinds of wood, states and cities, showing the class of articles manufactured by them; the grades of lumber being used, and the number of cars purchased per month. This book is printed from direct information received from the consumer and signed by him. The book is for sale only to the members of the association at a set price, and has been of great help to the members of the association, and to those from their office. It is a help to salesmen who travel on the road when visiting the cities, being made up of lumber being used, and the number of cars purchased per month.

BOOK OF MANUFACTURING MEMBERS.

We are endeavoring this year to compile a book of manufacturers, members of the association, showing the kind of lumber they manufacture, their location, the kind of machinery they use, and with the various kinds of hardwoods produced and amount of production of each, and to make the book of interest to all members, giving a desk guide to all possible purchasers of hardwood lumber in the various markets of consumption, only a limited number of copies of the association will be published in this book.

RAILROADS.

This association has been asked regarding its policy towards railroad legislation in the different parts of the country. It is of the greatest importance and one of very much importance to the shipper of lumber who produces his tonnage with the knowledge that his resources when once that is shipped there is no means of replacing the trees in the forests and which becomes necessary to have the National Forestry manage manner to his business advantage. The association which I represent is a National one, and the membership is made up of twenty-eight states, taking in the Trunk lines west of the Mississippi, the Trunk lines north of the Ohio river, the National Forestry Association, the Trunk lines east of the Alleghenies, and in the section south of the Ohio river to the Gulf of Mexico. The policy, therefore, has to be handled questions for the benefit of members in this line, and I will assist them in any general position.

Lumber rates are entirely too excessive and if

possible, the various sections of the country should take action for the benefit of the resources, represented in the line of timber, to have rates lowered.

Conditions in the food products are not as high as lumber rates, and I believe that the railroad companies, who are controlled by men of sound common sense, would be glad to give us ideas as to lower rates if taken up in a business-like manner.

MISCELLANEOUS.

There are different departments in our association which are used by the members in different localities, such as the Commercial Report Department, showing stocks being offered for sale, and stocks needed to be purchased. Our consuming members and shippers are also helped. They can learn by studying this list the class of material which is offered, the grades and kinds of wood. They learn the kind of material which is scarce and in demand, and keep their operations in accordance.

MARKET CONDITION REPORTS OF PRICE LISTS.

In the past I personally have given a great deal of attention to grading. My latter work, with all of its details, has been the subject of market conditions, with various conditions and suggestions for the improvement of the market. I published now a list that we consider of beneficial importance and interest to the producing trade.

This list is published for the purpose of showing to the members of this association, as found in the reports, the conditions of the market being obtained from the manufacturing consuming trade, being an average of the reports submitted by the members of the association, and positive list, nor is it officially adopted by this association, but is merely a publication of the members of the association.

This list is issued for selling the rough product, as well as giving an opportunity to the consumer to figure his future contracts accordingly.

"This list supersedes all former issues."

I quote that in the introduction and desire to obtain this list is to overcome various difficulties which we have met in the past. I want to state right here that the list is not a criticism of any extent by people who could not understand why certain prices would be published which could not be understood. You will find in going over past history that this subject has been always before the trade and until this publication was started and promulgated.

This list has been published monthly until market conditions when conditions did not justify, nor was the business volume sufficient to cause any marked change in values which have been published. The prices and conditions made in this list from time to time and are immediately sent out to all members of the association. The members who desire them, and many of whom have standing orders on our books to be supplied with a certain number of copies, whenever new editions are published. They are used by purchasers of lumber to figure out the cost of material. They are used by salesmen as a guide in selling material; freight rates are based according to the center of production, or railroad gateways, and are used by the manufacturer in such position that he may always know exactly what is doing in the market. If he cannot afford to pay the price, or if he is unable to obtain certain reasons that are beyond the control of my office, but at no time are these values given to any one who may wish to be informed by producers in the markets and being paid for by the consumers.

To produce this list it is necessary for me to travel to a great many sections of the country, and when the list justifies a change, it is sometimes impossible to be present in the association, and in the second month I cover sections not covered in the preceding month. Information from our members regarding the conditions and am pleased to have them write freely on this subject. If they have in our organization, the secretary's office asks for open and frank correspondence so that we may be able to discover any weak spots and to become familiar with subjects which may not have been presented in the past, which when acted upon would be for the benefit of the industry.

You may desire to hear of conditions existing in the various markets and which have already been portrayed in our market condition reports and which are coming to you in the form of a list. I will take up certain woods at a time which you will be glad to answer any question which you may have. Also, if any other subject may enter your mind that I have not touched upon, I will be glad to have you mention it in the contents of the list.

I will take up the subject of oak first, and will say that at no time in the past has the market for white oak been so good as it is now. Red and white, as well as white as well as the present time, and I am gratified to say that although

conditions were only covering a small point wherein the list prices were being obtained in any volume, every section I have visited lately has been very scarce, and the price of white oak lumber, higher than ever before. It is not only scarce but very much in demand by the consumer. Conditions in the market for oak are making some excellent purchases, but oak being a standard wood, it will always be in demand. Another reason why plain oak, white oak, has been so good lately, which is hardly necessary for me to refer to, is the situation in quarters of the market, and the fact that the market financial situation the past year, this material advanced in value. It was a very scarce article and it is now in demand. It was that it advanced \$3 to \$1 per M. Other classes of lumber not being in demand, operators were quarantining their oak and oak was neglected until it became very scarce. Of course, this condition has always existed in the past in regard to plain and quartered oak—when it is sought for, the other is neglected, and the values of this material vary up and down, but plain never gets back to its old basis, but keeps gradually raising a high general average.

Gum: A wood coming into close competition with the pine industry, but gaining in strength in the past few months. The price of gum, \$1 per M. I have had reports from the Mississippi valley lately showing a gain of \$1 to \$3 per M. The price of gum is now in demand. First and second gum has been a standard used in this country to such a degree that purchases have been made in large quantities, and the price being made for sale are subject to delivery and not bona-fide sales.

Cottonwood: Firsts and seconds has done excellent sales lately, and while heretofore it has been a slow sale, is now being sought after by the trade to a great extent, and it is without doubt show up to better advantage as the fall trade increases.

Other woods, such as hickory, ash and elm, which are produced in this section, are gradually strengthening, and this applies to other woods of the producing section.

Poplar is a leader in other sections, and will get very strong next spring.

Going into the production, we find that the log has decreased; logs have been used up, mills have been shut down, and quoting from figures, it has been able to obtain from

First canvass:

MONTHLY BASIS OF MANUFACTURE.	
Production,	No. of Mills.
Output reported	407,000
Production reported	600,000
Percentage of mills shut down	33%
Percentage of output curtailed	33%
Average length of time, including those who reported	50 days
Second canvass:	

MONTHLY BASIS OF MANUFACTURE.

Number of mills,	Normal production,
153,200	101,832,000 feet.
Now produced,	52,058,000 feet.
Percentage of mills shut down,	66%.
Percentage of normal output,	67%.
Average length of time, including those reporting indefinitely,	45 days.
And the consumers of lumber who report at once before March 1, or later.	

Favorable conditions existed last fall for log-ging, but the conditions were unfavorable and only a small volume of logs was obtained to manufacture; the financial stringency and the high price of lumber would not permit of possible operations—floods and incessant high water at river points—kept a great deal of manufacturing capacity idle, and the price of lumber for such purpose. The grades have been running to a low per cent, owing to the determination of the market, and the consumers of lumber. There are smaller amounts of 1 and 2 being produced from the logs than ever before in the history of the industry. The grade of firsts and seconds very scarce. What will be the result? The common grades will be a little higher than in the past, and the consumers of lumber will realize their inability to purchase the higher grades, will rush for the common grades of lumber, and the price of lumber will be higher than in the past year, also owing to the competition with the soft woods as they have advanced in price very much the latter part of the year.

PROSPECT.

Even now at this time, it is becoming apparent that the sellers of lumber are not so anxious to have their prices advanced, and a strengthening all at once is shown on all classes of hardwood.

The month of August is naturally a dull month in the most advantageous years, but I am pleased to say that business has been a little better in the month just past, with so many business men on their vacations. I believe that still better returns will be obtained in the future. There is a feeling existing among many, and which I believe is a sound one, that business awaits mostly until after elections during the presidential year.

Quoting from conservative and correct business journals regarding the times we have in view, all issues are proclaiming the renewal of blast furnaces, rail making, structural iron work and all mining interests to be better; also the renewal of business in the East where trade has been more slow to recover from the financial strain of the past ten months.

The lumber business has witnessed very excellent returns from the East the past month, and this is the most encouraging, as that section of the country is always more conservative than the West. You can certainly prepare to see a better feeling and increase in value in the hardwood situation here, providing the production does not become too great in volume.

You must work together to bring best results, both in sectional as well as the combined interests of the country at large. Close communications must be maintained with your fellow competitors who operate in the same line in other sections and states, and to the end that such mutual negotiations will become apparent immediately and bring you successful returns.

Following the address an informal discussion showed that the hardwood men are getting pretty well inoculated with the association spirit. Cass M. Shaw, of Dardanelle, a veteran in the manufacturing business in the state, led in a kind of "experience meeting" with the following résumé of his case: "I have been in the hardwood business for many years, but never gave much attention to association work. Didn't see any particular necessity for it. However, it's different now, and I am an association man from this time on."

F. A. Garrett, representing the HARDWOOD RECORD, Chicago, stated that his paper was in sympathy with the association work, and would extend to the columns of said paper information which could be submitted from the Arkansas manufacturers, for publication.

Secretary George R. Hayes of Newport reported the progress of his work. He said that he had sent out several thousand communications and had received many responses. "I have continually revised my list," said he, "until I have now pretty well arrived at the number of hardwood concerns in the state, and the list will reach about 500. When a man says he is not interested in the hardwood industry, or if the letter is returned unclaimed, I strike the name off the list. The last batch of correspondence, however, didn't result in any elimination."

He advocated much local work, a kind of missionary movement among the smaller manufacturers especially, to arouse sufficient organized interests to enable the organization to put a man on the road and keep him there in the interests of the association.

J. L. Jones of Little Rock, who was for a number of years connected with the traffic department of one of the Trunk lines of railway in the state, but who is now a valuable exponent of organized effort among the manufacturing hardwood men of the state, gave some interesting instances showing that the railroads sometimes get the best of the shipper unless he is acquainted with their tariffs and knows how to figure combinations on locals, understands "grouping," etc. "My knowledge of rates and how these rates may be manipulated has saved our house more during the year than my salary amounts to," said he, in discussing the question of overcharges. "There are many instances in which the shipper will have to pay a burdensome

overcharge, unless he is able to do his own figuring on rates, and is familiar with tariff sheets." He suggested the study of schedules and systems of rate-making, so that the shipper could protect himself.

E. C. Lippmann of Tupelo emphasized the value of lumber publications as accessories to the up-to-date lumber office, and the idea was freely expressed that the man without a lumber journal, or a number of them, if they related to his business, was leaving out one of his best aids to success.

The afternoon session was taken up mainly with an address by Samuel J. Record of Mea, Ark., supervisor of the Arkansas Forest Reserve, the largest in the state. Mr. Record spoke on "The Hardwood Shortage—How to Prevent It," as follows:

Forest Supervisor Samuel J. Record's Address.

My presence at this meeting is but another evidence that the foresters and lumbermen are getting together and working in harmony to one end—the preservation of our forests. It is not long since the foresters' ideas, coming to the wood land, were being regarded as a ridiculous and fledgling idea, or consigned to the waste basket. On the other hand the manufacturer has been too long regarded as a rapacious monster of greed whose one ambition was to devastate the land.

Today the Forest Service stands for practicality. Its successful management of some 165,000,000 acres of land calls for hardheaded business methods. Doubtless some pet theories have been discarded along the way, but in the main the original ideas have been vindicated, though often at a heavy revolutionary cost. The Forest Service has won the respect of the lumbermen and many are practicing its methods with success.

On the manufacturers' side has also come a change. They are less destructive, less wasteful; more conservative, more careful of their property. They find it pays, because of the depletion of the virgin forests with their stores of centuries; because an actual timber shortage is appearing; because of the necessity from mere exploiters to foresters.

It should require no argument from me to convince you that the time has come when the very limited and cannot long withstand the enormous drain upon it. But only a few days since I talked with a number of lumbermen who asserted that there is a thousand years' supply in sight, and that these scare stories of timber famine were but the wind-up of speculations of the lumber trust to cover a boost in prices. To silence such doubting Thomases (if there exist any here) I wish to call attention to a little history.

Look to the north woods of Maine and New York. Once they were prominent in the lumber activity of the nation, but long ago dropped from sight as lumber producing regions, although the bulk of the pulp wood used in the manufacturing of paper is supplied by this region. The region of the Lake States then became the undisputed center of the lumber industry, and the most important source of supply of white pine and hemlock. Today Michigan is importing white pine for her own consumption and many thousands of acres are being cut, but are doing but barren wastes of drifting sand.

Nothing could more clearly illustrate the differences between forestry and industry than the question is suited to forest growth and of little or no value for other purposes if properly harvested and preserved. Such land could be kept in forest continually, thus providing a perpetual supply of timber, a constant revenue to the country, and otherwise, for fictitious prosperity which eats up its own capital and leaves the country impoverished.

Look to the lumber business shifted to the South. As early as 1880 lumber companies which had cut over their holdings in Minnesota, Michigan and Wisconsin, were compelled to go out of business or seek elsewhere for timber. Then began a general trek to the pines of the country, and Wisconsin, and the West. Even now the bulk of the business is shifting to the Pacific coast. Nothing but the immense amount of private property and the exploitation of these vast fields which even now are feeling the drain. This fact is lamentable because it means that the supply of white pine and that enormous waste is resulting. Stumpage prices have risen rapidly. In 1904, I remember the best quality of white pine stumpage could be purchased in Montana for from 50 cents to \$1 per thousand feet. Last season I found that the same timber commanded a

stumpage price of from \$3 to \$6 per thousand feet. No other fact is needed to prove, what seems self-evident—that the end is in sight.

But you are most interested in the hardwood situation. The hardwood industry has had a continual and abundant supply. In 1906 the hardwood lumber cut of the United States had fallen to 1,000,000,000 feet, or less than in 1899. This decrease took place at a time when unparalleled development was being made in all fields of industry and the demand for all kinds of structural material was the strongest ever known. It means but one thing—the decrease in the result of a diminished supply, not of a lessened demand.

The wholesale prices of various classes of hardwood lumber have advanced from 10 to 25 per cent in this time, a fact not true at a time of lessened demand. Another significant point is that the hardwood supply has not been placed on the market, which formerly were not considered at all. A quality of timber is being severely sought, which a few years ago was considered worthless. Every locality where hardwoods exist in sufficient quantity is being drained of its timber.

How long will the present supply hold out? Our estimates of the amount of standing hardwood timber are little better than guesses, but even these are limited to not less than 500,000,000,000 feet in the United States. Our annual cut is known to be about 25,000,000,000 feet. By simple arithmetic, therefore, we find that we have at best a scant twenty years' supply of hardwood timber. A distinct shortage of hardwood timber is being felt in the hardwood situation. As the eastern softwoods give out, the demand can be supplied from the West and the South. But the hardwoods are all gone, for the far West produces no hardwoods.

We must have hardwoods. Think of the industries affected. Aside from the hardwood lumber manufacturer there are the industries of soap, furniture, machinery, electrical equipments, vehicle manufacture, agricultural implements, car building, railroad ties, telephone and telegraph poles. The depletion of the hardwood supply will paralyze many of the great industries of the country. A failure of the hardwood supply would mean the ruin of our industries through more than a generation.

What can be done to remedy the situation? What are the necessary and adequate means to avert the injurious consequences of such a shortage? This question is paramount and demands a serious and thoughtful consideration. It is one that substitutes will be found to take the place of wood. Indeed, great progress in such lines has been made. But all worth anything, however, must be based on an intelligent management. Wood has been largely displaced by artificial instances by iron, concrete, stone and metal, and the demand for timber seems to be stimulated rather than lessened. The same has been true for the greater number of its original uses. However, it has also found many new ones. For a man's purposes, wood is still the best material ever had, and in my opinion, never will be. The major portion of the problem yet awaits a solution.

The old process of exhausting the supply of timber in a region and then seeking new fields is at an end. There are no new fields of any magnitude remaining. We cannot look to foreign countries to any great extent for there is an approaching shortage of timber in other countries as well as this and each nation must cultivate and protect its own forests. South America may at some time be able to supply us, but materially affect the situation. We must effect our own solution of the difficult problem.

There seems but one practical solution: the maintenance under proper forestry methods of a sufficient area of hardwoods to produce a continuous supply of hardwood timber demanded by our industries.

There are two ways of doing this; one involves a large expenditure of money, the other, proper management of privately owned forest land. Repeated attempts have been made to purchase a vast forest in the White Mountains and the Appalachians. There is strong evidence that such action could be the right stride in the right direction, but so far such legislation has been frustrated.

The National Forests in this state will help materially in preventing a local shortage. The Arkansas, containing over 1,000,000 acres, and the Mississippi, containing over 1,000,000 acres, were established by act of Congress on December 18, 1907. Since that time, with a corps of assistants, I have attempted to protect and improve such action could be the right stride in the right direction, but so far such legislation has been frustrated.

The Ozark National Forest, lying north of the Arkansas, containing over 1,000,000 acres, was established by act of Congress on December 18, 1907. Since that time, with a corps of assistants, I have attempted to protect and improve such action could be the right stride in the right direction, but so far such legislation has been frustrated.

On March 6, 1908, was created the Ozark National Forest, lying north of the Arkansas, containing over 1,000,000 acres, and the Mississippi, containing over 1,000,000 acres, were established by act of Congress on December 18, 1907. Since that time, with a corps of assistants, I have attempted to protect and improve such action could be the right stride in the right direction, but so far such legislation has been frustrated.

Such of it as may be removed without injury to the continuity of the forest is for sale. But no sales of thrifty timber are now being encour-

aged. In the meantime we are busy with the protection of the lands from the fire and trying to increase the production and enhance their value to the nation.

Since practically all of the hardwood timber of the United States is in the hands of individuals and corporations, the actual solution of the problem must come from them. It is not wisely accepted must be financially sound.

A prime essential is economy. This implies complete utilization, intensive methods, prevention of waste. It means making the timberlands an actual part of the plant and giving them the care and consideration that such an all-important factor. It means greater care in logging to protect the young trees, the future of the lumbering operations of today. It may be second and subsequent cuts. It may mean an expenditure to cull out inferior species and stimulate the best. It means most emphatically protection of timberlands from fire and other destructive agencies which follow or accompany the lumbering operations of today. It may involve planting, artificial re-stocking. There is plenty of land to grow all the timber needed, and land for other purposes. Why not convert it from waste to timber producing? Why not have merchantable timber growing instead of weeds and culls? Why not timberland instead of woodland? Here is your solution, and the history of other nations shows it to be the only sound.

To this end there is need for organization and extensive co-operation.

The problem gentlemen, is yours. You must work together to effect a solution. Knowing the resourcefulness of the American people in times of crisis there is probably no need of the fear for the result.

There was some disposition to take issue with Mr. Record by members of the association, as to this last view, but he explained his position by saying that his suggestion did not exclude the small manufacturer, where he was working with others, but only when he undertook to stem the tide by himself, often finding that he would have to unload his product on a market already glutted or depressed in price for some other reason.

The general discussion following indicated

As the RECORD goes to press the big annual convention of the Concatenated Order of Hoo-Hoo is in session in this city. The program is being carried out in accordance with the scheme outlined in the last issue of the RECORD.

The attendance at this convention is probably the largest gathering that Hoo-Hoo ever had. The weather is faultless and everyone is having the best sort of a time.

The printing of the details of the proceedings of necessity is deferred until next issue of the RECORD.

The following is the annual address of Snark Bonner:

Address by Snark Bonner.

As I stand before you today, with the record of the year's work finished and the books closed, several features of that record come to mind as sources of special pride and gratitude. In some respects, the past year has been the most trying and the most unusual of any similar period since the first measures were adopted eternally and separated into dates, epochs and ages. We have all passed through a time of tribulation. We have endured the strain of commercial stress and have undergone the hardships of a financial situation as puzzling as it was painful.

When we went home from the last annual meeting, prospects were bright for an unusually good year in the business world and along the line of industrial development. Everybody was busy and nearly everybody was prosperous. Many plans for expansion and development were being carried out. The Hoo-Hoo year well started, however, before the most extraordinary condition came about in the financial world that has never been written in the history of mankind. With the country full of material wealth as the result of good crops, with prices high

that the hardwood men desired to assimilate as much as possible of the valuable matter in Mr. Record's suggestions in order that the methods of conservation might be put into practice by private owners.

Before adjourning the following resolutions were passed:

"Whereas, The manufacturers of hardwood in Arkansas today find that their interests can be further protected by mutual organization, and that adequate industry of hardwood manufacturers becoming members of the association.

Therefore, Be it resolved, that future work to be outlined for our state development should be taken up in sections, and that meetings be held in these various sections at stated intervals, attended by our state officers; that railroad subjects and tariffs be discussed, in their relation to the hardwood industry; that statistics be gathered and disseminated among the manufacturing interests, relating to stocks on hand, those wanted and the value of same."

"And, further, that it is the endeavor of the association to give all hardwood manufacturers in the state joint aid and that every member assist in the efforts above mentioned."

"L. LIPPMAN, President.

"GEORGE R. HAYES, Secretary."

Thanks were extended the Board of Trade and the Hotel Marion for courtesies extended, and a vote of thanks was extended Secretary Doster and Supervisor Record. Both of these gentlemen were made honorary members of the association, as were also representatives of the HARDWOOD RECORD and the Southern Lumberman.

Great interest was shown in the exhibit of Mr. Doster of the lumber gauge that was named after him.

E. C. Lippman proposed a resolution inviting the Hoo-Hoo to hold their next annual meeting at Hot Springs, Ark.; the resolution

was passed with enthusiasm, and is as follows:

"To the Honorable Order of Hoo-Hoo, assembled at Hot Springs, Searcy, S. C., 1908. Be it

Resolved, That as this state, so dear to lumbermen and so important a factor to the producer on account of its volume of lumber products, both in state and soft wood, and, moreover, the lumbic birthplace of your order, which has grown to international greatness; and also, never having been honored with an annual meeting; and, furthermore, geographically representing the direct heart of Brother Hoo-Hoo; Be it further resolved, that we today, that we respectfully invite your consideration for the annual meeting to be held in 1909 at Hot Springs, Ark. To be held in state and soft wood, and, moreover, arms in its entirety, and will offer you a meeting place, one of the most remarkable, as well as the best adapted for a convention of this size and importance. Furthermore,

Resolved, That copies of this resolution be sent to the association, the publisher and to each member of the supreme vice."

After adjourning a group picture of a part of the association was made and the convention closed with a decided advance having been made in the cementing of hardwood interests for mutual benefit in Arkansas.

Among those attending were: E. C. Lippman, Tupelo, Ark.; L. Lippman, Newport; J. W. Ginger, Little Rock; Cass M. Shaw, Dardanelle; F. D. McCaffey, Weldon; E. D. Byrne, Junction City; A. H. Oene, Traskwood; J. A. Bowman, Little Rock; G. M. Thomas, Little Rock; Samuel J. Record, Menat; T. J. Emmerson, Florado; Lewis Doster, Nashville, Tenn.; John Cooper, Indianapolis; J. L. Jones, Little Rock; Fred Van Wagoner, Kerr; W. C. Birkinie, Erie, Pa.; George R. Hayes, Newport; J. H. Fry, Atkins, Ark.; Forrest A. Garrett, Chicago, and others.

Seventeenth Annual of Hoo-Hoo.

With Hoo-Hoo, and particularly to me as the official head of an order composed of lumbermen of all states and all markets, it is as possible and profitable by the stability of the lumber business. We are proud of this feature of the most important concatenations in the coming year with confidence and hope. Back of us is the cohesive power of the legitimate needs of millions of human beings—constituting a permanent "demand" for a commodity that is stable because it has intrinsic value. Possessed of real wealth, then, we may feel assured of the ultimate result and of the final working out of the problems of commercial expediency.

Another feature of our concatenations is the character of some of the concatenations that have been held during the year. There have been some very excellent concatenations this year—so good that they mark a epoch in the history of Hoo-Hoo. The matter of concatenations is the most important matter in connection with the progress and stability of the order. Hoo-Hoo might survive the affliction of a poor snark, or a defection on part of the other supreme officers, but a few badly conducted concatenations would result in a permanent injury to the order's good name, and would go far toward bringing about a loss of interest and a lack of confidence. Some of the concatenations this year have been models of excellent management. They have been so well planned and admirably executed. In several instances, all the vicegerents in a state have co-operated in holding the concatenations in a most systematic and dignified manner, and at the same time afforded opportunity for making new acquaintances which may, very frequently do, redound to the advantage of all concerned.

Such a meeting brings out a large attendance of all members and furnishes occasion for a mingling of the best of the lumber industry of Hoo-Hoo territory, thus making possible an exchange of ideas and furnishing opportunity

and with the people busy and cheerful, undisturbed by prospects of war, change in politics, depressed markets or other terror of "inflation" and, out of a clear and smiling sky, burst a financial cyclone which carried destruction to many prominent business institutions, drove a number of eminent financiers to suicide, crippled numberless small concerns and scared investors into a self paralysis. Out of this condition of "chaos and old night," the great Sacred Black Cat emerged, not a hair trembled, not a whisker missing. He came through with all of his nine lives intact, his brow "bludgeoned but unbowled," his tail curled in defiance of fate. His limbs remained on the "inflation" and, and his blessing rests upon this meeting. He has cause for congratulation. His territory has extended, the number of his followers has increased, and he has no cause for surprise. He does show, at the end of so strenuous a period, a bank account so little impaired as is that of the Concatenated Order of Hoo-Hoo.

The lumbermen of this country have weathered the storm bravely and well. They are a peculiarly cheerful class of men anyway. Due to several causes, no doubt. They catch the inspiration of the trees and of the great outdoors. They are heartened by the realization that their great industry rests upon real value, actual worth. Many people have but a fanciful notion of the intrinsic value of gold, mistaking the symbol or token for the thing itself. If you were alone on a frail raft in the middle of a vast body of water, and you had on hand and some cold potatoes in the other, you would be in a position to learn the real meaning of the word "intrinsic value." The bag of gold would be worse than useless, for its weight might sink you. But the potatoes would for a time save you from starvation, and the floating wood might save you from the sea till a rescue came. Nothing has intrinsic value except that which we are certain to profit by. Food is the most pressing of our needs, but better and protection against wind and weather are scarcely less necessary. Dealing, therefore, with a commodity that is in itself of actual worth, the lumbermen have kept up their courage in the face of conditions that brought destruction to many prominent business institutions, drove the stock market. This is a source of gratification to the whole country, to every man concerned

sure that we have not escaped being imposed upon in the matter of a small disbursement made to one brother in the District. Disbursements have been held down to genuine cases of abject distress where, but for our active aid in obtaining for them a few dollars of life would have followed. I call to mind the case of a Louisiana brother whose wife and two girls were nursing in a distant hospital and doctor bills we paid, to his very great comfort and assistance. The man is now at work and has been able to pay and date his loan. Two other loans of small amounts, made during the midst of the panic, have been paid in full. Our largest disbursement of distress coming before us during the year was that of a Michigan brother who lost both his lower limbs in a railway accident, and who, though hopelessly incapacitated to earn a living for himself and family unless artificial limbs could be secured. Our largest disbursement during the year was a loan to this man on the investigation and report of Brother E. A. Johnson. The injured man has secured the limbs and writes enthusiastically of the effective use a very little practice has already enabled him to make of them.

PROPERTY OF THE ORDER.

Two years ago at Oklahoma City, acting under instructions of the preceding meeting at Portland, I submitted a closely detailed report on the property of the Order. I enclosed a copy of which report I have before me, and to which I alluded at some length in my report to the Atlantic City gathering. This document is tediously long. I will not read it now unless required, deeming it sufficient to say that nothing is so important as to know where the way of assets has been added to the possessions of the order other than as indicated in the report. I have a very complete statement of trunk equipment and supplies, cuts and electro, office fixtures, and printing material and supplies. The disbursements under these headings have not been large except in trunk equipment and supplies. The expenditures under this head for the year covered eight trunks which was instructed at Atlantic City to purchase and put in commission. We have hardly needed the additional trunks during the course of the year. In handling the decreased number of consecrations, but they are in good order and will come in handy for the future. The trunks so recently constitute a permanent asset of value. Expenditures under this head are for half-tone pictures, cuts and illustrations, the Bulletin, with an occasional cut to be used on printed matter sent out by vicegerents. Office expenses do come in considerable amount. All the property we have purchased since the office has been at Nashville being of a durable and handsome character. The disbursements made under this head for the year past went for a check protector. It will be observed that we received a check for \$100.00 on account. This came from the side of one of the old filing cases discarded when we installed the new filing system. It was a check made under the head of printing material and equipment are for type and other printing material used in getting out the handbook. We continue to accumulate this material, and on account of the special purpose for which it is purchased I fear it is of no great commercial

CONCATENATIONS.

I append below a statement of the number of concatenations made and the number of men initiated since the beginning, to the end that the comparative figures may be before all members:

1892	15 concatenations,	165 men
1893	28 concatenations,	458 men
1894	87 concatenations,	1,455 men
1895	139 concatenations,	2,382 men
1896	242 concatenations,	3,772 men
1897	68 concatenations,	657 men
1898	74 concatenations,	756 men
1899	103 concatenations,	961 men
1900	83 concatenations,	258 men
1901	70 concatenations,	1,131 men
1902	47 concatenations,	756 men
1903	109 concatenations,	1,274 men
1904	119 concatenations,	2,184 men
1905	122 concatenations,	2,458 men
1906	122 concatenations,	2,253 men
1907	109 concatenations,	1,469 men
1908	109 concatenations,	1,808 men

RECORD OF VICEGERENTS' WORK.

Credit for the largest number of concatenations during the year goes to Vicegerent C. C. Bess, a change of office and residence. He has held four concatenations and initiated 146 regular and one honorary members; second, Vicegerent Beal, who has held three concatenations and ninety-three initiates; third, Vicegerent W. M. Baugh of the southern district of Ohio, who has held two concatenations and eighty-seven initiates; fourth, Burt J. Wright of the western district of Missouri, four concatenations and eighty-six initiates; fifth, Vicegerent J. F. Greasley of the state of Nebraska, one concatenation and seventy-six

initiates; closely followed by Vicegerent W. E. Wileas of the northern district of Louisiana, who has held three concatenations and sixty-two initiates.

Vicegerent Greasley is due credit for very active and efficient effort put forth in raising through his office a generous sum for the relief of sufferers from a disastrous cyclone. He has taken in the year one hundred dollars during the year, one by Vicegerent Bradenbaugh of the northern district of Texas, as mentioned above, and the other by the Rev. J. C. Lewis of the eastern district of Louisiana. Six life members have been initiated, four by Vicegerent W. E. Wileas and two by Vicegerent S. N. Acree of the southern district of Mississippi.

DECEASED.

The list of members whose death was reported to me during the year numbers 116. I do not imagine that it is at all complete, as I feel sure that many deaths occur which are not reported to me. As it is, however, the list is a sorrowfully long one and includes the names of members who have been with us at almost every annual meeting since I have been a servicer, and whose presence had never failed to add wisdom to our councils and enjoyment to our gatherings. I have been obliged to record the name of Col. A. D. McLeod, whose death I am sure brings a sense of personal loss. He too has been present at every annual meeting.

RESIGNATIONS.

Another evidence of the hard times is no doubt to be seen in the increase in the number of resignations recorded. The figures for the year under review are 110 as compared with sixty for the year previous. Recently a few resignations have come to me with the frank statement that the member by reason of serious business losses does not wish to be permanently out of all business pursuits. I seldom note in the list of resignations the name of any of those familiar as attendants at our annual meetings.

IN CONCLUSION.

Frank Beal's report has covered all matters likely to come before us for discussion as to leave me little to say in the way of recommendations on the subject. His report at Oklahoma City two years ago, has proved, in my judgment, one of the very best ever made. It has shown how an effective means of collecting dues from many members long in arrears. In checking in the reports of members, I have noted a number of names who have paid quite a number from whom no collection of dues was reported. I feel sure that some of these members have not been as firm as they should be in excluding members who, without having a "current-year" card, have neglected or declined to pay the setting servicer of the consecration the one year's dues demanded. The rule is that the member without a card must pay one year's dues. He may owe more than this, and if so he is billed for the balance when the report of the consecration comes to the servicer's office. No man, therefore, is denied admission merely because he has not a card. He is given an easy alternative, and if he declines to "set off" at home, he must pay the amount he is required to pay is no burden and is credited on his account for a subsequent year. I have no objection to his being billed about it so little that it is drastic it should be enjoined to the letter on every occasion. Let it be understood that a card is not issued until the requisite to admission, and few members will have any protest to offer or will fail to discharge their obligations as soon as they are promptly paying whatever balance may be due.

I have, as so many times before, to thank my fellow brethren for their hearty and untiring cooperation in carrying on the business of the order, and our many vicegerents for their labor and loyalty which alone makes success possible. Respectfully submitted,

J. H. BAIRD, Servicer.

Woods Radial Knife Setting Gauge.

It goes without saying that good work on a planer depends first, last, and all the time, on the cutter-head, for it's the cutter-head that does the actual work; the rest of the machine merely feeds the stock to it and takes it away. An unbalanced head, poor knife preparation and/or setting, all give a setting and imperfect trailing or shunting, all have a share in turning out poor work. Any one of these bad features in the cutter-head may offset all the good points in the best machine.

The ideal of the S. A. Woods Machine Company has been to make the best machine that constant study and constant improvement, the

best tools, the best materials, and the best workmen, could produce. But more than this, they have centered attention on the cutter-head, have devised methods for giving it perfect running balance, have always selected the finest steel for the knives, and are now making possible the use of the high-speed steels; have for years built special knife grinders that insure perfect accuracy in the knives themselves, and last of all, have devised a Radial Knife Setting Gauge that insures equal accuracy in their setting, preparatory to the final process of truing by means of the Woods Feed Devices while the head is running at full speed.

Correctly set knives must of necessity have all corresponding points of the cutting edges at exactly the same distance from the center of the head. This is true, no matter what the form of the knives or the accuracy of the cutter-head. To secure such exactness, measurement must be made from the center of the head, but not from the lip of the head or from some other part of the machine. In its ingenious design, this absolutely accurate setting is insured by the Radial Gauge which may be rotated about the head.

Realizing that touch is far more sensitive than sight that you can feel a difference of a thousandth of an inch while you can scarcely see a difference ten or twenty times as great, this gauge utilizes the former of the human faculties in its use. In effect, it is a specially designed form of calipers. The construction and use of this gauge are clearly shown in the accompanying illustrations. It consists essentially of two curved arms connected by a shaft. The arms hook over the journals at each end of the head. Springs, easily manipulated by the thumbs, provide quick and secure means of locking the gauge in position. Upon the shaft are two setting rollers which have a close sliding fit thereon. The large circular portions of the rollers are for setting straight knives; the smaller for hollow backing cutters and to give proper projection beyond the surfacing knives; the rounded edge is for beading bits. Adjusting screws are provided at the ends of the arms to maintain the accuracy of the gauge or to change the size of the cutting circle. Evidently, as the gauge is revolved about the head, the gauge shaft always remains parallel to and at the same distance from the center of the cutting shaft.

When applied these springs are released, the arms are hooked over the shaft between the cutter-head and the journal boxes and clamped by snapping the springs back into their catches. A knife is lightly clamped upon the cutter-head, and the gauge having been properly adjusted the rollers are passed by the knife edge, and it is then gently pushed back to an exact distance from the center of the head. Here it is again lightly clamped with the other knives are similarly set. When all are thus adjusted so as to revolve in exactly the same cutting circle, all holding bolts are firmly set.

Beading and hollow backing knives are set in a similar manner.

The proper use of this Radial Gauge will be found to give a setting that is more accurate than any previously devised method, and will produce equally good results. It is simple with an ease of use beyond all others, and, regardless of the extent of the bevel, or even whether all are beveled alike. This is a result impossible to obtain by any method of measuring from the lip of the head or from any fixed gauges attached to the head.

This type of gauge is furnished with all of the machines manufactured by the S. A. Woods Machine Company of Boston. In connection with the training devices extensively applied to the cutters by the same company, the radial gauge makes possible such accuracy of setting and the maintenance of such sharp cutting edges as to absolutely insure equal cutting by all of the knives. This in turn insures finer finish and faster feed.

UTILIZATION OF HARDWOODS.

ARTICLE XII.

Sideboards and Buffets.

A hand-carved solid mahogany table is without doubt a decided adornment to any dining-room or banquet hall, but upon entering such a room one is apt to be even more impressed by the magnificent sideboard or buffet which is invariably its companion piece. Some of these are of massive design and command interest chiefly by their appearance of great stability. Others of more exquisite workmanship are beautiful because of apparent fragility and their delicacy of design. Of course this preference is principally a matter of personal taste, but there are so many different types of both sideboards and buffets upon the market today that even the most exacting taste can be readily satisfied.

This large variety of types is naturally found in any piece of furniture where individuality of construction is not only more essential than in a table, for instance, but is also more easily obtained. This is explained by the fact that a sideboard is larger than a table, thus giving more room for variation and also because more decorative materials, such as mirrors and glass panels, may be employed in its construction. Thus a sideboard occupies a prominent position in the house.

The wood used in the manufacture of sideboards, buffets, china closets and serving tables—for these all belong in the same class—is usually of the very best grades that can be obtained. Selected quarter-sawn white oak is employed more extensively than all other kinds put together for, although many mahogany sideboards are made, the principal call for them is from customers who wish to match other furniture in the dining-room; and as mahogany furniture is used by comparatively few people it would not pay a large manufacturer to cater to this trade alone. On the other hand, a well-finished piece of quarter-sawn oak, which plainly shows the handsome grain, is, in many respects, as attractive as the more somber-colored mahogany and is so much less expensive that it is within the reach of all. Of course birch is used more or less as an imitation of mahogany, and in some cases the cheaper woods, such as gum, are made use of for unexpensive backs; but frequently oak is employed throughout the entire piece.

As in the manufacture of all other kinds of furniture, the dry-kiln plays an important part in the making of a first-class sideboard. Kiln-drying is the first of the many processes through which the lumber must pass before

the finished article is turned out. The dry-kilns are usually fitted out with large sliding doors which separate them from the factory at one end and the lumber yard at the other. A wide track runs from the yard through the kiln to the factory and the trucks which run on this track are loaded in the yard, pushed into the kiln, where the lumber is thoroughly dried, and then pushed into the factory and unloaded for future use. A number of weeks or even months elapse before a load which entered at one end emerges at the other, so

includes the making of all those fancy pieces of wood which are used with such pleasing effect in decorating the different parts of the sideboards. These pieces are shaped by means of sharp-toothed cutters, and innumerable designs, some of which are very pretty, may be made, depending chiefly upon the ability of the operator to follow a given pattern. Along this same line, though of vastly more intricate workmanship, is the hand carving. This work is done by skilled laborers and has a certain individuality about

it which stamps it at once as different from the machine-made product. All of the better class sideboards have more or less hand-carved decorations upon them, and in fact, this is one feature that distinguishes the numerous grades.

Veneering is also of considerable importance in sideboard manufacturing, for nearly all the more beautiful wood effects are obtained by means of it. Some of the laity have the idea that wood which is veneered is but a cheap imitation; but all lumbermen know that this is far from being the case. In fact, the ordinary piece of veneering, considering the additional labor pertaining to it and the stability it gives, is worth more and often costs the manufacturer more than would a solid piece of lumber. The "swell" and other curved effects seen on many sideboards are obtained by sawing, not bending the lumber into these shapes, and then gluing on veneer.

The next step is the assembling of the parts in a rough form, preparatory to sandpapering. The different pieces are fastened together with wooden joints or large screws, and soon the sideboard begins to assume a more workmanlike aspect. The bottoms and tops are made separately and are not put together until later. The sides, tops and other portions are next thoroughly sandpapered, though, of course, some of this work has previously been accomplished. The drawers are fitted together and put in their proper positions, as are the doors if this particular type happens to have them. In short, all of the many little things which must be accomplished before the sideboard is ready for final treatment are attended to at this stage of the operation.

After all the parts have been fitted together and placed in their proper places, the entire article is again gone over with sandpaper and thoroughly rubbed down. It is taken to the varnishing room to receive its first coat of varnish or shellac. After this

A RICH AND MASSIVE SIDEBOARD.

that there is no question about the boards being thoroughly dried. This same principle with slightly varying characteristics is employed almost exclusively by all manufacturers.

The next step is a comparatively simple one, for the boards are cut into the desired lengths, breadths and thicknesses by means of the various saws. This work is particularly heavy in making sideboards or buffets, for, unlike desks or chairs, very little dimension stock is used, so that all of this work has to be done at the factory itself.

Next comes the scroll and millwork. This

AN EXQUISITELY FINISHED BUFFET.

AN IMPRESSIVE CHINA CLOSET.

has dried it receives several others, the number depending upon the grade of goods being turned out. Most of the cheaper patterns have a gloss finish, while the more expensive types are usually polished, this lat-

ter process taking considerable time and energy.

Staining does not play as important a part in the manufacture of sideboards and buffets as in other furniture in which cheaper

woods are made to imitate the better ones, but often cherry and birch are stained in imitation of mahogany and if the "artist" is particularly clever the resemblance is so marked that even an expert is often deceived

AN ELABORATE BUFFET.

A HANDSOME SIDEBOARD.

by it, especially if the operation has been recently completed. All of this kind of work is, of course, done by hand, and as it is the last operation before storage or shipment, a great deal of care is exercised in these finishing touches.

The cuts shown in connection with this article illustrate admirably several of the types described. The massive sideboard, weighing nearly 500 pounds, has some beautiful hand-carved decorations upon it, and also utilizes five mirrors and six clear beveled

plate glasses in the cabinets. The other sideboard shows what beautiful effects may be obtained with quarter-sawn veneered oak. The two buffets also bring out the beauty of the wood as well as the various uses to which plate glass may be put; while the china closet illustrates how elegance goes hand in hand with simplicity. All of these cuts show in a small way the kind of work done by the well-known Olbrich & Golbeck Company of this city, to whom the RECORD is indebted for illustrations shown.

CLARENCE BOYLE JR.

Preserve the Forests.

It was a faint and far-off cry at first, but now the shout of "Preserve the forests" can be distinctly heard throughout the land. This is well, for there was, and now is, great danger of their complete destruction. But may we not ask if that cry of alarm covers all that is required? Preserve the forests! Yes; that means to save them and keep them intact. But is that enough? Is it sufficient? We must realize that the cry has a different significance in the minds of some of those who join in it. One interprets it to mean, "Stop cutting down the trees, leave them alone, they are too sacred to have the profane hands of the lumberman laid upon them." Another deems it to mean "Cut and use them conservatively; cut only the mature trees, and do it in such a manner that the natural growth shall maintain the needed supply of forest products in perpetuity."

Here, then, are two plans, two widely separated schemes of forest treatment before the people of this country for consideration. Both cannot be right. Is either of them so? If not what is best?

If the supply of forest products is the paramount aim and purpose of forest maintenance—and it certainly should be—there is no call to now discuss the first proposition. We cannot do without forest products. Such a course would at once precipitate a timber famine which, in any event, will come all too soon. It would simply be an exhibition of sentiment gone mad.

But the other view may well be discussed—for it is largely entertained—to see whether it covers all that is needed, to see if our present area of virgin and second-growth forests can, by the method suggested, be made to produce what the people need; and, further, to see what more should be done if they cannot. That all this should be known every practical business instinct and conception testify and demand. It is an important question and, unfortunately, one little understood, for it is new, and there has been slight effort to determine it. The recent announcement of a possible exhaustion of our timber supply in the near future has dazed and bewildered our people. With the great mass of people forest reproduction and maintenance are profound and deep mysteries, and they have accepted the theories named without much ex-

amination, and largely as their fancy dictated. As Nature has thus far provided the forests so she will do for the future, is their thought—feeling all the while that there is no need for any action. To them it is hardly conceivable that our forests will not last forever. Have we not always declared that they were inexhaustible?

Facing this condition of the public mind will it not be reasonable to consider the case without wild, unreasonable denunciation of those who are accused of having been largely responsible for the destruction of our forests when the poor fellows cut everything they could sell—or, on the other hand, to hug the delusive phantom of their continued use, with restoration by unaided natural processes alone?

Efforts have been made by the Forest Service and the Census Bureau at Washington to secure data covering the amount of standing timber yet remaining in our country, together with the annual consumption. Could this information be accurately obtained it would give an approximate idea of how long our supply will last. But there has been, from the very nature of the case, only partial success in this matter, and much uncertainty is freely admitted. Except the amount of sawed lumber reported as turned out by the mills in 1906—which was 37,550,736,000 board feet—the information and estimates secured can be considered as approximate only. Still, enough has been learned to show that we are consuming our forests faster than their natural growth can replace. It is estimated that we are consuming in one year as much as grows in three, thus each year accelerating the speed of their destruction. It is further deemed probable that our present forests will not, at the present rate of consumption, last more than twenty-five or thirty years, and that the end of the hardwood supply will be reached inside of twenty years. That is certainly discouraging; but we must recognize it and also recognize the further fact that our population is rapidly increasing and that there are new uses and new demands for wood, never before known, coming to the front.

Now, in the light of all this, approximate only as it partially is, is it not safe, is it not fair to conclude that our present forests, no matter how well cared for, cannot be deemed

secure from exhaustion in the near future? Can any treatment increase their yield threefold?—and it should be more to provide for increase of population and new uses of wood. Is it not plain that there should be not only an increase of production of present forests, but a large increase of area that shall be productive in the not far distant future? Can any other conclusion be reasonably arrived at?

But offhand conclusions should not satisfy; there should be something specific, something of known facts—and these are not wanting. In considering the case it will not be necessary to roam over the whole domain of forestry. The hardwood side will suffice; but it may be added that what is true of that is true of the remainder.

It should be remembered that the most valuable and most used species of hardwoods in our country grow almost exclusively within our borders. So far as a commercial supply is concerned we can depend on no other country for hickory, oak, ash, poplar, black walnut, chestnut, elm and the gums. To these we could very well add maple; but, leaving that out, the species named produced in 1906, 6,867,861,000 board feet, or 79 per cent of the total cut of hardwood from the saw, to say nothing of the oak and chestnut used for railroad ties, telegraph, telephone, electric light and trolley line poles and coeprage. Can our hardwood forests sustain this drain upon them without we greatly increase their area? How long will the supply of mature trees, trees large enough for the saw, last? That is an important question, for, be it known, not one of the species named, except chestnut and, in certain locations, ash, can be expected to grow trees large enough for the saw from seed under 80 to 100 years, and the chestnut will not do it under 75 years. This is not guesswork; it is from actual and long continued counting of annual rings and the averages taken. The average of chestnut large enough for a standard forty-foot telegraph pole is from 50 to 55 years, according to soil in which it may grow, and but few white oaks will make a standard tie under that age.

Nor can any of these, except chestnut and, slightly, oak be depended upon to send up sprouts from cut or decaying stumps. After a few years our supply of hardwood must come from young and immature trees now standing in our forests or from seeds sown. From a long and careful observation of forest conditions in our country, observations made, in part, to confirm an early belief that natural reforestation could be depended upon, I am forced to say, and say it with all the emphasis possible, that to depend upon the young growth which may be found standing on 95 per cent of our forests is to lean upon a broken reed. And, furthermore, there must be seed sown in some other way than by natural process to provide for the future. Nature cannot satisfactorily accomplish seed sowing under the changed conditions which inevitably must result from cutting the mature trees.

Observing ones know that to grow a tree tall, straight and clean of limbs—which must be the case if good lumber is to be produced—it must be crowded, and thus deprived of light, in its early life, so as to compel it to reach upward to obtain that light and, hence, drop its lower limbs from practical starvation and decay. But few trees grown in the open from early life are suitable for saw logs, and what must be the condition of young trees in a virgin forest when the mature ones are removed, providing any such may exist there, which is by no means certain? If any one will devote the time and labor that should be given such an important matter, and go over the cut-over lands of the country and ascertain by careful observation the actual number of trees of valuable species that can be found, and note their condition, and chances for ever making good lumber, I venture to say there will be a great surprise. How many will he find? Do they stand close enough to their own or any other kind to be compelled to grow tall, straight and free from limbs? Will there be from 175 to 200 to the acre, and there should be at maturity? Will there result a satisfactory yield for the area occupied by these naturally sown trees? Will they be of satisfactory species? All this should be considered.

But supposing that this young growth shall be good. What then? Of course it will be cut when it matures, but what provisions are made for a succeeding one? Let us face the facts and see what the chances for satisfactory natural seeding may be. Nature has wisely provided the seeds of certain species of trees with a thin film or wing so that when ripe and released the winds will convey them away from the parent tree and sow them where they may chance to fall. They may go in the right direction or they may not, and they may fall where they can germinate

and not be suppressed and they may not. It is all a matter of chance.

The species of hardwood trees whose seeds have wings are the ashes, birches, elms, maples, poplars, gums, cottonwoods and some others of less note. All these are sown by the winds and probably not one seed in 50,000 ever grows into a tree.

Another class is that of the acorn and nut-bearing trees. These are the oaks, hickories, chestnut, walnut and beeches—some of the most important of our hardwood trees. Winds cannot distribute the seeds of these and Nature has left it for the squirrels and mice to do that work. Unless on a steep hillside none of these can be expected to spread their seeds, without the aid of animals, beyond the tips of their limbs, where, if they germinate at all they will likely be suppressed by the shade of the parent tree.

Are we, then, ready to depend upon the winds and little rodents to sow the seeds of our trees? Will they select such species as we need? Must the future supply of hardwood be subject to the whims or caprices of any of these? And yet we must depend on these if man shall not take it in hand and do with the trees as he does with his agricultural crops, gather and sow the seed.

I am well aware that, in the minds of some, this is rank heresy. I cannot help it. I am willing to abide "the logic of events" for my vindication. The future will witness the practical extinction of our timber-producing forests unless tree-planting shall be resorted to. We have come to the "parting of the ways." We stand now practically where European countries which engaged in forest growing did 200 years ago. They chose to plant trees, and results have justified their choice.

S. B. ELLIOTT,
Commissioner Pennsylvania State Forestry
Reservation.

Necessity of a Basis Upon Which to Quote Prices.

A prominent manufacturer and member of the handle association, who is a close observer of market conditions, expresses his view of the price situation as follows:

"I have been very much impressed with the damage that is being done to the handle trade at large, on account of a lack of a uniform price list, and I wish to strongly urge upon the handle manufacturers, at their next association meeting, to adopt one, for the following reasons:

"A uniform standard price list will tend towards the maintenance of prices, and aid all manufacturers in the business materially to get more for their handles. At present nearly every manufacturer has a different price list, and when a salesman calls on the buyer to submit an order, he may jolly himself with

the idea that as his price list is different from all his competitors he can bamboozle the buyer, and thereby secure a better price for his goods—his idea being that, having a different price list from all his competitors this makes it difficult for the buyer to compare his prices with others, and therefore helps him to secure better prices.

"In this respect, however, the seller is grievously mistaken. The buyer has each seller's price list before him, figured out on a net basis. He knows all the manufacturers have different price lists, and therefore he is strongly fortified against the seller. He can represent to the seller that the seller's competitors are offering prices much below the seller's prices, and consequently he hears the seller down in his prices. On account of the numerous price lists the seller is in total

ignorance, where the buyer is well posted, consequently, under the circumstances, due to his ignorance of the real situation, the seller cuts to a lower basis than is necessary, and so it goes from one seller to another seller, until the market price sinks below the level of the cost of manufacture.

"On the other hand, with a uniform price list, the seller has a plain course before him. He has his discount to offer, and if he is a manufacturer of high standard, making high-grade goods, he can name a discount that will give him better prices than the average manufacturer, and knowing the quality of his goods, their reputation, etc., he does not hesitate to quote a discount that will net him higher prices than the average manufacturer, and the buyer will give him his price to get the better goods.

"If the seller is a manufacturer without reputation, and making a grade of goods that he himself knows does not compare with others, he realizes to get an order he must cut the price, and if all price lists are uniform, it will then be quite an easy matter to find out or know just what discount the high grade manufacturers are giving.

"He knows just how much of a cut it will take to secure business, and therefore he cuts the price only slightly to secure the order—whereas, if he was mixed on the question as to what his competitors were doing, in ignorance *he would cut deeper than was absolutely necessary to get the order*; therefore I contend that it is better to have a uniform price list, as it is impossible for manufacturers to keep their prices secret, and when they are known, the high-grade manufacturers will keep their prices as high as they can obtain, and the low-grade manufacturers will not cut more than is absolutely necessary to secure their share of the business—the tendency being constantly to obtain better prices, because of intelligent cooperation between selling agents—whereas, to go it blind, means lower prices all the time.

"I hope the handle men will see this matter in its true light. I deem it of the utmost importance that a uniform price list be adopted, and I believe it will result in better prices for handles.

"We have recently built a large factory at this place and one in Arkansas, and are now extensively engaged in the manufacture of handles, and of course desire to do all in our power to better the condition of the handle business."

Indiana Hardwood Specialists.

The Smith & Randall Lumber Company of Ft. Wayne, Ind., are specialists in the cutting of large oak ship and dredge timbers and enjoy enviable reputation in that line of work. The concern is also a large producer of small dimension stock as well as air timber. They also manufacture white oak and hickory plank as well as a considerable quantity of black walnut.

The Smith & Randall Lumber Company have supplied some of the largest oak timbers that have ever been shipped out of Indiana and are still able to supply high quality timber even in some instances the size of an extraordinary

News Miscellany.

Death of M. B. Farrin.

On September 7 Mr. Matthew Brown Farrin, the well-known Cincinnati hardwood lumberman, died very suddenly.

Mr. Farrin was born in Cincinnati, July 14, 1851, and until twelve years old he attended the public schools of that city, later going to Chickering Institute and a military academy.

He entered into the employ of John K. Green & Co. at the age of nineteen, and three years afterward went into Michigan with the expectation of learning the manufacturing end of the business. The firm to whom he applied, however, insisted that he should work with them without pay for three years, and as he was required to board himself, he set about learning the inspection of white pine—and in a very few weeks had mastered it sufficiently to obtain and hold a position as an expert inspector. He remained in Michigan three years and purchased and operated mills, but on returning to Cincinnati he engaged in the lumber brokerage business and finally became an extensive producer of oak flooring.

Mr. Farrin was the first president of the Oak Flooring Manufacturers' Association, and it was due to his business acumen and tenacity, as well

as sunshine playing through their leaves, a whisp of gray clouds across the blue were a delight to him—but most of all he enjoyed the water, and every moment he could spare from his business in summer found him in his launch speeding about the Great Lakes from his summer home at Grande Point, Mich. A devoted husband and father, Mr. Farrin left a sorrowing wife and six daughters—Mrs. Chester F. Korn, Mrs. H. J. Chester, Mrs. Dr. Ralph Reno, Mrs. Paul Richardson and the Misses Harriet and Madora Farrin—to mourn the loss of the man who not only gave them every possible indulgence and luxury, but spent much of his time with them and personally made them understand his thoughts were always with them and for them.

It is said that nothing is lost in this world, and even when the form of Matthew Brown Farrin has been interested his kindly presence and staunch friendship for those he loved will still live in the hearts of his friends.

E. C. Atkins & Co. Suffer Fire Loss.

On August 22 the large stock of all kinds of saws and mill supplies which E. C. Atkins & Co., Inc., of Indianapolis, carry at their Memphis branch, was practically destroyed by fire. However, an additional stock of supplies stored in a nearby warehouse, as well as the saw shop, was saved intact, so that the company was not forced to discontinue business for more than a few hours. Rush orders for goods were sent to the branches at New Orleans and Atlanta, and with the prompt action of the factory at Indianapolis, arrangements were quickly made so that the store is now as well stocked as ever, and everything in connection with the branch is running smoothly.

The company has leased the entire building at 115 Union avenue, Memphis, which will hereafter be occupied as a store room, instead of the former location. Everything connected with the new site is more favorable than heretofore, so that the readjustment promises to be eminently satisfactory.

New Texas Manufacturing Institution.

Among the Chicago visitors during the week was T. P. Cooley, vice-president and general manager of the Beaumont Spoke & Handle Company of Beaumont, Texas. Mr. Cooley has recently organized this institution and succeeds the Naegedoches Spoke & Handle Company of Naegedoches, Texas, with which he has long been associated.

Mr. Cooley is just completing the building and equipment of his new factory at Beaumont, which will have a daily output of 15,000 spokes and handles, and he expects to have it in operation about October 15. He has purchased a complete equipment of machinery from the J. A. Fay & Egan Company of Cincinnati and from the Ober Manufacturing Company, Cagrin Falls, Ohio.

The company has large timber interests in the vicinity of Beaumont and will very soon build a saw mill to be operated in connection with its handle and spoke business, and will engage largely in the production of oak, gum and hickory dimension stock.

Mr. Cooley is very enthusiastic over the superior qualities of hickory, oak and gum of the Natchez river section and says that Beaumont offers exceptional opportunities for woodworking institutions utilizing the hardwoods of that region.

Beautiful Booklet Just Out.

E. C. Mengel & Bro. Company have just issued a little book which is not only interesting to all those who are interested with the hardwood industry, but also a literary production. It is "The Story of a Mahogany Tree As Told by Itself," and is the

work of Vander B. Paine. It was written by Mr. Paine while he was a member of an exploring party sent out by the Mengel company to the west coast of Africa, where they opened up several large mahogany tracts for the Louisville company.

The story tells of the beginning of the mahogany as a nut which dropped from the mother tree, and recounts the many difficulties which had to be overcome by the young shoot and the tender sapling in order to survive in the tangled jungle. Finally the tree grew to immense height and at a great conclave of all the trees was elected king of the mahoganies and emperor of the forest. Here the author, speaking through another tree, pays his tribute to the mahogany: "Mahogany is of royal blood, born to the purple, an aristocrat by birth and breeding, a prince by association, and a king by divine right."

The rest of the story tells of the coming of the white man, the felling of the tree, sawing it into logs and shipping it across the oceans to America. In the epilogue, the author says:

"In days of old, Kings David and Solomon sent their ships and their people to the east coast of Africa for gold, precious stones and fine wood. Modern wisdom prompted a mahogany manufacturing company of Louisville to fit out an expedition, made up of timber and logging experts, to explore the forests along the coasts of tropical West Africa, with instructions to locate and secure from the native kings choice tracts of mahogany timber trees.

"When this work had been successfully accomplished, extensive logging operations were begun, and full steamer cargoes of the finest wood are now coming regularly to ports of the United States, being thence transported by rail to the mills of the company at Louisville, Ky.

"In the African jungles, where now the Mengel logging camps are located, are found the ruins of many a native village, whose entire population was seized upon, killed or captured, the survivors being driven in chains to the sen beach, stowed away in the holds of the slave trading ships and brought, many of them, to the United States and sold on the market.

"It is a noteworthy fact that no full cargo of any native product of West Africa, other than human chattels, had been shipped direct to a United States port, until in 1906 Messrs. C. C. Mengel & Bro. Company sent its first full cargo of 1900 mahogany logs to Louisville via New Orleans on its chartered steamer "Corinth."

The book is handsomely printed, is illustrated by several half-tones from photographs made in Africa, and contains forty pages.

Acacia as Mining Timber.

Vice-Consul Bolmer of Tsingtau, China, furnishes the following information concerning the growing of acacia trees on barren land and the use of the timber for mining purposes. Acacia seems to be regarded as valuable as pine and cedar for these purposes in China:

"During the ten years of German occupation of the Kiaochoo colony one of the most active branches of the government has been the forestry department. After experiments with a large variety of trees, to determine what would grow best and quickest here, the acacia was chosen as the tree to be used most in the afforestation of the bare hills surrounding Tsingtau. The reasons for this selection were twofold: A tree was wanted to make shade and cover the hills as soon as possible, regardless of its value, and the poor soil precluded the use of a variety which would not grow in almost any sort of earth. While these acacias (*robina pseudo-acacia*) have been growing, more valuable wood

M. B. FARRIN, CINCINNATI.

as time and thought, that this association was started and put on a successful running basis.

In Cincinnati he was known as one of this city's solid business men, and the words "Matt Farrin is dead" will come as a distinct shock to his many associates and friends, to whom his rugged character and business ability appealed.

At the time of his death Mr. Farrin was president of the M. B. Farrin Lumber Company and the Farrin Korn Lumber Company, a concern of which his son-in-law, Chester A. Korn, is active manager; a director of the Merchants' National Bank of Cincinnati, and a director of the Ohio Cement Company.

Although he was a man of affairs, still he found time to mix with his friends as well as spend a great many days in the open. He was the first president of the Lumbermen's Club of Cincinnati, president of the Manufacturers' Club, and a member of the Queen City Club, the Backeye Club of New York and the Detroit Boat Club. There was no more ardent lover of outdoor life than Matt Farrin. Just to be in the open behind a pair of horses that could "step along some" or walking through the stubble with a gun that could "shoot some" was a joy to this hard-headed business man. The trees, the

of all sorts, adaptable to the climate, we being constantly planted.

In the winter of 1906-07 acacia planted in 1902 and 1903 were cut for the first time. All timber up to 5 centimeters (1.97 inches) diameter was sold to the Shantung Mining Company for mining timber. This company has made extensive experiments with the wood, and now reports that for mining purposes the acacia is as good as or better than the pine and cedar varieties now being imported from Japan. The demands of the company are growing from year to year, and are now at 20,000 cubic meters (706,280 cubic feet) per annum. With the satisfactory results of these tests the German government has decided to go heavily into the acacia raising business here, as there are large tracts of land apparently worthless for anything else. The acacias also have many other good points. Unlike the pines, they are not subject to disease or ravages by insects; furthermore, the entire cost of production is covered by the sale of refuse twigs, etc., to the natives for firewood, while the mining company has agreed to take all timber offered at about 85 per cubic meter (35,314 cubic feet)."

A Filing Cabinet for "Record" Information.

The HARDWOOD RECORD has had so many requests for a suitable filing cabinet in which to handle its card index of lumber buyers that it has contracted for a supply of handsome four-drawer oak cabinets which will hold nearly 5,000 cards. This cabinet is splendidly built of oak and very handsomely finished.

The Record can supply not only the cabinet but also the index cards covering over 12,000 hardwood requirements pasted up with the information, the surplus numbers removed and al-

CABINET FOR FILING HARDWOOD RECORDS HARDWOOD BUYERS' CARDS.

phabetically arranged between state guide cards at practically cost.

Upon application prices will be quoted to such advertisers who are interested in the utilization of this invaluable buyers' guide and details given regarding its handling out in a logical way.

Building Operations for August.

There is a loss of 10 per cent in the aggregate building operations of forty-two leading cities throughout the country, as reported by the American Contractor, Chicago, compared with August, 1907; the previous months of the year are January, a loss except July, as follows: January, 41 per cent; February, 33 per cent; March, 37 per cent; April, 33 per cent; May, 19 per cent; June, 15 per cent. July showed an increase of 3½ per cent. In the report for August thirteen cities scored a gain from 1 to 74 per cent and twenty-nine show a loss from 1 to 89 per cent. The principal gains are: Chicago, 29 per cent; Denver, 24; Indianapolis, 33; Louisville, 27; Syracuse, 25; Salt Lake City, 18; San Antonio, 24.

The Cedar Business in Tennessee.

Shelbyville, the county seat of Bedford county, in the great cedar belt of middle Tennessee, already has two cedar mills. Now it is to have a third one; Kaston & Co. of New Orleans are already engaged in establishing a large pencil factory. The business is heavily capitalized and these lack of it have plenty of money with which to buy the rapidly advancing cedar of that section. The plant will work about 200 men. Ben Culbertson will be general manager of the new industry.

There are many cedar and pencil factories in middle Tennessee. Davidson county, in which Nashville is located also at Kutherford, Marshall and Wilson. Bedford, Smith and Williamson, Sumner and two or three other counties in middle Tennessee comprised originally the biggest red cedar center in the country.

Most of the best timber has been marketed save a few choice tracts still held by farmers and land owners with means enough to live without selling them, and who therefore are waiting for the further advancement in price of this already valuable timber.

Red cedar has become so valuable that railroad, telegraph and telephone companies are substituting locust and other cheaper and smaller wood. No longer is cedar flooring made. Cedar chests are so very expensive that they are practically luxuries. Cedar shingles are a thing of the past except on houses where they were put many years ago. In fact, most all the cedar now cut is being used for pencil wood. It is not being measured, bought and sold as other woods, but is being taken up by the pencil factories and sold for by the pounds. Not only that, but the factories are sending representatives through all the rural communities of middle Tennessee, securing the country in the effort to buy the celebrated old rail fences that have long been in place on Tennessee farms, many of them since before the Civil war. The representative of the HARDWOOD RECORD made a trip through the cedar belt last week and found that farmer after

farmer had sold his rail fence to the pencil factories, receiving in return a new wire fence and some money to boot. Not only do the pencil factories give the new fence, together with the necessary posts, but they actually put it up and stretch the wire on it, paying the farmer some money besides.

This shows how much cedar is worth. Some of the farmers are refusing to sell their fences just yet, and are either holding them for still better prices or else do not choose to sell at all. Most of the poorer class, however, have already parted with their rails. In many places along the turnpikes one can see the rails piled up and stacked ready to be hauled to town to the pencil factory, and at the same time the new substitute—wire fence—is on the ground in the course of erection. The factories cut the timber to proper pencil lengths and turn the two halves of the pencil; do everything, in fact, save insert the graphite or lead, which is done in the East and in Germany.

New Treatment of Lumber.

A novel method for increasing the usefulness of lumber has been perfected in England. The method consists, in brief, in replacing the air in wood with a solution of beet sugar and removing the excess of water by a subsequent drying. The inventor of the process, Mr. Powell, attains his object by using a large boiler in which the timber to be treated is placed and the beet-sugar solution pumped in. After the air has all been replaced by the solution the wood is kiln-dried. Examination of the wood seems to show that the sugar is absorbed into the fiber of the woody tissue and is not simply held in the intercellular spaces.

It is claimed that timber treated in this way is no longer porous, will not shrink or warp, and is stronger, heavier and more durable. Moreover, it is said that this wood is not liable to dry rot; it is hoped that by mixing the sugar with the sugar bath the wood will be made resistant to the attacks of fungi and insects.

World's Lumber Trade.

The following facts were taken by Victor suit James L. A. Barrell of Magdeburg, from a brochure by Dr. Ernst Friedrich of the German Commercial High School at Leipzig:

The world's lumber trade amounts to \$285,000,000 annually, of which the United States furnishes about 20 per cent, Austria-Hungary 19 per cent, Russia 16 per cent, Canada 15 per cent, Sweden 18 per cent, Finland 10 per cent, Norway 4 per cent, and Roumania also a small quantity.

The countries importing wood are those on the highest economical plane, which were themselves in earlier times densely wooded, but whose forests have been denuded to a greater or less extent to make room for agriculture, industry, etc. Only 4 per cent of the territory of Great Britain is covered with forests, and during the year 1906 the country imported lumber to the value of \$135,501,530. Germany has still 26 per cent of its territory covered by forests, but imported in 1906 lumber valued at \$61,255,000. Belgium and the Netherlands, that have but 8 per cent forest lands, Denmark, that has 7 per cent, France and Switzerland, with a small percentage of forest land, are compelled to import lumber.

Besides these countries, those lands lying on the dry western side of the subtropical zone lacking forests are forced to import wood. Egypt imported wood and coal to the value of about \$16,690,000 annually; Algeria, Tunis, Spain, Portugal 13 per cent forest land, Italy, Greece (with 9 per cent forest land), the eastern part of Asia, British South Africa, the western parts of Chile and Peru, the Argentine Republic, and Australia, all poor in wood, are dependent upon import.

Getting Ready.

Detroit is already taking steps to arrange for the entertainment of the National Hardwood Lumber Association next year. In July a number of the city's hardwood lumbermen met to organize as a reception committee for the reception and entertainment of visitors. They were as follows: E. W. Leech, J. A. Matheson, J. P. Soranton, W. W. Armstrong, A. S. Dennis, J. R. Sicklesteed, C. W. Leech.

E. W. Leech was appointed president; J. P. Soranton, vice-president; J. A. Matheson, secretary and J. R. Sicklesteed, treasurer. A committee of three was appointed to decide on hotel headquarters and report at a later date. Landis Hayes of the Wayne and Woodley of the Pontchartrain, have kindly offered the convention hall free, in case headquarters of the convention were maintained at their hotel.

Detroit will certainly be ready for the convention in ample time.

New Rating Book.

The July edition of Clancy's Red Book, published by the Lumbermen's Credit Association, has just been issued and shipped to all subscribers. Every possible effort has been made forth to make it as complete and reliable as money and brains can produce.

It will be recalled that the association is the originator of special agency work, and that President Clancy, from the inception of the business thirty-two years ago, has been general manager and active head. The work of the collection department is based on an experience in handling lumber claims not born of a day, but of years of practical work, and its efficiency and reliability have been demonstrated to the trade by collecting and remitting money to clients amounting to \$5,000,000. Responsibility and good service are what all patrons of an organization of this kind are seeking, and in the Lumbermen's Credit Association they are found exemplified.

Miscellaneous News.

Four dry kilns of the Fradley Lumber Company at Warren, Ark., were totally destroyed by a fire which broke out July 11, together with half a million feet of high-grade lumber valued at \$50,000. About seventy-five per cent of the loss was covered by insurance.

The Mooney Lumber Mill and the Paul Heinman plant at Boone, W. Va., were destroyed by fire recently, causing a loss of about \$30,000. The Globe Column Factory at Somerset, Pa., one of the town's principal industries, was completely destroyed by fire the first of the month, together with a quantity of dry lumber stored in the warehouses. The loss was about \$25,000.

R. L. Frone of Shelbygan Falls, Wis., whose veneer plant at Cottage Grove was recently burned, is going to rebuild it at Cleveland, about twenty miles from Shelbygan.

The F. J. Shields Lumber Company has been incorporated at St. Louis, with a capital of \$10,000.

The Paoli Cabinet Company of Paoli, Ind., has completed its new building and began operations in it last week.

The parquetry flooring factory of G. H. Penant of Minneapolis was destroyed by fire recently, causing a loss of \$200,000.

The Southern Hardwood Manufacturing Company of Warren, Ark., has sold out to the Warren Vehicle Stock Company. A large tract of hardwood timber is part of the transaction.

James A. Martin recently lost \$25,000 worth of hardwood lumber in his yards at Johnson City, Tenn., by a fire which is believed to be the work of incendiaries.

G. E. Sattler Moulding & Frame Company has been incorporated at Camden, N. J., with a capital of \$75,000.

In a recent interview E. H. Mertes of Spokane, Wash., told of the forest wealth of Alaska. Said Mr. Mertes: "The world has no idea of the re-

sources from a lumberman's viewpoint of the great untouched Alaskan forests. Up from Valdez and stretching on above the Tanana river, the forests, mainly spruce it is true, but the biggest, finest in the land, are prodigious. The interior of Alaska is given over to much stunted growth, owing to the severe winters, but along the softer climated coast the forests are indescribable in their uncut luxuriance. It will be many years before the woodsman's axe is heard over the thousands of square miles included in this domain."

D. W. Williamson of the Williamson Veneer Company, Baltimore, Md., was recently elected president of the board of managers of the Maryland Lumber Hospital. Mr. Williamson has been vice-president of the board for some years.

The Variety Works, operated at Dawson, Ga., by Baldwin & Co., burned recently together with thousands of feet of rough and dressed lumber, causing a loss of \$75,000.

The Rice Lake Lumber Company's hardwood mill at Rice Lake, Wis., has resumed operations after a month's shutdown.

The Sook Lumber Company, Fargo, N. D., has increased its capital from \$25,000 to \$75,000.

The Riverside Planing Mill at Columbia, Tenn., was damaged by fire on August 19 to the extent of \$20,000; \$5,500 insurance was carried.

Articles of incorporation have been filed by the A. F. Anderson Lumber Company, Cadillac, Mich., with a capital of \$150,000.

The American Hardwood Company of Sedgwick, Ark., was chartered August 27 with a capital of \$750,000, of which \$350,000 has been subscribed.

The Anderson Furniture Factory at New Castle, N. R., worth \$100,000, was entirely destroyed by fire August 25. Four carloads of furniture and a large quantity of lumber were burned. The loss is said to have been fully covered by insurance.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

A book has just been issued from the executive office of the National Hardwood Lumber Association a handsome pamphlet covering the official report of the eleventh annual meeting of this organization, which was held in Milwaukee on June 11 and 12 last. The book is illustrated with portraits of the officers, directors and committeemen, and appended to it is a list of members.

Secretary A. E. Beebe of the Wisconsin Hardwood Lumbermen's Association announces that the next annual meeting of that organization will be held at Marshfield, Wis., on Tuesday, September 15, at 2 p. m.

J. Gilson McIlvain Jr., of J. Gilson McIlvain & Co., Philadelphia, accompanied by his western representative, Frank Wurtzberg, spent several days in Chicago during the last of August. Mr. McIlvain captured some very good business in the Chicago market and reports that generally throughout the country trade is materially improved.

J. C. Knox, secretary of the Michigan Hardwood Manufacturers' Association, was in town several days this week. On the ninth he attended the semi-annual meeting of the Wisconsin Hardwood Manufacturers' Association at Wausau.

E. F. Miller of the Engel Lumber Company of Grand Rapids, Mich., was a caller on Chicago trade this week.

Sam E. Burkholder of Crawfordville, Ind., was a welcome visitor during the week. Mr. Burkholder is well pleased with the hardwood outlook and says trade is coming back close to normal conditions.

The Buckeye Lumber Company will erect a hardwood sawmill near Ozan, Ark.

The New State Lumber Company, capitalized at \$100,000, will erect a woodworking plant at Oklahoma City, Okla., to cost \$25,000. Seventy-five men will be employed.

Fire in the yards of the Great Northern railroad at Barnesville, Minn., on August 20 destroyed 8,000 new railroad ties. The loss is estimated at nearly \$8,000.

George Brown of Norfolk, Va., announces that he will establish a barrel, crate and veneer factory at Lonevale, New Kent county, Va. Boulevard is located on the Chesapeake & Ohio railroad at the head of navigation of the Chickahominy river. Boulevard is seeking new industrial plants, which are being exploited and backed by the Virginia Land & Improvement Company.

The Foster Latimer Lumber Company, Mellen, Wis., is building a large addition to its plant for the production of finished hardwood and maple flooring. Fifty thousand dollars is being expended in the improvements.

The Harry G. Smart Wood Works of St. Cloud, Minn., a new industry, has thus far manufactured 5,000,000 the plugs. A large portion of the output was sold to the Great Northern railroad.

The Layman Manufacturing Company has moved its mill making plant from Chardon to Warren, Ohio. The new plant will be ready for operation in a few days. The concern is producing oyster and candy tubs and pails.

Articles of incorporation have been filed by the Cleveland Woodware Company of Cleveland, Wis., with a capital of \$25,000. The company will manufacture cheese boxes and veneers and succeeds the Promiss Manufacturing Company, formerly located at Howard's Grove, Shelbygan county, Wis., which was recently destroyed by fire.

W. J. Wagstaff, hardwood dealer of Ohio, dropped in on the 1st and reports that Baptist Church affairs are coming on swimmingly at his home city and that incidentally the hardwood trade shows marked improvement.

J. V. Hill, until recently chief of the inspection department of the Hardwood Manufacturers' Association, has resigned his position to accept charge of the inspection department of the Lamb-Fish Lumber Company at its big new Charleston, Miss., mill. Mr. Hill has made an enviable reputation in the work that he has carried on during the past few years for the Manufacturers' Association, and the Lamb-Fish Lumber Company is to be congratulated in securing his remarkably capable services.

D. J. Peterson, the well-known Toledo lumberman, spent a day in Chicago the last of last month.

E. Bartholomew, general rate representative for John B. Ransom & Co., has spent considerable time in Chicago markets during the last few days and has bagged a bunch of good business.

Walter S. Barnell of the Darnell-Tanger Lumber Company, Memphis, has returned home from his summer outing at Marquette Beach, Mich., where he was accompanied by his family. He spent a day in Chicago on his return trip, and reports trade conditions in the Memphis market decidedly improved.

Mr. Howlett, general representative of the Philadelphia Textile Machinery Company, dropped into the Record office a few days ago, reporting several new sales for the veneers manufactured by his company.

W. E. Barnes, editor of the St. Louis Lumberman, made a fraternal call last week on his

as adopted by the Milwaukee convention of 1908, but at the suggestion of the president, the matter was deferred in deference to a communication received from Hugh McIwain, who is acting for some of the representatives, who attended the former conference held here, until after the conference to be held in Philadelphia on September 24, at the Bellevue-Stratford hotel.

George M. Spiegle of George M. Spiegle & Co., in an attempt to save his brother, Henry Spiegle, who was bent on committing a terrible crime, accidentally shot him while trying to take a pistol from his hand; he died a few hours afterwards. The lumbermen of Philadelphia to a man tender their deepest sympathy to Mr. Spiegle, who they implicitly believe will be entirely exonerated from all blame when the whole facts of the case are placed before the authorities.

J. Randall Williams & Co. speak cautiously of business conditions. There is a slight progression, but prices are variable. They are changing their quarters to 514 and 515 Arcade building. J. Randall Williams Sr., is summering at Buzzard's bay, Mass.

John W. Coles has recently added two efficient men to his selling staff, E. Tate, who has had considerable experience in the lumber business in Williamsport, Pa., and West Virginia, to look after Philadelphia and nearby territory, and R. W. Smenner, a former commission lumber dealer, who will cover eastern Pennsylvania. Mr. Coles has recently made a tour through the lumber fields of Florida, where he was able to make some desirable connections; he reports a growing optimism as to outlook.

G. W. Wright, who is trying his luck in New Jersey, speaks encouragingly for southern sections.

Brawley & Smith Company report a better show in the East and an increase of orders over some time back. They think by the first of the year, a further advance may be looked for.

Justice P. Taylor & Co. see signs from afar of approaching good times. They have booked some fair orders of late and have no fault to find with the inquiries coming in. H. S. Field of this house has been probing the Michigan lumber districts with satisfactory results.

Wistar, Underhill & Co. express themselves as fairly content with the business coming in of late. Their orders are of respectable size and their men in the field report a better attitude in regard to trade, with prospect of rise in prices.

Sheip & Vandegriff, Inc., are resting on their oars until the opening of the fall trade. Asa W. Vandegriff is spending the summer at Eaglesmere, Pa., and Jerome H. Sheip, after a short sojourn at Ocean City, N. J., will try his hand at moose hunting in the wilds of Maine.

H. Wheeler & Co. state that they are not trading over the various reports concerning the speedy or tardy return of prosperity; they have breasted more than one panic and have learned that time alone can settle the ills and difficulties resulting from such chaos.

Eli B. Halliwell & Co. confess they would like it better if prices were firmer, but the volume of sales has compensated somewhat for this shortcoming. They consider outlook promising.

W. M. Ritter Lumber Company has engaged H. C. Magruder, formerly a commission lumber dealer of New York, to take charge of the Philadelphia office. He reports the mills working fairly well and that business has improved considerably during the last few weeks.

Philadelphia Veneer & Lumber Company, Inc., has thought best to reduce the output of its mills in Knoxville, Tenn., and is not disposed to force the market at prevailing prices for veneer. It is rebuilding as fast as possible the portions of its property destroyed by fire several months ago. Francis Goodhue Jr., secretary, has just

returned from a visit to his old home in Vermont, where he has spent a month's vacation.

Emil Guenther takes a logical view of existing conditions and works out for himself the vexing problem of the speedy return or delay of prosperity. He argues that stocks are not too heavy in the storage yards of the manufacturers, that crops are enormous and soon to be moved, and that the railroad companies have not thought best to repair rolling stock, which will necessitate the taking of cars from other industries, thereby creating a shortage. These conditions, he believes will have their effect on the lumber market and send prices up in the near future.

O. M. Bruner Company has presented to the trade a telephone directory on a large square of card-board in very readable type, and on which may be found the phone numbers of all the lumbermen in Philadelphia and the neighboring towns. As may be imagined it is greatly appreciated by the recipients.

J. S. Kent Company testifies to an encouraging activity during the last two weeks. J. E. Troth of this house is at Buck Hill Falls, Pa., for a summer sojourn, and A. W. Kent has just returned from Buffalo, N. Y., where he has been rustating for a few weeks.

Halfpenny & Hamilton predict a more satisfactory trading for fall. John Halfpenny and Benjamin C. Currie Jr., of this house are on a visit to the firm's mills informing themselves as to situation in that section.

Samuel H. Shearer is at Asbury Park, N. J., for a two weeks' outing.

On August 17, Judge McPherson appointed Edward Reukauf receiver of the estate of the Kendall Carriage Company, alleged bankrupt; security \$5,000.

The toy factory of the American Novelty Company at Bethlehem, Pa., was visited by fire on July 22, which destroyed the machine shop, toy room, boiler house, office and several smaller buildings, and several thousand dollars' worth of Christmas toys; partial insurance.

It is announced that the Burlington Railroad Company, after thorough trial, has rejected the concrete ties inferior, as to durability, to those made of wood properly treated with creosote to withstand the action of the elements. It is said the company will erect an extensive plant for the treating of ties, bridge timbers, etc., with creosote, which will be the largest and most up to date of its kind in the world, and will cost \$270,000.

The Interstate Lumber Company, Pittsburg, Pa., obtained a charter under Pennsylvania state laws, on August 27; capital \$50,000.

A charter was granted under Delaware state laws on August 26 to the Union Casket and Manufacturing Company; no capital given.

Nathan Crossman, 83 years old, a pioneer lumberman, who cleared the land where Puxun-sawney now stands, died recently at his home in Valier.

Johnston Vehicle Works, Hollisopple, Pa., was destroyed by fire on September 1; loss \$15,000; insurance about \$5,000.

Forest fires are said to be raging in the western portion of Schuykill, and a report from Pottsville states that much damage has been done to timber groves.

The assignment of Andrew F. Leatherbee of Boston, Mass., was recorded on August 28, with liabilities at \$100,000.

Among the recent visitors to the local trade were: J. J. Mann of Mann-Caven Lumber Company, New York; B. A. Shaffer of Slaymaker & Co., New York; John B. Case, Flemington, N. J.; G. G. Barr of Beecher & Barr, Pottsville, Pa.; William Brown of Stevens-Eaton Company, New York; D. S. Cunningham, manager Hendricks Lumber Company, Hendricks, W. Va.; C. L. S. Sheldrake of Butters Lumber Company, Boardman, N. C.; Joseph C. Jones, Conshohocken, Pa.; J. Jarrett of Jarrett Bros., Savannah, Ga.; J. W. Foreman of Foreman-Blades

Lumber Company, Elizabeth City, N. C.; W. S. Hollister of Pine Plume Lumber Company, Montgomery, Ala.; Morris Wilson of Wilson & Mendallish, Toughkenamon, Pa.; E. B. Sheriff of Bresco Lumber Company, Williamsport, Pa.; G. W. Chambers of Kendall Lumber Company, Pittsburg, Pa.; Lindley C. Kent, Wilmington, Del.; M. X. Wilson of Wilson Lumber Company, Elkins, W. Va.; George Rodgers Jr., Chester, Pa., and H. W. Alexander of Mershon, Schuette, Parker & Co., Saginaw, Mich.

PITTSBURG

The J. L. Lytle Lumber Company is having good success in marketing poplar and hemlock in the towns outside of Pittsburg. The August sales of this company were much the best that it has had any month since it started, and President Lytle feels sure that much better times are at hand for wholesale lumber dealers. H. T. Lincoln of Bemis & Vosburg has returned from his trip through Canada which was almost a honeymoon, inasmuch as he has been married but a few weeks. Mr. Lincoln is handling the affairs of the Cheat River Lumber Company and is doing his best to get some dividends for the creditors.

J. H. Henderson, secretary of the Kendall Lumber Company, has been looking after the work at the Crullin plant, where a large cut of lumber is being made. The Kendalls are pushing hard for trade and their hardwood sales are very encouraging.

L. H. Allen, of the Byers-Allen Lumber Company, of Buffalo, N. Y., spent a few days in Pittsburg last week. His concern has a good mill at Ligonier, Pa., and is turning out some fine lumber.

The Linehan Lumber Company feels encouraged over the hardwood outlook and reports a better call for oak and a slight advance in the demand for maple flooring. The factory trade, according to this concern, is bracing up right along.

R. A. McDonald, president of the McDonald Lumber Company, is spending his vacation at Cambridge Springs, Pa. His concern has been doing some good hardwood business all summer and expects to run its West Virginia plant in full this winter.

The Webster-Kessey Lumber Company is doing business in the good old fashioned way at its mills in Indiana, Butler and Venango counties. Its sales have been very encouraging, and Mr. Kessey is inclined to think that the worst times for lumbermen are about over.

D. L. Gillespie of D. L. Gillespie & Co. is one of the republican politicians who is frequently mentioned as a candidate for mayor of Greater Pittsburg. Mr. Gillespie was a delegate to the national convention at Chicago in June and takes a very active interest in local republican politics.

A. A. Germain of the Germain Company has gone to the wilds of Canada for his vacation. Thomas Raine of Eranwood, W. Va., called on the Pittsburg trade this week. He has a good hardwood mill at Gladwin, W. Va., on the Dry Fork railroad and is cutting all hardwood now.

The Pittsburg Wholesale Lumber Dealers Association resumed its meetings last Tuesday after a vacation of four weeks. The association is taking a firm stand for higher prices and its members are gaining much benefit from the weekly meetings.

J. G. Cristo, secretary of the Interior Lumber Company, spent ten days recently in northern Wisconsin, Michigan and Minnesota. His trip was very profitable and he came back full of the notion that the man with good business sense and a little money will buy his lumber this month.

The J. M. Hastings Lumber Company is working its mill at Jacksonville, W. Va., in full and

is cutting out a fine lot of oak for the eastern trade. Mr. Hastings is spending a few days in New York.

H. W. Wilmarth, who has three mills near Boyer, W. Va., spent a few days in the city last week. His mills have been down for some time, but he expects to resume operations in the oak mill very shortly.

The Lackawanna Lumber Company is preparing to sell to the state of Pennsylvania a large portion of its land in the Cross Fork section, east of Pittsburg. The land is well timbered and admirably suited for forest reserve.

The Inter-State Lumber Company is the name of a new concern with offices in the Ferguson block which may be said to be the outgrowth of the old Pittsburg Lumber Company. This latter concern, it will be remembered, was formed with the purpose of giving retailers a chance to buy lumber direct from the manufacturers, but has been out of business for some eighteen months.

W. E. McMillan and A. F. Johnson have formed partnership as McMillan & Johnson, and will have offices in the Schmidt building in Pittsburg. Mr. McMillan will act as the head of the W. E. McMillan Company, Inc., which recently went into the hands of a receiver, and Mr. Johnson has been in the export business in Baltimore for fifteen years. The firm will have a capital of \$50,000, and expects to devote most of its attention for the present to the wholesale business.

C. D. Haywood of the Georgian Bay Lumber Company of Cleveland, Ohio, took some nice Pittsburg orders last week. He is feeling "strong" on the fall market and looks for higher prices soon.

The Reliance Lumber Company notes that mills are short on many sizes and stock, and also that the call for house building lumber in the small towns is increasing steadily. Its men are all out on the road and notice a gradual gain in business.

The Railroad & Car Material Company has been doing a good business in the East lately, but finds local demand very slow. Its chief complaint is that railroads hesitate to close for orders after requisitions have been put out.

When you talk about office hangers and calendars you want to include the Buchanan Lumber Company. This company's latest gift to its patrons was a very novel and extremely colorful calendar showing the "Irregularity" at his best.

William T. Monroe of the Diamond National Bank building, says that trade in mill work was not as good in August as in June and July.

"The New York Central Railroad Company is doing most work along this line of any railroad," he says. He is figuring some good jobs for steel plants.

W. E. Townall, president of the Colonial Lumber Company, spent his vacation in Long Island, Atlantic City and New York. "Trade is picking up a little and prices are noticeably stiffer," he says.

W. A. Clay of the Clay-Scheppe Lumber Company is down at the company's plants near Cumberland, Md., trying to repair the damage which was done by the disastrous flood that overtook that section a few weeks ago. It will be a week or ten days before his mills can be operated as usual.

Manager Wickesham of the Buckeye Lumber Company reports that some bill oak and a few oak timbers are moving, but that prices are still being cut hard. His trade at Buffalo in poplar has been very good, but he reports little inquiry from the Pittsburg district. His chief business at present is in tickon wagon stock, which goes chiefly to Ohio and Indiana.

W. M. Kirkland and W. H. Witherspoon of Beaver, Pa., and W. H. Conner of Connelville, Pa., are largely interested in a company which has out over 3,000 acres of timber in Preston county, near Kingwood, W. Va. The timber is white oak and yellow poplar, with considerable

lign and chestnut and is one of the finest tracts in the Little Mountain state. It is estimated that the tract will cut 25,000,000 feet of hardwood and 200,000 ties. The company now has three mills going and employs nearly 100 men.

A. J. Diebold of the Forest Lumber Company spent his vacation in Atlantic City. The company's mills at Carmarock are doing well and all indications point to higher prices for lumber this fall.

J. B. Flint of the Flint, Erving & Stoner Lumber Company has returned from his summer outing at Lake Simcoe, Canada, and managed to get some good orders while away for pleasure. He reports the general situation as slightly better, but admits that there is still room for improvement. This is especially true of the river trade, which in ordinary years is one of the most important branches of this company's business.

J. N. Woollett, general manager of the American Lumber & Manufacturing Company, has been working the Cincinnati trade lately and his efforts contributed largely to a total of over 200 cars of lumber which the American has sold since August 15.

BOSTON

Harrison Parker of the Palmer & Parker Company, hardwood dealers and manufacturers of Yeneers, Charlestown, Mass., is expected to return to Boston from a European trip about September 29. Mr. Parker has been abroad with his family for the past three months.

Charles H. Hawley died at his home in Bridgeport, Conn., August 27. As a young man he entered the lumber business with his father under the firm name of C. H. Hawley Lumber Company. This name was later changed to the Hawley & Beecher Lumber Company, and still later to the Bridgeport Lumber Company. The business was discontinued about fifteen years ago.

W. E. Chester of W. R. Chester & Co., who has been abroad for the past two months, is expected home shortly. While in Europe, Mr. Chester attended the peace conference.

Richard J. O'Reilly of the O'Reilly Lumber Company, St. Louis, Mo., has been spending a few weeks at Gloucester, Mass.

J. H. P. Smith of the Hardwood Lumber Company, Ashland, Ky., has returned home from a trip through the East.

Lumber dealers have not yet made any serious complaints relative to shortage of cars. Some shippers are writing to their representatives that it would be a good idea to place orders as early as possible, in this way avoiding any delay due to car shortage. Reports this week show that more cars are in use than for several months, and a heavy crop movement might result in a shortage.

George W. Fooshe of the Robertson Fooshe Lumber Company, Memphis, Tenn., has been a visitor in the eastern markets.

A. T. Fulton of the George D. Emery Company, large importers and dealers in mahogany and Spanish cedar, has been making a business trip South.

Gardner J. Jones of the Jones Hardwood Lumber Company, Boston, was a recent visitor in the New York market.

Fred W. Mowbray of Mowbray & Robinson, Cincinnati, Ohio, was a recent visitor in the eastern markets.

Andrew F. Leatherbee, well-known retail lumber dealer, Boston, made an assignment about two weeks ago. His liabilities were placed at about \$100,000. The assignee states that under normal conditions the assets of the company would about offset the liabilities. An early settlement is predicted by Mr. Leatherbee.

Harry R. Chester of W. R. Chester & Co., has

been spending a few days at Lake Winnepesaukee, N. H.

The many friends of George Van Dyke of the Connecticut River Lumber Company will be glad to learn that he has so far recovered from his long and severe illness as to be able to give a part of his time to his business at his Boston office.

Marcus L. Foster of the Stone & Foster Lumber Company, Worcester, Mass., returned a few weeks ago from a business trip to British Columbia.

A. C. Dutton of the A. C. Dutton Lumber Company, Springfield, Mass., has spent a large part of the past summer visiting his numerous lumber interests in Quebec and New Brunswick.

BALTIMORE

The attention of the local hardwood trade is centered largely upon the affairs of the two lumber concerns that have gotten into difficulties during the past few weeks. One of these, the National Lumber Company, of which E. M. Perego is the chief stockholder and virtual proprietor, called a meeting of its creditors two weeks ago, at which Mr. Perego made a statement and proposed acceptance of 30 cents on the dollar. The creditors resolved to take no action on this proposition for the present, but they named a committee which is directed to make an investigation of the National Company's condition and report what action should be taken.

At a meeting of the creditors of James H. Cranwell, called for August 28 by Henry Duffy, the referee in bankruptcy, the affairs of Mr. Cranwell were extensively discussed, but comparatively little additional light was thrown upon them. Mr. Cranwell, it transpired, did not keep any books, except a kind of day book, in which he made some entries of transactions, and he also kept a memorandum of notes due. He could give very little further information about his business dealings, and seems to have carried most of the details of sales in his head. Charles E. Cockey, Charles Merriken and United States Assistant District Attorney Morris Soper were named as a board of trustees, to deliver further into Mr. Cranwell's affairs and make a report.

Much interest was manifested here in the annual concatenation of the Hoo-Hoo held at Chincoteague during the present week. The Baltimoreans read glowing reports about the elaborate preparations made for the event, and they should all have enjoyed attending, but among those reported to have gone we note John L. Alcock, a former vicegerent snark for this jurisdiction; also George Waters and Maurice W. Wiley.

Geo. W. Eisenhauer, of the Eisenbauer-Maclen Company, hardwoods, 60 Central Avenue, has just returned from a trip of about ten days or two weeks in the lumbering regions of North Carolina and other southern states. He made his headquarters at Asheville, and visited a number of the mills, taking account of the conditions there.

Secretary E. M. Terry of the National Lumber Exporters' Association, has returned from a stay of several weeks, where he went to confer with various members of the association relative to business matters, and also put in some time sight-seeing. He was much benefited by the change from the ordinary routine of his duties.

The managing committee of the Baltimore Lumber Exchange was called together in special meeting Tuesday of last week to con-

sider several matters that had come up unexpectedly and called for immediate action, though they were not of special moment. The regular meeting of the board is slated for next Monday afternoon, which is also the date for the quarterly meeting of the exchange, when a luncheon is usually served.

A. C. Hanscom, the manager of the local office of the Morse Company, manufacturer of doors and other mill work in all kinds of woods, with factory at Oshkosh, Wis., has been in Maine for nearly a month, spending his vacation, and he is once more ready to plunge into business.

Much regret is expressed among hardwood men here over the tragic outcome of the difference between Mr. George M. Spiegle of George M. Spiegle & Co. of Philadelphia, and his brother Harry, in which the latter lost his life last Thursday. Mr. Spiegle is one of the most prominent members of the National Lumber Exporters' Association, and has a wide acquaintance in this city, where he has been a frequent visitor.

CHARLOTTE

Asheville, N. C., is the home of a large new lumber concern by name the Asheville Mill & Building Company. The capital stock of the company is \$100,000, and C. T. Rawls, former mayor of Asheville, Dr. P. R. Moale, W. F. Cellar, L. M. Bourne and S. M. Smith are the incorporators. The company will do a general mill business and will also build up a line of upholstered furniture and houses, etc. It is understood negotiations are being made with A. Schenck, G. W. Vanderbilt's agent, to take over the Biltmore, N. C., yard and planing mill. It is likely the plant will be located at Biltmore, near Asheville. It is stated that a stock of about 350,000 feet of lumber, laths and shingles will be secured at once from the Sprucecroft Lumber Company of Waynesville, N. C., and shipped to the company at Asheville.

It is stated that the National Casket Company, sometimes termed the "coffin trust," is considering the proposition of locating a large plant in the vicinity of Asheville, N. C. A tract of twelve acres of land near Asheville will probably be chosen as the site for the plant. The present plans contemplate the dressing and shaping of caskets at Asheville, to be shipped knocked down to finishing plants at Pittsburg, Pa., and Nashville, Tenn.

A large woodworking and agricultural implements factory to manufacture all kinds of agricultural implements will be established near Washington, N. C., at an early date.

Preliminary work for the erection of the large cooperage plant at Washington Park, Washington, N. C., by the Atlantic & Stave Manufacturing Company, is progressing at a rapid rate, and it is hoped to have the plant well under way within the next few weeks.

Messrs. Salvo and Harvey of Charleston, S. C., are said to be planning the establishment of a large woodworking and builders' hardware plant in Union, S. C. It is hoped to have the plant ready for work by January 1.

In the big land suit of the Table Rock Lumber Company, of Morganton, N. C., vs. A. J. Brapch, tried a few days ago before Judge Ferguson in Morganton, N. C., the jury rendered a verdict for the defendant, adjudging him to be the owner of over 330 acres of fine timber land near Morganton which was in dispute. The plaintiff gave notice of appeal to the supreme court.

H. C. Heitman of Lexington, N. C., inventor of the "joistless buggy," was arrested at Barber Junction, N. C., a few days ago on a warrant charging the young inventor with obtaining money under false pretenses. Heitman recently went to Statesville, N. C., and called on the wholesale house of J. K. Morrison & Sons and asked the firm to cash a

draft for \$30 on the Commercial Savings Bank of Lexington, N. C. He represented himself as inventor of a mail pouch for which the United States and German governments had given him \$83,000; of an arc light which he had sold to the General Electric Company for \$10,000, and a joistless buggy which he had sold to the Rock Hill (S. C.) Buggy Company for \$4,000. He said he was on his way to Columbus, Ohio, to sell the buggy model to the Columbus Buggy Company and needed the money to defray expenses. He had bank books in the Lexington bank, and on the strength of these representations he secured the \$30. Later an official of the wholesale house became suspicious and telephoned the bank, only to learn that Heitman had nothing there. The warrant and arrest followed, the prisoner being carried to Lexington, where he will be tried later.

The Giant Lumber Company of North Wilkesboro, N. C., has resumed work on its twelve-mile flume near that city. Delay was caused in reaching an agreement with certain parties through whose property the flume passed. Work will be pushed to completion now, and the work of hauling the company's lumber from the forests to the mill will be greatly simplified.

The unprecedented rains of last week throughout North and South Carolina and parts of Georgia did immense damage to lumbermen. It is impossible yet to estimate the loss, but all along the large and small streams in these states manufactories were seriously damaged, while woods work received a serious setback. Loss to crops amounts to hundreds of thousands of dollars; cotton mills suffered severely. Power plants report thousands of dollars' damage.

CLEVELAND

Bar fixture manufacturers and users of hardwood who cater to the hotel trade are complaining bitterly of the prohibition wave which has struck this state during the past year. They say that it is ruining their business and that their consumption of hardwoods has dropped to almost zero. Joseph Irv of the National Fixture Company threatens to pull up stakes and move to some eastern city. He says that where a year ago he was buying \$2,500 worth of hardwoods, now he is expending scarcely \$60 a month. He uses mahogany and oak in bar fixtures of all kinds, and since the present unsettled condition began has not been able to sell stock, as the saloon men do not know how long they are going to continue in business. Irv says that he is now employing only ten men, as against sixty a year ago. He points to the failure of the Swesinger Fixture Company at Sandusky a short time ago as an example of the way business conditions now exist. It is said that some of the breweries have large numbers of fixtures on hand which they have no use for. Hardwood dealers admit that so far as the fixture trade is concerned they are having a difficult time selling stock of any kind. This fall's election is being based on the liquor issue, and the liquor men hope to win.

Carolina poplars, pest breeders, are being cut down by the score every week in Cleveland and are being replaced with sprucemores, catalpa-specioses, Norway maples and Scotch elms, all hardy trees. Eighty of the poplars are being sacrificed daily and new trees set out in the fight on insect pests being conducted by the city forester's department.

Nicola, Stone & Myers, big hardwood dealers, with office in the Hicks building, are expecting a load of Philippine mahogany soon from the Philippine plant of the Insular Lumber Company, with which they are connected. The plant is operating in some of the virgin forests in the

islands, where a handmill cuts the mahogany into plank for shipment, instead of stock being received in the square, as it is from the African market. The shipment will comprise 300,000 feet, which is to be used for interior finish. It is coming via the Suez canal. While not as valuable as the San Domingo or African mahogany, the Philippine product is becoming very popular for interior finish in all classes of buildings. Cleveland capitalists are behind the company producing the lumber.

Fire ravaged the lumber yard of the Saginaw Bay Company on the afternoon and evening of September 3, doing damage to the extent of \$30,000. Stacks of white pine were mostly burned. Several adjoining lumber companies, all big dealers in hardwoods, were endangered, notably the plant of the Martin Harris Company. For a time it seemed as if the flames would sweep the entire flats district and do great damage, but good work on the part of the firemen stopped it. An agitation has resulted which will affect all the Cleveland lumber companies. It is for a new set of regulations for the piling of lumber. The fire chief complains that space is not left behind the lumber for the firemen to get in and fight a blaze. It is likely that a new set of rules will be laid down for the building of lumber piles hereafter.

At the plant of the Advance Lumber Company it was stated that business was materially improving and that the export trade was especially good. During the week an export for 500,000 feet of oak plank for export abroad was received and promptly filled, the first installment being sent on at once, with others to follow at regular intervals. The company is rapidly developing some of its big tracts in the South in anticipation of a big business next spring and summer.

R. H. Jenks of the Jenks Lumber Company has returned from a brief visit to Montreal and Quebec, where he inspected several large lumber properties and consulted with some of his customers there.

F. R. Gilchrist of Laurel, Miss., who has been spending the summer in Cleveland, has returned to his home accompanied by his family. Mr. Gilchrist is manager of the Gilchrist-Fordney Lumber Company of Laurel, Miss.

W. L. Martin, a prominent hardwood manufacturer of Cheboygan, Mich., was in the city several days during the past week. He is visiting a son here and reports that the lumber business is picking up all over the country.

Daniel Wells of Detroit and David Gelcher of Fulton, O., were other visitors last week.

The A. Teachout Company, manufacturers of hardwood doors and finish, has opened up a new end depot on Euclid avenue adjoining the Nickel Plate tracks.

In addition to the Banner Box Company Cleveland has had launched another box company during the past month. The new concern is known as the Acme Box & Lumber Company and is backed by Joseph Miller, for several years manager of the Forest City Box Company. A plant at East Forty-ninth street and the Wheeling & Lake Erie Railroad is being equipped. A new brick building 100x90 feet in size and of two-story factory will be in operation November 1.

Stephen Hendrickson has become manager of the new Bannor Box Company, which has completed its factory in the flats district. He reports a good line of business.

EVANSVILLE

The Milwaukee Falls-Evansville Chair Company, this city's newest furniture factory, will start its production in a short time, having completed the installation of its machinery. The factory will employ a large force of men.

Construction work on the new Furniture Exchange building at Fourth and Vine streets

is being rushed by the contractor in charge. Several men have been engaged to do special work at night on the building.

John Graham of the Edinburg Cabinet Company, Edinburg, Ind., is in the city this week visiting friends and relatives and incidentally attending to some business in the interest of his firm.

Charles Artman of Leib & Artman, the well-known lumber and box manufacturers of Rockport, Ind., was in the city this week.

Evanville manufacturers who attended a conference with Southwestern railroad people at St. Louis last week to discuss the proposed higher minimum weights for all articles of light and bulky character returned with the impression that eventually they would get a reduction of the weights. In an interview with J. C. Keller of the traffic bureau of the Evansville Manufacturers' Association it was stated that they felt confident of gaining the concessions they ask for. The Southwestern Tariff Committee representing the railroads have asked the manufacturers to prepare a new schedule of what they would consider reasonable minimums for light and bulky articles, and this will be done, and on September 18 another meeting will be held at St. Louis, when the whole matter will be gone over and concluded.

C. A. Linton of Grand Rapids, Mich., a furniture manufacturer's representative, was in the city last week to get facts about local shipments to the Southwest, which he will use in a conference of furniture men to be held in Chicago shortly.

George Meyers, a well-known lumberman, formerly with the Henry Maley Lumber Company and later with the Fort Smith branch of Thompson, Thayer & McCowen of this city, has embarked in business for himself at Fort Smith, Ark. The style of the new firm is the George W. Myers Lumber Company. Mr. Meyers' many friends here wish him success in his new enterprise.

F. M. Chatter, of the HARDWOOD RECORD, Chicago, was in the city this week visiting his friends among the trade.

Delph Demmitt, with Maley & Wertz, has gone to Yazoo City, Miss., in the interest of his firm and will be gone several weeks.

Edward Maley of the Henry Maley Company, Edinburg, Ind., was in Evansville last week on business.

J. W. Taylor of Columbus, Ohio, representing the Domestic Lumber Company, was here visiting the trade recently.

Miss Fay Frost, the popular and efficient stenographer in the office of Maley & Wertz, has just returned from a vacation trip to the northern lake country.

INDIANAPOLIS

About forty-five local lumbermen attended the Hoo-Hoo concatenation at Chicago.

W. H. Sumption, manager of the Robinson Lumber Company, has returned after a visit to the southern mills.

Building operations here during the month of August amounted to \$748,034 as compared with \$582,296 in August, 1907, the largest gain of any month this year.

A thirty-foot band saw was ruined at the plant of the Montgomery Lumber Company, Crawfordsville, a few days ago by coming in contact with a plowshare imbedded in a large walnut log.

Eldon L. Dynes has disposed of his interests in the Dynes Lumber Company to a Mr. Moore of Lima, O., and has bought an interest in the Anson-Hixon Sash and Door Company, being elected secretary and treasurer.

Louis G. Buddenbaum of the Buddenbaum Lumber Company has returned home after a vacation of several weeks spent with his family at Lake Maxinkuckee.

The house of Hoo-Hoo being built at the Summer Mission for sick children by local Hoo-Hoo is nearing completion and will represent a value of \$4,000. Elaborate dedicatory ceremonies are being arranged.

A new office building is being built by the National Veneer and Lumber Company at 1633 West Washington street. It is a frame structure and will cost about \$1,000.

A vacation of some weeks was spent at Charlevoix, Mich., by W. H. Coburn, president of the W. H. Coburn Lumber Company.

The Central Casket Company has been organized here with \$25,000 capital by Frank L. Daugherty, C. D. Johns, J. W. Boyd, Stephen W. Frazer and A. W. Lacey. A factory will be established immediately.

During his recent visit here William Jennings Bryan was presented with a pair of mahogany oars manufactured by J. H. Montgomery from lumber obtained in Central America.

After a short illness Charles G. Louet, for some years lumber inspector for the Indianapolis Chair Company, died at his home, 846 North Temple avenue, a few days ago. A widow and nine children survive.

The real estate of the G. B. Lesh Manufacturing Company of Warsaw, Ind., and Memphis, Tenn., will be sold September 12 by County Clerk Edwin Stout, the receiver.

Earl Tabor, a banker of Argos, has purchased a timber tract of 400 acres near Pierceton from Fred Elder of Warsaw, the purchase price being \$55,000.

It is reported that C. H. Lambert, formerly with the Star Carriage Company, Huntington, is organizing a company to be known as the Independent Pole and Shaft Company, and will establish a factory at Louisville, Ky.

Frederick M. Bachman, president of the F. M. Bachman Company, veneer manufacturers and lumber dealers, will return from a three months' tour of Europe some time next week.

Manufacturers of South Bend, including all lines, held an industrial exposition in that city September 8-15, the lumber manufacturers and dealers being well represented in the exhibits.

The Indiana Manufacturing Company, Peru, has received an order for 216 refrigerators, to be shipped to Panama to be used in the canal zone. The order is from the United States government.

W. W. Hobson has returned home after a few days' business trip to Chicago.

A special session of the Indiana legislature will convene in this city September 18, and shippers and manufacturers will probably make an effort to have the shippers' law amended to include reciprocal demurrage. The Indiana Railroad Commission contends it has no power to establish reciprocal demurrage under the existing law.

E. J. Brooks, secretary of the Indianapolis Lumbermen's Club, has organized a political club with several hundred members in West Indianapolis and has given it the use of one of the buildings in his lumber yard for a club house.

COLUMBUS

Some very encouraging statements have been given at this week by a number of the Columbus lumber companies. The W. M. Ritter Lumber Company says that a good volume of business was transacted during the month of August and that the trade was much better than it has been in many months.

The General Lumber Company reports that September has started off in fine style and that a number of good orders have already been taken. The company's men, on the road, are doing a good business and say that the trade manifests much greater interest than it has for several months.

Mr. S. S. Morgan of the Kile & Morgan Company returned several days ago from a month's

vacation spent on the lakes, and before leaving Wednesday evening for a business trip to Cleveland, said that there is considerable improvement in the lumber business and that new orders are coming in with greater regularity than they have in many months.

The Powell Lumber Company is now enjoying a good trade and the outlook for new business shows considerable improvement. This company reports profits of certain grades of lumber as being on the upgrade and expects to see a stiffer market for this on.

H. C. Kreith & Co. report business as moving along very satisfactory and say that signs of decided improvement are visible in many lines.

Nearly all lumber companies in Columbus report business as decidedly on the mend and it seems to be the general opinion that the turn for decided improvement in the trade has taken place. Business men are now back from their annual vacations and have settled down to business in earnest.

CINCINNATI

Matthew F. Farrin, one of the best-known lumber dealers of the Queen City, died after a short illness at his home on 3666 Reading Road, Monday, September 7. Mr. Farrin was president of the M. B. Farrin Lumber Company, Farrin & Korn Lumber Company, Central Box & Shook Company, the latter concern being just organized by Mr. Farrin and his son-in-law, Chester F. Korn. Mr. Farrin had been ill but a few days and the news of his death came as a great surprise to his many friends. He had been identified in the lumber business for the past twenty years and during that time made a very wide acquaintance.

W. J. Breed of the Crane & Breed Manufacturing Company died at Los Angeles, Cal., last week after a brief illness. He went to California to bring home his wife and daughter, who were spending their vacation when he took ill suddenly and death was the result. He will be sadly missed by many friends and loved ones. Mr. Breed was connected with the house of the Crane & Breed Mfg. Co. a number of years.

A transcript of record from the common pleas court of this county was filed last week in the circuit court in the case of the Standard Millwork Company vs. the Chicago Lumber and Coal Company. The latter contracted to deliver fifty carloads of cypress lumber at a stipulated price. About the time forty-five carloads were delivered the market rose considerably, and it is alleged that the defendant has failed and refuses to deliver the balance. Wherefore damages in the sum of \$2,745.83 are sought. A plea in abatement was filed at the same time by the defendant, as there is already pending in this court a case wherein the parties reversed, and wherein the defendant there and plaintiff in the new case filed an answer and cross-petition in which the above sum is claimed to be due for breach of contract. The original action was brought in the federal court about a year ago to recover \$4,373.11, claimed due under the contract.

J. E. Tathill of the E. L. Edwards Lumber Company left last week for a business trip.

Joseph Wintzinger and Joseph Kenkel have organized the Fairmont Box Company, which began business this month. The new concern manufactures all kinds of boxes and cases, and is located at 2820 Western avenue. Both men have been connected in the box business for many years and have secured a concern of their own to do some much needed labor.

Frank McCracken, brother of Ralph McCracken of the Kentucky Lumber Company, arrived in the Queen City this week from Williamsburg and immediately left for Chicago, where he will attend the concatenation of the Hoo-Hoo Order at that place this

month. Ralph McCracken stated that trade with them was showing some improvement and he looks for a continued increase to manifest itself this month.

F. G. Callwell of Alabama, representative of the Ford, Brenner Lumber Company, was a visitor in town this week. L. N. Taylor, Tennessee representative of the same concern, was also here for consultation with Mr. Brenner.

R. C. Whitbeck of the Ford, Brenner Lumber Company left for Cleveland last week to visit relatives.

Max Kosse stated that trade was showing a better tone each month and that he looked for a fair fall trade. Improvements have been made at the three mills of the company and a great deal of lumber is now being turned out there. Mr. Kosse has just returned from a southern trip.

H. J. Pease was a visitor among the lumber trade here during the past fortnight.

A. S. Dennis called on many of the local lumber dealers here in an effort to secure trade for his company.

E. O. Robinson has returned from his vacation trip to Atlantic City and immediately departed for the South on a business trip. Fred Moberly of the concern stated that trade with them was fairly brisk, especially perceptible in the poplar and quartered oak line. The month of August was a very good month for the company and prices being realized are regarded as firm.

B. F. Dulwiler of the John Dulwiler Company said that trade with them has been fair.

The next meeting of the Cincinnati Lumbermen's Club will be held some time this month, but no definite date has as yet been set for that occasion. This will be the first meeting of the club for two months.

A. E. Hays said that trade with them was picking up and that the month of August proved a fairly good one for them. They find quartered oak the best selling item in the hardwood list.

J. H. Bolser notes an increase of business during the past month, and furthermore looks for an increase during the present month. Business should be very good during the remainder of this year.

L. C. Kimball of the J. C. Kimball Lumber Company of Knoxville, Tenn., was a visitor among the lumber element during the past few weeks.

W. Perry was registered in the Queen City during the early part of this month.

Harry A. Freiberg of the Freiberg Lumber Company said that trade with them was just fair, but he looks for an increase this month. The bulk of the company will be started in the latter part of the month. At the present time he is buying some lumber, that is where he can pick up some choice lots at reasonable figures.

A. V. Jackson of the Ault & Jackson Company was summoned home from a business trip last week owing to the sudden illness of his wife, George Frederick of the company stated that business with them was pretty fair. During the month of August they did a better business than for any two months previous.

John Frohmiller of the Acme Veneer and Lumber Company returned last week from a business trip north and was much impressed with the shipment of trade there.

W. E. Shrimpton of the Shrimpton Lumber Company stated that business was about the same as last week, but he looks for an improvement during the present month. The fall trade, he says, will exceed that of the spring by a goodly margin.

Robert Vestal of the Vestal Lumber and Manufacturing Company of Knoxville, Tenn., was here during the past week.

Harry F. Hendy of Hendy & Co., wholesale lumber dealers of the Commercial Tribune building, has just returned from the South.

He reported the local trade here as growing much better.

Walter Quick of the Richey, Halsted & Quick Lumber Company has returned to his active business duties after an absence of more than six weeks. S. W. Richey of the same concern stated that trade with them was getting much better.

C. M. Clarke was calling among the local lumber dealers here during the past week.

The shipments of lumber from Cincinnati during the month of August were larger than any other month, indicating that trade was gradually settling down. The increase in the month has led a number of the local lumber merchants to become very optimistic over the situation here and look for another increase during the present month. During the month of August 4,110 cars of dressed lumber were shipped from here as compared with 5,873 for the same month of the year previous. The receipts during the last month were 5,566 as compared with 8,480 for the same month of the year previous. The shipments during the last month were better than any other month of the year, as fully 100 more carloads of lumber were shipped from here.

MEMPHIS

The Sawyer & Austin Lumber Company has resumed operations at its big bandmill at Fin-Bluff, Ark. The box plant and planing mill have kept in steady operation, but the sawmill proper was closed down for a number of months as a result of the depression in lumber trade circles.

The Tennessee Hardwood Manufacturing Company, which is capitalized at \$80,000, has filed articles of incorporation under the laws of Tennessee and will engage in the lumber and mill-work business. W. C. Fenn, C. H. Lewis, A. A. Hatch and A. H. Murray are the incorporators.

Announcement is made that operations have been resumed at the plant of the Gadsden Car Works, on the Queen & Crescent system, at Gadsden, Ala., and employment has been given to about 300 persons. The plant had been closed down since early spring and there is a large accumulation of bad-order cars to be repaired. The Frisco system has taken on additional men at its yards and shops at Springfield, Mo., where its principal car plant is maintained. The statement is given out on official authority that about 2,000 more men will be given employment there in the near future. The Rock Island system is gradually increasing its force at its shops at Argenta, Ark., and the Missouri Pacific system is also becoming more active at its car plants in the Southwest. All the roads, with one or two exceptions, have allowed their equipment to get in bad shape, and it is feared that repair work has begun so late that this may prove a serious feature in handling the traffic which will be offered the railroads throughout the Central South during the next few months.

E. H. Ward, who until recently was located here as general manager of the Memphis Car Company, has become identified with the Kellogg Car Company, Kankakee, Ill., and will make his future home in that city. He will retain his interest in the Memphis company despite the fact that he will be no longer identified with the management thereof. The change is in the nature of a distinct betterment of his business position.

J. M. Barnett has recently purchased the plant of the Krebs Lumber Company at Blenheim, Ala. The plant, which includes planing mills, cabinet works and a drying kiln, is very complete. It is the intention of the purchaser to change the name of the business, but for the present it will be conducted under the name of the Krebs Lumber Company.

The enterprise of E. C. Atkins & Co., Inc., is fittingly illustrated by the rapidity with which orders are being filled. The local branch of the

company was forced here, with entire loss of its stock, August 22, but the company has moved into new quarters on Union avenue and is filling orders as promptly as if nothing had happened. The large facilities of the headquarters of the company at Indianapolis, Ind., are largely responsible for this condition. C. S. Gladding, general manager of the company, has been in Memphis since the fact. He has been successful in securing an adjustment of the loss and left yesterday for his home.

One of the bitterest fights in the history of commercial organizations in this city or section has been launched in the Business Men's Club by the action of the president, S. M. Williamson, in demanding the resignation of James S. Warren, secretary. Mr. Warren's resignation was handed the board at a meeting a few nights ago, but was laid on the table. President Williamson immediately resigned, but was persuaded to hold over until another meeting, when the charges of inefficiency preferred against Mr. Warren by him will be further investigated and the fight may be taken. It is practically certain that the fight might change in either the presidency or secretaryship of the club, as these two officials could hardly be expected to act along together after the recent development. A. L. Foster of the J. W. Thompson Lumber Company, vice-president of the organization, has been delegated to appoint a committee to investigate the charges against Mr. Warren and will act in the next few days. The nature of further developments will depend largely upon the finding of this committee. General regret is expressed that the fight has been precipitated. The club has a very large membership among the lumbermen of this city, practically all of whom belong to it. The principal contest at the last election centered around the first vice-presidency, and the lumbermen were successful in putting their candidate, Mr. Foster, into office.

The Meinin Lumber Company of Hattiesburg, Miss., has purchased from McPherson Bros. of Michigan 2,750 acres of pine stumpage for \$90,000. This is the largest acreage of pine stumpage since the financial depression came about a year ago. The average price was high, \$35 per acre. The mill of the purchasing company, which is located at Petal, Miss., will run at full capacity until the timber has been cut.

Much interest is shown in the forthcoming annual convention of the Deep Waterways Association, to be held in Chicago next month. All the leading commercial organizations will appoint delegates to this meeting and some of them have already taken such action. Prominent among those already named are W. M. Russe of Tuske & Burgess, who has always been deeply interested in the improvement of the Mississippi river. Lumbermen of this city are firm believers in the fact that if an adjustment is ever to be secured in freight rates, and if lumber shippers are ever to be provided with facilities for prompt handling of their traffic year in and year out, it will come as a result of the deepening of the channel of the Mississippi. Arkansas is already naming delegates to the convention, and so are Louisiana, Mississippi and Missouri.

The Memphis Industrial League has been absorbed by the Business Men's Club and will be conducted as a separate department of that institution. It will be in charge of the secretary of the club. Negotiations to this end have just been concluded after efforts covering more than a year. In consenting to exist the Industrial League gave out a statement showing that it had seven years, ninety-one individuals and during the past seven years, giving employment to 12,000 people, increasing the population of Memphis by nearly 60,000, and bringing to Memphis about \$22,000,000 in capital stock.

George D. Burgess of Russe & Burgess has gone to New York, whence he will leave for Atlantic City in a few days. He goes to join his wife and family at the latter point. He will be absent between three and four weeks.

S. B. Anderson, president of the Anderson-Tully Company, and interested in a number of woodworking establishments in this city, has returned after an absence of some time.

S. C. Major of the S. C. Major Lumber Company, who recently returned from an extended western and north-western trip, will leave in a few days for the East. He will probably go as far as Philadelphia.

W. H. Russe of Russe & Burgess has just returned after an extended absence from the city. He reached here in time to relieve Mr. Burgess before the latter left on his eastern trip.

O. M. Krebs, manager of the McLean Hardwood Lumber Company in New South Memphis, has returned from his trip to the Pacific coast. He spent practically all of the month of August there.

H. B. Dudley of the Dudley Lumber Company has returned from northwestern points.

W. H. Greble, sales manager of the Gilchrist-Fordney Company, with headquarters in this city, is back after an absence of several weeks. Mr. Greble combined business and pleasure on his trip and returns much improved in health.

R. J. Darnell, Inc., will begin the operation of the big double hand mill and veneer plant at this point on Monday, September 7. The entire plant was closed down some time ago on account of the unsatisfactory conditions prevailing in the hardwood lumber circles.

The J. W. Thompson Lumber Company has begun logging for its mill at Beulah, Miss. It does not propose, however, to put the plant in operation before the beginning of the new year. The company manufactures considerable quantities of cypress at this point.

Frank R. Gidd and H. W. Wells of Chicago, two of whom are identified with the International Harvester Company, are among the more prominent visitors to Memphis during the past few days. Mr. Gidd is sales manager for the Wisconsin Lumber Company, with headquarters in Chicago, and Mr. Wells is connected with the purchasing department of the big company.

Nothing definite has been done by the special committee of the Lumbermen's Club having to do with the adjustment of the matters in hand, but the committee expects to hold a meeting in the near future at which something will be done. The rates furnished Memphis by the railroads since the reconignment privileges were withdrawn have been very unsatisfactory and the adjustment they have made has not been favorably received by the general lumber trade and particularly by wholesale and yarding interests.

NASHVILLE

A recent visitor to the city was former councilman John H. Baskette, who was back on a brief visit to see some of his old friends and acquaintances, and on every side he was given the glad hand. He is now living in Helena, Ark., where he is engaged in the lumber business and is prospering. He spends a portion of his summers in Tennessee still, however, as he has a summer cottage at White Bluff, on the N. & C. west of Nashville. Mr. Baskette was formerly city councilman of the seventeenth ward of Nashville, and chairman of the finance committee of the city fathers. His friends strongly intimate that the next mayor of Helena will be none other than John H. Baskette.

The Nashville lumbermen's baseball team has now become a regularly constituted aggregation, ready to play a game of ball any old time and place. Although the squad is playing good baseball, they are not drawing any too many victories right at this time. Following up their defeat at the hands of the lumbermen of Memphis, they played the strong team of the Knights of Columbus at Athletic park on last Saturday and came out second best in that game with a score of 2 to 1 against them.

Hampton Lane is getting rid of his rheumatism, which has beset him for several years, and he attributes his march toward recovery to

the efficacy of so homely a remedy as buttermilk. It makes his own buttermilk, too, by dropping some kind of a tablet into a quart of fresh sweet milk, letting it stand for twenty-four hours, and then the buttermilk is made. Hampton says buttermilk that will keep indefinitely. He opines that buttermilk contains millions of lactic germs that are harmless to the body, but that eat up every other kind of germs with which they come in contact, and he is "sloking them" on the "rheumatic" germs with instructions to eat 'em all up.

A new furniture company which has just begun business in Nashville is that of the Bradford-McKee Furniture Company, with a capital stock of \$21,000. The following are the incorporators: Carson Bradford, J. H. Bradford, A. J. McKee, A. J. Morrissey, Arthur Rogers and Gordon Stokes Jr.

A special from Athens, Ga., states that Ross Sweetland, a young man living near that place, was killed by coming in contact with a rip saw at his father's sawmill near that place. The boy's body was cut almost in two.

A report from Trezevant, Tenn., where a mouse croaker was run over and killed by a logging wagon.

Night riders have extended their operations in Montgomery county outside of the tobacco world, for reports from Marion, near the Montgomery-Dickson county lines, state that the boiler of the sawmill of Tom Edwards had been blown up. The mill had been operated by Harry Harper for Mr. Edwards, and Mr. Harper had recently received orders in the shape of anonymous communications from "night riders" warning him not to employ any more "hill billys" as laborers. He complied with the order and states that he does not believe night riders blew up the mill.

James Whitner, a Mississippi lumberman in the employ of the Procter-Rupp Lumber Company at White Sulphur, Miss., did this week at a local infirmary. He came to Nashville about August 20 and registered at the Hartman hotel. When found he was in an unconscious state. At the hospital he was unable to tell anyone about himself. His firm was apprised of his death, however, and a sister living in Spokane, Wash., who was finally located, was also notified.

Laborers running a sawmill near Clinton, Tenn., at Holder's mill on Beech creek, had a most exciting experience last week. Heavy rains up the creek caused a sudden rise and before the men could get away the water had caught them. They took refuge on top of the boiler and this escaped, having to swim. Many timbers were washed away.

Driftwood coming out of Stone's river twenty miles above Nashville on last Sunday gave the engineers who are building a half-million-dollar bridge over Cumberland river at Nashville a scare they will not soon forget. Cumberland river is at its lowest ebb and was very low, but by taking advantage of the low stage of the river, the engineers put up the big middle span on false work, waiting to swing it into position when the cast river concrete pier had dried out sufficiently. While the false or trestle work was holding all this weight a great volume of timber came out of Stone's river with a fresh and pouring down against the false work, seriously threatening it. A large force of men in boats and on rafts with axes and saws were put on the river at once and they kept the timber from collecting and tearing the bridge away. It is believed the danger is about over.

Secretary of State John W. Morton has granted a charter to the Pennsylvania Lumbermen's Mutual, or rather has given that company a right to operate in Tennessee. The company has its capitalization, the business being done on a mutual basis. The main office is in Philadelphia.

Secretary of State Morton has also granted a charter to the Algood Coopers Company, of Putnam county, capitalized at \$7,000. The in-

corporators are: L. D. Hoadley, J. B. Thomas, J. A. Keith, H. D. Keith and O. K. Holladay.

Morgan Perkins, a former lumberman of Murfreesboro but now of Memphis, experienced a rough deal on his way home on a visit last week to home folks in Murfreesboro. Someone relieved him of a valuable diamond ring and a considerable sum of money between Nashville and Murfreesboro.

The Stearns mills at Stearns, Ky., probably take the premium in having in their employ as handler of a big saw the youngest of all sawyers, John McDonald, age eleven years. Young McDonald's father died and left him as the sole support of the family. The company gave the lad his father's position and paid him his father's salary. The youngster is said to have an unflinching eye and unerring judgment. The Stearns mills are operated by electricity solely and each machine or saw has a separate and independent motor. Will Freeman, a well-known Nashville boy, now occupies an important position with the company. The company operates a double band sawmill with a daily capacity of 75,000 feet also a planing mill with a capacity of 40,000 feet. The yards now have on hand over 10,000,000 feet ready for the market.

From present indications there will be lively doings on Cumberland river this season in the lumber world as well as other lines of traffic. It is stated that the Ryman line of boats will have opposition in the lower and upper Cumberland. Capt. John S. Tyner, the veteran steamboat man, will soon commission a boat for the lower Cumberland to ply between Nashville and Paducah, making two trips a week, and Messrs. Wiley, Parkinter and associates will soon place a boat to ply the upper Cumberland. Most of the lumber coming into Nashville comes down the river, and this competition will probably mean much to the lumber interests.

BRISTOL

Several important timber deals have been consummated in this section recently, including the sale of a 50,000-acre tract of timber in western North Carolina. The announcement of the deal is temporarily withheld, pending the organization of corporations to take over the property and develop it.

"The demand for timber lands about here is very strong," said W. R. White of Trigg & White. "Notwithstanding the recent flurry, it is selling higher than heretofore and in no other kind of property is values firmer. As an illustration last week there was sold a 25,000-acre tract of timber in Washington county and an adjoining tract of 8,000 acres at \$15 per acre. This was purchased by well-known lumbermen and the price is regarded as only a fair one. However, a year ago this property was on the market for \$7.50 per acre. The same is sold of a number of other large tracts."

Haskell Wood, formerly of the Wood-Galloway Lumber Company, Johnson City, Tenn., has entered the wholesale business here. He was in Bristol this week and left for Baltimore, Philadelphia, New York and Boston.

R. E. Wood of Baltimore, head of the R. E. Wood Lumber Company, was a recent visitor here. Mr. Wood's company, which is one of the largest concerns operating in the South, has a band mill near Bristol. While here he was the guest of E. L. Warren, formerly of the company. Mr. Wood is quoted as saying that conditions are improving very rapidly and the outlook is bright.

Franklin L. Pishlon, the absconding lumber clerk who was arrested at Toronto, Canada, may not be brought back to Virginia for the alleged theft of funds from the Tag River Lumber Company of this city, by whom he was formerly employed as bookkeeper, and the T. T. Adams Lumber Company of Richmond, where he was last employed. It is said that the American National bank of Richmond, which claims to have been victimized by Pishlon, is anxious to have him

brought back, while the lumber concerns are making no effort. He will be paid in Canada on a charge of swindling people there. Fishion is a graduate of West Point and a relative of the famous Alger family of Michigan. He was formerly employed as traveling auditor by the W. M. Ritter Lumber Company of Columbus, Ohio, and came here well recommended.

Among the recent visitors on the local market were: O. J. Mann of the Mann-Caven Lumber Company, New York; E. R. Hoeman, Big Stone Gap, Va.; L. H. Snodgrass, Truck & Snodgrass Lumber Company, Johnson City, Tenn.; H. R. Eisenhauer of Eisenhauer & MacLen, Baltimore, and E. R. Smith, Mead & Spear Company, Pittsburg.

C. H. Smith Jr., has resigned his position with R. A. & J. J. Williams, Philadelphia, and gone with the Tipp City Lumber Company, at Altopass, N. C.

The Whaling Lumber Company was organized here last week by Irving Whaley and incorporated with a capital stock of \$15,000. The officers are: J. B. Bumgardner, cashier of the Citizens' bank of Bristol, president; C. C. English, late of Brown & English, timber dealer, vice-president; Irving Whaley, secretary and general manager. The new company has opened offices in the First National Bank building and will do a wholesale business for the time being, but expects to soon purchase timber and operate mills.

LOUISVILLE

C. C. Mengel & Bro. Co. are receiving their usual shipments of mahogany from British Honduras, and the superintendent of the Louisville yards said that the temporary depression is not being allowed to affect the development of their tracts. M. de Benedetto, who is in charge of the work at Belize, has reported that extensions of the 18-mile railroad into the interior are progressing. Much of the timber land that the Mengels are now going over was cut into by the English 50 years ago, but the work then was less accurate. Reference to the maps of the Mengel concessions shows that only a small part of the available territory has been touched, and that they will be able to send their 15,000,000 feet to Louisville annually for many years to come.

C. C. Mengel has gone abroad to remain until October. He is accompanied by members of his family, and will tour England and visit a few of the continental cities. C. R. Mengel, who has been on the Pacific coast, will return to Louisville shortly.

Gamble Bros. report that business is dull, but that the outlook is somewhat more cheerful. Their sales of dimension lumber of manufacturers of furniture and similar branches have fallen off to less than 50 per cent of last year's sales, but the activity which is being renewed in building circles has resulted in considerable sales in that direction. The planing mill of this company is now being worked full time.

"Business is improving fast," was the report of W. P. Brown & Sons Lumber Company. Though prices are no better, they have found evidences of an increased demand. Plain oak is in greater demand, and manufacturers are buying in larger quantities, having apparently used up most of their reserve stock. Lumber, particularly white oak, is reported to be scarce. Large orders are being filled by the Browns, and large shipments received.

J. D. Brown is laboring under an attack of hay fever.

The mills of the Wood Mosaic Company are running full time, including those at Highland Park and in New Albany, Ind. They are producing about 500,000 feet a month. The trade in quartered white oak is especially brisk. Their lumber tracts, situated

at various points through Kentucky, offer stock for a year's production yet.

The Kentucky Year-Work report that business is quiet. The works are not running full time, and the demand on the part of the furniture manufacturers is not strong.

Though business in Louisville has not been particularly active, the vacations of the local lumbermen have not been extended beyond their usual length, and most of those connected with the larger firms are now back at their desks. Louisville dealers suggest that this is a good stopping point for buyers, as it is so located that it can be reached by travelers passing north or south.

ASHLAND

Leon Isaacson, vice-president of the Yellow Poplar Lumber Company, Coalbridge, O., was a business visitor in the city this week. Mr. Isaacson reports business steadily improving and advises his company feels very much encouraged that business will continue to get better. This company has enough logs to run for several months. They are operating their plant in all departments full time.

The Wright-Saulsbury Lumber Company has not as yet definitely decided on the location of its new sawmill, but will do so now in a very short time. It has been understood that the company is thinking of locating in Ashland.

W. R. Vansant, the sawmill man from Rush, Ky., was a business visitor in the city this week. Mr. Vansant reports business improving and is running his mill steadily at this time.

T. N. Fannin of the Keys-Fannin Lumber Company, has returned from a few days' stay at the large timber operations in Herndon, W. Va.

L. C. Smith, a lumberman of Paris, Ky., was a business visitor in the city this week.

John M. Cranor, at one time a lumberman of this locality but who is now located at Waycross, Ga., is a business caller in the city this week.

W. H. Dawkins Lumber Company has resumed operations at its hand mill in Ironton, O. The company has a supply of logs in the log harbor at the mill that will last for several weeks, and should there be a rise in the river expects to receive a good supply of logs which is now along the river banks. The company reports receiving some very desirable orders.

W. L. Watson of the Mahan Lumber Company, Mahan, W. Va., spent a few days in the city this week. After the usual two weeks' shutdown for repairs operations are again resumed and will very likely continue steadily.

T. J. Boldman of Ironton, O., passed through the city this week on route to Pike county, having been called to that place by telegram stating that his sawmill had been entirely destroyed by fire. Mr. Boldman carried no insurance whatever on his mill and was very fortunate to save the large stock of lumber he had on hand. He expects if there is sufficient timber to justify replacing the mill at the same place, to proceed to do so at once, otherwise the mill will be rebuilt.

The railroad proposition which has been long talked of and looked for through "The Breaks" of Big Sandy, will be a sure thing at no distant date. After two years' lull the South & Western, which won the right-of-way from the C. & O. from Elkbranch to the terminus of the C. & O., and through the rich coal fields of Virginia and other southern states, now has a force of civil engineers with the land officials looking over the route, and it is understood that some of the contracts have already been let for the construction of the road. This road will open up rich coal fields and large timber lands and will tend to make business lively in that section of Kentucky and West Virginia, and not only that, but it will be a great thing for the Big Sandy valley and make it one of the best sections of Kentucky.

The Ashland Lumber Company resumed operations at its mill last week, but could not saw out a few days' account of the very low water. The mill is now closed indefinitely, awaiting a rise in the river. The company expects to saw a large amount of lumber for the General Lumber Company as soon as the river will permit getting logs into the mill harbor.

ST. LOUIS

The month of August was far from satisfactory as to shipments and receipts of lumber to and from this market, according to the reports compiled by the Merchants' Exchange. The report follows:

The receipts of lumber at St. Louis by rail for the month of August this year were 10,576 cars, as compared with 13,883 cars during the same month last year. This shows a falling off of 3,307 cars in receipts by rail as compared with last year. There were 150,000 feet of lumber received by river during August this year, as compared with 944,000 feet received by river last year. This shows a falling off of this year of 794,000 feet received by river. During August, 1908, there were 7,328 cars shipped by rail as against 9,721 cars shipped by rail last August. This shows a falling off of this year of 2,393 cars. There were 111,000 feet of lumber shipped by river during August this year, as against 474,000 feet last August, a falling off of 363,000 feet.

Notwithstanding August is considered the duldest month by building contractors, figures compiled by the St. Louis building commissioner for the month ending August 31, show that there were about twenty more brick building permits issued during August than in August last year, and the aggregate cost of construction will be considerably more.

There were 263 permits issued in August, with an aggregate cost of \$1,216,000, against 148 permits and buildings to cost \$1,211,000 in August, 1907.

The total amount of construction, including all classes of buildings, whether new structures, additions or alterations, for the month just ended, was \$1,415,984, against \$1,515,835 for last August. The falling off on the total amount of construction is accounted for by the few additions to brick structures this season. The building commissioner predicts a general increase in the building line this fall. It will begin to revive this month, he says, but in October there will be a far better gain. Architects are working on many new structures and contractors are figuring on many others.

It is pointed out by the contractors that now is the best time to build. All classes of building material are down. "As a general proposition," one of them said, "lumber is now being sold for 10 to 15 per cent less than during last year, while other stuff is proportionately less. The home builders are discovering this and within the next month there will be a great revival of business."

According to the report furnished by A. H. Bush, secretary of the Lumbermen's Exchange of St. Louis, the following is the number of feet imported and measured by the exchange for the last month:

	Feet.
Plain white oak	72,545
Plain red oak	88,817
Poplar	101,902
Quartered white oak	27,189
Quartered red oak	1,376
Maple	9,206
Gum	45,159
Chickensaw	53,991
Hickory	270
Pecan	1,176
Cypress	12,773
Yellow pine	11,227
Loblolly	361
Ash	19
Iron	2,610
Total	439,647

One of the oldest hardwood lumber yards in the city, that of the Johnson Lumber Company, will retire from business. The president of the company H. T. Reis, intends to give his attention to a mill on the Pacific coast in which he has considerable money invested. Formerly the John J. Canahil Lumber Company carried a stock of \$150,000 to \$200,000 worth of lumber, but it has now been reduced to about \$40,000 with the view of going out of business.

Fred L. Hofman, who was formerly connected with the Fred Heim Lumber Company, from which company he retired some weeks ago, has acquired an interest in the Cherokee Lumber Company, and will manage it. A new wholesale lumber company, the Commerce Lumber Company, has recently entered the St. Louis field. It was started and is managed by A. R. Belt, secretary of the Millmen's Association. In addition to handling hardwood it will handle yellow pine, cypress and sash and door lines.

George H. Barnes of the George H. Barnes Hardwood Lumber Company, who has been at Turtle Lake, Wis., with his family, is expected back in a few days. Mr. Barnes has a cottage at Turtle Lake and his family has been occupying it during the summer. He went up during August.

W. W. Dings, secretary of the Garetson-Greason Lumber Company, who has been down through the southern hardwood territory, has returned. He says, after a thorough canvass of the situation, that he believes the outlook is good for an increase in business this fall. Mr. Krebs of the new Krebs-Schow Lumber Company is down among the hardwood mills in the South. The firm has enlarged its office space recently, having found that more room was needed.

A. W. Sumner, formerly with the Massegale Lumber Company, but more recently with the Ozark Coopers & Lumber Company as traveling representative, has gone back to his old company and will look after its interests on the road.

Theodore Plummer, president of the Plummer Lumber Company, says they have been having a nice demand for ash and poplar recently. A few days ago he closed an order for 100,000 feet of ash and 50,000 feet of poplar. On account of the good demand for ash, he placed an order for 500,000 feet recently. This will have to be delivered by the first of the year. A good business is reported during August by the Chas. F. Luchmann Hardwood Lumber Company. The company's specialty, red gum, is in good demand and E. H. Luchmann, the vice president of the company, says the call is going to be better in the near future.

The inventory of the stocks in the various yards recently acquired by the new St. Louis Lumber Company is being taken. The company will have offices in the chemical building. J. O. Kelly, president of the O'Reilly Lumber Company, has returned home from his summer outing at Gloucester, Mass.

Charles E. Thomas of the Thomas & Proetz Lumber Company says business is better and is becoming more so all the time. He is now more interested in the new baby that came to his home recently than in the hardwood business.

NEW ORLEANS

J. M. Elder, until recently an assistant secretary of the National Lumber Exporters' Association, assumed charge of his duties as secretary of the Gulf Coast Lumber Exporters' Association June 29.

Fritz Jabnick and his sons, all members of the Jahneck Navigation Company, which does wholesale trade business in lumber between New Orleans and over the lake points, have launched a new company to operate a big shipyard in St. Louis and to handle lumber barges and other

conveyances for handling all kinds of lumber will be built at the place.

The charter of the Great Central Company of Lake Charles, La., has been recorded with the clerk of the district court in Calcasieu parish and it is said that the concern, which has bought extensive tracts of land in British Columbia, will immediately begin developing its properties. It is capitalized at \$100,000, with the following officers: D. R. Swift, president; C. A. McCoy, vice-president; William Allen, secretary, and L. H. Moss, treasurer. The company has purchased in the vicinity of Vancouver, B. C., estimated to contain 3,000,000,000 feet of lumber, mostly fir and cedar, and will shortly begin marketing the timber. The properties are on the upper end of the Great Central lake and the properties will be rafted through the lake to tidewater.

A contract for a big supply of lumber to be exported to Jamaica was recently signed here by Capt. Louis Paul Hartz, owner of one of the largest wharves in the West Indies. C. F. Hay & Co. engineered the local end of the deal. The contract calls for 2,500,000 feet. Capt. Hartz is in the market for 20,000,000 feet more. Much of this lumber was loaded on the steamship Ramsey, which took also 12,000 sixty-foot piles.

Dispatches from Alexandria, La., indicate that the Dalton-Clark Barrel & Stave Company, which now has its plant at Winnfield, will locate its factory in Alexandria. The Progressive League has offered attractive inducements to the company and it is proposed to locate the Alexandria mill of the J. E. North Lumber Company at Bond, Miss., which has been in the hands of a receiver for some months, is reported to be preparing for a resumption of operations. F. D. Taylor, formerly connected with the New Lumber Company at Hattiesburg, will, it is stated, manage the plant.

Lumbermen of the gulf ports are jubilant over the prospect of heavy fall shipments to Cuba. Several large contracts have already been closed and others are being negotiated at the present time. Gulfport and Pascagoula will probably handle a large share of this business.

The Sumral Furniture Company has been incorporated at Laurel, Miss., by J. L. Sumral, J. E. Coats and others. It expects to operate extensively in Mississippi.

Hardwood manufacturers have been much interested in some of the handsome hardwood products displayed at the Home Manufacturers' Exhibition of the New Orleans Progressive Union which is now being conducted in this city. The exhibition began September 1 and will close September 20. Several beautiful furniture exhibits are included among the booths, the New Orleans Furniture Manufacturing Company occupying more space than any other exhibitor. Many beautiful manufactures of hardwood are on display. There are 120 exhibitors at the fair.

MILWAUKEE

Wisconsin lumbermen were well pleased that Senator Isaac Stephenson, Wisconsin's greatest lumberman, was nominated in the recent primary election to succeed himself as United States senator. Lumbermen say that the victory was a genuine one in that it came from the people direct. The "grand old man" of Wisconsin secured the nomination by a handsome plurality and counted the heaviest vote in all of the lumber counties of the state.

R. F. Hodges, Milwaukee wholesale hardwood lumber dealer, spent part of the past week in a business trip about the state.

G. M. Maxson, secretary of the Cooper & Maxson Lumber Company, is making a business trip through northern Wisconsin visiting various milling centers.

The grain and feed elevator recently erected by the Wilbur Lumber Company at West Allis, a suburb of Milwaukee, is now completed and

is doing its best service. This new phase of the company's business is expected to be an important one. T. A. Huetel, buyer for the company, with headquarters at Milwaukee, made a recent trip to Wausau, Wis.

J. J. Johnson, president of the Johnson Lumber Company, with his wife, recently returned from an extensive automobile trip through various points in eastern and northern Wisconsin to Escanaba, Mich. Mr. Johnson owns a handsome Packard touring car of 60 horsepower and a Pope-Hartford runabout. Thomas and William Johnson, sons of J. J. Johnson and both members of the Johnson Lumber Company, recently returned from an automobile tour of Illinois, Indiana and Michigan points.

W. E. Allen, president of the newly organized W. E. Allen Lumber Company, recently returned from a combined pleasure and business trip to Oshkosh, Wis.

G. A. Green of the Greenwood Lumber Company was a recent Milwaukee visitor.

Suit has been brought against Frank N. Sault, a well-known Milwaukee wholesale lumberman, by a Washington firm for the recovery of a claim amounting to a little over \$1,000.

Forest fires have been raging in the northern Wisconsin lumber country for the past week and extensive damage to both standing and cut timber was the result. The worst conflagrations were experienced at points near Washburn, Park Falls, Phillips and South Superior. Damaging fires have also been burning in the districts in northern Wisconsin along the shores of Lake Michigan.

The Bird & Wells Lumber Company's mill at Wausau, Wis., is again in operation after an idleness of about a month. The mill has been thoroughly overhauled and needed improvements were installed during the close down. At present the plant is operated only on the day shift, although plans are under way for both night and day operations.

The Brooks & Boss Lumber Company's sawmill at Escand, Wis., has completed the season's cut and is closed down until early in the winter. The mill has been in continuous operation both night and day ever since last fall and an especially large cut of lumber was turned out.

Wausau and Merrill lumber companies are raising "deadheads" from different points on the Wisconsin river. The work is under the charge of J. H. Runshaw, and the crews engaged in the "submarine logging" average about 500 logs per day in the work.

The Prescott Sawmill Company of Menominee, Mich., is now working on a new sawmill to be erected at the new town of Goodman, Wis., founded by the Goodman Lumber Company, Marinette.

The sawmills of The John Week Lumber Company and the Clifford Lumber Company at Stevens Point, Wis., are being pushed at their full capacity. It is estimated that the season's cut will be approximately 20,000,000 feet.

P. L. Cusick, well-known wholesale lumberman at West Allis, suburb of Milwaukee, is experiencing an excellent run of business. Mr. Cusick supplies all of the great manufacturing plants located at West Allis, including the Allis-Chalmers Company and others, with most of the lumber required, and the revival in the manufacturing field has meant a greater demand for lumber. Mr. Cusick came to West Allis in 1902, when the city was in its infancy, and has seen it grow from a little hamlet of 500 to a bustling city of nearly 10,000 and with the reputation of being the richest fourth class city of its size in the United States.

The Kaukauna Lumber & Manufacturing Company at Kaukauna, Wis., are planning on a busy sawing season this coming winter. The electric driven plant is being overhauled and everything is being put in readiness.

The Fort Lathrop Lumber Company at Mellen, Wis., is erecting a new dry kiln on large proportions.

The sawmill plant of Joseph Kedlock at Klondike, Wis., was destroyed by fire recently; loss \$2,000.

The plant of the Choute-Hollister Furniture Company at Janesville, Wis., is operating on a full schedule and plans are under way for taking on additional orders in the near future.

An inheritance tax amounting to \$14,116.23 has been paid by the trustees of the late Col. I. H. Wing, in his time one of the best known lumbermen in Washburn county, who died leaving an estate of nearly \$800,000.

Complaint has been filed with the Interstate Commerce Commission by the MacGillis & Gibbs Lumber Company, Milwaukee, which alleges Chicago, Rock Island & Pacific Railway Company made excessive freight charges on lumber shipments. The case will be considered with others by Commissioner Harlan, who will be present in Milwaukee on September 28.

Orders have been placed with the American Seating Company by the school board committee on building of Milwaukee for furnishing seats for the city schools. The contract, which calls for 514 large seats at \$2.35 each and 488 small desks at \$2.25 each.

Bids for the furnishing of the chairs to the new Milwaukee auditorium, now building, were opened September 9. Specifications called for some 10,000 chairs of the opera and portable variety.

J. T. Barber and G. G. Moon, the well-known Eau Claire, Wis., lumbermen who were indicted on the charge of being implicated in the land fraud case in Idaho and who were recently freed of the indictment by Judge Tharles in the United States court, have again been placed under arrest on the same charge. Both lumbermen are out on \$5,000 bail each.

The Wheeler Lumber, Bridge & Supply Company of Des Moines, Ia., has filed articles and statements to operate in Wisconsin. The capital stock of the company is given at \$500,000, \$100,000 of which is represented in this state. The Wisconsin branch of the company is located at Wittenberg.

The Crescent Casket Company of Pewaukee, Wis., has been incorporated with a capital stock of \$7,000 by E. McDowell, W. A. Griffith and John Morrow.

The lumber yards and sheds of the F. G. and C. A. Stanley Lumber Company at Chippewa Falls, Wis., were recently destroyed by fire with a heavy loss. An automobile belonging to the company also met destruction.

A new three-story addition 90x64 feet has been completed at the plant of the Art Furniture Company at Sheboygan, Wis.

The plant of the Portage Lumber Company at Portage, Wis., manufacturing a line of woodwax specialties, was burned recently with a loss of \$6,500; no insurance.

MINNEAPOLIS

Revival of demand for hardwood stock on the part of Twin City factories, especially the sash and door people, has brought quite an influx of salesmen for wholesale concerns to these towns.

Among the recent visitors who have been taking the pulse of the trade and incidentally placing a few orders are: Otto Meyer, representing the J. W. Thompson Lumber Company, St. Louis; L. N. Burgess, with the Steele & Hilbard Lumber Company, St. Louis, hardwood lumber and veneers, who brought Mrs. Burgess with him and has been spending some time on a vacation at Lake Minnetonka; Alex. Bohm, with the Waldstein Lumber Company, St. Louis; Bert Trump, with the Thomas & Proetz Lumber Company, St. Louis.

There was another gathering of hardwood men here the other day that caused considerable amusement. One of the local wholesale firms had placed an order in Chicago for a million feet of

2-inch oak, and the order was divided up among several concerns. It was specified that the stock was to be clear. As the cars began to come in they were turned down by the buyers' inspector, and the association inspection showed car after car to contain a percentage of common. The buyers refused to accept them, and each concern that had shipped the stock sent representatives up here to dispose of the rejected cars. There was quite a trade here in 2-inch oak for a while.

Halsted & Booram, hardwood wholesalers here and representatives of the Fullerton-Powell Hardwood Lumber Company, South Bend, Ind., have moved their offices to 308-309 Bond Exchange.

A. S. Bliss of the Payson-Smith Lumber Company, whose marriage was told of in the last issue of the Record, has been attending a honeymoon vacation at Lake Minnetonka.

Samuel H. Davis of the S. H. Davis Lumber Company, this city, was married August 26 in Janesville, Wis., to Miss Minerva Fisher, daughter of Mr. and Mrs. A. L. Fisher of Janesville. They went East for a wedding trip. John H. Cook of John Hein Company, manufacturers of hardwood lumber and coeprage at Tony, Wis., was a business visitor in Minneapolis a few days ago.

The Standard Cedar & Lumber Company of this city has bought the cut of a Michigan sawmill, amounting to 2,000,000 feet of pine and 500,000 feet of hardwood.

The Fulton & Libbey Company, sash and door manufacturers of this city, were placed in the hands of a receiver September 3 by order of the federal court on petition of creditors. F. H. Libbey, formerly a member of the company, was made receiver. The assets are figured at about \$40,000 and the liabilities are nearly \$60,000.

Hamilton Broughton of the Forbes-Everts Lumber Company of this city has returned from a short business trip to Wisconsin.

L. C. Nolan of Nolan Bros., hardwood wholesale dealers at Memphis, but formerly of St. Paul, has been on a business and pleasure combined, visiting with relatives and friends.

F. W. Huswell of the Huswell Lumber & Manufacturing Company, hemlock and hardwood manufacturers, has returned from a business trip of two weeks' duration.

August Cook, in the office of the Minneapolis Lumber Company, has been taking a short vacation at Ruby, Wis., where the mill of the Ruby Lumber Company is operated.

SAGINAW VALLEY

The lumber business is getting on its feet again. This is noted everywhere. More lumber is being sold and being moved. There is more in the way of mill machinery and equipment. The cars standing by the hundred on the mill sidings are disappearing and lumbermen talked with have all put on their old time cheerfulness.

The M. Garland Manufacturing Company of Bay City is equipping three new sawmill plants with band saw outfits. Last fall N. Michaelson built a shingle mill at Houghton lake, and this spring the N. Michaelson Lumber Company was now in progress and the erection of a band sawmill is organized at the same place. The main office of the company will be located at Grayling. Machinery is being furnished for a mill now in process of erection at Grayling, by R. Hanson & Sons. These mills are practically duplicates of that of the Richardson Lumber Company at Bay City, built last winter, one of the handsomest and most convenient plants in the country.

Still another band mill is for the big plant at Bay City of W. D. Young & Co., being the adding of another band saw outfit to the mill built last winter, making it when complete the smartest double band mill to be found. Young & Co. will also erect a large warehouse for storage purposes. All of these firms have ample supplies of timber for years.

C. A. Bigelow reports the Kneeland Bigelow Company and the Kneeland, Euell & Bigelow mills at Bay City will run right through the season, one ten hours a day and the other day and night. Lumber is selling and there is a good inquiry. These plants are getting two train loads of logs daily from the North.

There have been heavy fires the last ten days in northern Michigan owing to the extremely dry weather, and much damage has been done. A number of small mills have been destroyed and logs and timber either burned or injured. In Missaukee county alone the damage is estimated at \$75,000. In Otsego, Crawford, Roseconum, Montmorency, Ogemaw, Gladwin and other counties, much injury and loss has resulted. Some logs have burned, but as a rule lumbermen do not keep as many logs on skids at this season in the woods as during the winter months.

Mershon-Bacon Company at Bay City is making box shooks out of hardwood and has been very busy, working a full force and in some instances running overtime. Maple ash, beech and other woods are utilized.

The high prices at which white pine lumber has been held stimulates the manufacture of boxes from hardwood material. Some other box plants also use more or less hardwood lumber. The box business has picked up materially of late and this is giving the box plants more business.

S. P. Ferry will operate two camps near Millersburg this winter and will put in 4,000,000 feet of hardwood logs. The sawmill of the Ottawa Hardwood Lumber Company at Tawas City, has passed into the hands of John Hantzian-Schitsch & Son of Bay City, and they are now operating the plant.

CADILLAC

The month of August has been an exceptionally dry and hot one for northern Michigan and there has been very little, if any, rain since the early part of the month. Consequently forest fires have been raging which have done considerable damage to cordwood, pulpwood, bolts, bark and small timber already cut and lying on the ground. So far we have not heard of much damage to standing timber.

Forest fires are raging fiercely in Pioneer township, Missaukee county. The old pine slashings have been swept and the fire is entering the standing timber. Unless rain in good quantities comes quickly much damage will be done to the standing timber.

Word comes from Lake City that large quantities of lumber and saw logs, Iverson's sawmill and adjacent buildings, together with the homes of farmers in that vicinity, have been burned. On one farm in Otsego county other livestock were consumed. It is claimed over 800,000 feet of added lumber were destroyed at Iverson's mill. Mitchell Bros. Company lost about 2,000 cords of 4-foot wood in Missaukee county. Cobb & Mitchell, Inc., lost 1,000 cords of wood and a few thousand railroad ties in Emmet county.

J. C. Knox, secretary of the Michigan Hardwood Manufacturers' Association, is attending the semi-annual meeting of the Hardwood Manufacturers of Wisconsin at Wausau, Wis., this week. After this meeting, he will visit Chicago and St. Louis before returning to Cadillac.

A. W. Seeley of the firm of Phillips & Seeley, Saginaw, is in Cadillac this week on business.

Hess & Worthworth of Bay City have taken a membership with the Michigan Hardwood Manufacturers' Association.

Forest fires have also been menacing the village of Buckley, Wexford county, and a large force of men have been lighting the flames in order to save the town. The Wexford Lumber Company has been the heaviest loser, a large quantity of logs, bark and wood having been consumed together with some standing timber.

Messrs. Fred A. Phillips, W. L. Saunders and Joseph Murphy took a fifty-five-mile trip into Selm, Ross and Marsh townships in an automobile to ascertain what extent the forest fires were damaging their timber. They found the accounts not overdrawn so far as the burning of underbrush, wood, bark, etc., were concerned, but not much damage to standing timber.

Henry Hallon of Colts & Mitchell, Inc., has returned from a trip to Springfield.

Mrs. George A. Mitchell, wife of the pioneer lumberman 748914, died about a week ago.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

Hardwood sales conditions in Chicago and surrounding territory are very satisfactory, and there is an increase in demand from nearly every source of distribution. The furniture and interior finish people especially are placing a good many orders. There is also a marked renaissance in railroad buying. This prolific source of so much business has constituted but a very small percentage of sales for nearly a year, and concerns interested in this branch of the trade are encouraged to believe that there is going to be a big volume of hardwood orders from the rail roads from now on.

Quotations on different varieties of hardwoods are still irregular and range from the highest notch prevailing under sales conditions of a year ago to \$3 and sometimes \$5 off the old lists. It is expected that there will be a settling down of values before very long, which will more likely approximate the higher range of prices than the lower ones.

NEW YORK

The hardwood market at New York does not show any increased activity so far as the volume of lumber moving is concerned, but the market shows a steadiness and an upward tendency in demand for prices, particularly on good grade stock. It is very evident from the current condition of the market that buyers, both among the retail yards as well as the local manufacturing trade, are waking to the fact that the bottom has long since been reached so far as hardwoods are concerned and that a change at all will be for the better. Hence buyers who have been holding very close to the wind, or going shy on stock since the spring, have all of a sudden come into the market with at least inquiries, and considerable business is resulting. This is especially true of the trim and local manufacturing trade and indicates that with the rapid approach of fall, consumers are contemplating a further revival of business and are aiming to have supplies in hand to take care of it. Stock most in call are oak, poplar, ash, birch and basswood. Quite a number of plans have recently been filed for lease structures in which the trim will figure largely in oak, poplar and birch, and as consequence the demand for those items of lumber will undoubtedly be somewhat stimulated by reason of such demands.

An interesting feature is the increasing demand being manifested in gum specialties. A little encouragement has been felt of late in these lines and while gum has increased largely in price here in recent years, the prevailing rates are its further development and considerable progress. Taking the market as a whole there is no question but what there has been more stock available for the market than there has the summer season, but all dealers of considerable size today reached a realization that hardwood lumber is worth getting more to and more here particularly

She saw Cadillac grow from a mere spot in the tall pine timber to one of the most progressive cities in northern Michigan. She leaves a daughter, three sons and many friends to mourn her loss.

The A. F. Anderson Lumber Company has succeeded and taken over the interests of Mr. A. F. Anderson at South Boardman. The company is capitalized at \$150,000, and the officers are: A. F. Anderson, president; J. S. Campbell, vice president; W. E. Gustinie, secretary and Fred A. Anderson, treasurer.

is, because of an appreciation of the full value of hardwood stock that stock buyers' good asset and one which is limited in supply so far as the immediate future is concerned. Anything that has been lacking in the volume of trade here that made up by this realization on the part of hardwood manufacturers and wholesalers, with the result that there is a constantly decreasing tendency to shade prices to any degree when it comes to inquiries for orders for the better grades, in poplar, oak, ash etc. Chestnut is holding very firm, more particularly by reason of scarcity than to any material increase in the demand. Maple is rather dull with ample stock offerings for all wants.

In summing up the whole situation the salient feature of the present market is the shortage of stock in the yards as well as local manufacturing trade, and any material increase in the consumption during the fall and winter trade will immediately be felt in a stiffening of values all along the line.

BUFFALO

Lumber is not changing front very much here. This report a steady improvement, better so, while for the most part it does not improve evenly, all dealers finding the demand good one week and quite other poor the next week. There is, though, a larger amount of big orders in sight, some of the railroads being in the market and they buy heavily as a rule.

In hardwoods the demand is still for quartered oak with plain oak not showing the strength it should, as it is not very plenty, so that it would not do much on a par with quartered if the demand should increase very much. As it is, all demand is increasing so slow that the dealers and mill owners are still waiting for a larger stir before stocking up very much. They carry a good assortment, enough to meet all present needs, and will let the future decide the rest. The winter woods are selling much as they have done, none of them showing any further activity than enough to make it plain that they will have to be a busy time when the demand returns to the normal. Birch and chestnut are among the least active though some dealers are able to move quite an amount of them. It is by no means settled in any one's mind whether there will be a big fall trade or not, though at present it does not look like it.

What is needed yet is a disposition on the part of the more speculative buyers to ask no more than they at present need, but it cannot be found that they are doing so. Apparent for present consumption covers the bulk of most of it.

PHILADELPHIA

Business during August, though not heavy, has been of a better quality than during the earlier months of the season and less

dependence on compulsion. The lumbermen are learning from experience that recovery from a slump must be slow, hence have ceased to be over-enthusiastic by the occasional and intermittent surges of buying, but from the manner in which orders are now being booked, they believe themselves justified in looking forward to a steady improvement. Encouraging reports come in from the various furniture manufacturing centers, to the effect that, although a strict conservatism is everywhere observed in buying, there is none the less a decided show of reviving activity. The stocks in the yards and factories of best grades of hardwoods have reached the point when buying becomes compulsory, and it is noticeable that there are some who are already looking in a view of the probability of a car-shortage and the trouble with the logging and shipping on account of the autumn floods, which conditions will naturally force up values. There has been no startling change in the hardwood prices during the fortnight, poplar, plain and quarter-sawn oak run along in good style, with maple flooring stiffening and the other woods holding old reputation. A slight improvement is noticeable in some of the lower grades and cuts, attributable to a more active movement of these grades by the job factors.

PITTSBURG

The beginning of fall finds the lumber market in Greater Pittsburgh greatly improved so far as general conditions go. Locally the situation is, rightly, discouraging. The increase in buying activity and making question has made unnecessary the purchase of quite a large amount of lumber during the past two weeks, and the hardwood men have got their share of this business. Local dealers announce that in the Middle West and also in the East there is good demand for lumber, and this call is what is responsible for higher prices now being asked in certain lines.

The factory trade for hardwoods is picking up steadily and the indications are that most plants will be running nearly to capacity by October 1. Railroads are getting in shape to put out requisitions for good lots of lumber, but so far they have been very tardy in placing orders. The building situation outside the city seems to be going along nicely, and wholesalers look for large trade from this source later in the fall, although it is naturally out of season for building. In Pittsburgh proper, the amount of lumber sold is very small. Yards are buying only where they have to fill their stocks. There is practically no house building going on, and although a half dozen large contracts have been awarded for big office buildings downtown in the past few weeks, these projects have not yet reached the state where they do the hardwood men any good.

The market for ties and poles is much slower than it should be judging from the inquiry. The trouble seems to be to close up orders, oak is a little better than holding its own, and white pine is in good demand. The call for maple flooring is increasing a very little but it comes from sections quite removed from Pittsburgh. Chestnut is a little more steady in the higher grades, but the common grades are moving slowly. This is also true of spruce, although dealers are evidently expecting higher prices for this wood, inasmuch as they are quoting with much more than the usual margin on these items, and there is little chance of a cut in prices this fall. Stocks of hardwoods at the country mills are pretty badly broken. On account of the dry dry weather of the past six weeks a large number of mills in Pennsylvania, Ohio and West Virginia have been unable to operate

CINCINNATI

August, though usually quiet, has proved the best month of the year so far in the local hardwood market. The demand for large quantities of lumber was greater than for some time, and that leads the local dealers here to believe that the real trade is starting.

The demand for poplar is still as urgent as it was some months ago, especially in the better grades. Prices on all grades are being held very firm, and some dealers state that they are on a par with those obtained last year at this time. The demand for quartered and plain white oak has also developed a much better tone during the past few weeks and the prices obtained for those grades are regarded as being very firm. Several dealers are still complaining of the shortage of some of the desirable grades of wood, but the present demand has not caused them any fear. The furniture trade is buying only what they need, but are expected to soon increase the amount of lumber as business is growing better. Walnut, mahogany and several other woods used in the manufacture of furniture are only moderately active, but nevertheless the prices are being held up fairly well.

BOSTON

The market for hardwood lumber in Boston and vicinity has developed quite a little additional strength during the past two weeks. Some dealers report many more inquiries and predict a fairly active market this fall. Others state that while in receipt of good inquiries, they are closing very little new business, and would not be surprised to see the demand continue of a very moderate character until about the first of the new year. The furniture manufacturers have not been free buyers, but it is well known that their stocks on hand are small. Some dealers believe this trade will start up in a brisk way inside of a few weeks. A prominent dealer states that some of the Massachusetts furniture manufacturers now prefer New England hardwoods to those that come from a greater distance. This may account in part for the smaller demand for western and southern hardwoods. A salesman who has recently returned from a trip through Canada states that he found more interest in hardwood there than he expected.

Prices of hardwoods have gradually been showing firmer and some grades are now higher than they have been at any time this year. Quartered oak, one-inch, is quoted at \$80 to \$85, although there are mills that will not sell under \$85. A little business has been done at this latter figure. Plain oak continues to sell slowly. Offerings are rather large, and prices for the most part are easy. A few manufacturers, however, are asking \$52 to \$54 for one-inch one's and two's. Brown oak continues to be in very good demand, with offerings scarce. Dealers state they could do a larger business if they could get the supplies. White ash continues in quiet call, with offerings large. Chestnut has received very little attention of late and it is possible to buy it at concessions. Prices of North Carolina pine have grown a little firmer and some of the larger mills will not entertain low bids. The better grades of cypress and whitewood are in moderate demand with prices more steady.

BALTIMORE

The hardwood situation in this market is practically without changes of any consequence. The management noted some time

ago seems to continue, but its progress has not been as rapid as the members of the trade here had expected. Whatever the retarding factors may be, does not seem to be clear even to experienced dealers and manufacturers, but there can be no doubt that the recovery has been considerably slower than the various classes engaged in the handling of hardwoods felt they had reason to hope for. It is thought that the political situation may be regarded as perhaps the most important element among those that have in a way put a brake upon the movement. While there does not appear to be much doubt as to the outcome of the national contest, the campaign engenders just enough uncertainty to cause hesitancy in various directions about pricing orders.

The demand for stocks is of a very fluctuating nature. Some weeks ago the hardwood men here are quite busy and the aggregate of transactions approaches closely the record for the corresponding period of 1907, and at other times quite the contrary may be the case. Just why the movement is so erratic no one seems to know. It is obvious, however, that the yardmen are not buying with that freedom which the low prices and the depleted condition of the stocks would appear to warrant. There is comparatively little speculative trade, and while this would seem to be a favorable opportunity to place liberal orders and hold the lumber for the inevitable rise, the prospect of making large profits is not taken advantage of to any marked extent. It may be that the financial depression has placed most of the dealers in a position where they are obliged to hold as much as possible, and where they cannot allow themselves any latitude. Prices, however, are fairly steady and have become rather firmer in the past two weeks. Some signs of an upward movement are discernible, too, and the prospect is by no means unpromising. The foreign situation, however, continues discouraging. The accumulations abroad are very large, and the prospect of a fall in prices is so great that the shippers are obliged to leave the shipper without a margin of profit. Frequently he faces losses. Every effort is being made by the National Lumber Exporters' Association to check the forwarding on consignment, which practice is blamed in great part for the injury done to the foreign business. Under the circumstances the shippers here have been keeping very quiet, and as a rule they confine themselves entirely to shipping on orders only. Even these shipments are hedged with precautionary clauses in order to narrow the scope for disputes as much as possible.

CHARLOTTE

There has been a great falling off in dimensions of lumber on account of the demoralization of the cotton mill business, and the sale of large sizes has been greatly cut down, but otherwise business shows a healthy and almost normal aspect. The demand for flooring and ceiling and high-grade manufactured product, desks, etc., is good. Many grades of lumber show decided increases in market prices, and on the whole business is decidedly better than was the case several months ago. Furniture makers of this state report the best kind of business during August. Many large new concerns are starting up in different parts of the state, and it would seem that the lumber industry has recovered to a marked degree from the setback caused by the panic. The record-breaking storms that prevailed over North and South Carolina several days ago did immense damage to lumbermen, but yet no estimate of loss can be made.

CLEVELAND

While the call for hardwoods of various kinds has increased materially during the past two weeks the same line of stock is moving now as a month ago. Quartered oak seems to be in best demand, although the call for poplar is also good. A number of manufacturing concerns using hardwoods in considerable quantities have resumed operations and depleted stocks are being replenished. The financial situation in Cleveland is greatly improved over that of a month ago. Plain oak is stronger, with some slight call for hickory and other hardwoods.

COLUMBUS

Sales this week have been mostly to furniture dealers and the railroads are said to be in the market for large quantities of white pine. In addition to the foregoing, the demand for lumber for building purposes shows decided improvement and plans for many new structures are now in the hands of the local architects. The building situation is decidedly improved and, with the railroads and furniture manufacturers in the market for large quantities of lumber, it seems reasonable to expect considerable improvement in the trade from this on. The general business situation in Columbus is gradually getting better. Industrial plants are getting ready to resume, and there seems to be a disposition to move forward all along the line. It is expected that several large structures will be started before the close of the year. The building situation shows signs of decided improvement and an optimistic feeling prevails, not only in the lumber trade, but also in all lines. For the year ending with August, 1908, building operations in this city showed a decrease of about 25 per cent, compared with the previous year, when business conditions were far above normal. The total cost showed a decrease of a little over \$1,000,000, and the number of permits showed only a moderate falling off. Everything considered, the building situation was much better during the past year than was anticipated.

Prices for nearly all grades of lumber are on the up-grade and show an advancing tendency. The oaks are no higher than they were a week ago, but chestnut and yellow cypress are about \$2 higher than they were a few weeks ago. Compared with the market on August 1, yellow pine is about \$2 higher and shows a good demand. Inquiries for nearly all kinds of lumber are numerous, and many orders have been placed during the past week. There is a good call for oak flooring, and poplar shows an excellent demand. Stocks in, of nearly all kinds of lumber, are low and that is regarded as one of the best factors in the situation. The general market seems to be in a good condition and many buyers are inclined to take advantage of the prevailing low prices.

INDIANAPOLIS

Hardwood prices are being forced upward by the increased demand and the inability to get all orders filled promptly. Local hardwood and veneer mills are busier than they have been at any time this year, and conditions are exceptionally bright.

Facts and public buildings valued at \$750,000 are now under course of construction, and local hardwood men have contracts for the inside hardwood finish. Furniture plants in this and other growing cities are also working full time, and vehicle manufacturers are enjoying the best business of the year.

Local hardwood men look for present conditions to continue throughout the fall and winter, with the exception that prices will likely go higher.

EVANSVILLE

The hardwood market in this section continues to improve, more activity in the market being noticed than at any time this year. Prices are holding their own; in fact, a slight advance has been noticed on some grades of oak. Business with the local furniture factories is picking up, and it is thought the fall trade will be the best they have had in some time. It is also noticeable that the railroads are also getting in line for their requirements. It seems that this branch of the lumber business has suffered more than any other, and it is gratifying to know that the railroads are coming around. The demand for plain oak is stronger than for some time past. Poplar is also picking up. Quarters oak remains strong.

MEMPHIS

Business conditions in this section show material improvement as reflected in the financial statement of the banks, in bank loans, in building operations and in the increased volume of business in almost every line. It is doubtful if the cotton crop outlook is quite as favorable as it was a short time ago. The crop has deteriorated considerably throughout this section but, as prospects were unusually brilliant two or three weeks ago, the loss in condition still leaves prospects for a very large yield. The movement of cotton has begun on a moderate scale, but it has not assumed large enough proportions to interfere materially with the handling of lumber or other commodities. In other words, most of the railroads are still able to supply necessary cars for the prompt handling of shipments. The steel and iron business in the southern field is very active and most of the plants which were closed down have either resumed operations or propose to do so at an early date. All reports received here indicate a marked increase in the volume of business being done in yellow pine. The hardwood lumber business has improved to some extent, but is still comparatively slow. Buyers who return from northern and western markets state that the prospect is brightening somewhat and that there is a good demand not far distant. Some hold the belief that there will not be material improvement until the presidential election is out of the way, while others think that there will be a gradual gain in the volume of business before that time.

Conditions surrounding production show a little change. Manufacturers are still exhibiting a disposition to go rather slow in the operation of their mills and the amount of hardwood lumber now being produced is exceptionally small. Occasionally plant owners and some of the companies which possess on timber are forced to run their mills so that they may get the timber off within the time prescribed in their contracts. Aside from such, however, the number is particularly small and the trade goes into the winter with the lightest amount of lumber in many years.

There has been no improvement of the business in export conditions. The amount of assigned stock on the other side is reported to be still large, and more recent advice from competent authorities indicates that the bankers are disposed to cut down exports as much as possible and to keep every dollar here to carry until business conditions

have righted themselves. The amount of lumber being sent abroad on direct sale at this time is exceptionally small and leading exporters here do not expect material change for the better at an early date.

The demand for hardwood lumber is still improving and the volume of business is slowly returning to normal. The demand, however, is somewhat spasmodic and is confined to special kinds of lumber rather than applicable to the entire list of hardwoods. Buyers are encountering some difficulty in their efforts to purchase lumber at very low prices, and this fact is beginning to be reflected in a general advancing tendency. Production continues on a rather small scale, but gives slight evidence of increasing with the return of more favorable market conditions. The stock of low-grade lumber of all kinds is rather full in the Memphis territory and the demand therefor is disappointing. The higher grades, however, are generally in fair to good request, and most of the business being put through in these. The demand from export channels is very light and no material improvement is indicated in that direction for the near future. Leading exporters themselves are authority for this view. They are doing a very small percentage of normal volume in export lines, finding a rather satisfactory market in the United States.

There is an excellent demand for plain red and white oak, particularly in inch stock. The supply of this is comparatively light and prices are firm. Sales are reported on a basis of \$8 for inch plain red and \$10 for the same size of plain white. This is quite an advance over the recent level. Prices are, of course, Memphis stock thicker than one inch is in only fair request, and the supply is generally relatively more plentiful than inch stock. There is also a demand also for quarter sawn red and white oak in the higher grades. The lower grades of oak, plain and quartered, are comparatively slow, and there is no scarcity at the moment. Cypress shows considerable improvement in ships. There is a particularly good request reported for 1 1/2 inch, which is comparatively scarce. Selects and the upper grades, however, show no material improvement. The demand is rather slow and the movement is small. Prices, too, are rather unsatisfactory. There is improvement in the demand for boxboards and first and second cottonwood. The carriage manufacturers are taking some of the latter, preferably 1x12 inch and up and 1 1/4x8x12 inch. Prices, too, show some improvement. Boxboards are being sold around \$41 to \$42 per thousand, f. o. b. here. The lower grades, too, are in request, but there is a comparatively small amount of these for sale, especially among box manufacturers who consume the bulk of their output in their own factories. Gum is rather slow in all grades. The improvement in yellow pine has not gone far enough to remove this lumber as a strong competitor of gum, and this is given by some of the trade as one of the reasons for the comparative slowness. Ash is slow of sale and is one of the really disappointing features of the list. There was quite a demand recently for thick ash in certain dimensions, but there is very little evidence now of any marked activity even in this. The sale of poplar is good, but there is demand enough to take up current offerings at a very satisfactory price.

NASHVILLE

A good deal of optimism pervades the local market at this time. All the dealers report business to be picking up right along in fact, everyone seems pleased with the present and enthusiastic

over the outlook for the future. The month of August just ended shows in many instances twice as much business done as in July. The wholesalers and exporters are on the market after lumber again. Stocks are light both at mill points and distributing centers. Quarters oak is in good demand. There is as usual no surplus supply of it. Plain oak is coming into its own again, and the situation with poplar shows steady improvement. Everything, in fact, looks good just at this writing.

BRISTOL

It is the general opinion among lumbermen that trade will continue to pick up and that business will resume its former status early next year. It is believed that the presidential election will have some influence on business and that when it is over business will be given an impetus. Trade has been slightly better of late, with a stronger demand and little change in prices. The yards are all pretty well stocked, though nearly all of the mills are running. Much lumber is being shipped from the rural districts, having been hauled to the railroads.

LOUISVILLE

The general tone of the Louisville market is optimistic, though a more cheerful outlook is being taken. The demand for lumber on the part of the manufacturers is expected to grow stronger in the near future, and a confident feeling is being produced as a result among the dealers. Reports to the effect that more building is expected than has been reported of late are now having a good effect on the market. A gradual improvement, leading back to the active conditions which preceded the panic of last fall seems to be anticipated generally. As a result of the expectations of brisker trade, the output in the producing districts is not being seriously curtailed.

The dull season with furniture and piano manufacturers has caused the veneer trade to remain quiet, and few of the local mills are operating more than half time. The flooring trade is picking up steadily the West particularly showing an improvement, though business from the East is still quiet. The mahogany industry is quiet in the matter of sales, but confidence is expressed that in a few months the normal output will be resumed. Meanwhile, as regular shipments from the points of production are being received. The dimension stock trade is also quiet at present, but in line with other branches a slight improvement is noted and a stronger tone is expected to develop.

In spite of the inactivity in most lines, prices are being maintained, and in the case of white oak and some other lines the trend in anything is upward.

ASHLAND

The sale of hardwood lumber continues to improve as a whole, although the manufacturers of this district are experiencing and reporting both good and poor weeks. Business does not come very steadily but is continuing to look better. There is every reason to believe that buying will continue to get heavier until it will be back to normal conditions. In such quarters white and plain oak, there is more of a demand than heretofore. The greater majority of the mills along the Ohio river are shut down on account of the very low water, which is lower than it has been known to be since 1888. Several of the mills will be unable to operate for several weeks on account of a shortage in log supply due to the low water.

ST. LOUIS

The hardwood situation remains about as it was a couple of weeks ago. Consumers are buying, but they are not purchasing in large quantities. They are waiting for a betterment in their several lines of business. Although there is no doubt that a severe car shortage is in sight, it does not seem to inspire buying, and the consumers do not seem inclined to take advantage of the situation. Reports from the mills are to the effect that there is little or no logging being done. In fact, there is less than has been the case for several years. Mill stocks are very badly broken and other stocks are also light. There is also little good lumber in the market. Lower grades seem to be the most plentiful, and even these are in poor supply. Gum, however, seems to be plentiful and there are some good stocks on hand at the various points. Owing to its price having gone down, the sale of it is not forced. Stocks in the local yards vary. Some have a pretty good supply on hand, while others are short. In the latter case, there does not seem to be any inclination to increase them. The best items in demand are quartered and plain oak. There is a steady call for them, and the prices are held firm. Poplar sells well, particularly in the better grades. Ash, also, is selling pretty well. Hickory and wagon stock is also quiet, as there is little improvement in the wagon business when compared with that of the buggy. Cypress is in pretty good demand and it is on the incline, as to price. Chairs and seats, right now, seem to be the most sought for.

NEW ORLEANS

Excepting for a recent advance in the cypress lumber market which has resulted in an increase of from \$1 to \$2 per thousand, the lumber situation in New Orleans has not changed materially within the last fortnight and there are no indications that there will be any other changes in the near future. The cypress market has strengthened a trifle as a result of an increased demand and the advance has come as a natural consequence. Pine, too, is up from \$1 to \$1.50 per thousand. Exports have continued comparatively light recently. There is no great European demand and buyers from the other side have not been active in some time.

MILWAUKEE

The possibility of a car shortage later in the fall is now being considered by Milwaukee dealers. Wisconsin's crop this year has so far been a record-breaker, and indications are that the end of the season will witness the situation of the available cars being reserved for the crop movement. Dealers, especially in the wholesale field, are impressing this fact upon the retailers and urging them to fill up stocks at the present time. While the general improvement in the hardwood trade is not taking place quite as rapidly as in other lumber lines where yellow pine and hemlock are dictating to the market, yet conditions are steadily "looking up," as one dealer expresses it. Inquiries are certainly hopeful and there is every prospect that the coming fall trade will be most satisfactory. The present time, in the general building situation, is one that is requiring other building material than lumber, since the spring building is nearly completed and the fall operations are scarcely under way. The real improvement and business is now coming from the dealers and builders who are preparing for the near future. Box factories are busy, but manufacturing plants in general are not placing extensive orders. Industries are fast returning to the normal stage in the city

and about the state, and this is another fact that looks bright to the hardwood men.

The oaks are still at the head, with quartered oak leading and plain oak ranking second. The basswood supply is good, and the greatest demand in this lumber is coming from the box factories. Birch receipts are heavier, while poplar stocks are rather small. Dealers say both oak and poplar stocks are broken quite extensively and that in the near future there will be a scarcity in these lines. Maple is slowly improving and is recovering from its period of quietness.

MINNEAPOLIS

Factories in this city and St. Paul are getting into the game after a long quiet spell. They have started to buy hardwood stock a little earlier than usual, having allowed their supplies to run pretty low. The outlook for fall trade is very fair, and there is more strength in the market than for a long time. Birch is selling more actively, but being still abundant in supply, is holding steady at about \$29 to \$30 for firsts and seconds. Basswood is higher, while culls are strong. Plain oak is selling well. Quartered seems about out of the market, with white selling at about \$79, and red stronger at \$61.

The railroads are also getting into the game, and some good orders for car material have been placed lately, also for switch ties. The demand for grain door material is taking call hardwood fast, and the railroad purchasing agents are hustling now for stuff. Country demand is still light, but will improve before the end of the month, according to the indications, as the business situation is getting better right along in the Northwest. Building in the cities is going ahead faster than ever, and the demand for flooring and finish will continue strong until late this fall.

SAGINAW VALLEY

Trade is steadily improving. There is a fairly good demand for stocks, and manufacturers and dealers regard the slump as a thing of the past. Prices are well maintained. There hasn't been such a cut in good hardwood as might be naturally expected. Maple flooring is doing much better. Orders are being booked freely and manufacturers are, feeling relieved. Box stuff made from hardwood is also moving more freely and there is a good call for it.

A large amount of beech and maple is worked up into box shooks, particularly the lower grades. Building operations in this section of Michigan are calling for a large amount of material and local factories are getting back on their normal base.

CADILLAC

Generally speaking, conditions in the lumber trade from the standpoint of the manufacturer are gradually improving. Hardwoods, flooring and hemlock are moving freely and prices are holding firm on most stocks.

SAN FRANCISCO

Since our last report, we find conditions in San Francisco continue their gradual improvement. Trade is slowly getting back to almost normal conditions, and although we do not anticipate the business of the last two years, we do certainly expect that before long trade in general in this city will be moving along as it was at the time of the fire two and one-half years ago.

Building continues fairly active, and on account of the low cost of construction, property owners are being induced every day to improve the lots that have been left un-

touched for some time. Money from other sources continues to gradually find its way into San Francisco, and as there is no safer security than real estate, it naturally is used for improvement.

Medium and large buildings continue to be finished in the best of hardwood, and our architects and property owners give preference to oak and jenisora for general interior trim. The demand for this latter wood daily improves, and we would not be surprised to see it introduced shortly into eastern markets. Local hardwood yards report transactions very satisfactory and collections quite easy, particularly with trade using medium and large quantities.

Representatives from eastern hardwood yards recently passed through the city seeking direct connection with the consumers. They have found this rather difficult, as the trade is well handled and well controlled by the Pacific coast dealers. Although the eastern competitors may get some orders and fill orders for a half-dozen cars, they will sooner or later find themselves with lumber rejected and with which they know not what to do.

Flooring is moving along very well and large quantities are being used at prices, however, which are certainly competitive. Dealers wishing to get in on this trade must be prepared and in a position to quote absolutely lowest figures.

A
STANDARD
FOR
MEASURING
LUMBER

Lightest, smallest, most accurate gauge ever produced.

Made of best quality steel, heavily nickelled.

Can be conveniently carried either in the hand or pocket of the inspector.

Retail price is 50c each, postage prepaid—all orders for one only should be accompanied with money order for the amount.

Dealers and commissaries should write for special price in lots of 3 dozen or more, stating number wanted.

Extra inducements to jobbers and agents, who will order in gross lots.

LUMBER CONSUMERS' GUIDE.

More than

15,000

Hardwood Requirements in All.

If the stock splinters or breaks just before entering the side-heads—

You don't have to stop the feed and then reverse it by a crank on the feed shaft—

And the setting of the machine isn't broken and your operator don't have to set the heads over again because

The REVERSE FEED DEVICE

on our No. 89 Special Hardwood Matcher enables the operator to instantly stop and REVERSE the feed by one lever at his position.

This device absolutely prevents a broken or splintered piece of stock from reaching the side-heads. The operator can REVERSE the direction of feed in a moment's time, clearing his machine without danger of the setting being broken by splinters or pieces of stock wedging into the heads.

The feed-roll power is another feature. Each of the 8-inch feed rolls is independently driven by gears almost double the usual size. Spring-roll tension provides a powerful, uniform feed.

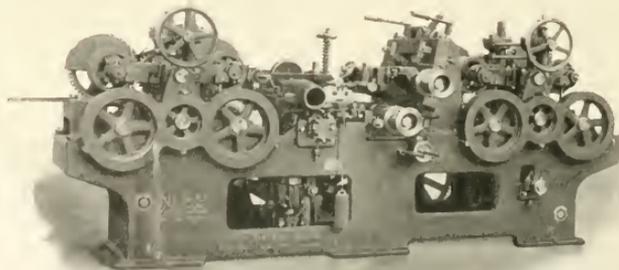

A special roller hold-down keeps the stock true on the side-head platen and insures perfect matching. You can turn out a finer quality of work with this machine at 90 and 100 feet per minute than can be done on any other hardwood machine at half this speed.

Maybe you think that's just "talk." Every word of it's true. Our new method of finishing hardwood is a revelation. This machine will turn out work that will make it hard for you to detect the knife marks.

Let us send you samples of work done at 90 and 100 feet—you will say as did one lumberman who visited our plant a few days past: "If I hadn't seen it done, I would think the stock had been scraped." He had to believe his own eyes, and he placed his order for two 89's at once. Let us give you full particulars.

The Berlin Machine Works

Beloit — Wisconsin

THE PRODUCTION OF
**CIRCULAR & FOLLOW-UP
 LETTERS**

THAT ARE
ACTUALLY TYPEWRITTEN

IS THE WORK
 ACCOMPLISHED BY

The **Writerpress**

This machine is a practical repeating typewriter without complicated parts or delicate adjustments, and is built to stand hard steady work without its parts breaking or wearing out. It is

**EASY
 TO LEARN
 TO USE.**

Your ordinary office help, with a few minutes instruction, will prepare a 30 line letter for printing in less than an hour, and will print

AS FAST AS 100 TYPEWRITERS

In addition to producing form letters, it is used in printing order blanks, price lists, card index supplies, or other office forms at one-half the expense charged by the printer.

Any size or style of type, cuts, electros or ruling may be used.

Any number of forms may be held intact, ready for instant future use, 30 seconds only being required to change one form for another on the machine.

You can set up one form, distribute another, print from another—all at the same time.

Printed sheets are automatically removed, piled and counted.

Each outfit consists of the Writerpress, combination type and operating cabinet, type and accessories. Send your name for samples of work, and complete information.

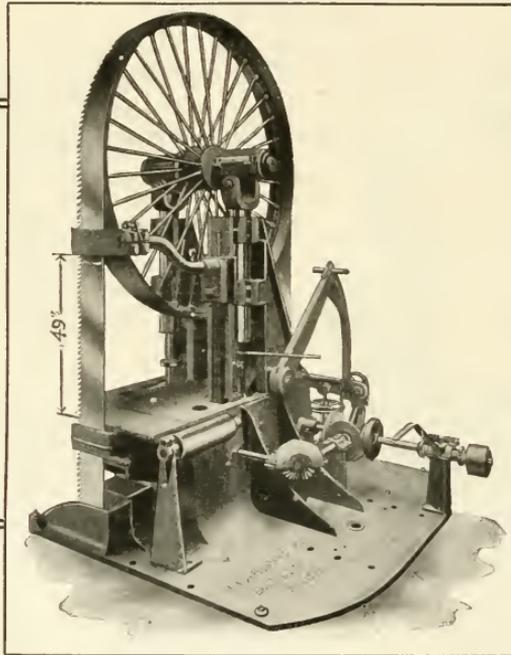

The **Writerpress Company** 528 WHITE BUILDING, BUFFALO, N.Y.

A Few Styles of Teeth used in

ATKINS SILVER STEEL CROSS-CUT SAWS

We make an endless variety for all sections of the country and all kinds of wood.

THE MOST ECONOMICAL SAW.

Because—They are made of SILVER STEEL and tempered by our own secret Gas Process. Are hard and stiff (but not brittle). They hold their teeth and edge.

Segment Ground (our own exclusive process). They are thinnest at the center of the back and taper gradually from tooth edge which gives them ample clearance with but little set. They cut faster and easier.

Use them this season in comparison with any other Saw. You have always expected to try an Atkins sometime—why not now, when you are so anxious to economize in every way?

For Sale at your Dealers, Jobbers, or if not, write us direct or to our nearest branch listed below.

Our No. 180 Aut. Band Rip Saw

SHOWN HEREWITH

No. 180 Aut. Band Rip Saw.

is especially adapted for use in factories working in hardwood, such as furniture factories, cabinet shops, etc., because its thin blade (thinner than that of any other machine) saves a good deal of material which other machines waste in sawdust. Hardwoods are expensive and are becoming more so; this accounts for the growing demand for our line of Band Sawing Machinery. No matter what kind of a band saw you may be in need of, we can save you money—not only in the initial price of the machine, perhaps, but certainly in the saving of high priced materials which go into the making of your product.

A talk with us along this line, if you are in the market for a band saw, may mean many dollars to your good.

Write for our Descriptive Circular.

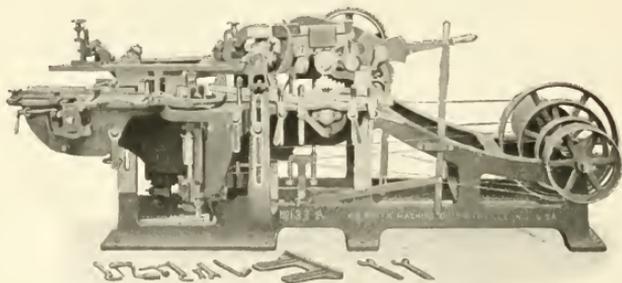

414-434 W. FRONT ST.,

**SMITH of
SMITHVILLE**

New Profit Builder

**SMITH of
SMITHVILLE**

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding sticker of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular.

VENEER DRYER

"The Proctor System Improved Apron Conveyor"

Objections to Roller Dryer overcome because no clogging can occur.

Objections to old style Apron Dryer overcome because no adjustment is needed.

Objections to "Girt Conveyor" overcome because the veneer is held throughout its surface which prevents the ends buckling as in the "Girt Conveyor" type.

Grain can be fed either way.

The "Girt Conveyor" type may be altered to the Improved Apron type at small cost.

The magnificent air circulation is maintained as in the old Apron Dryer and as in the old Girt Conveyor Dryer.

GREENVILLE, MICH.

The Largest Manufacturer of Grates, Edgers and Trimmers in the World.

Experience is a Good Teacher, but she sends in terrific bills. Even a novice can quickly learn that with a WOODS MACHINE the experience has all been paid for—he has nothing to do but reap the benefits.

Long years of experiment and use lie behind these machines, they are the result of concentration of thought and effort upon a single ideal—the production of the best planer type machine that can be built. Ask Experience if we have not succeeded.

Take our No. 24 Special Fast Feed Planer and Matcher for instance. Here is a machine that produces absolutely smooth work at 100 feet feed with knives set by our Patent Radial Gauge and reduced to a perfect cutting circle by our Automatic Truing Device, patented.

CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

AN OVER-STOCK—OUR LOSS—YOUR GAIN

We have a stock of approximately—

300,000 6x20 No. 1 Heart Rived Cypress Shingles

500,000 7x24 No. 1 Heart Rived Cypress Shingles

This is a much larger stock than we ordinarily care to have on hand and in order to reduce it to a minimum basis, we will, until the over-stock is exhausted, name some attractive prices. If you now need or anticipate a future want for all or any part of this stock, of as choice a product as is on the market today, you will make a big mistake by not allowing us the opportunity of quoting you our rock-bottom prices.

G. W. Jones Lumber Co.

ESTABLISHED SINCE 1880

TIMBER

WE OFFER TRACTS OF VIRGIN TIMBER IN LOUISIANA, MISSISSIPPI, FLORIDA, ALABAMA AND ALSO ON
PACIFIC COAST

We employ a larger force of expert timber cruisers than any other firm in the world. We have furnished banks and trust companies with reports on timber tracts upon which millions of dollars of timber certificates or bonds have been issued. We furnish detailed estimates which enables the buyer to verify our reports at very little expense and without loss of valuable time. Correspondence with bona fide investors solicited.

Coop-
erage

CHARLESTON, - - - WEST VIRGINIA

Modern mills and perfect manufacture.

We make a specialty of getting out high grade Soft West Virginia Panel Poplar and are in position to ship either straight or mixed cars of lumber. We also get out a Sound Wormy grade of Chestnut, suitable for veneer purposes. We will load cars to suit the requirements of our customers. We seek the trade of wood-working factories who want a dependable lumber supply and fair treatment.

Write us for prices on Chestnut, all grades.

Second Annual Meeting Handle Manufacturers' Association of America.

The second annual meeting of this association will be held at Hotel Gayoso, Memphis, Tenn., at 10:30 a. m., on Wednesday, November 11, 1908.

Lunch will be served at 1 p. m.

All handle manufacturers, whether members of the association or not, are invited.

T. R. CLENDINEN,
President.

HENRY H. GIBSON,
Secretary and Treasurer.

General Market Conditions.

General market conditions are still "spotted," but in the mass of affairs the interpretation of the situation depends largely upon the temperament of the observer. The general business public has just awakened to the fact that the "panic" hurt business worse than has been ordinarily estimated. The recovery is therefore tedious, and to the minds of many, unnecessarily slow. However, there is no question that day by day marks improved conditions. The election of Taft among the gentlemen who indulge in wagers on political results, seems to be a foregone conclusion, although there are other wisecracks who are not so cocksure of the result. In the very apathy of the average Republican and Democrat alike there is the possibility that the Democratic candidate may slip into the presidential chair.

During the last week many industrial and railroad stocks have gone off and there is quite a slump all along the line. While some blast furnaces are going into commission there seems to be little activity in the iron trade. The railroads on whom this business

depends very largely, have been buying but few rails. The extreme dry weather of the last month has been another thing that has militated against activity in general business. The general rains of the last few days will materially help the situation.

The crop outlook generally is mighty good. The empty cars of the railroads are gradually going into commission, and the earnings of every road are better the last fortnight than since last fall. The decrease in the number of empty cars for the week ending September 10 in the United States and Canada, was 30,371.

Hardwood lumber in all varieties is moving fairly well, although there is some delay on the part of buyers in permitting shipments to go forward. Apparently the financial condition of many buyers is such that they want to postpone receipt and payment until the last possible moment. There is no apparent danger of a car shortage and the average man thinks he can get lumber about when he wants it. There is quite a little speculative buying in hardwoods by jobbers and large manufacturers who are well financed, but this does not overcome the drag in other directions.

The average of values being obtained for hardwoods is probably fully \$2 lower than it was a year ago, but with the advancing season it is expected that prices will recover fully up to last year's standard. The pronounced feature of the last week in hardwood buying is the fact that quite a quantity of railroad business has been placed for stock repair work and bridge planking. Apparently the roads have held off until the last possible moment before placing orders, but it can now be practically assured that there is going to be a considerable volume of railroad business. Detailed reports from nearly all the hardwood trade centers of the country, to be found in the market department of this issue of the RECORD, reflect that conditions are showing a slight improvement in most all sections of the country.

On the whole the outlook is good, and even better than should be expected considering the conditions that have prevailed for months past.

Why These Failures?

"Two thousand and ninety-one business failures in 1906 were the result of incompetence!" This is the sweeping statement made by a writer in the June issue of System, who also says that the number of failures attributable to this cause was second only to those from lack of capital. He further avers that the liabilities involved in these business wrecks amounted to \$19,637,908 and states that such incompetency covers the phase of unwise credits, which might be placed in a distinct class having at least 244 failures to its credit, and doubtless 500 to 2,000 failures were due to greater or less extent to this one feature of incompetent management.

Speculation is another sub-head which might be placed under incompetence. As a primary cause, however, seventy failures are attributed to it during that year. Lack of capital is another distinct source of trouble—the only one surprising general incompetence in point of causing ruin; 3,376 failures are attributed to this alone. Limited capital, found as a cause in connection with incompetence, means that the poor management was more conspicuous than lack of money—in other words that the capital would have been ample, had it been carefully handled and wisely dispensed.

A New Profession.

A comparatively new calling is that of the business systematizer. That a large and successful corporation should turn the management of its business over to a stranger without experience in its particular line, seems almost incomprehensible; this very thing, nevertheless, is frequently done in modern business practice, with results highly profitable to the business concerned.

Thus H. A. Wright, in American Industries for August, prefaces a very interesting article on the business systematizer and his work. Undoubtedly the rise of this calling is merely a new application of the modern scientific spirit. The reasons for the origin of a practice so foreign to tradition come about from the fact that business of late has become a science. It is generally recognized that men who spend their lives in studying this science have experience and ability which should be of value to the busy merchant or manufacturer.

"Business systematizer" is the name which best describes this calling which has sprung out of twentieth century commercialism, although many who previously adopted it have dropped it from the fact that the term has been applied to and abused by some who have no right or title to it, and who use it as an excuse to secure a "snap" job, and eventually are found out to be of no service to their employers. Hence the terms business economist, production engineer, developer of business systems, etc., have been adopted by many earnest members of this new profession, and it is difficult to appreciate their value, and the scope of their efforts.

The systematizer may be termed the surgeon of commercial warfare, says Mr. Wright. Problems are now presented to him which in previous years would have worried the sufferer from them until long experiment disclosed a solution which had perhaps been known to his neighbor or competitor for years. Such cases may be discussed with the commercial counsel just as legal problems are referred to an attorney, or matters of health to a physician. This sort of service, common enough in such lines, has but recently been taken advantage of in connection with business problems. Today, however, the services of a man trained in this special line can be had at a reasonable rate, and for just such length of time as may be desired.

Truly, this new calling is a tangible reflection of the trend of the times.

Retail Yards as Hardwood Consumers.

Up to a comparatively recent time the retail building wood yards have been very inconsequential as consumers of hardwoods. But during the last few years yards of this type have become such a considerable factor in hardwood consumption as to now be regarded of considerable importance in the disposal of a good many varieties and grades of hardwood lumber.

For years past many yards have handled poplar in the form of finishing lumber, cornice lumber, and bevel and patent siding, and latterly have taken on considerable cottonwood and gum for these same purposes. The advancing prices of soft woods have caused many retailers, especially in the Middle West, to become large buyers of the coarser grades of birch and other northern hardwoods, in the form of ship-lap for sheathing purposes, floor lining, etc. Now more than ever, these retail dealers are carrying stocks of oak, beech and maple flooring, as nearly all modern house construction demands this sort of material. Again, retailers are almost universal buyers of cypress lumber for finishing and other purposes. Many of them carry stocks of high-grade oak for finishing, as well as low grades for bridge planking and other purposes.

In the aggregate, therefore, it will be seen that the retail lumber yard is becoming an important factor in the hardwood trade, and it would be well if hardwood manufacturers and jobbers would bear this in mind in their work of securing a wider distribution of the woods they handle. This observation is especially true from the fact that the highest qualities of bevel siding made from white pine, have become so extremely high that every effort is being

made to obtain a substitute at less cost. It has been demonstrated that red gum makes a very fair article in both bevel and patent siding. This, however, should be taken into account by gum producers, who certainly can sell a large quantity of worked stock to these retail yards.

Hickory Handle Matters.

As will be noted by the announcement at the head of the editorial columns of this issue of the RECORD, the second annual meeting of the Handle Manufacturers' Association of America will be held at the Gayoso hotel in Memphis at 10:30 a. m., Wednesday, November 11. A luncheon will be served to members and visitors at 1 p. m.

This promises to be the most important meeting ever held by the association, as the letters received by the secretary indicate very strongly that the three-grade method of inspection, as recommended by the special committee on grades, will be put into effect, together with a new base price list. The numerous grades involved in the old system of inspection which has prevailed for some years have tended to demoralize both grades and prices to a marked degree, and it is believed the new system would put the hickory handle manufacturing business into very much better shape. Today the trade is a good deal upset and although the average handle plant is running only half to two-thirds capacity, there is an accumulation of stock, especially in low-grade handles.

Common Sense in Inspection.

Originating among a certain element in the eastern hardwood trade there is manifest dissatisfaction over the present status of the inspection rules of both the National Hardwood Lumber Association and the Hardwood Manufacturers' Association of the United States. The contention is particularly against those of the former named association. This dissatisfaction has spread among a part of the jobbing element as far west as Buffalo and Cincinnati.

The people who are arguing against the accepted inspection methods of the chief lumber associations of the country are of two classes. One is the old-fashioned element which fails to consider the lower quality of the timber now available for the making of lumber, and the modern methods indulged in by the remanufacturers of lumber into furniture and kindred lines, who have discovered that the extra labor cost and waste in utilizing coarser grades is more than made up by the lower price of the lumber. This element seeks to maintain the old time standard of grades and fails to recognize the evolution in hardwood production and utilization.

The second element that is antagonistic to the prevailing systems of grading is the "scalper" who seeks the privilege of "salting" original grades and working off a lower or mixed assortment for a higher grade, thus achieving a profit in his transactions beyond the legitimate.

Paramount in this entire inspection controversy is the essential desirability of uniformity in hardwood inspection—a universal base of inspection by which the value of lumber in dispute can be determined.

A grade of lumber determines its value and not its name. If the grade is lowered the price is lowered with it. If "firsts and seconds" be applied to culls they will not command the price of firsts and seconds.

The crux of the whole matter is that the specific division of hardwood lumber into grades, so long as they are made to reasonably accommodate the product of the present quality of logs, and so long as the grades will reasonably satisfy the wants of the users, is a subject unworthy of discussion or dispute.

The honest efforts of the best brains in lumber affairs in the country are standing right up to the rack in this matter, seeking only justice between hardwood producers and hardwood users. Their good work has been endorsed by the majority and should be by all.

Pert, Pertinent and Impertinent.

Bye and Bye.

The photographer had a caller from the country the other day. "Be you the man who makes pictures?" she asked. He admitted that he was. "Can you make pictures of little children?"

"Certainly."

"And what do you charge for 'em?" was the next query.

"Three dollars a dozen."

"Oh, shucks!" said the woman, in a disappointed tone, "here I'll have to wait till next year, for I've only got eleven."

The Woods.

Into the woods my Master went
Clean forspent, forspent.

Into the woods my Master came

Forspent with love and shame.

But the olives were not blind to Him,

The little gray leaves were kind to Him.

The thorn tree had a mind to Him,

When into the woods He came.

Out of the woods my Master went.

And He was well content,

Out of the woods my Master came

Content with death and shame.

When Death and Shame would woo Him last,

From under the trees they drew Him last,

'Twas on an tree they slew Him last,

When out of the woods He came.

—Sidney Lanier.

Cruel!

"Did you ever find a man under the bed?"

"Yes, the night we had burglars in the house I found my husband there!"

Only Safe One.

A safe race track bet is one you didn't get there in time to make.

It Pays.

Hide Your Troubles.

The world has too many troubles of its own, so learn to hide yours under a smile.

Don't Forget.

While you're "planning ahead" keep pushing along.

Do Not Last.

Honors that are unmerited never wear well.

Lots of Them.

There is many a man in this world who talks a great deal and says little.

True.

You often see a man who thinks he's right but who does not go ahead.

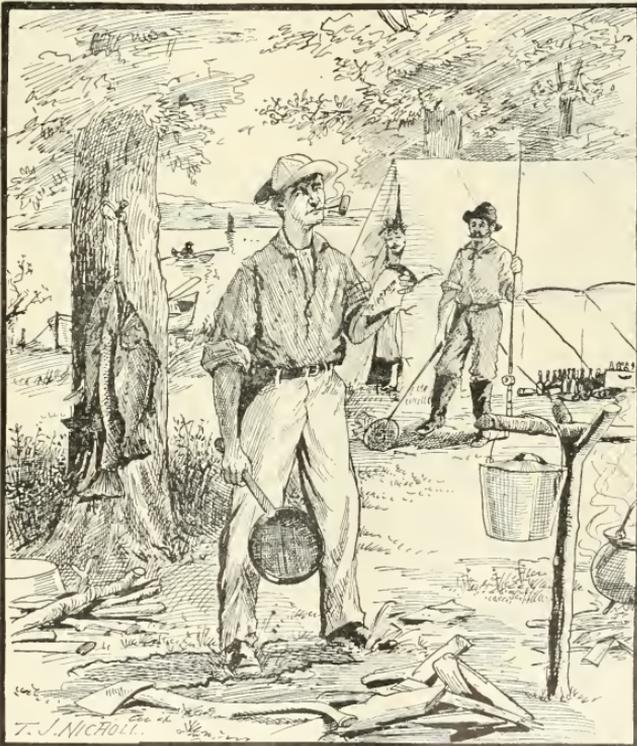

Rarely.

A man who pays strictly to his own business seldom has a headache the next morning.

Sharpening His Tools.

The chap who always agrees with you has an ax to grind.

End of Vacation Season.

"It's tough to have to leave sport like this to go back to the lumber office,

A Toast.

Here's to the land we love—and here's to the love we land.

Men in Society.

In polite society women do most of the talking, since men are chiefly interested in money and stomachs—which may not be mentioned, rather than in scandal and lingerie—which may!

A Chance.

When a girl's hair is so red she couldn't get lost in the night, that's the time to call her slightly blonde and get a reputation with her for being a man who always tells the truth.

Poor Policy.

The people who say what they think have to do a lot of explaining afterward.

Rushed With Business.

Cupid is the architect of a good many air castles. The chief trouble with love's young dream is that it is only a dream.

After an Absence.

Wifey: How mother has changed! I don't quite like the way she looks, do you, dear?

Hubby: No, my love, I never did!

Would Fall Down.

Many a man who thinks he could steer the Ship of State couldn't run a wheelbarrow; while many another who is merely a good guesser, and can keep his mouth shut, poses as a statesman!

A Smile or Two.

Laird: Well, Sandy, you are getting very bent. Why don't you stand straight up like me, man?

Sandy: Eh, mon, do you see that field o' corn over there?

"I do."

"Weel, ye'll notice that the full belds hang down, and the empty ones stand up."—Glasgow News.

Twilight.

A forest-shrouded lake:

The soothing, greyish gloom of evening-fall:

Deep, elfin shadows of dream-haunted trees—

Sweet, somber solitude.

Mild moist leaf odors, creeping through the woods,

Rise indolent, thought-laden wreaths of smoke—

Lifting, wrath-like, into the dusk,

And filling all the silence.

—Thos. H. Urzeil.

Which Was It?

The governor was puzzled. "Look here," he said, turning to his private secretary, "can you tell me whether this note comes from my tailor or my legal adviser? They're both named Brown."

The note was as follows:

"I have begun your suit. Ready to be tried on Thursday. Come in.—Brown."—Toledo Blade.

Lumbering in Hawaii a Hard Proposition.

NO. 1—LAI HAI LA TREE, SHOWING CURIOUS ROOT GROWTH.

Lumbering in Hawaii is new—absolutely so. One of the consequences of this fact is that every one who is even remotely connected with any of the various businesses in which a mill has to depend, considers it his chance to either work his little graft, or else harass the operations in some way in order to bring himself into prominence. It is a fact that in this sleepy tropical island the chances of notoriety are so limited that people take all sorts of ways to bring themselves into prominence, the personal vanity of human nature being abnormally developed.

This is particularly true of the people who furnish the transportation facilities, the

railroad men here being of a sort that failed to make good on the mainland; but here they "swell up" a good deal. It will take a long time, but some day the people will be in a position to make the roads feel the effects of drastic legislation to cure evils beyond other remedy.

The lumber or tie venture in which the writer is engaged is in a remote section, with two trains a week, and no facilities other than the trains. So the little railroad officials of a toy railroad are constantly on the alert to see how many ways they can devise to hamper the interests of the lumber company, possibly from the fact that there is no chance of a graft, as the financial end is remote from here. The only other way for these officials, who would be station porters or crossing watchmen in the States, to make themselves known, is to be very obnoxious in their application of the rules of

NO. 2—BIRDS-NEST FERN.

the road. It puts one a good deal in mind of Venezuela, from the accounts of that Gastro-ridden country, and is accountable only from the fact that in this part of American territory, any old sort of a nationality but American is given all preferences. The papers here have lately been having a journalistic feast over the visit of Secretary Garfield, and as a result of his endorsement are urging the need of more European (?) labor. By that is meant more Asiatic labor, a class that is now cursing this land to the fullest extent.

There is a plethora of this sort of labor here now. What these islands need is some American labor, not of the sort who will work for \$1 a day, but who can give value received for what they get. Taking it on the basis of a day's work, any ordinary laborer in the States at \$1.50 a day is worth

NO. 4—GENERAL APPEARANCE OF HAWAIIAN COAST LINE.

half a regiment of these brainless brutes from congested Oriental countries. One of the conditions that make these laborers desirable to certain persons is the fact that they will sign away their pay in advance, and some one in Honolulu will be living on easy street from the proceeds of a rake-off on labor, while the man or company who is paying for the work is simply not getting what they pay for. In one particular instance Uncle Sam is paying the bill where Chinese labor was hired against American or Hawaiian, because the Chinese would pay the rake-off. The matter is now under investigation by the grand jury. But in this island country that doesn't spell anything. In fact, in a country which has emerged from savagery within the last fifty years, a state of graft is bound to exist, and the more ignorant the people can be kept the better the graft is worked by those of both high and low degree.

That these things are so is deplorable. On the occasion of the visit of Mr. Taft the

NO. 3—EPAULETTE CACTUS.

NO. 5—DISTANT VIEW GREEN LAKE CRATER.

remark was made on leaving Honolulu, "Here is a land for which Nature has done the most and man the least." Nature may have done the most, but man also has certainly "done" the islands. The trades here are full of men whose only claim to employment is the fact that they are 2,000 miles

for export, but it did not pay. The building is indestructible, as it is all of concrete, and with the concrete stack is a fine piece of work.

Near this place, as shown in cut No. 1, are extensive fields of the lau-bau-la trees, whose curious root growth is seen in the picture. The leaves of this tree are used for siding houses, for roofing, for hats and mats and many domestic uses. The wood is light, fibrous and easily perishable, but the leaves are very enduring. As they fall to the ground, ripened or cured, they are picked up and worked into the various purposes for which they are adapted. One of the petty forms of graft in existence here is that the owners of the land on which this wild lau-bau-la grows exact a mat or other tribute from the natives for the privilege of picking up the fallen leaves.

Cut No. 2 is a plant that would delight the heart of some one with a fernery or hot-house. It is the "epalette" cactus, the flowers of which are seen at the lower end

something over a mile near the coast, it seems possible that a lot of this country will take a slide for lower levels some of these days. This lava is from the now active volcano of Kilauea, which is at present in a state of activity, though not in eruption; but the boiling lava bed, 350 feet down in a pit 1,500 feet across, can be seen, and at night frequently illuminates the surrounding country for miles in every direction. I have made several trips down to the crater and have seen the vast lakes of fire form and disappear and the giant cones rise up and then tumble back into the boiling depths below. The whole thing is not unlike a huge cauldron of molten iron, with the addition of reverberations of the immense masses tumbling back into the depths below.

No. 5 is a rather distant view of Green Lake crater, now extinct, in which is a lake of emerald hued water of an unknown depth, reaching down into what was once the bowels of the earth. The lake is now several hundred feet higher than the surrounding land, which is 110 feet above the sea level. This crater is the last of a chain which starts from Mauna Loa, now inactive, 14,850 feet high. This cone has thrown out vast quantities of ashes in former times, forming hills, one of which is shown in the cut, and which has been for many years a fertile sugar-cane field. The trees shown at the top are wild coconuts, which grow abundantly all over this side of the island.

Some idea of the terrific forces exerted here at times may be had from No. 6, which shows some square rocks, broken out of a crevice a half mile away and hurled down to the sea edge by some of the titanic spasms felt in this section. So far the writer has felt only moderate ones, but enough to know that the forces are there.

NO. 6—ROCKS HURLED DOWN TO SEA COAST BY DISTANT ERUPTION.

closer than the man at San Francisco; but in a majority of cases it would pay to wait for the man at the other end instead of having to employ beggars. As a matter of fact, supervision here costs from five to fifty times the amount of labor. This is on account of the class of labor employed.

To an American with any directness of purpose in working, the handling of the Japanese and Koreans, Chinese and Hindus, and the mongrel mixture between, is a nightmare. Japs do everything backward. One fellow sent to put in a drain from the top of a building to a water tank twenty feet lower down, ran the drain across and ended at the tank eighteen inches higher than where he started. Some of them are smart and with a crew of their countrymen have dominated the carpenter business here because their carpenters are well paid at \$1.25 to \$2 a day. Our men could not live on a few cents' worth of rice and meat two or three times a week, nor could they sleep on mats in a room where there are only a few cubic feet of air to a man.

So, with all the beauties of Nature, all the allurements of climate and grand scenery, this is no place for a lumberman nor a man dependent on any of the trades connected with the mill business. Some have thought otherwise, and thinking they could defy natural conditions, have spent large sums of money in fruitless enterprises. For instance, a concrete building on the eastern coast at Pohoiki that was intended for a coffee mill and sawmill, now stands as an everlasting monument to the wanton expense of \$100,000. An abundance of wild guava bushes covers this section, and part of the waste in this mill was in a lot of machinery to make guava jelly

NO. 7—DOUBLE CIRCULAR MILL AT PAHOA.

of the long stem, and which open at night into a thing of rare beauty. No. 3 is the "bird's nest fern," a plant that grows in ku-ku-i trees, and this fine specimen is about eight feet across, with a most beautiful shading of the wide leaves. The leaves die off and droop to the center, the new ones forming a crown and the dead leaves being used for weaving hats and some forms of domestic utensils.

No. 4 is the appearance of the coast for almost its entire circumference. The island is a vast deposit of lava, which, in contact with the water while in a molten state has broken into the most fantastic forms. The wash of the surf for many years has rounded many of these forms until they seem almost to have been fashioned by human hands. Not far from this scene is a part of a road which was once a straight line, but now has an offset of twice its width, caused by volcanic disturbance moving a whole section of the district about twenty feet toward the sea at one time. As the ocean has a depth of

NO. 8—COMMISSARY AT MILL

No. 7 will perhaps look more natural. It is the double circular mill at Pahoia, which we are just finishing. The stack does not show, as it was not up at the time this was taken. The boiler setting shows and the stack will come up through the flat roof,

being built up in sections. This mill is built in a rocky section on what is called poi-hoi-hoi, or hard stone, as distinguished from ah-ah, or broken lava. It cost \$1,500 to level off enough ground to put this mill and the tracks; the hole in the ground in the center was originally forty feet deep and about an acre in extent and is part of the log yard at present.

No. 8 is the quarters where we put our feet under the table. No matter what other conditions may be, the eating is good and plentiful. Except for the pest of mosquitoes the nights are fine here; the cool mountain air

blows at night and the salt breeze from the ocean all day. We are 660 feet high and when the weather is clear can see the white tops of the waves.

The native Hawaiians are the souls of generosity, and the Hawaiian salutation, even to a stranger, "Aloha nui" (my love to you), is expressive of their courteous treatment of "haoles" or foreigners. This confidence has been abused at times, but once they like one, there is no limit to what they will do to please. I shall try and send some photos of trees with a later article.

H. C. HANER, Pahaia, Hawaii.

Makers of Machinery History.

NUMBER VIII.

Thomas P. Egan.

(See *Portrait Supplement*.)

THE HARDWOOD RECORD takes pleasure in carrying as its portrait supplement in this issue a foremost maker of woodworking machinery history—Capt. Thomas P. Egan of Cincinnati. So well known is Captain Egan in connection with this great American industry that his name is practically synonymous with woodworking tools wherever used in all parts of the world. He is president of the J. A. Fay & Egan Company of Cincinnati.

The commercial rise of the J. A. Fay & Egan Company had its beginning in the year 1830, when J. A. Fay commenced the manufacture of woodworking machinery for his own use in a small planing mill at Keene, N. H. Seeing the growing need of woodworking tools and the wonderful future possibilities this line of production had in store for it he early began to manufacture them for sale, and the enterprise very soon became a remunerative one. He removed to Cincinnati in the early thirties and started the business of J. A. Fay & Co., which soon grew to large proportions.

In 1874 Thomas P. Egan left the business of Steptoe, McFarland & Co., where he had acted in the capacity of salesman for several years, and established in a small way the production of woodworking machinery under the title of the Egan Company. This house grew so rapidly that in ten years it was the equal rival of J. A. Fay & Co.

In 1893 the two companies united under one name—that of the J. A. Fay & Egan Company, under which title it has since continued. Mr. Egan was elected its first president, and so continues. In the years that have transpired since that date great strides have been made in the commercial importance of the house, until today it is reputed as easily the largest concern of its kind in the world.

The business of the J. A. Fay & Egan Company, both domestic and foreign, is done entirely through its own representatives. The preponderance of its trade is domestic, but its export trade is said to be much greater than that of all the other woodworking machinery houses in the country combined. The

foreign branch of the business has grown rapidly and steadily for the past thirty years, and now comprises nearly one-third of the total output. There is scarcely a ear shop on the continent of Europe that does not employ Fay & Egan tools. Mr. Egan is a great believer in the power of the trade press, and alleges that the great demand created for his varied and extensive line of machinery production is attributable largely to his trade journal advertising in this country and Europe. Beside this line of exploitation Mr. Egan issues annual catalogues in English, German, French and Spanish.

Another distinct feature that has made for the success of the Fay & Egan machines is the care and enterprise that has been exercised in originating new tools whenever there was a demand for them, and bringing them to such perfection that they became essential to the successful operation of every woodworker who would keep his manufacturing cost down to the lowest possible level. While every new machine produced by the J. A. Fay & Egan Company is thoroughly covered by both domestic and foreign patents the majority of European machinery makers copy the designs and improvements as closely as they dare.

Undeniably the dynamic force in this great manufacturing institution is its president, Thomas P. Egan. Mr. Egan is fifty-nine years old, and is very active in every detail of his business. No man of thirty has more of the freshness of life than he. He permits no business problem to worry him. He sizes up a situation in an instant and is ready with its solution as quickly. He has the rare power of handling men, especially in the sales department. He infuses into his salesmen a thorough belief in the superiority of the Fay & Egan tools and an enthusiasm that carries them forward to achieve success in marketing them.

Mr. Egan occupies an enviable position in the commercial affairs not only of the city of Cincinnati, in which he has great pride, but among the leaders of commercial affairs the country over. The respect and popularity which he enjoys in his home city is well evidenced by the fact that he is president of the Chamber of Commerce of Cincinnati, a dis-

tingtion which reaches only the foremost men of that community. Mr. Egan is also a leader in the social affairs of that city.

The great plant of the J. A. Fay & Egan Company, long occupying three city squares in the very heart of the manufacturing district, was recently increased in size by the addition of another six-story building 100x300 feet in size, which is used as a warehouse and shipping department. This great building is kept stocked at all times with machinery ready for shipment. It is the policy of the house to be able to deliver a completely finished and tested tool promptly on receipt of an order.

Notwithstanding the enormous extent of the plant of the company Mr. Egan is looking ahead to the increased development of his business and the eventual necessity of securing more room for extension, which cannot be obtained in his present location. This has led him to recently purchase a tract of land at Bond Hill, a Cincinnati suburb, on which he expects to erect a magnificent woodworking machinery manufacturing plant to outstrip anything of this character in existence in the world.

Difficulties of Lumbering in Africa.

In referring to the timbers of Africa, the *Timber Trades Journal* of London says that as a result of its prospects for profitably exporting timber, other than mahogany and cedar, to Europe—under existing conditions of freight and labor—it does not pay to export wood that realizes less than 2d per superficial foot. A large number of west African timbers can easily command from 20s to 25s at Liverpool if presented in the form of sound, carefully prepared and seasoned logs; but unfortunately the expense of hauling the timber by human labor is too great to admit of any profit being made from such prices. The timber industry of southern Niger can never be developed to its full extent unless human labor is replaced by mechanical appliances or draught animals are employed. Supervision by skilled European contractors would also be necessary.

The Sudan is far from devoid of forests, but they run great risk of destruction by fire, and the natives know no other fuel than wood, and consequently do terrible harm to the forests by their heedless methods of cutting. The authorities now have certain rules and regulations, but it seems almost impossible to enforce them. In the south, all along the Nile, trees are disappearing with alarming rapidity. Even the opening of the Red Sea Railway did not seem to increase the consumption of coal, and the belatedness of the Nile's water continuing to be heated with wood, while trees are being transported down the river continually.

Enters Business Independently.

Albert N. Thompson of Memphis, who organized the firm of Thompson & McClure and has lately been identified with the Belgrade Lumber Company, has severed his association with these houses and engaged in business on his own account, under the firm name of A. N. Thompson & Co. He has purchased the yard of the Belgrade Lumber Company and will do a general wholesale and yard business. He has taken offices in the Randolph building. D. F. Heuer will be Mr. Thompson's chief assistant in the new enterprise.

Mr. Thompson has been identified with the hardwood trade of Memphis for many years, and the fact that he has friends throughout all the great buying centers of the country, as well as his well-known ability as a lumberman, insure him immediate success in this new line of effort.

THOMAS P. EAGAN,
CINCINNATI, OHIO.

UTILIZATION OF HARDWOODS.

ARTICLE XIII.

Hardwood Doors.

For many years the solid hardwoods were used in making doors, but gradually they were replaced by the cheaper and more easily handled softwoods, such as pine. This transformation was slow but sure until, with the exception of those cases in which hardwood doors were necessary because of some special characteristic, the pine door had almost entirely supplanted its more expensive rival. Later, however, an imperative demand arose for hardwood doors. This was due to the fact that the one thing needed to dignify the appearance of an otherwise architecturally perfect house was a set of doors which harmonized with the decorations. Such harmony could not be obtained with an ordinary pine door, and so the manufacturer was confronted with a serious problem. He knew, as does every lumberman, that a solid piece of hardwood is heavy and unwieldy and that doors made from such pieces have the unparadonable property of warping, twisting, and opening at the joints. In other words, they were a source of unending trouble and could not be relied upon to act twice in the same manner.

As is usually the case, however, this problem had a solution, and the manufacturer found it when he developed the idea of veneered doors. By making the core, or center of the door, of pine or some such light wood, and by veneering the hardwoods on to this, the beauty and other advantages of hardwood doors were retained, while most of the disagreeable features pertaining to them were done away with. It is true that at the present time the greater number of doors turned out annually are of softwood, but the marked advance of hardwoods in popularity during the last few years indicates that it is only a matter of a short time until all of the better class houses, offices and other buildings will be fitted out with hardwood doors almost exclusively. To the hardwood lumberman this is naturally a source of satisfaction.

In the manufacture of doors, thorough kiln-drying is of the utmost importance. With outer doors especially the tendency to warp and shrink is very great indeed, and unless the core as well as veneer is entirely freed from moisture at the very start, this tendency cannot be overcome. Thus upon receiving a consignment of lumber the first step is to get it into the dry-kiln as soon as possible, unless it has not been previously air-dried, in which case the process is thoroughly completed in the yard of the factory before it is taken to the kiln. It remains in the kiln as

long as possible, and when taken out to allow room for another lot goes directly to the factory for immediate use.

The work done by the cut-off and ripping saws during the preliminary steps in the transformation of the rough boards into the correct sizes for doors is, of course, very simple as compared with some of the more intricate work which follows, but even here the utmost care is exercised. All of the latest machinery is used, so that a few men can do an enormous amount of work in a compar-

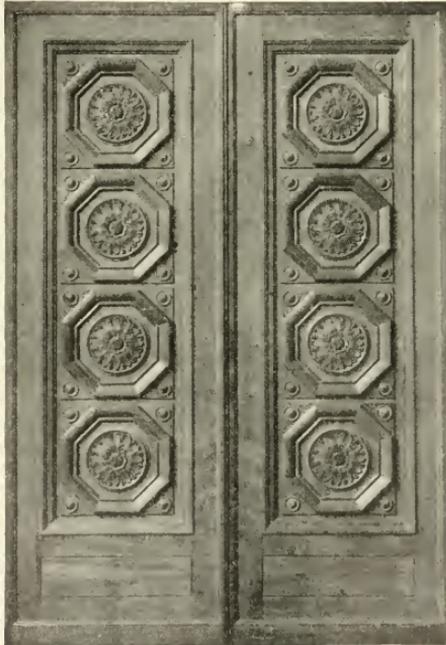

solid piece of softwood which is covered on both sides with a beautiful piece of hardwood veneer.

The veneers themselves are made from all varieties of hardwoods, the principal ones being birch, plain and quarter-sawn red and white oak, brown ash, and mahogany. With the best doors these veneers are a quarter of an inch thick, which is far above the average for furniture veneers. This is particularly necessary in outside doors, of which several are shown here. The best veneers of birch and some other woods are rotary cut in this operation, bringing out the beautiful figure and grain of the wood most effectively.

Mill work plays a rather important part in the making of doors, for with the outer ones especially moulding around the panels and glass are quite common. The egg-and-dart moulding is perhaps seen more often than any other one kind, although there are several other varieties on the market. The dentil-stool, which to the uninitiated is the wooden projection just below the glass in a front door, is also made in various designs. In striking contrast to this work, which is done by machinery entirely, is the hand-carving with which some doors are decorated. As in the case with so many pieces of furniture, this hand-carving tends to "tone up" the entire article and make it a work of art, as may be seen from one of the accompanying illustrations.

After the veneer is thoroughly dried on the core, the edges are smoothed and the whole carefully sandpapered so that the entire door is ready to be fitted together. This assembling of the different parts in the case of doors is simplicity itself as compared with the same operation in the manufacture of desks, for instance, for in the latter case this work is done by many different laborers, while with doors other than those which employ glass in their construction, the entire operation is frequently accomplished by machinery.

Thus in the making of an ordinary five- or six-panel door the outer stile is laid down in a horizontal position on a special machine which is in reality a press. This stile has holes into which the ends of the cross-rails fit. One man begins at each end of the uncompleted door and covering one end of the top or bottom rail, as the case may be, with glue, fits it in its proper place and hammers it down with a wooden sledge. Next comes a panel whose tongue fits into the groove running up the side of the rail. The next rail is then hammered in place, thus firmly secur-

A MAGNIFICENT PAIR OF HAND-CARVED DOORS.

atively short time.

As stated before, the core of the door is almost invariably made of pine, though sometimes other woods are used, chestnut being especially applicable because of its lightness and non-warping properties. This core is made of narrow strips of wood with pieces of hardwood at the edges. These pieces are all fitted with tongue and groove or are perhaps dovetailed, and are glued together and subjected to powerful hydraulic pressure, thus insuring a perfect joint. Of course this applies chiefly to the stiles and rails for the thin panels, which are usually made of one

ing the panel between, and so on until the men meet at the center and fasten the last rail. The projecting ends and pegs of the rails are then given a coat of glue and the other outer stile fitted on them. Upon reversing a lever the machine compresses the entire door to such an extent as to make tight-fitting and strong joints. The whole operation is completed in a couple of minutes and the next door started immediately. Two interesting facts in connection with this phase of the operation are that the bottom rail of a door is always made much wider than the top rail, and that glue is not used in fastening the panels to the rails except, perhaps, in the case of a single panel door. This is usually not necessary, for the panels are entirely surrounded by stiles and rails which in their turn are firmly fastened to each other.

The varnishing or shellacking of doors is also comparatively simple, although great care is taken in finishing up outer ones especially. This varnishing is, of course, done in a separate room in order to lessen fire risks, and from this room the doors pass directly to the storage or shipping department, as the case may be.

A new idea in regard to doors is now being worked upon by a manufacturing concern of Chicago. Their idea for "the door of the future," as they call it, is to conform to that ever increasing demand for sanitary types. They make a perfectly flush door by veneering hardwoods on a softwood core and decorating the whole by means of inlaid work. Thus any degree of elaboration may be obtained, and the result is often very pretty indeed, for by these means the natural beauty of the wood itself is very forcibly emphasized.

The RECORD is fortunate in securing a set of a pair of hand-carved hardwood doors

made by the True & True Company of Chicago. These doors show a large amount of very intricate workmanship to which a photograph fails to do justice. They were made of straight-grained red birch, and the hand-carved rosettes on them are of the very best grade. This is shown by the fact that the labor involved in the making of these doors is equivalent to forty-five days' work for one man, including twenty-seven days on the carving alone. The other large cut shows a unique pattern of an interior door made from Wisconsin brown ash, as does also one of the smaller cuts. The remaining cut shows a plain red oak outer door with an oval glass and carved decorations. These last three doors are from the stock of the well-known Morgan Company, who have done much toward popularizing hardwood doors.

CLARENCE BOYLE JR.

An Attractive Souvenir.

The Russel Wheel & Foundry Company of Detroit has just issued a handsome booklet, beautifully illustrated with a large number of photographic views showing different types

of Russel skidding and loading machines in operation, under widely varying wood conditions. The company considers the appliances of steam to the handling of timber from stump to car an engineering problem in each operation, and in order to design machinery capable of producing regular daily requirements with the greatest economy, a careful investigation of local conditions is desirable in each individual case. In the booklet the company cites numerous reports submitted to it, covering operations in northern hardwoods and hemlock, southern pine, mountain hardwoods and river bottom timbers, showing a cost reduction for handling standing timber on to cars or sleighs ranging from 15 to 50 per cent, attributable to the use of Russel logging machinery; also testimonials from users agreeing that it is feasible to more regularly log their mills with Russel equipment than is possible with animals. Several typical timber operations have been selected and numerous views of each presented, showing the topography of the land, and the various stages which are passed through in the evolution from stump to car.

The little book is attractive from an artistic as well as a utilitarian viewpoint, and is well worth looking over—especially by those interested in securing the most practical and up-to-date logging appliances. The Russel Wheel & Foundry Company will no doubt be glad to supply copies on request to its Detroit office.

Radial Knife Setting Gauge.

The vital importance of accurate setting of cutter-head knives is clearly set forth in an attractive pamphlet bearing the title "Radial Knife Setting Gauge," which has just been issued by the S. A. Woods Machine Company, Boston, Mass. Numerous handsome illustrations and clear instructions emphasize the simplicity and unflinching accuracy of this gauge, which is so designed that the knives can always be set in a perfect cutting circle with relation to the center of the cutter-head. The booklet will interest every user of planing machinery, and a copy can be had on application to the S. A. Woods Machine Company.

EXQUISITELY FINISHED FRONT DOOR.

Annual Wisconsin Hardwood Lumbermen's Association.

On September 15, at Marshfield, the Wisconsin Hardwood Lumbermen's Association held its thirteenth annual meeting. The attendance was not as large as it undoubtedly would have been had not forest fires been raging upon or near the properties of many interested in the organization, but the meeting was, nevertheless, a highly enjoyable and beneficial one.

The session was called to order by President E. E. Finney, who spoke as follows:

President's Address.

It is almost unnecessary for me to attempt to review the trade conditions since our last annual meeting, as I think we all had occasion to observe that soon after that meeting a general depression in all lines of trade was felt, more especially in the lumber trade. Coming, as it did, so abruptly and almost without warning, apparently without cause and following such a long period of unusual prosperity, it perhaps was felt more keenly than if it had approached more gradually. It was prophesied that this condition would be of short duration, but as the weeks and months continued to go without an improvement it brought on a tendency on the part of many of the millmen to force their products upon the market at ruinous prices. This, however, was not generally practiced by our northern mills, but more especially in the South, which procedure naturally demoralized the market. This condition has continued throughout the greater part of our fiscal year.

From what information I have gathered, the members of our association have had unshaken faith in the values of their hardwood products, and have clung to this faith in making sales. There has been no general attempt to force their product upon lukewarm purchasers, and, as a result, the sales that have been made were profitable to the seller and at prices that represent, very closely, the value of the commodities.

At the present time the unfavorable atmosphere that has surrounded us for so long appears to be clearing up and the general impression is that we are about to be rewarded for guarding so faithfully the prices and values of our northern hardwood lumber.

There are several matters of importance to be brought before this meeting. The adoption of inspection rules should be definitely considered. The matter of this association joining the Car Stake Equipment Committee in continuing the fight against the railroad companies should be determined.

The Chicago & North-Western, the Chicago, Milwaukee & St. Paul and the Wisconsin Central railway companies have notified shippers that on October 1, 1908, the milling-in-transit rate which has been in force for years will be abolished and, as it appears that a great many members of this association will suffer by this move on the part of the railroad companies, it seems some action should be taken at this meeting, protesting against the abandonment of this rate.

The secretary's report will show that this association is in a thriving condition and capable of continuing in its service and giving benefit to its members.

I wish to thank the association for the courtesy extended me during my term of office.

Secretary-Treasurer's Report.

Secretary A. E. Beebe next read his report, which was accepted, and which was as follows:

As has been the custom for several years, the

secretary recently sent out blanks asking for information as to the amount of lumber and logs now held by the various members of this association. I am sorry to report that only a few members replied to the request for information and nearly all those that did respond simply reported stock as all sold or practically so. On that account the statistics gathered are of no practical value. I regret this, as a full and complete report would have been very interesting to the association and the hardwood trade in general.

Since the last annual meeting a few firms have withdrawn from membership. At the present time our list of members contains the names of forty-four firms and I am pleased to report that these forty-four firms are all in good standing, having paid their 1908 dues.

At the last meeting the secretary was instructed to get 1,000 copies of the grading rules printed, but as we had adopted the rules of the National Hardwood Lumber Association, and as that association was figuring on changing its rules (which has been done), the secretary thought it best not to go to the expense of getting the rules printed, as the members could all get the books of grading rules of the National association; in fact most of our members belong to that association and make all their shipments under its rules.

The lumber business, as we all realize, has been slow the last year and no important matters have been taken up through the office of the secretary, but we all hope for a revival of business the coming year.

I wish to thank the members of the association for the many courtesies extended the secretary in his work.

RECEIPTS.

Balance on hand September, 1907, meet.	\$502.40
Received from annual dues, 1908.....		232.50
		\$734.90

DISBURSEMENTS.

Printing and stationery.....	\$ 4.25
Travel.....	10.00
Salary to secretary.....	120.00
National Lumber Manufacturers' Association assessment for 1908.....	50.00
Balance on deposit in First National bank, Marshfield, Wis.	545.65
	\$734.90

It was moved by J. L. Davis, and duly seconded, that the rules covering the association's needs in the matter of grading hardwoods, as adopted by the National Hardwood Lumber Association at Milwaukee—be also adopted by the Wisconsin Hardwood Lumbermen's Association. The motion was carried.

With regard to an assessment of \$300 levied on the association to help defray the expenses of the car stake equipment complaint case, no definite action was taken, and the matter was deferred until the car stake meeting at Chicago in October.

The secretary was instructed to send out circular letters regularly, to obtain information as to Wisconsin market conditions, and asking for other information which would enable him to compile statistics of interest, for the purpose of mailing out to all members.

The secretary was instructed to correspond with the railroads and determine just what their attitude will be in relation to withdrawal of the milling-in-transit rates.

A committee on nominations was appointed, consisting of J. L. Davis and B. L. Timlin, and their report of the following ticket for officers of the association during the ensuing year, was unanimously adopted.

- President—E. E. Finney.
- Vice-president—B. W. Davis.
- Secretary-treasurer—A. E. Beebe.
- Directors—H. C. Humphrey, Appleton; Thomas Wall, Oshkosh; B. F. McMillan, McMillan; George H. Lusk, Thorp; E. E. Finney, Marshfield; Guy Nash, Shanagolden; F. D. Timlin, Wausau.

A vote of thanks was tendered the officers and directors for their efficient work during the last year.

The meeting then adjourned. The Wisconsin Hardwood Lumbermen's Association is an important one, comprising as members the following hardwood concerns of the state:

- Andrus & Roepeke Lumber Co., Birnamwood.
- Arpin Hardwood Lumber Co., Grand Rapids.
- A. H. Barard, Minneapolis, Minn.
- Beldenville Lumber Co., Bruce.
- Britton & Lumber Co., Madison.
- Bundy Lumber Co., Bundy.
- Bussell Lumber & Manufacturing Co., Minneapolis.
- Chicago Lumber & Coal Co., Bibon.
- Cooper & Maxson Lumber Co., Milwaukee.
- John B. Davis Lumber Co., Phillips.
- Doud Sons & Co., Winona, Minn.
- Fenwood Lumber Co., Wausau.
- Flanner Steger Lumber Co., Blackwell.
- Foster-Lattimer Lumber Co., Mellen.
- N. C. Foster Lumber Co., Fairchild.
- Girth & Lumber Co., Chamberlain.
- H. Helmeum Lumber Co., Antigo.
- Heineman Lumber Co., Heineman.
- Frank E. Hiles Lumber Co., Hilles.
- Ingram Lumber Co., Wausau.
- G. W. Jones Lumber Co., Appleton.
- E. W. Knyazsky Lumber Co., Hilles.
- Keith & Hiles Lumber Co., Crandon.
- Mason-Donaldson Lumber Co., Rhinelander.
- Menominee Bay Shore Lumber Co., Soperton.
- B. F. McMillan & Bro., McMillan.
- Nash Lumber Co., Shanagolden.
- Nye, Lusk & Hudson Co., Thorp.
- Redbrook Land & Lumber Co., Milwaukee.
- Rice Lake Lumber Co., Rice Lake.
- Rust-Owen Lumber Co., Drummond.
- Daniel Shaw Lumber Co., Eau Claire.
- Stevens-Jarvis Lumber Co., Eau Claire.
- Stolle-Barold Lumber Co., Eau Claire.
- Upham & Agler, Chicago.
- Vollmer & Below, Marshfield.
- W. J. Wagner, Oshkosh.
- Wall Spaulding Lumber Co., Oshkosh.
- Wausau Lumber Co., Edgar.
- Wisconsin Land & Lumber Co., Hermanville, Mich.
- H. W. Wright Lumber Co., Merrill.
- George H. Underhill, Elmhurst.
- Wheeler-Timlin Lumber Co., Wausau.
- Ferdinand Bard, Spring Valley.
- H. T. Sutter, Plum City.

Reorganized Grand Rapids House.

The well-known lumber house of Charles Dregge Lumber Company of Grand Rapids, Mich., has been succeeded by the Dregge-Grover Lumber Company. The concern is made up of Charles Dregge of the old concern and H. P. Grover. The company has now mills at Ozark, Mich., and at Spru 461 on the Soo Line in the northern peninsula. Will carry on the business of manufacturing and wholesaling forest products the same as heretofore, but expect to extend the business very materially.

Both parties in interest in this concern are experienced lumbermen and Mr. Dregge is especially well known to a large portion of the consumers of northern hardwoods.

In addition to northern and southern hardwoods the house are dealers in ties, posts and poles, lath, shingles, hemlock and yellow pine lumber.

The Cableway Skidders.

The growing use of steam machinery in logging has called the attention of many active minds to the inventive possibilities in this line. The ever increasing efficiency in the newer types of machines is proof of continued success.

The cableway skidder, which was formerly used mainly in swamp logging, has recently been the subject of many improvements, giving it increased efficiency, and it is now replacing snaking and slackrope machines wherever timber is small, or the ground is rough, brushy, or swampy, or in fact, other than perfectly smooth and open.

Two practical loggers of Michigan, Messrs. Fox and Davidson, in order to render a snaker more efficient in the small northern hardwoods, conceived the idea of a load-locking carriage which could be operated on an overhead cable by the simple geared snaking machine which they already possessed.

This carriage which they built is in general appearance similar to the original form of cableway skidder carriage known as the Putters-Miller type, but, the skidding or tong line, instead of passing through a depending block, passes over a sheave in the carriage itself and has a short chain extension which is seized by a patent grip in the carriage when the load has been elevated and is held firmly until the load is conveyed to the point of deposit. The grip is then released by a trip lever actuated by contact with a stop bumper.

The major points in favor of this carriage

are that when it is used, any two-drum snaking engine can operate a cableway; that after a load is raised to position but little power is required to convey it, and it is especially suitable for log conveying, across canyons, rivers, or where similar obstructions exist.

The first illustration here given shows this carriage as used with a tree rig. The load is approaching the point of deposit. The load consists of six short logs bunched together with short choke or grab chains. The same result could be more efficiently secured by the use of Shaw pins and sockets.

The handling of chemical wood, a great factor in present day hardwood operations, when the smallest sapling has a commercial value, is shown in the illustration on page 25. For economical operation a number of full length trees should be handled at one time,

even enough to make four or five cords when cut up. This enables a large capacity to be secured and consequently decreases the cost of production per cord. A large incidental saving in this handling in full lengths comes from the fact that the trees can be cut into manufacturing lengths cheaper at one central

point, as at a mill, than they could be in the woods and with more discretion and less waste.

The second illustration is a rather unusual one in that it shows a view of the skidder taken from the tail spar on a hill several hundred feet high. It gives a good idea of the rolling and somewhat broken nature of the country usually found in the northern hardwood sections.

With the old horse methods of getting out logs a great deal of swamping, road building and general hand labor made the operations very expensive. All overhead skidding systems operate virtually without regard to ground conditions, and all expense for swamping or other ground preparations is avoided.

The patent rights of the Fox & Davidson device have been secured by the Lidgerwood Manufacturing Company, 96 Liberty street, New York, and it will be developed by them, as have their other cableway logging systems.

FIRST LOAD-LOCKING CARRIAGE IN USE WITH TREE RIG—FOX & DAVIDSON PATENT.

TWO LINE SNAKER CONVERTED TO CABLEWAY. DECREASING COST OF OPERATING PER THOUSAND FEET, FIFTY PER CENT.

SKIDDING MACHINE HANDING WOODS' OFFAL TO BE CUT INTO CHEMICAL WOOD.

Hoo-Hoo Annual.

On September 11 the Concatenated Order of Hoo-Hoo concluded its four days' annual meeting at Chicago, which was the seventeenth affair of this sort that has been held by the organization. The registration of Hoo-Hoo and visitors numbered about seven hundred. The meeting was noticeable from the large number of ladies accompanying their husbands or relatives.

For four days Hoo-Hoo practically owned the Auditorium and the Annex. The local committee having in charge the entertainment of guests, carried out its program in every detail and everyone expressed himself as highly pleased with the amusement provided. The ladies were especially enthusiastic over their entertainment and sent a message of thanks to the local committee accompanied by a beautiful set piece of flowers.

September 8 was given up to the doings of the Osirian Cloister and the following officers were elected:

- High Priest of Ptah—L. E. Fuller, Chicago, Ill.
- High Priest of Anubis—A. H. Potter, Portland, Ore.
- High Priest of Thoth—J. H. Baird, Nashville, Tenn.
- High Priest of Hathor—John Oxenford, Indianapolis, Ind.
- High Priest of Osiris—J. L. Alcock, Baltimore, Md.
- High Priest of Ra—R. W. Neighbors, San Francisco, Cal.
- High Priest of Isis—J. A. Moore, Chicago, Ill.
- High Priest of Shu—M. W. Wiley, Baltimore, Md.
- High Priest of Sed—A. F. Sharpe, Alexandria, La.

Seventeen new members were admitted to this division of Hoo-Hoo. During the evening the annual Osirian Cloister banquet was held at the Auditorium, the occasion being

graced by the presence of many ladies. N. A. Gladding of Indianapolis acted as toastmaster.

Wednesday, September 9, was devoted to a lake trip on the big steamer Theodore Roosevelt to Michigan City, Ind., in which fully 600 participated. The first regular meeting of the order was held aboard the vessel.

On Thursday the meeting of the order was continued in the large dining hall of the Auditorium hotel. Very little legislation was taken up for action save the regular detail work of the order. After a sharp contest between Denver, Seattle and Hot Springs for the next annual meeting it was voted to hold it at the famous Arkansas resort.

The order by resolution donated \$300 toward the Little House of Hoo-Hoo being erected at Indianapolis for the benefit of sick babies. This action was taken on recommendation of Ex-Snark Bonner. This commendable charity is being carried forward by the Indianapolis Hoo-Hoo and other lumbermen, and when completed will cost \$4,000.

On resolution the matter of the erection of a suitable monument to mark the birthplace of Hoo-Hoo at Guerdon, Ark., was referred to the Supreme Nine.

It was decided to readmit members who had dropped out of the order through nonpayment of dues on the payment of \$5, on recommendation of the vicegerent snark of the district.

A great concatenation was held on Thursday night, at which there were forty-five initiates. On Friday the meeting of the

order was continued, but very little business was transacted, save the election of officers, which resulted as follows:

- Snark of the Universe—Platt B. Walker, Minneapolis.
- Senior Hoo-Hoo—W. A. Hadley, Chatham, Ont.
- Junior Hoo-Hoo—E. H. Dalbey, Chicago.
- Tojum—C. E. Fatten, Seattle.
- Jabberwock—M. W. Wiley, Baltimore.
- Custacatian—W. E. Griffin, Indianapolis.
- Arcanoper—E. J. Wright, Kansas City.
- Gardon—E. F. Nicholas, San Francisco.
- Scrivenoter—J. H. Baird, Nashville.

On Friday afternoon the spectacular Hoo-Hoo comedy-drama known as the Embalmment of the Snark was held at the Studebaker theater under the auspices of the local committee, assisted by Bolling Arthur Johnson, author of the play. The feature was much enjoyed by members of the order and their friends, who filled the house.

The magnificent badges worn by the visitors, illustrated in connection with this

HOO-HOO BADGE FURNISHED BY E. C. ATKINS & CO.

article, were gifts of the well-known saw manufacturing house of E. C. Atkins & Co., Inc., Indianapolis, and reflect credit not only on the company's good taste in the matter, but on its generosity to the order as well.

Installs Hardwood Department.

The Alf Bennett Lumber Company of St. Louis has somewhat reorganized its various lines of work, and in so doing has installed a hardwood department, which is in charge of an experienced hardwood lumberman, E. L. Page. The entire output of the Walnut Lake Cypress Company of Walnut Lake, Ark., and of the Forbes-Everts Lumber Company, of Van Buren, Mo., will be handled.

Mr. Page was formerly a hardwood wholesaler of Kansas City, and later was a member of the firm of Page & Davis, engaged in the sash and door trade at Kansas City. Until his affiliation with the Bennett company he has been representing the Louisiana Red Cypress Company in Iowa, with headquarters at Cedar Rapids. Thus it will be seen that Mr. Page is well qualified for the work which he has lately undertaken, and under his management the hardwood branch of the Alf Bennett Lumber Company should prove a desirable and remunerative department.

Minor Musical Instruments.

The pedant will perhaps tell us that the phonograph or "talking machine" is not a musical instrument, because it merely reproduces. But that problem is not of much interest to the lumberman. As to the talking machine from a lumber standpoint, it consists, to the outward eye, of the horn and case. The latter is usually of solid oak, occasionally of birch or mahogany. The cabinets of the large-sized instruments, such as the Victor Victrola, are often of the finest

closed, a beautiful four-sided figure that is almost a perfect rectangle. The upper doors, when opened, reveal a compartment shaped like a truncated pyramid, which takes the place of the horn. This, it may be somewhat surprising to some of our readers to learn, is of mahogany, which wood has been found to make a perfect horn, free from harshness, and presenting a good appearance. Mahogany horns are even supplied for talking machines of the ordinary pattern. A very hand-

uninitiated call it, is not a very complex affair as regards cabinet work. In the finest varieties, which are expensive, a piano sound-board, made of spruce, is employed. The cabinets, when American-made, are generally of mahogany, solid or veneered. These are for the disc machines, which are the favorites on this side of the water. The cylinder boxes are imported from Germany and Switzerland, and the cabinets come with them. They are of hardwood, generally stained to

A POPULAR INSTRUMENT—THE PHONOGRAPH.

woods, either veneered or solid, about three and a half feet high, and are frequently costly affairs. A recent production in the Victrola line, for example, is in the Louis XV style, of solid Laguna mahogany, with embellishments in gold. The two pairs of doors which are a feature of this type of machine are V-paneled, that is, with the figure run-

A BEAUTIFUL SILVER-TONED "MUSIC BOX."

ning obliquely. In the lower pair each door has a single veneer, with the figure running upward from the middle, but in the upper pair each door has two veneers, meeting at the knob and forming, when the doors are

A BEAUTIFUL BRASS BAND ORGAN

some one in quartered golden oak has also been placed on the market recently. These horns, exclusive of the ones for the Victrola, are of the usual conical shape, and the process of bending the wood must be very interesting, as also that of joining the pieces, which is a matter of great importance, as joints are the bane of the horn maker's existence.

The musical box, or "music box," as the

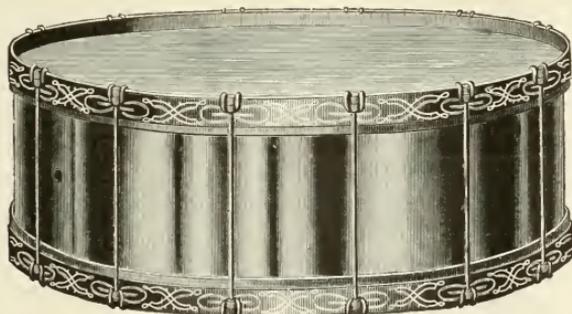

represent mahogany, except the interior of the lid, which is made to resemble maple. The wooden frame surrounding the glass panels inside is sometimes of birdseye maple. The largest sized cabinets, which consist not only of the container for the mechanism but also of the disc receptacle, exhibit the usual characteristics of high-grade cabinet work.

Drums are of three kinds—snare, bass and

kettle; to these perhaps the tambourine should be added. The banjo combines the guitar and the drum. The tom-tom is the barbaric precursor of the drum and was perhaps the first instrument, as it is often the only one among savage tribes.

Maple and poplar are the chief woods used in the modern drum. The cylinder may be of poplar with a hirsute maple veneer, or of solid maple. The drums that are adorned with star-shaped decorations are veneered with white holly, a wood that submits easily to the dyeing process. Oak is also much used, especially for bass drums.

The thickness of the cylinder is usually three-eighths to a quarter inch. In snare and bass drums the layers or solid cylinders are made each of one piece of wood, bent into a perfect circle. The interior hoops that strengthen the instrument at the top and bottom are usually of basswood. The kettle-drum or tympanum is much more elaborate, having a compass of several notes. In orchestras they are always used in pairs, one being tuned to the key-note and the other to the fourth below. The basin, almost hemispherical in shape, is always of metal, and the shells of other drums are often of the same material. Drumsticks are made of rosewood, ebony, snakewood or hickory.

THE BASS DRUM.

No article on the use of hardwoods in connection with modern musical instruments would be complete without some mention of the electric piano—a mechanical instrument which in its highest form is very similar to the player-piano, that is, the piano with playing attachment, the difference being that the electric piano contains within it a mechanism that, when a coin is dropped or a switch turned on, the instrument plays without the guiding hand or mind of a human being.

The larger electric pianos—those with a full piano scale of seven and one-third or seven octaves—are also playable by hand, and have all the wood, metal, felt and other parts characteristic of the regulation instrument. The smaller electric pianos, however, are without the keyboard, the part corresponding to it in position being enclosed in

wood, bent in rough imitation of the "fall board," or cover for the keys on the regular cases, but mahogany, birch and walnut are also to be had, and it is a mistake to suppose that the cheaper grades of wood are always utilized. Some very handsome cases may be seen in the music stores that deal in these goods. Flemish oak and similar finishes are popular. Large cases are usually veneered, the smaller ones often solid, but of a cheaper grade of wood.

In well-constructed automatic pianos the wood composing the interior parts is very strong, as the instrument has to endure a vast amount of punishment. It is a great error, therefore, for a saloonman, restaurateur or dance-hall proprietor to purchase a cheap instrument.

Besides the mechanically played pianos in all their various forms, mechanical instruments include the orchestrons, military band organs, street pianos and all their kind. Some of the readers of this article may not know the meaning of these words. Orchestrons are found mostly in saloons and cafés. They resemble the pipe organ in tone, but are generally provided with all the appurtenances of an orchestra—drums, cymbals, etc. While their tendency is to be too "flutey," they are often well worth listen-

The hand organ is in one form a congener of the cylinder music box and in another a miniature pipe organ, or more properly a whistle organ. The woods used are not usually of the best, though one does hear occasionally of "hurdygurdies" that are decidedly expensive on account of their elaborate and costly cases.

The cuts accompanying this article were loaned the RECORD by Lyon & Healy of Chicago, among the largest producers of musical instruments in the world.

Record Mail Bag.

In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.

Wants Fancy Handle Material.

PHILADELPHIA, September 18.—EDITOR HARDWOOD RECORD: Can you inform us where we can obtain a close-grained foreign or tropical wood that is less in price than rosewood or cocobola, preferably with some figure, suitable for turning small work, like buttonhook handles?

—LUMBER COMPANY.

It has been suggested to this correspondent that vernium wood would afford a very good substitute for this purpose. It is about the same density as rosewood, although not as heavy as cocobola, but its brilliant coloring lends itself admirably to small fancy handle production. The value of this wood is about \$20 per ton less than cocobola or rosewood. It has also been suggested to the correspondent that if he could use a low-priced wood without figure, and depend on staining it afterwards—logwood or persimmon would make an admirable substitute. Any reader of the RECORD who has any suggestions to make this correspondent can secure his address by applying to this office.—EDITOR.

Wants Second-Hand Taping Machine.

CHINA GROVE, N. C., September 14.—EDITOR HARDWOOD RECORD: Can you put us in touch with someone having a good second-hand taping machine for sale?

—VENKER & PANEL COMPANY.

Anyone having a machine of this sort which he wants to dispose of can obtain the writer's address on application.—EDITOR.

Wants Market for Minor Woods.

LOUISVILLE, September 16.—EDITOR HARDWOOD RECORD: We are operating on a tract of timber of 1,200 acres in Jackson county, Tennessee. After estimating our oak, hickory, poplar and chestnut, we find that we shall have among other woods 2,000,000 feet of beech, 200,000 feet of elm, 50,000 feet of buckeye and a large quantity of dogwood. Much of the dogwood will run six inches in diameter. We want to get in touch with users of the above four items before we cut the timber. All is virgin, long-bodied timber and can be cut any way desired.

—LUMBER COMPANY.

Anyone wishing to communicate with the writer of the above may have the address by applying to this office.—EDITOR.

ing to. The case of the orchestration is generally of oak, but mahogany is also used; they may be either veneered or solid. The best orchestrons come from Germany.

The military band organ is so called because it is an imitation of the military band. One variety of this so-called musical instrument is that which is used to accompany the gratings of the merry-go-round or carousel; the military band organ is frequently seen—and certainly heard—in amusement parks and dance-halls. The case is generally made of oak, while the interior is largely of metal, as the nature of the instrument demands.

The instruments that the peripatetic Italian plays on the street are of several kinds and in all of them hardwoods are employed. The "street piano" proper is in reality an automatic piano or closely resembling it.

Wants Old Cypress Price Lists.

KISSIMMEE, Fla., September 15.—Editor HARDWOOD RECORD: I am desirous of obtaining price lists covering the value of cypress lumber during the years 1901 and 1902. Wish you might be able to dig up this information for me.

— & Co.

If some of our readers can unearth some cypress price lists of the years named they will confer a great favor by forwarding them to this office.—EDITOR.

Look Out for a Swindler!

The editor has received a communication from Jas. H. Baird, scrivener of the Concatenated Order of Hoo-Hoo, recounting the misdoings of one C. G. Hascell, alias Haskell, alias L. H. Haskins, and also having several other aliases. A St. Louis lumber corporation recently gave this man employment and advanced him \$45 expense money. He left town and immediately commenced to make drafts on the house of from \$25 to \$30 at every place he stopped, applying usually to

members of Hoo-Hoo, and representing himself as a member of the order. He was last heard of in Arkansas. Mr. Baird is very anxious to have the criminal apprehended and thinks his real name is Matthias. Mr. Baird says in conclusion that he wishes to caution all lumbermen and Hoo-Hoo not to extend financial aid to any man unknown to them who claims to be a member of the order without wiring his office at Nashville, which will stand the cost.—EDITOR.

A False Report.

PHILADELPHIA, Sept. 22.—Editor HARDWOOD RECORD: We wish to inform you that the article in the Southern Lumberman, on page 46, issued September 19, 1908, in reference to our company is absolutely false and without foundation.

HENRY C. PATTERSON COMPANY,
C. Conde Freas, Treasurer.

The report referred to alleges that the company had been thrown into bankruptcy, which published statement might work much injury to this veteran and substantial house.

—EDITOR.

News Miscellany.

Magnificent New Boat.

James D. Lacey, of the well-known timber-land house of J. D. Lacey & Co., Old Colony building, reached Chicago a few days ago accompanied by his wife and party of friends, in his handsome new mahogany yacht, the Tonopah, and since that time his Chicago friends have been the recipients of several little outings on Lake Michigan on this beautiful pleasure craft.

Mr. Lacey is a member of the Chicago Yacht Club and the Tonopah becomes the handsomest yacht to fly its colors. The boat is thirty feet in length with fourteen-foot

Forced Draft for the Sawmill.

Twenty years ago forced draft appliances for sawmills were exceedingly crude and had objections that went a long way toward neutralizing their advantages. The blast was turned unconfined into a sealed ash pit. Selecting the path of least resistance, the major portion of it escaped into the furnace, where there was the least fuel, and where the fuel lay thickly the blast did not penetrate it at all. Thus there was most air where there was least fuel, and least air where there was most fuel—a condition exactly the reverse of what was desirable. Again, as the ash pit had to be sealed, the blower had

man perfect control over the fire, enabling him to regulate it according to the weather, the kind of fuel, its condition, the demand for steam, etc. It makes it possible to make a much hotter fire, to generate much more steam, to burn cheaper fuel. It is to the sawmill what the bellows are to the blacksmith or the blower to the foundry. As the bars are hollow and are always full of fresh air, they keep cool and are far more durable than the best draft bar ever devised.

This excellent grate is manufactured by the Gordon Hollow Blast Grate Company of Greenville, Mich.

Car Stake and Equipment Matter.

The meeting of the associations interested in the car stake and equipment complaint which was called to meet on September 18 at St. Louis has been postponed until Tuesday, October 13, 1908, at 10:30 a. m. in the Auditorium Annex. This change in date and place was made by the committee to accommodate the convenience of a large number who expect to be present at this meeting. The matters to be considered are as stated in previous calls, viz.:

First—The amount of free which it is proper and reasonable to pay Attorney Walter W. Ross up to date, and in this connection it is only proper to state that Mr. Ross has agreed to abide by the decision arrived at at this meeting, providing there is a representative attendance of the associations interested.

Second—Shall this matter drop or shall proceedings be taken to get an opinion and decision from the supreme court of the United States upon the question at issue?

We trust that this change will meet with your approval and that if you have not already named delegates that you will be able to do so, and that they will be present at this meeting. The hour and place of meeting will be sent to those interested as soon as decided upon.

Progressive Lumbermen Practice Economy.

R. S. Kellogg, assistant forester in the United States Forest Service, in speaking about the progress of forestry in this country, says that all lumbermen are not wasteful, but that just the contrary is true in many cases and the number of men in the lumber industry awakening to the necessity of conserving the country's forest resources is increasing each day. Progressive lumbermen realize that they must adopt conservative methods or live to watch the slow death of their great industry. Nevertheless vast stretches of territory have been made barren in the past through the careless and almost criminal methods of the old-time lumberman. Practically every section of the country bears scars where he skinned the land and left what remained open to the ravages of fire. The waste in the woods was terrific; the mill waste almost as serious. In many cases the percentage of a tree that reached the markets in the form of lumber was considerably less than half.

All this, however, was more the fault of conditions than of individual lumbermen. While some of them were without doubt unnecessarily wasteful, the majority operated as economically as they were able to and still make a profit. Lumber was cheap, and at many times only the best grades could be sold. Things have been changing during the last few years, however, for the timber supply is dwindling and prices of forest products are rising to a point that permits a fuller utilization of timber.

Waste has been reduced because conditions now make it profitable to use much of the stuff that was formerly left in woods. Improved sawmill machinery is also playing an important part in the matter of the closer utilization of the tree. Better work in the woods, reduction of mill waste and protection of timber holdings from fire are going a long way towards conserving our forest resources.

Still not all the old-time practices have ceased, nor are all who are cutting our forests practicing forestry, but their number is increasing, for wide-awake men are learning that conservative

COMMODORE JAMES D. LACEY'S NEW YACHT TONOPAH.

form and was built at South Boston by Towler & Sons. It has twin screws, with two Naptha engines of 125-horsepower each, built by James Craig. The craft has yellow pine planking and white pine decks, and is finished throughout in mahogany. Two yawls, mahogany propelled, hanging at its davits, are built of mahogany with mahogany trimmings. The cabin is most magnificently finished and finished and contains a handsome cabin with the owner's private cabin saloon, and dining-room that will seat ten persons, adjoining which is a completely equipped kitchen. Forward are quarters for the crew. The yacht has a speed of sixteen to eighteen miles

to do all of the work, there being no other way for the air to find its way but through the closing of the draft doors and the irregular heating, due to irregular distribution of the fuel and air, as above, the grate bars burned out very quickly. The result was that it was a question whether, everything considered, forced draft was a benefit or a nuisance.

Today all is changed. The Gordon Hollow Blast Grate gives perfect control over the blast. There is no necessity for sealing the ash pit. The draft doors may be closed or left open, as may be desired; the blower does only a fraction of the work, most of the air enters the furnace as the result of natural draft; the blast merely supplements the draft and gives the fire-

lumbering pays. A progressive Pennsylvania firm manufacturing lumber, lath and shingles outlines its policy as follows:

"We have always pursued a conservative course in lumbering, taking care of our timber and striving to keep out the fire. Any timber that blows down or should be burned we gather up at once and always, so far as possible, all trees struck by lightning. We manufacture with this saw, band and gangs. We strive to do our work as well as anybody can, and take pride in the fact that we can furnish anything in white oak, white pine or hemlock. We make all our lath from slabs and edgings, about six and a half million a year. The balance of the hemlock slabs and edgings, after taking out the lath, we lead up and send to the pulpwood mill, about 6,000 cords per year. Our shingles are made from broken pieces, forks and hollow butts, about six million per year. We also gather up the tops and breaks and limbs of the hemlock and hardwood timber left in the slashings, using all but the oak, hickory and chestnut, and send that to the pulp mills, about 5,000 cords of 160 cubic feet each per year. This gathers up the refuse in the forest so well that there is little fuel to make a destructive forest fire. Every man in our employ for the past thirty years has had positive orders when he sees a smoke start on our land or anyone else's to drop his work at once and put the fire out, if he hasn't help sufficient to do it, to send to the office and we will give him money enough. In this way we have saved nearly all our land from devastation by fire. It is coming up well in second growth, of which we do not cut any. The question of taxation is a very serious one. Timber land has been assessed and taxed so high that owners have been compelled to cut it off and could not hold it. Our recent law permits some concession on fire insurance, and only to be held only to be kept in growing timber. If taxation of growing timber were lower, owners would not be compelled to cut it so rapidly. So far we have not succeeded in any legislation for the prevention of forest fires that amounts to anything. If the fire can be kept out and taxation reduced, with judicious cutting there is no reason why Pennsylvania should not have timber sufficient for all time."

Statements like these, Mr. Kellogg declares, show that practical men of the lumber industry are different from the old-timers who went into the forest, slashed away to their hearts' content, and told the world that the timber resources of the United States were inexhaustible. Although a considerable proportion of our future supply will come from national and state forests, the great bulk of our timberland is in private hands, and much of it the lumber used by the next generation will come from it. While there are unquestionably short years ahead of us, we eventually produce all the timber we really need if we go at it in the right fashion. This Pennsylvania firm is on the right track and many other timber land owners will introduce similar methods of conservation and wise utilization as soon as conditions become such that they can afford to do so.

Leading Nations Import Much Lumber.

Few people have the slightest conception just how important a part timber and unmanufactured wood play in the trade between the world's great nations, and doubtless it is news to many to learn that the lumber importations of the various countries amount to \$285,900,000. This is according to estimates for the whole world compiled by Dr. Ernest Friedrich, of the German commercial high school at Leipzig.

Notwithstanding the fact that it finds its own supply dwindling, the United States furnishes about twenty per cent of the lumber imported by other countries; Austria-Hungary furnishes nineteen per cent, Russia sixteen per cent, Canada fifteen per cent, Sweden eighteen per cent, Finland ten per cent and Norway and Rumania a small quantity.

The countries importing wood are those on the

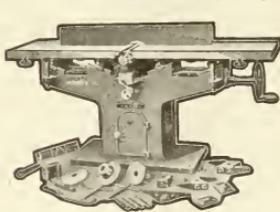

highest economical plans, which were themselves in earlier times densely wooded, but whose forests have been denuded to a greater or less extent to make room for agriculture and other industries. Only four per cent of the territory of Great Britain is covered with forests, and during the year 1906 that country imported lumber to the value of \$135,561,750. Germany has still twenty-six per cent of its territory covered by forests, but imported in 1906 lumber valued at \$61,285,000. Belgium and the Netherlands, that have but eight per cent forest lands, Denmark has seven per cent. France and Switzerland, with a small percentage, are all compelled to import lumber.

Besides these countries, those lands lying on the dry western side of the sub-tropical zone, lacking forests, are forced to import wood. Egypt imports wood and coal to the value of about \$16,660,000 annually; Algeria, Tunis, Spain, Portugal—with only three per cent forest land—Italy, Greece—with nine per cent forest land—the eastern part of Asia, British South Africa, the western part of Chile and Peru, the Argentine Republic and Australia, all poor in wood, are dependent upon imports of wood products.

A Universal Woodworker.

The machine shown herewith is a most valuable tool for any woodworking shop, as it will do a variety of work that usually requires several different machines, and at the same time it does the work much better, quicker and cheaper.

So great is the variety of work that can be done on this machine that it is entitled to the name "Universal." It will plane out of wind, surface, straight or tapering, rabbet door frames, rabbet and face inside blinds, joint bevel, galn chamfer, plow, make glue joints, square up bed

posts, table legs, newels, rase panels, either square, bevel or ogee, stick beads, work circular molding, rip, cross-cut, tenon, bore, rout, rabbet, joint and lead window blinds, work edge moldings, etc.

The tables are of iron and each can be adjusted independently, vertically and longitudinally in relation to each other or simultaneously together to and from the path of the cutters.

The machine is made by the J. A. Fay & Egan Company, 414-434 West Front street, Cincinnati, O., who will be glad to send descriptive circulars giving all details upon request.

Americans Take Up Logging in Colombia.

The George D. Emery Company, of Chelsea, Mass., has been interested in lumber operations along the Magdalena river in the United States of Colombia for a number of years, and Consul I. A. Manning now writes from Cartagena that other Americans and some Europeans have recently been examining the forests in that locality with a view to taking up their further exploitation. Concerning the timber and the availability of the Cartagena canal for transportation, Mr. Manning writes:

"I am informed that large bodies of most excellent timber, carrying, in addition to Spanish cedar and mahogany of the finest quality, many other valuable trees of beautiful grain, have been discovered, and a great deal of the timber is of easy access to the

Magdalena river. One of the main questions is the possible delivery of this timber at the seashore, as the delta proper of the Magdalena offers no facility therefor. Examination has recently been made of the 'digue' by an Englishman who has several options on a large tract of this timber, and he declares that it is possible to float or raft logs through it for at least eight months of the year.

"This dique, which draws its main water supply from the Magdalena river at Calamar, is almost a hundred miles long and quite tortuous for part of its distance, and is very much overgrown with vegetation, but recently the Condor, a screw steamer, forced its way the full length of the dique, and demonstrated that the waterway is open. The Englishman referred to recently came through the dique and informs me that in his opinion logs can be easily handled therein for at least half the year, and usually eight months. At periods when the dique might be closed to navigation, logs could be loaded on the cars at Calamar or at Barranquilla, and thus taken alongside ship without delay.

"To make navigation of the dique feasible for steamers the entire year would without a doubt be an expensive proposition, according to an American engineer who recently examined it with that end in view, but it would seem that to float logs through would not be difficult. If proved feasible, it will open up great bodies of valuable timber in the interior valleys of Colombia. There is said to be a fair current through the dique during the six or eight months of high water when logs would float without much attention. At the other seasons, i. e., of low water, it is believed that they could be towed through. The dique empties into a deep gulf opening into the sea about seven miles south of Cartagena bay. This gulf is protected and at almost any season ships could lie near the mouth of the canal or dique to load logs."

Hardwood Flooring Conditions.

Perhaps the hardwood flooring business has suffered less during the "panic" than any other branch of the hardwood industry. Not a single factory has been obliged to shut down indefinitely. The July and August trade was especially good with the average manufacturer engaged in producing maple, beech or oak flooring. One important factory making maple flooring reports that today it is oversold on 2½ inch clear more than a million feet.

Water-Soaked Timber.

The Forest Service is out with a circular stating that various writers on the work of wood seasoning have called attention to the merits of soaking lumber from logs long submerged. They do this by speaking of the distinct advantages gained by soaking the logs or the sawed lumber in water as a preliminary step to the air seasoning.

It is pointed out that in Japan logs are kept in brackish ponds for several years before being worked up. To this treatment is ascribed the peculiar freedom from warping found in woodwork from Japan, and especially in the wood carvings which are common in that country.

The warping of woodwork is due to a change in dimension caused by the wood adjusting itself to the moist condition of the surrounding air. In damp air wood swells, but shrinks again as the air becomes drier. This property of wood cannot be overcome entirely, but the search continues for methods of lessening its damage.

Soaking does decrease the tendency to warp, but by no means overcomes it entirely. The effect of soaking as a remedy for warping, however, is less than can be reasonably expected from some methods of steaming.

As a commercial practice the soaking of logs or lumber to remedy warping of the finished product is not to be recommended except when it can be done during storage or transportation, because of the time required to produce results that fall far short of what is usually claimed.

Band Saw Driven by Electric Motor.

The accompanying cut shows a rather novel and quite recent application of electric motor drive to a band saw. The interest of this installation lies in the fact that instead of direct motor drive, the belt drive with its slightly lower efficiency has been chosen.

The belt tightener shown at the upper right hand corner of the picture consists of a rather heavy framework carrying a pulley. As the entire frame is hinged from the rafters, the pulley rests on the slack side of the belt by gravity alone. This keeps the belt from flapping and swaying and at the same time allows slippage under heavy load. This arrangement allows the use of a high-speed motor and is in itself quite a saving, as the slow-speed motors are larger and therefore cost considerably more than motors of the same capacity running at higher speed.

The slippage of the belt when the motor is starting enables it to take the load gradually,

ELECTRIC BELT-DRIVE ON BAND SAW.

bringing the saw up to speed in a short time. This slippage avoids overloading the motor and prevents the blowing of a fuse or possible injury to the motor when starting, or in cases of sudden or heavy demands for power. The additional convenience of operation and the saving in the cost of maintenance more than compensates for the small loss of power caused by the use of the belt and tightener. While there is very little danger of fire with an electric motor it is quite desirable to put it out of the way of the sawdust which is continually accumulating on the floor near such a machine. Moreover, a motor located on the floor and directly connected with the saw is necessarily in front of the re-saw and is constantly exposed to injury from careless handling of trucks and large timbers. Another advantage of having the motor hung from the ceiling is that in this position it is safe from the meddling of mischievous boys who have in several cases found that by dropping a nail into the motor they could disable it and enjoy a rest while repairs were being made.

This arrangement of motor and saw affords on the whole an installation that could hardly be improved upon, as all possible causes of interruption seem to have been anticipated and the motor requires but little attention.

National Conservation Commission Active.

Five hundred manufacturers of explosives, sawwood and similar products have been asked by the National Conservation Commission for information as to all possible uses of sawdust. From this it will be seen the commission is going into fine details in its inventory of the natural resources of the country. Seven thousand lumbermen have been asked for their opinion as to the waste of lumber in sawmills, and more than two thousand lumber dealers and cooperage, veneer, furniture, box, vehicle and implement manufacturers have been asked to point out striking features of waste in their respective lines. Yet all this is only one part of the general scheme of hunting down waste which the commission is following in making its inventory. It is going after the little wastes here and there, which, added together, and put into dollars and cents, make an astonishing total.

Take the making of veneer, for instance. The scarcity of the more attractive finishing woods in the last few years has led to the annual production of over 1,100,000,000 square feet of veneer. This, of course, has been made possible only by the introduction of new veneer-making machinery.

The use of veneer is generally regarded as exemplifying the scarcity of the finer woods and typifying the complete utilization of all sorts of kinds of woods, yet from one of the schedules of the National Conservation Commission it is evident that the commission expects to discover great waste even in veneer manufacture. Though the word veneer carries many meanings, from a glaze applied to pottery to the "polish" of a man of the world, it is commonly employed as the name for the thin slices of wood now extensively used in the manufacture of all sorts of articles, such as wood plates, baskets and the exterior finish of furniture and woodwork, though the term "thin lumber" is more applicable to many varieties of this product. The manufacture of veneer in the last few years has advanced by leaps and bounds.

The woods principally used for making veneer are red gum, maple and yellow poplar, which together yield more than half of the total product. Red gum is largely used for baskets and maple for furniture. More valuable than these, however, are white oak and walnut veneer. Beech, which can be cut very thin, is used very largely for wooden plates.

A good deal of waste occurs in the manufacture of veneer. It is always a problem, for instance, what use to make of the cores left by the rotary process. In many cases these are used for pulpwood, pillars or panel headings, and they are largely used also for fuel, excelsior, crates, boxes and baskets. In the schedule of inquiries which the National Conservation Commission, through the Forest Service, is sending out, several questions are aimed to secure information as to the amount of waste in veneer manufacture and the possibilities of finding ways to utilize it.

Fire in Licking River Company's Plant.

Fire broke out in the big plant of the Licking River Lumber Company at Farmers, Ky., September 17. Its origin is unknown. The mill was in operation at the time and the employees did all they could, using modern fire equipment and chemicals—to put it out. Thus the lumber yard was saved; otherwise several million feet of lumber would have been consumed. In the mill the flames spread rapidly, so that it could not be saved. It was a large and valuable one, being one of the best equipped in eastern Kentucky and consisting of a heavy band mill and carriage which had only recently been installed. This heavy loss is covered by some insurance. R. G. Page, secretary of the company, states they will rebuild at once on the same site and continue operating. The Licking River has its main offices at Ashland. F. G. Eberhart of Mishawaka, Ind., is president.

Miscellaneous News Notes.

The Walker Veneer & Lumber Company is a new concern at Mound City, Ill., capitalized at \$25,000.

The Helena Hardwood Lumber Company is a new corporation at Helena, Ark., which is capitalized at \$40,000, of which \$28,000 has been subscribed. A. B. Pierce is president.

The Wardell Land & Lumber Company is a new St. Louis concern, capitalized at \$45,000.

The Mexican Central railroad has decided to follow the example of the Santa Fe and provide for future supplies of telegraph poles and ties by the establishment of eucalyptus forests.

The Whiskey Lumber Company is a new concern at Bristol, Va. Tenn., It is capitalized at \$15,000. J. B. Baumgardner is president and Irving Whaley, treasurer.

The Buckeye Lumber Company has been incorporated at Pittsburg, Pa., to deal in lumber and underlams; capital, \$30,000.

Seven varieties of New Zealand hardwoods have been put through a series of tests by the United States Forest Service and showed up well in comparison with white oak, four of them developing bending strength even greater than that wood.

The Jamestown Hardwood Trim Company has entered business at Chautauque, N. Y. It is capitalized at \$40,000.

The Novelty Wood Works of Waterloo, Ia., has changed its name to the Waterloo Sash & Fixture Works.

The Phoenix Lumber Company of Little Rock, Ark., has had a petition in bankruptcy filed against it by creditors. W. B. Ferguson is at the head of the concern; the Ferguson Lumber Company is already in the bankruptcy court.

Receivers have been appointed for the Beltrami Cedar & Land Company of Minneapolis, Minn. Liabilities are said to reach \$80,000, while assets are valued at \$50,000.

John Cathcart Lumber Company is the style of a new corporation at Plainfield, N. J., incorporated at \$50,000, of which John Cathcart of New York City is the head.

Plants for treating mine timbers and railroad ties are to be erected by the Philadelphia and Reading Coal & Iron Company and the Delaware, Lackawanna & Western Railroad Company in the Pennsylvania anthracite region.

Fire which it is believed was started from an overheated bearing in the Northwestern Co-operative & Lumber Company's stave mill at Gladstone, Mich., destroyed that part of the plant before the flames were under control. The loss is estimated at \$35,000.

F. M. Sorague, a well-known lumber inspector of Grand Rapids, Mich., and H. W. Mollenbacher of that city have organized the Sprague Lumber Company, to engage in buying and selling lumber. The mill, two warehouses and two dry kilns belonging to George H. Tennant of Minneapolis were recently destroyed by fire at a loss of \$75,000.

The Miller & Miller Lumber Company is the name of a new Philadelphia concern, capitalized at \$40,000.

The Illinois-Arkansas Lumber Company, having headquarters at Tivoli, Ill., has been given a charter to operate in Arkansas. Its assets are estimated at \$100,000. Its headquarters will be in Little Rock, and J. M. Rose will be local manager.

The stockholders of the Pioneer Pole & Shaft Company held their annual meeting at Piqua, O., last week. W. A. Snyder of Piqua is president; J. A. Smith of Muncie, Ind., first vice president; and F. E. Kiplinger of Piqua, secretary-treasurer.

According to an article recently published in Toronto, the Ontario lumbermen have decided to reduce the cut of lumber in the bush during the coming winter by 50 to 75 per cent on account of stagnation in the trade and American competition in Canadian markets. The cut in 1906-7 was 25 per cent greater than the previous year. A quarter of that cut was left over, either in

logs in the hooms or as lumber in the yards. When the lumbermen faced the season of 1907-8 they reduced their cut by 25 per cent, calculating that the stock on hand and the cut of

the last season would meet all requirements, and it did, for the financial collapse came and the demand for lumber declined as did other products.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

M. M. Thomas, sales manager of Cobbs & Mitchell, Inc., and Mitchell Brothers Company of Cadillac, was a welcome caller at the RECORD office on Wednesday last. He reports that both in lumber and flooring the two houses which he represents had the largest trade in their history during July and August, and that prices are very satisfactory. Mr. Thomas is absent from home on his annual vacation and after spending a few days in Chicago will make a western trip. The RECORD had the pleasure of a call on September 16 from A. B. Pierce, treasurer of the Southern Mill & Land Company, 508 Fullerton building, St. Louis. Mr. Pierce's company operates hardwood mills at Catron, Mo., and Keller, Ark. Associated with the company is the Helena Hardwood Lumber Company, which has just about completed a new mill at Helena, Ark. Mr. Pierce reports lumber conditions in the St. Louis market as having materially improved during the last few weeks.

One of the welcome visitors at the recent Hoop annual was George O. Worland of Thompson, Thayer & McCowen, Evansville, Ind. Mr. Worland is very much pleased with the business outlook.

A. H. F. Timken, manager of the Kentucky Car Lumber Company of Madisonville, Ky., spent the last two weeks in the Chicago market. Mr. Timken's specialty is railroad car lumber and wagon woodstock, and he secured some very desirable orders during the last few days.

A. Fellabum of the Frankfort Handle Manufacturing Company, Frankfort, Ind., was a RECORD caller early this week. Mr. Fellabum's institution is running about two-thirds capacity, with orders well up to output.

A new Chicago institution is the Lumber Shippers' Storage & Commission Company, with office and yard in Throop street, south of Twenty-second. This institution is under the management of Q. Y. Hamilton. The business of the company will be to store lumber for local and foreign shippers and make sales of the property on a commission basis when so requested. Mr. Hamilton is an experienced hardwood man and his new venture should be a success, as shippers are often at a loss how to handle old lumber forwarded to this market that is unsatisfactory to consignees. The company should be able to save demurrage charges for shippers in many instances and to effect sales that will be profitable and satisfactory.

F. J. Kiny, secretary and treasurer of the Williamson-Kiny Mill & Lumber Company, Mount City, Ill., spent the last ten days in Chicago, tending up business. This concern is a producer of southern hardwoods as well as sawn veneers, and is represented locally by the Hardwood Mills Lumber Company, 1120 Monadnock building, Chicago. Mr. Kiny reports having booked several very handsome orders while in the city.

A caller on the RECORD September 22 was O. M. Evans, a student in the forestry department of the University of Michigan at Ann Arbor. Evans was in Chicago seeking to acquaint himself particularly with the utilization of hardwoods, and on that mission visited several leading Chicago woodworking plants.

H. C. Hauser of Pahoa Puna, Hawaii, who has been engaged in the erection of a sawmill at the same place for some months, will return to the United States within a month to buy machinery for another new sawmill which he will erect at the Volcano Kilaua, and on his trip will visit Chicago.

Among the callers at the RECORD office this week was W. F. Hopkins of Munising, Mich., vice-president of the First National bank of Alger county. Mr. Hopkins is very much interested in hardwood lumber affairs. He reports no forest fires reached within twenty-five or thirty miles of Munising.

Burdie Anderson of Munising, Mich., president of the National Veneer & Panel Manufacturers' Association, was in town on Monday and said "Hello" to the RECORD. Mr. Anderson was on his way to attend a meeting of the Veneer Club held at Cincinnati on Tuesday last. He reports the veneer business in very fair shape and conditions constantly improving.

W. E. Hoshall of the house of Hoshall & McDonald Brothers, manufacturers of hardwoods at Eola, La., was in Chicago recently looking after business. He reports a considerable improvement in his company's hardwood trade. L. E. Ridley, hardwood wholesaler of this city, has opened a distributing yard at Brookport, Ill., on the Ohio river. He expects to pile about 1,000,000 feet at that point. W. E. Barrett & Co. of Chicago are also interested in the enterprise.

M. A. Hayward of Columbus, O., was a Chicago visitor of the past week and one of the many visitors to the Hoop-Hoop annual.

H. J. Heilmann of the Heilmann Lumber Company, Heilmann, Wis., was transacting business in this market during the past ten days.

J. M. and W. W. Schultz of Scituit Brothers & Cowan were absent on a southern trip last week.

R. J. Lockwood of the Arthur Hardwood Flooring Company, Memphis, called on Chicago friends the early part of last week.

E. A. Lang, in charge of the hardwood department of the Froelche-Leicht Lumber Company, is enjoying a vacation among the Wisconsin lakes.

NEW YORK

The Superior Lumber Company is the name of the latest acquisition to the local wholesale trade, with headquarters at 549 Flushing avenue, Brooklyn, N. Y. The leading spirit in the company is C. H. Boner, formerly with Sam E. Harg. The company will handle a full line of hardwoods for the local trade, and with the experience enjoyed by Mr. Boner it starts out under favorable auspices.

Sales Manager F. A. Kirby of the Cherry River Boom & Lumber Company, Scranton, Pa., was a visitor this week in the interest of business. The mills of the company are running full time, and have every prospect of a good fall and winter trade.

W. S. Van Cleaf, the prominent lumberman of Port Richmond, Staten Island, as president of the Richmond County Agricultural Society, was the leading spirit in the management of the fourth annual county fair of the society, which was held during Labor day week at Dongan Hills, L. I. Many distinguished guests were present during the week, including Governor Hughes, and the fair was a big success owing to Mr. Van Cleaf's able management.

A petition in bankruptcy has been filed against the firm of Charles Rosenberg & Son, manufacturers of cabinet trim and grillwork at 250 East 120th street, Bronx. F. H. Griffin has been appointed receiver.

The annual meeting of the Building Material Men's Association of Westchester county, New York, comprising all the lumber and building material firms of the county, will be held at

White Plains September 21. The annual election of officers and many important matters will be discussed and acted upon.

A petition in bankruptcy has been filed against Thomas Todd, large box manufacturer and lumber dealer at Thirty-sixth street and First avenue, Manhattan, alleging insolvency. G. F. Darrell has been appointed receiver. Liabilities are \$15,000 and assets \$3,000 above liens and incumbrances. The business was started in 1862 by John Todd and is one of the oldest in that line in the district.

The Oriental Fireproof Sash and Door Company has been organized in the Bronx with a capital of \$2,000 by P. Lingeram, A. L. Brown and J. Kaaber.

The Coopers Creek Lumber Company has been organized in this city with offices at 20 East Forty-second street, Manhattan, by F. A. Camp, late treasurer of the Mead Lumber Company, wholesale hardwoods, at the same address, A. L. Camp and Fritz Zaeniger. The new company will develop a choice tract of hardwoods in north Georgia and has bought mills at Baxter and Margaret, that state, formerly owned by the Mead Lumber Company. The latter company will handle the output of the Coopers Creek Lumber Company, comprising oak, ash, poplar, etc.

Miss Margaret Marsh, daughter of Eben J. Marsh, the well-known cypress lumberman of 1 Madison avenue, city, was married on August 20 to Paul L. Sheldon, a well-known local stock broker.

E. A. Salomon, a broker and lumberman of 29 Broadway, Manhattan, has been arrested on charges preferred by J. H. Bryan of the Bryan Lumber Company of Knoxville and Bristol, Tenn., alleging that he sold the Universal Lumber Company of 13 William street, of which Salomon is president, \$65 worth of Tennessee timber land for which he was paid what he believes were worthless bonds and notes, and charges fraud.

B. P. Salmon, the popular manager of the local office and exhibition room of the Froquois Door Company of Buffalo, has just returned from a week's stay with Manager A. J. Phinney of the company at the latter's handsome summer home on Lake Ontario.

E. H. Skinner, John P. McEwan in the wholesale trade, has bought a controlling interest in the business of Budd & Co., large manufacturers of furniture, desks, etc., at 71-73 Spring street, Manhattan, and has incorporated the business under the same style. Mr. Skinner is president of the corporation and William Budd, secretary and treasurer.

Loren E. Moore, the well-known stave and lumberman of 805 Orleans and head of Lucas E. Moore & Co., that city, was here during the fortnight visiting Manager W. K. Knox of the local office, 11 Broadway, on business.

John Cathcart, who for several years past has been prominently identified with the hardwood manufacturing, wholesale and export trade, with offices in this city and plants at Glasgow, Ky., and Decatur, Ala., has just organized the John Cathcart Lumber Company at Plainfield, N. J., with a capital of \$20,000, to conduct a general lumber and timber land business, with headquarters in New York. Associated with him in the new company are George E. and Herbert J. Cathcart, two brothers.

F. R. Babcock of E. V. Babcock & Co., Pittsburg, was here last week at the local office of the firm, 43 Wall street, en route home with his family after spending at Spring Lake, N. J.

W. W. Schuyler, the able assistant to Secretary E. E. Perry of the National Wholesale Lumber Dealers' Association, 66 Broadway, returned this week with his family from a stay at Stamford, N. Y.

An execution of \$65,000 for \$450 has been made against the Wood Mantle and Pier Mantle Company, 298 Bowery, in favor of the Jefferson Trust Company. The company was capitalized at \$200,000, and the sheriff found only a few dolls and ends when he visited the place.

McNeill Bros., Inc., is the style of a new corporation just organized to succeed to the retail lumber business of Robert McNeill, at 237 East Fortieth street. The incorporators are Robert McNeill, Joseph McNeill and Martha McNeill. The business was originally established by Robert McNeill in 1898. He died in November, 1902, since which time his two sons and his widow have conducted the business under the old style. The new corporation will enlarge the business.

Robert W. Highie of the R. W. Highie Lumber Company, 45 Broadway, has just returned with his family from New Bridge, St. Lawrence county, New York, where he has been spending the summer at Mr. Highie's extensive hardwood operations at that point.

There will be quite a delegation of wholesalers and retailers leaving this city to attend an important meeting of the car stake and equipment conference at St. Louis, September 18. The meeting will be largely attended by delegates from all the organizations interested in this important case, its objects being to decide definitely whether the case shall be appealed or dropped.

G. E. Smith, wholesale hardwoods, 17 Battery place, returned last week from a month's business trip in the White mountains. He reports business as showing a marked improvement.

S. E. Slaymaker, S. E. Slaymaker & Co., 300 Broadway, is speeding a few weeks at the big operations of the West Virginia Spruce Lumber Company, as Cass, W. Va., for which his firm are selling agents. The company recently acquired another large tract of timber from Senator S. B. Elkins, which, added to their present holdings, makes them one of the biggest timber land owners in the East.

The J. F. Murphy Lumber Company is the name of a new corporation just organized in this city with a capital of \$10,000, to conduct a general lumber business by J. F. Murphy, 765 Trinity avenue, B. P. Reynolds, 107 Broadway, New York, and H. S. Chittick, 106 Hardenbrook avenue, Jamaica, L. I.

The large sash, door and hardwood trim firm of Meisel, Danowitz & Co., 45 Eckford street, Brooklyn, N. Y., has just been incorporated under the style of Meisel-Danowitz Company, with a capital of \$50,000, to succeed to the business. The incorporators are S. Frank, Sarah Frank and L. Danowitz, all of Brooklyn.

The Montgomery and South Shore Company has been incorporated in this city to conduct a timber land and lumber manufacturing business, with a capital of \$25,000. The incorporators are T. W. Constable of Brooklyn, F. Hoar and L. Earle of New York City.

BUFFALO

Reports from the south-western sawmills themselves show that they are not in a very active shape, some entirely idle and others shuddering for want of logs. There is a report that an effort is being made to break the log price, which is called high, but some of the mill owners say that buying is active and intimate that they are in the market for as many logs as they can get.

There is another good reason for keeping the sawmills quiet, and that is the dry weather. Owners are actually afraid to run, for a spark in almost any part of the plant would be fatal. A good rain would make about the biggest difference in lumber manufacturing.

The Lumber Exchange, at its last meeting, conferred with the request of certain authorities of the National Hardwood Association and agreed to send a committee to the Philadelphia conference on September 24, though the idea of a kick on suspension is not favored here. President Beyer on his return from his Missouri sawmills, mentioned O. E. Yeager, I. N. Stewart and P.

W. Vetter on the committee and will also go to the Philadelphia meeting.

The Scatterdill sawmills in Memphis have now saved out and will have to wait till there is a supply of logs in, which does not seem to be a very easy matter, especially at this time of the year.

The Buffalo Hardwood Company is buying Michigan stock, having picked up quite a quantity this month for immediate shipment here. If there was a better water route to the east side of the city the handling cost would be small.

A. W. Kreinbender of the Standard Hardwood Company has gone to the Kentucky mills of the company to get the fall stock started this way, such as the yard depends on for winter sales. There appears to be enough of it there for present needs.

F. M. Sullivan has gone to Michigan to pick up another stock of hardwoods, elm, black ash and the like, for a yard stock, which appears to have sold pretty liberally of late. Mr. Sullivan is now entirely restored to health.

The sales from the yard of O. E. Yeager have been pretty good of late and the supply south of the Ohio is good enough to make up for the shipments, so that the plan is to go on about the same as before, till there is a change in market features.

I. N. Stewart & Bro. are still making cherry their leading wood, but will add such other hardwoods as oak, poplar and chestnut, as stock and yard space permit. The plan is to put in other woods always, if they do not cut out cherry.

Hugh McLean sticks to the sales part of his business as usual and Angus McLean will prepare to care for the spruce and cedar trade in the St. Lawrence valley almost entirely, with Montreal as headquarters.

The yard of A. Miller is, as usual, well stocked up with all sorts of hardwoods, and though he has not been inclined of late to regard trade as what it should be, he is doing as much business as others and knows where to find it.

F. W. Vetter finds no special points of novelty to report from his trade, for the reason that he has adopted the plan of keeping a general assortment of hardwoods and making no change till the market picks up again. It will still further filled up with a few varcos by luke, especially as they go into pine and hemlock as well as hardwoods. Hemlock is doing decidedly well here this summer, building is so active.

F. A. Beyer is back from a trip to his Pascoia Lumber Company's mills with a report that business in lumber is showing much more activity than formerly. The mills are not running yet, but are ready for business.

PHILADELPHIA

Samuel Miller, senior partner of the well-known lumber firm of Miller, Robinson & Co., Sixth street and Sedgely avenue, died on September 15. He was sixty-three years old. Mr. Miller was highly respected by the whole lumber trade, who extend their heartfelt sympathy to his family and to his partner, Herbert P. Robinson, vice-president of the Lamberson's Exchange.

C. E. Lloyd Jr. of the Holly Lumber Company, Inc., has returned to the city after his summer outing at North Lovell, Me. He reports lumber orders coming in notwithstanding the insistence of the people that they do not wish to buy. He thinks the outlook for fall business unquestionably good, and contemplates a tour of the Ohio districts to inform himself as to conditions and to prepare for calls, which are sure to come.

A. Gibson Mitchell & Co., who have always been most business on their properties of a gradual

return of better conditions, report very satisfactory orders with better prices coming in; also good results from their men who are unfailing in their quest for business.

Schofield Brothers are emphatic as to their faith in better and better times right along, and they believe by the first of the year the winds of prosperity will be full spread. J. H. Schofield is in the mill district in West Virginia investigating the stock situation. Robert W. Schofield is on one of his trips to their Salzkenthe mill at Schofield, S. C., attending to matters there. W. W. Clark sends good reports from the Cumberland valley section; George Lanza, Jr., who is traveling through eastern Pennsylvania, writes hopefully, and James C. Place, who is trying New York, is disposed to believe the best of the opening fall trade.

Lewis Thompson & Co., Inc. are very well satisfied with business conditions at present and consider the outlook promising.

Robert C. Lippincott testifies to a recent progression in trading, with encouraging outlook. Mr. Perry of this house states that inquiries are increasing, good orders are being booked and prices tend upward.

The Monarch Lumber Company has no fault to find with conditions generally. Its men are busy all the time, with very tangible results, and the outlook is for a steady advance. John J. Rumberger of this company, who has just returned from a trip through eastern Pennsylvania and West Virginia, states that though buying is on a conservative basis there is good prospect for a progressive fall business.

E. V. Babcock & Co. do not concede to any recent great expansion of business, but think things are picking up and the outlook very encouraging.

L. Power & Co., woodworking machinery makers, 20 South Twenty-third street, evidently see signs of returning business, as they are busy manufacturing stock machines, to be prepared for a short notice demand. They do not hesitate to state that things with them are considerably brighter.

The Germania Company of Pittsburg, Pa., states that August, always a doubtful month, has been exceptionally prolific in sales. C. G. Maus, the Philadelphia representative, 1020 Real Estate Trust building, reports a far better aspect of things, with outlook flattering.

H. G. Hazard & Co. report things lively up and prospects for trade encouraging. This firm for a time was practically out of the hardwood market, but appreciating the possibilities of these woods in the near future, it is again entering the lists.

The Tomb Lumber Company states that orders are coming in better than for some time.

H. H. Maus & Co., Inc., report that although there is still difficulty in making prompt collections, as the fall opens there is a trend noticeable toward better conditions generally.

It was recently announced in Washington, D. C., in the case of the lumber conference against the Northern Pacific and the Union Pacific rail roads, that the Interstate Commerce Commission has authorized the railroads to establish differential rentals not exceeding 10 cents per hundred pounds above the rates on fir lumber between the same points. This authority is with the provision that no such differentials or differential of less than 10 cents existed prior to November 1, last.

A fire on August 28 destroyed the cooper shop of T. B. Maloney, Princeton avenue and Hezer main street, causing a loss of about \$10,000.

On September 15 fire destroyed the plant of Hochheimer & Bros. chair manufacturing in Baltimore, Md.; loss, \$20,000.

News from Middleford, Me., reports the recent burning of fifteen acres of lumber yards, twenty tenement houses, several factories and much rail road property causing a loss of \$700,000.

The Union League of this city, of which nearly all the prominent lumbermen here are members, have decided to build a large addition to their clubhouse; it will consist of a handsome structure seven stories high, of pressed brick, with gray stone trimmings, and will cost about \$650,000.

Among the recent visitors to the Lumbermen's Exchange rooms were Frank X. Longbery of Santa Rosa, Cal.; Mr. Galloway of Galloway & Payne, Johnson City, Tenn.; F. Pyne of E. B. Martin Company, Lancaster, Pa., and J. B. Murphy of N.-W. York.

The Buckeye Lumber Company, Pittsburg, Pa., obtained a charter under Delaware laws on September 14; capital, \$200,000.

To manufacture automobiles and all parts and accessories thereof, the Auto Accessories Company, capital \$10,000, has been organized at Camden, N. J., by F. R. Hansell, William F. Eddell and I. C. Clow.

S. John Pyle of Lansdowne, Pa., a member of the lumber firm of Pyle & Mitchell, died suddenly in the West Philadelphia station as he was about to start on a trip through Canada. He was sixty-seven years old.

PITTSBURG

The Pennsylvania Forestry Commission has bought 7,000 acres of land in Coganstown, Meyers and Louis townships near Williamsport, Pa., which will be immediately added to the state reserves. This tract lies on the watershed of Gray's Run and is heavily timbered.

The Wellsjimer stove factory at West Mansfield, O., was burned last Friday with a loss of \$2,000 and very little insurance.

E. H. Stoyer of the Pilot, Erving & Stoyer Company and A. J. Diebold of the Forest Lumber Company are two of the Chamber of Commerce parties which are on a trade-booming excursion this week in Ohio and West Virginia.

Robert A. McDonald, president of the McDonald Lumber Company, reports a very slow inquiry for hardwoods and has not yet started an inquiry in West Virginia. Mr. Donald is spending his vacation at the Cambridge Springs summer resort.

●Manager S. A. Seaman announces that the C. P. Caughey Lumber Company is getting orders with a commendable regularity, although they are not so large or frequent as he would like. The company's trade in river stocks has been especially good for this season.

The A. L. Sheaffer Lumber Company, which usually does a large amount of estimating on bill stuff, is taking it quiet at present. Outside of a few big contracts which have been lately accepted, Mr. Sheaffer says that there is practically nothing in the market to figure on and that even when a job is estimated it is usually held up.

J. E. McVain & Co. have just finished filling an order for 10,000 white oak ties, part of which went to Cleveland and part into the Pittsburg district. The concern has also taken an order for 200,000 feet of oak bill stuff. Manager J. J. T. Penney says that prices are still soft and that the inquiry is coming from a better class of buyers.

William R. Cornelius is doing a nice business with good, well-established trade and manages to keep lumber on the road most of the time. A large portion of the small mills in West Virginia are down, according to his information.

The West Virginia Lumber Company is doing much better in a hardwood way and reports a good inquiry for both oak and poplar. The furniture trade is coming into market again and things are so encouraging all around that the company will put on two new salesmen October 1. B. W. Cross, who was a member of the Parsons-Cross Lumber Company, is now established as office manager for the West Virginia.

The Clay-Schoppe Lumber Company is running two mills at Coalmont, Pa., and Dudley, Pa., on hardwood. It sold twenty cars of four-quarter red and white oak this week and has a good stock of dry lumber on hand. The company will also about 500,000 feet of ash this winter and also a large amount of hickory. It reports more inquiry for 25 and 40-foot white oak timbers than for anything else on the oak list.

The Helmeke Lumber Company is mightily well pleased with September trade to date, and finds the market for poplar rapidly coming back to old-time form. Most of the inquiry is for house building lumber and comes from Ohio and states farther west. H. W. Henninger, secretary of this company, says that the lath business is improved a little also, and that he looks for a gradual increase in all lines of hardwood business from now on.

W. W. Vosburg of Bemis & Vosburg has returned from a long trip through the South. The company, in sounding the September situation, finds that inquiry is uniformly better and that orders are coming more easily. Trade, however, has not reached the point where it can be compared with 1906, nor two years previous to that date, but all indications point to steady improvement now.

The Nicola Lumber Company is convinced that both inquiry and sales are improving at a fairly steady rate. While price advances have resulted in some hesitation on the part of buyers, this only lasts for a short time and the buying public is finding that these prices are coming up to stay. The company has had an excellent trade in building lumber of late, most of which goes to places outside of Pittsburg.

I. F. Balsey, hardwood manager for the Willson Brothers Lumber Company, will represent the Pittsburg Wholesale Lumber Dealers' Association at the convention of eastern associations to be held in Philadelphia September 24. This is the fourth meeting called by these associations to try to devise a new method of grading hardwoods that would be satisfactory to the individual associations and also to the National Hardwood Association. Mr. Balsey reports a better outlook in the factory trade and says that white oak is in excellent demand.

The Linehan Lumber Company is getting a better inquiry from the factory trade and especially from furniture and implement concerns. While buying has not been resumed on the scale that present low stocks would seem to warrant, yet it is sufficient to show that confidence is steadily being regained and that by the first of the year with favorable political results business will be going ahead in good shape.

The Furnace Run Lumber Company does not feel jubilant over things yet, but is satisfied that the situation is improving. President Nelson has kept very close tabs on the line-up of bill and stocks, and finds that present conditions point to slightly higher prices even before January 1.

The J. C. Moorhead Lumber Company is doing the best it can with portable mills on its operations at Shryock, W. Va., pending the erection of a large planing mill to take the place of the plant which was recently burned. Mr. Moorhead's trade has been largely in hardwood and his company is in excellent shape to supply standard hardwood lumber.

The Bradford Hardwood & Rubber Company of Bradford, Pa., will shortly begin the complete manufacture of cot beds. For some time it has been supplying the hardwood parts of these beds to wholesalers all over the country. Its new scheme of assembling the parts and shipping the beds complete will make necessary a much larger force of employees.

The Crescent Lumber Company recently took an order for forty cars of hardwood piling. It has been getting some good orders for chestnut poles to be cut in Ohio and delivered in the Pittsburg district. The demand for ties is slight, according to its inquiries.

Selling timber by the pound is something rather unique in Pennsylvania lumber history. This was virtually what was done last week when J. P. Frederick of Bloomsburg, Pa., let the contract to V. A. McWilliams of Danville, Pa., for clearing a large tract of woodland on his farm at the rate of \$1 for every thousand pounds of timber.

H. T. Lincoln, receiver of the Chest River Lumber Company, is not handing out any big bumps of encouragement to the creditors of that concern. Reports of auditors so far go to show that it was nearly a "clean-up" and if present rates hold out, a ten per cent dividend will be a mighty lucky find for those who are left "holding the bag."

The Henderson Lumber Company reports a very fair business during August with a good increase in demand this month. Although buyers are hunting bargains and seem determined to keep prices at the lowest possible level, President J. F. Henderson says that conditions are going to force better quotations soon. The coal mining trade is taking more lumber and with the small stocks at the country mills it is soon going to be difficult to pick up bargains at the plants.

The Neuse River Lumber Company, which was recently established at 407-409 Ferguson building, is running its mills only part time. The company is preparing to build four miles of railroad to reach the heart of its tract of 4,000 acres of timber at Redwood, N. C., on the Senobar Air Line railroad. For this reason its plant will not be started in full for six months. W. Wood is president of this company, Newton Shaver is vice-president, F. W. Siebert is secretary and John P. Stang is treasurer.

The F. W. Crane Lumber Company is now well established on the fourth floor of the Ferguson building with F. E. Smith in charge of its sales department. R. E. McQuay holds a like position in the Philadelphia office of this company. Another Pennsylvania salesman and a salesman in New York and Philadelphia are also bustling hard for business under the direction of President F. W. Crane, whose headquarters are at the Pittsburg office. The company's plant at Clover Lake, W. Va., on the C. & O. railroad, is cutting about 40,000 feet a day. This is choice stock and in birch and beech the company has an exceptionally fine lot of lumber, with 200,000 feet of twelve-quarter hard maple that is hard to beat. It is also carrying a big stock of four-quarter No. 2 quartered oak and 500,000 feet of eight-quarter sound square edge oak. Its trade is coming up right along and quite a nice inquiry is now coming through railroad concerns.

Western Pennsylvania and eastern Ohio suffered badly the past week on account of forest fires. A large area near Greenville, Pa., was burned over and the 1,500-acre tract of young timber belonging to the Dorset Coopersage Company, which is over the line in Ashland county, Ohio, was almost entirely destroyed. Bad fires also raged on the Blue and Green mountains near Sniensselsmith, Pa., and along the Mauryer line.

The Eaner combination rolling the Mauryer, sawing and fly screen is the magic way which is likely to make a large amount of money for a \$300,000 company being formed in Pittsburg which interests several prominent lumbermen of this city. The shutter is made of wooden slats fastened with aluminum clips and strung on a bronze tape. It has been gaining favor very rapidly and it is proposed to erect a \$50,000 plant this fall in the Pittsburg district.

The Pittsburg Lumbermen's Mutual Fire Insurance Company is making a record of which insurance men will be proud, under the management of Carl S. Van der Voort. Its fire losses for the eighteen months of its existence amounted to only \$1,100 net. While the company has lost a considerable number of dealers on account of low stocks being carried, it has secured more than enough business from other insurance companies to offset this. Its strong point is that it

has no agencies and pays no commission and that it insures lumbermen and woodworkers only. J. C. Parsons is president of the company, Nathaniel Green is vice-president, George N. Glass is treasurer and Carl Van Der Voort secretary and manager.

A dispatch from Cumberland, Md., says that the Kendall Lumber Company has obtained a contract to furnish 850,000 feet of hemlock to the H. C. Frick Coke Company of Pittsburg, to be used in the erection of eight houses at the company's works near Brownsville, Pa., for employees. The lumber is being put aboard cars at Hutton, Garrett county, Md., and the company operates mills at Crellen, Kendall and Pyle.

BOSTON

At a meeting of the Massachusetts Wholesale Lumber Association, held at the Exchange Club here on September 10, it was voted to adopt the last rules of the National Hardwood Association. Another and let us hope equally successful effort in the interest of harmony will be made in Philadelphia on September 24, when numbers of wholesale merchants there will meet together to endeavor to reconcile conflicting views. It may be that delegates from Boston will be present at this meeting. A delegation has been invited to attend and Mr. Blanchard, the president of the Massachusetts Wholesale Lumber Association, has written the members of the South Atlantic for an expression of their opinions in the matter. Mr. Blanchard himself is strongly in favor of peace. There are still some dealers in New York who may at this writing be termed "irreconcilables."

Horace M. Bickford and Frank Witherbee of the Bickford Lumber Company are making an extended business trip through the South.

Harold Weston of Jacksonville, Fla., was in Boston with an automobile last week. He left here with the intention of making a long extended tour of the West.

F. F. Fish of Chicago, secretary of the National Hardwood Lumber Association, has been in Boston this week.

M. Foote, manager of the National Lumber Company, Grand Rapids, Mich., is expected here today (September 20).

E. B. Wright, vice-president and general manager of the Bates Lumber Company, Boardman, N. C., was in Boston a few days ago.

The insurance commissioner of Connecticut has admitted the Lumber Mutual Fire Insurance Company of Massachusetts to do business in that state.

E. J. Hammond, who spent quite a little time during the hot weather at his beautiful summer home at Water Harbor, Me., is now to be found at his office in Baltimore.

The Fuller and Rice Lumber & Manufacturing Company of Grand Rapids, Mich., have been sending their Boston friends boxes of peaches. The fruit was first-class and highly appreciated. The poetry accompanying it was equally good.

BALTIMORE

The quarterly meeting of the Baltimore Lumber Exchange was held last Monday, having been postponed for a week owing to the fact that the regular date was the 1st of day, when not a few of the banks were closed up. But the exchange, in carrying out its constitution, was destined to continue its operations until the arrival here of William J. Brown, democratic presidential candidate, who delivered a speech. Many of the lumber business representatives of politics, wanted to hear the candidate, and as a consequence the attendance at the meeting of the exchange was considerably reduced. It so happened, however, that this was little business to transact and the meeting was of a routine character, so that the meeting proceeded to its short duration. A city official has to have delivered an address on the

loans to increase the water supply and for other purposes, which are to be voted on this fall, but he failed to be present and adjournment suitably followed. Afterward the members sat down to a very excellent luncheon, served in the best style of the Merchants' Club. Those present at the luncheon were: Daniel MacLean of the Eisenhauer-MacLean Co.; M. B. Kegan, East Brooklyn Box Co.; Bennett E. Tuck, Ryland & Brooks Lumber Co.; J. Benjamin Byrnie; William T. Lawton and Joseph T. Lawton Jr. of Joseph Thomas & Son; R. W. S. Traylor; A. Frank Gilbert and J. C. Gilber of the L. L. Gill & Co. and J. C. James; C. Row, Jr. of the W. Lewis Rowe Co.; George Schumacher; L. H. Gwaltney and F. W. Clapp of the American Lumber Co.; John A. Berryman, Joseph Virdin and James Clarke of the Canton Lumber Co.; William D. Gill and E. P. Gill of Wm. D. Gill & Son; John S. Heinrich; R. J. Colonna and Charles T. Howard of the G. S. Briggs Co.; Campbell V. Heinrich of George Helfrich & Son; H. T. Bart of J. T. Bart; F. A. Asheville of the E. W. James Lumber Co.; Alexander Campbell of the N. W. James Lumber Co.; C. W. Hillberg of John L. Aleock & Co.; Rufus K. Goodenow of the Canton Box Co.; Parker D. Dix of the Surry Lumber Co.; Theodore Motu and Thomas H. Motu of Theo. Motu & Co.; Harvey C. Hall of Granger & Lewis; J. H. Manken, secretary of the Lumber Exchange; Paul Coriell, secretary of the Retail Lumber Dealers Association.

A second meeting of the creditors of the National Lumber Company, West Falls avenue, which has been involved in financial difficulties for more than a month, took place on September 8, at which the affairs of the company were extensively discussed. Mr. Perezog, the virtual owner of the company, submitted a statement of assets and liabilities, showing the former to be relatively small and the latter as amounting to more than \$30,000. He proposed to pay 70 cents on the dollar in cash within thirty days, and requested that the proposition be accepted. About two-thirds of those holding claims against the company, he said, have already accepted and the others are expected to come in. Among the largest creditors are the Old Town and Canton National banks. Some twelve or thirteen Pennsylvania banks are also interested. The statement submitted, it appears, classes as assets some of the notes of the Wilson & Kony Company, the Independent Lumber Company and J. H. Cranish, which were turned over to banks as collateral for loans, so that they will do little or nothing. A number of other items are admitted to be bad by Mr. Perezog, these amounts being either disputed claims or debts of the concern which have gone into the hands of receivers. Under the circumstances 30 cents on the dollar is considered the best offer that could possibly be obtained.

John L. Aleock of John L. Aleock & Co., one of the Baltimoreans who attended the annual convention of the Hoop-Hoo at Chicago, has returned and speaks in terms of the highest praise about the reception accorded visitors by the lumbermen of the western metropolises. He said that everything was done on a large scale and in admirable taste, and that the Hoop-Hoo had the time of their lives. The trip across Lake Michigan was very enjoyable, and the proceedings, he thinks, will result in advancing the interests of the order to a marked extent. While some disappointment was felt about the passing over by Mr. Aleock as a candidate for secretary of the Unversity in favor of a western man, the view prevails that Mr. Aleock is still a young man and will have other opportunities to secure the honor. His popularity was attested by election to a high position, and another Baltimorean, Maurice W. Wiley, also came in for distinction, so that taking it altogether the Monumental City, 208 Ford avenue, of Heelinger Brothers & Co., 208 Ford street, this city, was damaged \$7,000 by fire on the night of September 16.

The blaze was the sixth to break out in the building in recent years. The stove mill of James Detrow, north of Hancock, Md., was completely destroyed by fire on September 13. A quantity of lumber and staves were lost. The loss is estimated at \$2,800, partly covered by insurance.

R. P. Baer of R. P. Baer & Co. has been on a southern trip during the past two weeks and has conferred with a number of millmen in North Carolina and other states. He reports that business in the section visited is improving and that a hopeful feeling prevails.

Another Baltimore hardwood man to spend a week or ten days in the South was G. W. Eisenhauer of the Eisenhauer-MacLean Company, who went as far as Asheville, making that city his central point for trips to the surrounding country. He came in touch with a number of the manufacturers and paid close attention to the lumber situation.

CHARLOTTE

One of the best indications of returning normal conditions among lumbermen of the Carolinas is the fact that many plants heretofore closed on account of the panic now find it profitable to resume full operations. Every few days reports come in of the resumption of operations at plants located in various parts of the two states.

One of the latest plants to begin operations again is the Colleton Cypress Company of Waterboro, N. C. This is one of the largest lumber manufacturing concerns in that part of South Carolina, and the resumption of work means that about 150 men who have been out of employment will again be given work. All of the different departments of this large concern are now running as of old, and prospects are good for continued operations without interruption.

Announcement has just been made that J. C. Rigny has purchased the plant of the Spartanburg Lumber Company of Spartanburg, S. C. from W. A. Lawton.

The Matthews and Matlin Weens, the latest addition to the Baltimore and Carolina Steamship Company, sailed from Charleston, S. C., a few days ago with a large cargo for Baltimore via Georgetown, S. C. Her cargo consisted of over 200,000 feet of lumber, 500 barrels of rosin, etc. The increase of business in this line has been 1,000 tons since last May.

A meeting of the North Carolina Case Workers' Association was held in Greensboro, N. C., a few days ago, when about thirty prominent furniture manufacturers assembled to discuss conditions affecting their business. One of the most important results of the meeting was the decision to advance the price of furniture made by North Carolina factories by January 1.

The Jonesboro Sash and Blind Factory of Jonesboro, N. C., which has been shut down for the past sixty or ninety days on account of a fire, has just started up operations again. This is one of the largest concerns in that section and not only does a large local business, but sends its goods all over the North and South. The resumption of work at the plant is welcomed by the many operatives who have been out of work since its suspension.

J. H. Tucker, Asheville, N. C., has just sold for C. H. Roxford 30,000 acres of the timber land in South Carolina and Georgia. This has been the first large sale of timber land since last year, and Asheville lumbermen consider it indicative of a reviving demand for timber. H. F. Watt of Pennsylvania is the purchaser.

George W. Roper, receiver for the Kinston Lumber Company of Kinston, N. C., has just filed with Judge Funnell a report advising the early sale of the mills at Kinston, which applicants claim to be worth about \$112,000. Creditors have been called to appear before Roper in Bankruptcy S. W. Smallwood, of New Bern, N. C., on September 25 and show cause.

if there be any, why the prayer of the self report and petition should not be granted.

From complaint of Messrs. Frank Gough, L. E. Whaley and J. A. Wooten of Lumberton, N. C., who allege an indebtedness of about \$10,000 on a timber contract, Judge C. C. Lyon, at Burgaw, N. C., has just appointed receivers for the Monira Lumber Company, with offices in Wilmington, N. C., and mill plant at White Hall, Bladen county, North Carolina. Assets of the company are estimated at from \$10,000 to \$12,000, with liabilities estimated at \$8,000. The general depression in the lumber business is attributed as cause of the failure.

The American Fixture Company, the largest makers of pool and billiard tables in the world and one of the largest concerns in the country manufacturing high-grade bank and store fixtures, etc., has just opened headquarters in Charlotte.

A. E. Lentz has purchased a big share of stock of T. E. Witherspoon & Co., furniture dealers in Salisbury, N. C., with his son now to be associated with the company.

Judge Newman is to hear the noted case of Harris-Woodyburn Lumber Company vs. Coffin & White in Asheville, N. C., court at an early date. This is a phase of the long standing Whittier timber boundary litigation. The Whittier boundary contains more than 70,000 acres of fine timber lands lying in western North Carolina.

George Stone, employed at Phillips' sawmill, near Betham, N. C., in Wilkes county, suffered a serious accident a few days ago by accidentally falling on the saw while it was in motion. There is little hope for his recovery.

Jerome Bolick of Conover, N. C., inventor of the spring steel buggy which is just now finding its way rapidly upon the market, spent some time in this city last week. Mr. Bolick was en route to Rock Hill, S. C., where he proposes to place his invention with the Rock Hill Buggy Company in accordance with his plan to deal exclusively for the present with the wholesale trade.

The Horn Land & Lumber Company, of Mocksville, N. C., has been chartered with \$125,000 capital by G. E. Horn and others.

The schooner William Thomas Moore of Bethel, Del., sailed from Little River, S. C., a few days ago with a cargo of 300,000 feet of pine lumber consigned to New York parties by the Hammer Lumber Company of Wilmington, N. C. This is the second three-masted schooner that has been loaded by the Hammer people at Little River, this summer.

J. Elwood Cox of High Point, N. C., has been nominated as candidate for governor of North Carolina by the republican state convention, and is now waging a hot fight in his own behalf. Mr. Cox is perhaps the most prominent and extensive manufacturer of bobbins, shuttle blocks and furniture in the state or South. He is largely interested in six of the largest furniture factories, the three known as the Globe-Home being among the group, and is said to be closely identified with the interests of others. Mr. Cox is said to practice strict control over the trade in bobbins and shuttles in this section. He is one of the most important figures in the manufacturing life of his home town, High Point, which is the grand Rapids of the South in the furniture business.

A charter has just been granted the Wendell Hardware and Furniture Company of Wendell, N. C., capitalized at \$25,000, by J. R. Hood and others.

C. E. Molton, prominently connected with furniture manufacturing of High Point at Greensboro, N. C., has just returned from a trip to New York, Boston and other northern points. He reports that indications are now that the furniture business has about weathered the financial storm and that trade is opening up with much encouragement.

Jack Robertson, night watchman for the Carlington Lumber Company of Durham, N. C.,

was found dead on the yards of the company with two bullet holes in his body on the morning of September 19. It is thought he was shot by a negro who had threatened his life, Wesley Bates, and after the coroner's inquest Bates was arrested charged with the murder.

Luther George, a young man employed at the sawmill at Walnut Cove, near Winston-Salem, N. C., suffered a serious accident a few days ago by catching his hand in the saw. All the fingers on his left hand had to be amputated.

The recent storm which extended over North and South Carolina and parts of Georgia and Virginia did heavy damage to many lumbermen. The storm was the worst ever experienced in this section, and a number of lumber mills were damaged by the unprecedented rise of the streams nearby. An example of the magnitude of the storm may be seen from the fact that the Cape Fear river, on which is located a number of lumber mills, reached a flood stage of 79 feet, and other streams in this state made new flood records. At this time, however, most of the damage to plants has been remedied, and operations are being taken up again as before. It is not possible to estimate the damage to lumbermen, but a conservative estimate of the entire damage in this section to crops, manufacturing, etc., has been placed at \$25,000,000.

NORFOLK

The most pregnant happening of the past three weeks has been the exceedingly heavy, extraordinary and disastrous rains which have visited this immediate section and these sections of North Carolina from which the local wholesalers draw their principal stocks. From old and experienced lumbermen there come dismal estimates of the extent to which the lumber trade has suffered, some authorities having figured out the loss to be close in the neighborhood of \$10,000,000. With the farmers the loss is, if not equally disastrous, at least fully as distressing. The entire corn crop along the Roanoke river will be a total loss, and the cotton production will not succeed in getting at a fair estimate of their damages. With the different logging operations it was only with the utmost difficulty, in some sections, that work was continued, and in other sections, because of washouts and high water, work was utterly impracticable. With many of the loggers the expediency of running loaded cars of logs upon trestles to prevent their being washed away by rising streams was successfully tried. Some of the mills, amongst which was the mill of the Camp Manufacturing Company at Franklin, Va., were completely flooded, the waters rising to the top of the first floor, putting out engine fires and stopping all machinery. One of the largest operators in South Carolina writes a friend in this city: "In consequence of the tremendous floods we have had recently in this territory we have been practically at a standstill with regards to the shipment of all business on our boats, and have had many orders badly delayed." Another large producer states that his output has been reduced fully 20 per cent. Still others write in that their wood is so full of water that it is still impossible to log. A rough estimate of the extent of the curtailment of lumber production by these almost unprecedented floods, puts it at 25 per cent.

Charles G. Blatchley, prominent wholesaler of Philadelphia, was in Norfolk last week on business. Mr. Blatchley, who handles different kinds of hardwoods, had difficulty in recognizing this city, the last time he visited here being about 1890. He states that business is encouraging, and that this aspect is general.

James R. Clark of the Canton Lumber Company, Baltimore, Md., was a visitor to this city last week.

The recent storm was also felt severely in marine circles and there are several disasters reported as resulting therefrom. One of these is

the wreck of the three-masted schooner Margaret H. Vane, loaded with lumber from Beaufort, N. C., to New York City, which went ashore on Hog Island beach, upon the upper Virginia coast. Another disaster, of less consequence, is that which visited the Alice P. Turner, from Charleston to New York City, which ship had a good portion of its deckload of lumber washed overboard.

George McEld Jr., with the Foshargh Lumber Company, this city, as buyer and salesman, has resigned from those duties to assume those of manager for the Exchange Branch Lumbermen's Bureau, Bank of Commerce building. The purpose of this bureau is to furnish consumer and producer with weekly lists of stocks in hardwoods and pine wanted and for sale, and also price data secured from members' reports, has been accorded a cordial reception by the trade, over two hundred of the fraternity having demonstrated their faith in the proposition.

CLEVELAND

Cleveland lumbermen are up in arms against the rule of the city administration regarding the piling of lumber in the flats, where most of the concerns are located. The city's building code prohibits the piling of lumber within 100 feet of a house of any kind. The recent fire in the yard of the Saginaw Bay Company, which imperiled the Central viaduct to some extent, has caused unusual activity at the city hall, and the rule is being enforced a little more stringently than called for as a result. The Cleveland City Lumber Company was required to secure a temporary order from the common pleas court restraining the city from interfering with its lumber piles. The city authorities complained that the lumber was piled too close to dwellings. The lumbermen hope to have the code amended so they will not be subject to hardship, as is now many times the case.

W. A. Cool, the well-known Cleveland hardwood dealer, has returned from a visit to North Carolina on important business. At the office of Mr. Cool it was stated that trade is quite good and that orders for hardwoods are rolling in with regularity. The small cramped quarters occupied by the company in the Citizens' bank has been deserted and a spacious suite of three large rooms has been secured on the fifth floor of the Superior Arcade, where the concern is now located.

Contracts have been closed for a couple or more twelve-story buildings. With the plans gradually maturing there promises to be a big lot of building next spring, when the superstructures of most of those recently announced will be gotten under way.

Andrew Dall & Son, contractors for the new \$4,000,000 court house, have notified the county building commission that arrangements have been completed for changing the specifications for the window frames of the new monumental structure from clear oak to oak for the inside finish with cherry veneer for the outside. This has been pronounced satisfactory. The change was made to prevent warping.

William Osterhouse, formerly connected with the Cleveland Box Company, has become manager of the American Box Company, succeeding Joseph Miller, who has resigned from that position to become manager of the new Acme Box & Lumber Company. The latter's plant is nearly complete and will be in operation in a few weeks.

George E. Meier, manager of the Cleveland-Oconee Lumber Company, with a large preserve and mill on the Oconee river in Georgia, reports that the mill is very active, cutting about 300,000 feet of hardwood every week. Mr. Meier says the company has booked a lot of good orders within the past two or three weeks and that business is very brisk. The export trade is also improving, particularly regarding red gum and also dimension stock.

Fred Buell of the Fred Buell & Son Co., of Malvern, O., together with F. H. Weeks of Akron, was in the city during the past week.

D. T. Patterson of C. T. Patterson & Co., mill supplies, of New Orleans, was in the city last week calling upon the various dealers.

T. J. Aycock, secretary-treasurer of the Aycock Lumber Company of Aycock, Florida, and Thomas H. Betty, general manager of the N. & B. Lumber Company of Montgomery, Ala., were in Cleveland and called on the trade.

COLUMBUS

The Wayne Lumber Company of Mt. Gilead, Ohio, was incorporated Wednesday, September 16, at Columbus, with a capital stock of \$50,000, by H. S. Cruikshank, T. W. Babcock, Mt. Gilead; O. S. and I. B. Jeffrey, Ashley, Ohio, and Meyers Jeffrey. The headquarters of the company will be at Mt. Gilead and the sales offices will be at Columbus. The company has 4,000 acres of valuable timber land in Tennessee and during the next two years will give its attention to the cutting and selling of quartered oak and poplar. It will ship its mill within a few days from Mt. Gilead to its timber district in Tennessee and expects to begin operations within a month. F. McDonnell, former president of the F. McDonnell Lumber Company of this city, will have charge of the local sales offices and has contracted for the company's entire output during the next two years. The Jeffrey brothers have been operating a mill successfully for years at Ashley, Ohio, also at Mingo, Ohio, and have a thorough knowledge of the lumber business. All the men connected with this company are practical lumbermen, and Mr. McDonnell is well known to the local trade as a man of wide experience in the business. The company expects to have its lumber on the market within about five weeks from this time.

W. H. Schleyer, secretary and treasurer of the Powell Lumber Company, returned several days ago from the timber districts of West Virginia and reports stocks as unusually light everywhere and prices decidedly on the upgrade. The Schleyer Lumber Company was formerly launched several weeks ago and has enjoyed a good business ever since it opened offices in the Harrison building the first week in September. J. F. Schleyer is the president of the company; G. A. Schleyer, vice-president, and W. H. Schleyer, formerly of the Powell Lumber Company of this city, secretary and treasurer. The company will limit its business entirely to the hardwoods and conduct a wholesale trade. W. H. Schleyer has spent considerable time in the timber regions of the South since the company was formed and reports stocks as light everywhere and but few mills in operation. He says that some of the mills are getting ready to start up about the first of November, but will not begin operations then, until the general business situation shows better signs of improvement.

S. D. Morgan, vice-president of the Kile-Morgan Lumber Company, who has been out of the city a greater part of the summer, says that business is much better than it was several weeks ago and reports inquiry, which is good all along the line, is resulting in many orders. Mr. Morgan says that prices are higher on the better grades of lumber and lower on the under grades. He is optimistic regarding the fall trade and says that the market will give a good account of itself before the close of the year.

M. A. Hayward of the Hayward Lumber Company says considerable stock is moving and there is a general improvement in the demand for all kinds of lumber. Prices are firming up on oak and there has practically been no cutting on poplar. Mr. Hayward seems to be confident regarding the future of the market for poplar, because stocks are light and mostly in the hands of manufacturers, who manifest a disposition to hold for higher prices.

A. G. Fritchey, who has been with the W. M.

Ritter Lumber Company for several years, has resigned his position to take a similar position with the Lamb-Fish Lumber Company, of Memphis, Tenn. R. L. Gilliam, who has previously worked about five years for the W. M. Ritter Lumber Company, has taken the position formerly occupied by Mr. Fritchey. Mr. Gilliam has a practical knowledge of the lumber business and is highly esteemed by the local trade.

The H. C. Creith Lumber Company says that its men are doing a good business on the road and sending in more orders than they have in many months. The company says that business is very satisfactory considering the depression that has prevailed in all departments of trade since the beginning of the panic last October.

The General Lumber Company is doing a good business in the hardwoods and has no complaints to offer at this time. It regards the outlook as very satisfactory and says that the trade will be active during the fall months. The month of September has been very satisfactory so far, and this company did a good business the latter part of August.

The McLaughlin-Hoffman Lumber Company continues to enjoy a good business and says that new orders are coming in with more regularity. The company is optimistic regarding the future of the trade and says that the low point of the depression has been passed.

Other local lumber companies say that the turn for improvement in the lumber trade has taken place and much better business can be expected from this on. Collections are good and there seems to be a gradual betterment taking place in the general business of this city. The outlook is regarded as very satisfactory.

CINCINNATI

The Cincinnati Lumbermen's Club held its first meeting of the season at the Business Men's Club, September 14. It was decided to send a delegate to the inspection congress at Philadelphia on September 24 with instructions to stand by the 1905 rules. The rules as adopted by the National Hardwood Association at its meeting in Milwaukee in June, 1908, were condemned as unsatisfactory.

A monthly bulletin of the lumber mill will be issued giving all information obtainable as to markets, statistics, etc. A committee was appointed to arrange for a game of baseball between the lumbermen and the furniture dealers of the Queen City, to take place Wednesday, September 23, at League park. Both teams have been training hard for the combat, and each team is eager to capture the contest. The contest promises to reveal several ex-players, and a very warm contest is generally anticipated.

President B. F. Dulweber read a most touching eulogy upon the passing away of Col. A. D. McLeod in June and upon the death of the late Matthew Brown Farrin, both of whom were prominent members of the club. The committee on resolutions presented a tribute to the late M. B. Farrin, saying, "He was a man of sterling worth to the community, an able worker in all affairs that made for the best interests of his fellows. Of an optimistic and cheerful disposition, he lent encouragement to all those with whom he came in contact, and his wise counsel will be keenly missed by the various public organizations with which he was connected, and in his sudden and untimely death the city has lost one of its foremost and progressive citizens."

That Matthew Brown Farrin, the wealthy lumber merchant who died suddenly a short time ago, left no will, developed when his widow, Dora L. Farrin, applied at the probate court for appointment as administratrix of his estate. The estate is valued at \$250,000, equally divided as the realty and personal property.

The Vermilion Lumber & Manufacturing Company, of Vermilion, Ohio, with a capital stock of \$10,000, was incorporated last week.

The Wayne Lumber Company of Mt. Gilead, Ohio, was incorporated last week with a capital stock of \$450,000.

Fire in the Krempe lumber yard at Oakley last week brought out the entire village, and the volunteer fire department were confronted with a difficult proposition in extinguishing the blaze of a lumber pile. The work was fast and the flames were put out with a small loss to the concern.

S. P. Egan of the J. A. Fay & Egan Company has returned from a business trip, where he reported that prospects were brighter.

Harry A. Freiberg of the Freiberg Lumber Company reports trade with them during the past month has made a decided improvement and that by the end of this month he expects to start up the mill of the concern located in this city. The mill has been idle for many months and the increased amount of business in bringing on the reopening of it. The fall trade should be very good and exceed that of the spring of the year.

J. H. Hicks of Glasgow, Ky., a prominent lumber dealer of that city, was a visitor in the Queen City during the past week.

James Raub of the Freiberg Lumber Company left last week for the South, where he will ship a great deal of lumber to the concern here. The shipments will consist principally of undressed wood, which will be fitted for market at the mill here.

George M. Morgan of the Nicola, Stone & Meyer Company, large dealers in hardwoods, said that trade with them is only fair, but he looks for an increase in the volume of business within a short time.

W. E. Shrimpton Lumber Company state that trade is fair, but is not quite as good as the month previous.

William S. Sterrett of the Sterrett Lumber Company says trade is very good and from present indications he can see nothing that will cur a continued good business and a prosperous fall trade.

L. B. Adrich of the Reimeler Lumber Company left last week for a southern business trip, which he expects will consume about two weeks.

E. O. Robinson of the Mobery & Robinson Lumber Company returned from a business trip to the South. F. W. Mobery of this company says that business with them is very good, especially so in poplar and quartered oak. Both those items have been in good demand for some time and prices have been held up materially.

W. A. Hadly, senior Hoo-hoo, was a visitor in town during the past two weeks on business and on association matters.

G. H. Reimeler of the Reimeler Lumber Company reports that trade during the past month has been very good in all items of hardwoods, and also stated that the foreign demands were on larger volume.

Joseph Bosken of the Cincinnati Hardwood Lumber Company finds trade locally improved during the past few weeks. The export trade has been picking up in the veneer line. Ferd Bosken left last week for the South to look after some timber lands there of the company.

Chester F. Korn of the Farrin-Korn Lumber Company has returned from a business trip to the South.

Frank McCracken of the Kentucky Lumber Company brother of Ralph McCracken, stopped at Cincinnati on his return trip from Chicago to Williamsburg, Ky.

A. E. Hart of the L. G. Banning Lumber Company reports trade as rather quiet during the past two weeks. L. G. Banning of the

company with a party of friends left last week for an auto tour to Cleveland, Ohio. Mr. Banning is very fond of taking long auto trips and takes advantage of the opportunity at all times.

Watt Graham of the Graham Lumber Company has returned from a short trip to the lakes, where he said fishing was very good and where he was successful enough to land several large ones.

J. E. Tutthill of the E. L. Edwards Lumber Company returned from a trip up state. E. L. Edwards of the concern left last week for a trip to Michigan.

B. A. Kipp of the B. A. Kipp Lumber Company states that the demand for quartered oak during the past week has been very good and also that the upper grades of poplar are moving more freely with prices on both grades holding up fairly well. The output of mahogany this year, he says, is about 75 per cent of that of last year. Collections also are better.

The O. Armleder Company, manufacturers of carriages and wagons, reemployed full force the past month, which was brought on by the continued increase in their business. Orders have been coming in during the past two months of such nature to force the reopening of the big plant. Mr. Armleder also presided at the meeting of the Carriage Makers' Club at Heidelberg, Ky., where arrangements were made for a delegation of about fifty to attend the national convention in Chicago.

INDIANAPOLIS

The E. H. Eldridge Lumber Company is making a \$1,500 frame and brick addition to its plant, South New Jersey street.

Richard Bartlett, Indiana representative of the Nathaniel Lumber Company, Hammond, La., recently made an extensive trip through the southern part of the state.

The Warsaw plant of the G. B. Lesh Manufacturing Company has been sold to E. C. Johnson of that city for \$5,400 by Receiver C. E. Stout, county clerk.

A branch factory is being established at Birmingham, England, by the Sidway Mercantile Company of Elkhart, manufacturers of go-carts. A recent English law refuses to protect the patentee of an article not manufactured in that country.

The Knudson-Mercer Lumber Company of Huntington suffered a \$25,000 loss by fire on September 9, the lumber stock, office building and shed being destroyed.

A petition asking for a revision of lumber freight rates has been filed with the Indiana Railroad Commission here by William H. Bower, a Kurta lumber dealer. He charges excessive freight rates are driving him out of business.

A. L. Messimore of Etna Green has completed a table containing 250,450 pieces of wood, all of the known hardwoods in the world. The top of the table is 3 1/2 feet long by 3 feet wide, supported by a center 18 inches in diameter.

The Fulsome Manufacturing Company has taken over the plant of a former table manufacturing company at Margatun, which has been idle for about eight months. The new company is manufacturing tables, employing about fifty people.

A. V. Bradrick of the W. H. Gerhart-Bradrick Lumber Company, Spokane, Wash., is spending a few weeks in Indianapolis and vicinity visiting old friends. He left Indiana seven years ago to engage in the lumber business in Washington.

A. B. Eldridge of the E. H. Eldridge Lumber Company has just returned after a month's trip through the East. The company's bookkeeper, Henry C. Murphy, is now spending a few weeks in southern Michigan.

Arthur Wylie, manager of the Elwood Lumber Company, was married to Miss Laura Brown at

the home of the bride in Elwood on September 17. Mr. and Mrs. Wylie left immediately for a wedding trip, after which they will be at home in Elwood.

The Indianapolis National Supply Company, dealers in hardwood cooperage stock, ties, etc., with headquarters in the Board of Trade building, have increased their capital stock from \$10,000 to \$100,000 in order to extend the business.

Clarence Morton has been made superintendent of the Oakland City yard of the Greer-Wilkinson Lumber Company, headquarters of which is in this city. Mr. Morton has been in the service of the company some time and won the promotion by hard work.

S. P. Jennings is in the city a few days attending a reunion of members of a party of twenty-six that made a trip through the East last summer. Mr. Jennings is in the lumber business at Newcastle.

After a pleasant trip through Europe, lasting more than three months, Frederick M. Bachmann has returned home. Mr. Bachmann is president of the F. M. Bachmann Company, lumber dealers and veneer manufacturers.

C. C. Foster of the Foster Lumber Company was one of the organizers of a political club which has just been organized here with 1,000 members. It is believed the club will wield considerable influence during the coming campaign.

The Indianapolis and Chicago Hoo-Hoo baseball teams played a return game at Atkins Park in this city on Saturday, September 19, the score being 23 to 4 in favor of the local team. It was an eight-inning game and might have lasted longer if the score card had been larger.

A return game will be played in Chicago on Saturday, October 3, when Indianapolis expects to repeat the two it has made over the Chicago "kittens." The line-up at the local game was practically the same as the line-up at the Michigan City game during the Hoo-Hoo concatenation. The summary:

Chicago	ABR	I	O	A	E
D. R. Fox, p.	3	0	1	0	4

Indianapolis played 7 1/2 innings.

TOLEDO

A new chapter was added to the Kleper Brothers Furniture Company litigation the past week when the Michigan Life Insurance Company brought suit in the common pleas court at Toledo to recover on notes amounting to \$50,171.31, given by that concern. Numerous indorsers are made parties to the proceeding. The defunct firm is now in the bankruptcy court here, having been forced into that court by creditors several months ago.

Clarence D. Whitney of Toledo has been appointed general traffic manager of the Missouri & Northern Arkansas Railroad, with headquarters at Eureka Springs, Ark. He was for years general traffic manager of the Cleveland and Western roads at Toledo.

A valuable hardwood timber tract comprising thirty-five acres on the Gerry Harris farm near Bellefontaine, Ohio, was destroyed by fire last week, incurring a loss of about

\$5,000. The flames originated from a lighted fuse to a dynamite cartridge. Forty farmers turned out with plows and finally succeeded in checking the flames.

The Toledo "saw dust volcano" has been in constant eruption during the present drought, and is causing the fire department no end of work and worry. For years this old Mitchell & Rowland saw dust mountain has been burning and hundreds of visits have been paid by the fire department to the scene.

The firm of Robinson & Duttweiler, wholesale and commission lumber dealers at Toledo, has been dissolved. F. W. Duttweiler, having purchased the interest of his partner, will continue the business under the firm name of the F. W. Duttweiler Lumber Company.

Hardwood floors and finish will be used in the Frank house now being erected by John C. Budd of Defiance, Ohio. The structure will be of six rooms, with veranda, and the outer walls will be constructed of the new material for which Mr. Budd has applied for patents. It is a concrete composed of straw, broken glass, mud, feathers, paper, and anything else that will fill space, all of which is poured together in a mass. Even the porch columns will be made of this material. Rommie Howard, a pioneer of Williams county, Ohio, died at his home in Stryker, Ohio, recently, at the advanced age of seventy-five years. He was a wagonmaker by trade and for more than fifty years worked continuously in the same shop. He leaves a wife, one daughter and three sons.

Official announcement has been made of the appointment of Hudson C. Fio to the position of traffic manager of the Ohio Central lines. The appointment is effective at once. The vacancy in the position of general freight agent caused by his promotion has not yet been filled.

Milton Kyle, engineer at the basket factory at Edgerton, Ohio, was scalded to death recently. While engaged on top of one of the boilers the steam pipes connecting to the boilers came loose, and he was burned so badly that death resulted within a few hours. He was fifty years old and leaves a wife and two children.

Toledo window glass jobbers feel optimistic as to the future. George L. Heater, general manager of the Toledo Plate & Window Glass Company, is quoted as saying that surplus stocks have now about all been cleaned up and prices are stiffening. Many of the plants throughout the country have been closed because of over-production, but are beginning operations.

Charles H. Whittier, who built and operated the first excelsior factory in the state of Ohio, died recently at his home in Lima, Ohio, at the age of eighty-four years. He was born in Maine and came overland to Ohio, settling at Delphos in 1859.

EVANSVILLE

Richard Jenks of the Davis-Birely Table Company, Shelbyville, Ind., was in the city this week calling on his friends.

J. A. Brittain, lumber dealer of Jackson, Tenn., was in the city on business recently.

Nathan Thayer of Thompson, Thayer & McCowen, who has been abroad since last spring, has just returned. Mr. Thayer says he enjoyed his trip very much, having visited nearly every country on the continent and Ireland, Scotland and England. Mr. Thayer is in excellent health after having made the trip.

J. P. McPrinland of Chicago, Ill., was in the city recently looking after business.

Frank Smith of the Mossman Lumber Company, this city, spent several days at the mills of the company at Dubois, Ind., last week.

Work on the Furniture Exchange building is being pushed to completion. A force of men is being kept at work at night.

Mr. Otto Hill of this city, formerly with S. F. Coppock & Sons Lumber Company, Fort Wayne, Ind., has accepted a position with that firm again.

Beda Young of Young & Outsinger returned last week from Edinburg, Ind., where he had been on business.

B. F. VonBehren of the VonBehren Manufacturing Company left this week for the Great Lakes and Canada with his family.

Frank May of May Bros., formerly of this city but now of Memphis, Tenn., was in the city recently on his way to Memphis from the North.

George Worland of Thompson, Thayer & McCowen has returned from Chicago where he attended the seventeenth annual meeting of the Hoo-Hoo.

A forest fire of more than a mile in width has been burning in the Ohio creek bottom near Mayfield, Ky. Two cabins have been destroyed and the fire fighters have given up hope of checking the fire until it reaches a creek two miles away.

H. J. Schaefer, the hustling young manager for Masey, Young & Outsinger, is making a trip through the central and northern part of the state for his firm with a fine line of Indiana quarled and plain oak.

D. E. McLaren & Co. of this city, wholesale hardwood dealers, have removed their office to the site of their lumber yard, Kentucky avenue and Illinois Central Railroad tracks.

The building trade in this city is quite active at the present time, and the general outlook for fall building is good. Several contractors have reported the contemplated building of a number of residences and business buildings, which will live things up in this line.

MEMPHIS

A. N. Thompson, formerly a member of the wholesale hardwood firm of Thompson & McClure and lately vice-president of the Bellgrade Lumber Company, which has its offices in this city and a large mill at Belmont, Miss., has sold out his interest in the latter to Messrs. Crenshaw, Cathey and McClure, the more important stockholders in that corporation. Mr. Thompson has taken over the yards at Memphis formerly operated by the old firm and will have his offices with the J. J. Holmes Lumber Company, in North Memphis, close to the yards. He will engage in the wholesale handling of hardwood lumber under the name of A. N. Thompson & Co. Mr. Thompson is one of the best known lumbermen of this city and has a large acquaintance with the buying as well as the selling end of the trade. His many friends wish him much success in his new venture. He has a good stock of ash and other hardwood lumber in the yards he has taken over, and will continue to make a specialty of handling ash.

Production of hardwood lumber is on the increase. H. J. Burnett, Inc., began operations at its double hand mill and veneer plant in South Memphis a short time ago after an extended shutdown. All departments of the mill are reported in full operation. C. L. Willey of Chicago and Memphis is preparing to resume operations at his mill and veneer plant in North Memphis. The Lee Wilson Lumber Company, which shut down a portion of the summer, is running at full capacity at both its band and planing mills at Wilson, Ark. The L. H. Gause Lumber Company will resume about October 1 at its big band plant at Earl, Ark., after a suspension of several months. The firm has recently been engaged in getting out timber to supply the mill when it resumes. The big hardwood plant of the McLean Hardwood Lumber Company in New South Memphis will also resume shortly,

this course having been recently decided upon by the management. The Three States Lumber Company is making preparations to resume at its band mill at Burdette, Ark., but only with a view to cutting up about 1,000,000 feet of lumber which it is anxious to remove from its property there. The company does not believe there is sufficient improvement in conditions to justify resumption of operations on a larger scale. As proof of this fact it may be stated that it has closed down its hardwood mill at Hollywood, Miss., and has also suspended operations at its cypress mill in Louisiana. There are other firms in this city which are preparing to resume in the near future. Others, however, say the improvement has not yet been extensive enough to warrant such action and there are many mills which are still idle and which may remain so for some time.

Among the big firms which have resumed outside of Memphis may be mentioned the Sawyer & Austin Company of Pine Bluff, Ark. Operations at the band mill were started again about the middle of the current month and it is proposed to keep the plant going steadily. The planing mill and box factory operated by the same company has been running most of the summer.

With preparations for increasing output there is naturally considerable gain in the amount of logging operations under way. Weather conditions recently have been very favorable for this work, as there had been no rain of consequence for about thirty days until yesterday, when copious precipitation was noted throughout the Memphis territory. But, even allowing for the recent increase in milling and logging operations, production is still far short of normal and the amount of timber being gotten out is nowhere approximately what it should be at this time. There are points on which practically every interest in the trade is agreed.

J. V. Hill, who was for some years chief inspector of the Hardwood Manufacturers' Association of the United States, has resigned that position to accept service with the Lamb-Fish Lumber Company, which has its headquarters in this city but which operates mills at Charleston and other points in Mississippi. It is understood that Mr. Hill will have charge of the banding plant at Charleston, where the company operates its most extensive hardwood plant. Mr. Hill constitutes the second important addition to the forces of the Lamb-Fish Lumber Company, the first being John Dwyer, who recently resigned as assistant general freight agent of the Illinois Central to accept a confidential position with that firm. General regret is expressed among members of the association over the withdrawal of Mr. Hill from a position which he has filled with satisfaction to all concerned and with credit to himself. No official announcement has yet been made as to his successor.

Encouraged by the success of the Lumbermen's Club of Memphis and prominent shippers of this city in winning their cases before the Interstate Commerce Commission, involving proposed increases in freight rates as well as rates already put into effect, cottonseed oil interests here retained W. A. Perry, attorney of record in the lumber cases, to file a bill with the commission seeking to secure an order restraining the southern roads from putting into effect on October 1 an advance of 2 to 3 cents per hundred pounds on cottonseed and products from and to all points east of the Mississippi river. The lumbermen of Memphis are interested to only a moderate extent in any step looking to joint action with cottonseed oil interests. Cotton men of Memphis, however, are preparing to join hands with the cottonseed oil men in the fight. Mr. Perry states that the injunction will be sought on the ground that the advance is unreasonable and on the additional ground that the roads, by acting in conjunction in this matter, are violating the spirit of the Hepburn bill.

The annual convention of the American Hardware Manufacturers' Association and the National Hardware Jobbers' Association will be held in Memphis November 19 and 20. It is expected that fully 1,200 delegates will attend, 500 representing the former organization and the remainder the latter. The hardware dealers and mill supply men of Memphis are already discussing plans for the entertainment of those who will come to Memphis on that occasion. The Hotel Gayoso has already been chosen as headquarters for the jobbers and the Peabody hotel for the manufacturers. The sessions will all be executive and trade topics will be the chief subject of discussion and action.

The Crosby Folding Case Company has been granted a charter. Its headquarters are at Jonesboro, Ark., and its capital stock is \$30,000 authorized and \$15,000 paid in. The company will manufacture folding egg cases, folding poultry coops, folding bread boxes and other styles of shipping crates, boxes and cases. R. E. L. Crosby, E. L. Westbrook and others are the incorporators.

The Lehman Manufacturing Company, with headquarters at Anniston, Ala., has been incorporated under the laws of that state. Its capital stock is \$40,000, and it will engage in the manufacture of washboards, step ladders, law awnings and other wood, iron and metal products. E. S. Lehman is president; C. K. Hoetter, vice-president and treasurer; A. G. Lehman, secretary, and W. H. Sargent, general manager.

A big concentration of Hoo-Hoo will be held here early in the next year under the direction of Vice-president Stank J. H. Fischer, who only recently received his commission as the ranking officer of the order for the western district of Tennessee. It is proposed to have one of the biggest concentrations witnessed here in some years. Mr. Fischer, who is connected with the firm of Reed & Ducker, mill supply men, has been a member of the order for very a year, with the result that he was very much surprised at his selection for the high honor.

The Three States Lumber Company is developing yards at Burdette, Ark., which will have a capacity of about 15,000,000 feet of hardwood lumber. It has had yards at Burdette for some time, but is rebuilding and enlarging these. It is employing kaolin for building the roadways between the piles of lumber and finds that this is not only better for this purpose, but a great deal cheaper. It is securing the kaolin of clay from a nearby property and is making rapid progress with its yards. It is understood that the Chicago Mill & Lumber Company is employing a similar material in rebuilding its yards at Blytheville, Ark.

The river and rail committee of the Lumbermen's Club has fallen heir to the problem of readjusting rates to compensate for the withdrawal of reconsigning privileges by the railroads entering this city. The special committee of the Lumbermen's Club, headed by A. L. Foster, which has this matter in charge, has retired from any further connection with this subject. So far as known the River and Rail Committee has taken no definite action in the matter, pending the arrival of some of the members who are out of town. In the meantime lumber is being shipped under the terms designated by the railroads, which means that the only concession allowed is about one cent per hundred pounds on the east and northbound rate out of Memphis. All shippers of lumber at Memphis are forced to pay the combination of the two locals less this slight concession, and the basis is a most unsatisfactory one. James E. Stark is chairman of the River and Rail Committee.

The Brainard Lumber Company has announced its intention of building a large hardwood mill at Ashdown, Ark. The company will use this almost exclusively for cutting blocky to be used in the manufacture of various articles and carriages will be made through the municipal authorities and the various commercial organizations

here, send a large delegation to the forthcoming annual convention of the Deep Waterways Association in Chicago early in October. The Lumbermen's Club, the Cotton Exchange, the Merchants' Exchange, the Business Men's Club and all other organizations will send delegates and Memphis will make a most excellent showing. Much interest was aroused in the project of deepening the channel of the Mississippi by the convention here last October and the enthusiasm created at that time has gained in force rather than diminished during the year. Lumber interests are strongly in favor of the deepening of the Mississippi because of their positive conviction that nothing will tend to facilitate regulation of the railroads in rate matters so much as the development of shipping facilities by water for lumber, coal, steel, iron and other bulky commodities.

W. H. Greble of the Three States Lumber Company has been ill for some days and has not been able to be at the office of the company. He is suffering with malaria in the usual way. The notes quite an increase in the number of inquiries and is inclined to take a slightly more optimistic view of the situation.

J. W. McClure, secretary of the Lumbermen's Club, reports that it has been impossible so far to give out final returns on the financial results of the baseball game played between lumbermen of Memphis and Nashville here August 22 for the benefit of the Memphis Foundlings' Home and intended to determine the permanent owner of the handsome living cup offered by the American Lumberman, as well as to settle the question of the supremacy of Memphis or Nashville as the premier hardwood lumber market of the world. The report is awaited with much interest by all lumbermen of this city, who gave freely of their time and money for the success of the same.

BRISTOL

The Yellow Poplar Lumber Company of Coal Grove, Ohio, is making considerable improvements at its extensive operations along the Big Sandy, in southwest Virginia, where it operates a large band mill and circular mills.

J. H. Bryan, of this city, president of the Bryan Lumber Company and several other lumber corporations, denies in toto the story printed in New York and widely spread over the country, that he was swindled for \$65,000 by confidence men in that city. While he admits that he caused the arrest of Frederick E. Shamoon, a promoter, and Solon B. Lillibridge, a lawyer, on a charge of attempted swindle, he denies that he or any of his companies lost one cent in the reputed transaction. The property was deeded back to Mr. Bryan's company and he loses nothing. He has just returned from New York, and will go there shortly to appear against the men whose arrest he caused and who are now held under heavy bail.

E. B. Burns of the Tug River Lumber Company has returned from a visit in southwest Virginia. Mr. Burns' company has just completed extensive improvements in Wise county at its band and circular mills, including a new five-mile line of standard gauge railroad, connecting with the Louisville & Nashville.

The Whaley Lumber Company, which was recently organized in Bristol by J. B. Burn-

garden, C. C. English and Irving Whaley, has leased quarters in the First National Bank building and begun business. Irving Whaley, until recently with a large lumber concern here, is in charge of the business and will have C. C. English actively associated with him. The company expects to soon purchase timber land and operate mills, but until next spring will do a wholesale lumber business.

Receivers were appointed this week for the Standard Oak Veneer Company, the Allen Panel Company, the Interior Hardwood Company, all of Johnson City. The receivers for the two first named companies are Attorney S. C. Williams and J. Fred Johnson, while those placed in charge of the business of the Interior Hardwood Company are J. Fred Johnson and C. B. Allen.

All of the concerns are allied and own a large plant at Johnson City, employing about one hundred men. The plant is temporarily closed. No statement of the assets and liabilities obtainable by the *Hardwood Record* correspondent. It is stated that it is the result of entanglements with New York interests.

It is believed that an agreement will be reached whereby the plants may be started by the latter part of this week. C. B. Allen, well known to the hardwood trade of the East and Middle West, is president of all of the concerns. For some time they have been in danger of liquidation and insolvency proceedings were not unexpected.

Several large timber deals are about to be consummated here. Timber values are firm and there is a heavy demand for hardwood stumpage. A large amount of property of this kind has recently changed hands here, and in one instance a tract of 50,000 acres sold for \$15 per acre; whereas a year ago it was on the market at \$10 an acre. This illustrates the increase in the value of timber in this section.

It is understood that the Buck Snodgrass Lumber Company of Johnson City is in Bristol installing a yard on the Virginia & Southwestern Railway. The company will ship the most of its stock in the future from Bristol.

Retail lumbermen in this section report that the business for this year will compare favorably with that of last year. This is due to the large amount of building, builders taking advantage of cheaper labor and the greatly reduced cost of carrying on building operations. This condition of trade has helped the wholesale lumbermen and manufacturers in this section no little.

LOUISVILLE

E. B. Norman of E. B. Norman & Co. reports that there are more numerous inquiries than before and that sales during the last month have shown an increase of 75 per cent. There has been no letup in prices, he said, but with the increased demand for red oak compared with white oak the prices on the former are strengthening. Mr. Norman states that he has 3,000,000 feet of lumber on hand, including all grades of red and white oak and poplar.

Mr. Norman's younger brother, Edwin, has just returned to Princeton, where he will try for the freshman football team. He played on the local high school eleven and captained it last fall, thus creating a unique record for his family, all three brothers, Barry, Van and Edwin, having been captains of the team.

Judge A. E. Richards, city attorney of Louisville, who is also president of the Louisville & Atlantic railroad, is quoted as saying that extensions are being contemplated by his road which will result in opening up important timber tracts in the eastern part of the state. The road runs from Lexington about 100 miles east and taps a rich territory.

The Southern Lumber Company reports that sales to the furniture dealers are improving, owing to the success of the Furniture Carnival in Chicago, July 1. Orders were so much better than expected, it is said, that the furniture manufacturers have opened up more than before and have ordered fairly liberally. Higher prices are also reported by them as being commanded by lumbermen in the producing region, the price of \$15 for log run delivered on car, made in June, has been raised in several instances to \$17.50. Word has been received by them of the landing of a mill in the East Furniture Company of Shelbyville, Ind., one of their business correspondents.

The State Fair, which was held in Louisville from September 14 to 19, brought thousands to the city, the total attendance being over 100,000. Many who came were lumbermen, and they called on their conferees in this city in numbers. One of the features of state fair week was the celebration of the Kentucky Lumbermen's Association, in which about 150 delegates of Kentucky and southern lumbermen participated. The day was known as Hoo-Hoo Day at the fair and the lumbermen made their presence noticeable. A reception was held from 10:30 o'clock in the morning until noon, and at 12:30 o'clock lunch was served at E. L. Hughes & Co.'s warehouse at 315 East Main street. An interesting departure from the program, which stated that the visitors would be taken to the fair grounds in automobiles, occurred when they were loaded into big lumber wagons and proceeded with much merriment to the fair. A. N. Stuck of Louisville presided as toastmaster at a banquet which was served at 8 o'clock in the evening at the Seelbach. Following the banquet, at which members of the association responded to toasts, there was a concatenation of Hoo-Hoo behind closed doors. It was officially announced that the initiates will long remember the celebration.

The Louisville Veneer Mills is running a partial fire and reports that business is spasmodic, occasionally orders are given in volume and indications are that business is about to boom, when suddenly the bottom drops out and inactivity is resumed. Inasmuch as one of the company's Tennessee competitors was forced into involuntary bankruptcy, the firm feels as if it were fairly prosperous.

The Ohio Valley Improvement Association is to hold its annual convention in Louisville, October 22 and 23, and lumbermen are much interested in its proceedings. Owing to the low stage of the river, which would be connected with the proposed improvements, shipments of logs have been made impossible this summer, and it is reported that many mills in the eastern part of the state have been unable to operate.

Advices from the Louisville Lumber Company are to the effect that business is improving and that the outlook is optimistic. Prices are being maintained and there is no reason to cut them. The company has a big assortment at its handsome yards at Twenty-ninth and Chestnut streets.

C. H. Stutz of the Louisville Lumber Company has just returned from a trip to Auburn, Ky. He said that the drought in that part of the state is very severe and that crops will be far below the usual yield. Unlike most states which have large timber areas, however, Kentucky has thus far escaped devastating forest fires.

The action of the Interstate Commerce Commission in reducing the rate on lumber from Memphis to the Pacific coast to 85 cents, leaving the rate in effect at Cincinnati, Louisville and Evansville at 90 cents, and at Gary, Ind., 75 cents, is regarded by local lumbermen as a discrimination which should not be. Efforts are being made to get a unanimous opinion on this subject, and it is possible that steps will be taken to have the former equality of rates put back into effect. As it happens, however, there is relatively little lumber shipped from Louisville to California.

A lumber inspector who was new to his job was preparing a statement for his company, a Louisville firm. He came to the heading "Miscellaneous." "If there's any miscellaneous in this yard I haven't seen it," he said.

Edward L. Davis Lumber Company reports that while business is fair, the manufacturers seem to be making only hand-to-mouth orders, and that as a result small shipments and quick deliveries are the rule. The demand for quartered oak is fair, and the Kentucky manufacturers and interior house trimmers are using it in considerable quantities. Mr. Davis' stock is the largest he has had in some time, though he is short on plain oak and has had to buy some in order to fill contracts.

Reports of the Louisville building inspector are that building is going on here at a much larger rate than at the same time last year. With increases in this line of activity, local lumber dealers believe that the general situation will improve.

C. M. Sears, representing the Edward L. Davis Lumber Company, is traveling through the East for his firm, and has secured some large orders.

The Norman Lumber Company reports that sales are holding up fairly well, but that current orders are larger than last year. While the total sales are larger, owing to contracts which were made last year, new business is falling off considerably. Local sales are fair, however, though for the rest business is quiet. Mr. Norman believes that there is a tendency on the part of manufacturers and buyers to wait and see, and that activity will hardly be resumed before the election is over. A bad feature of the situation he regards is the tendency to insist on immediate delivery of orders, showing that the manufacturers are keeping a rather limited stock on hand. The chief demand just now is for first and second quartered and plain oak. Prices on both white and red oak, he said, have been advanced, as there is very little of it to be found.

Stuart R. Cecil of the Norman Lumber Company, is traveling for his firm in Canada and Michigan. The engagement of Mr. Cecil, who is a graduate of Princeton, to Miss Lucile Drummond of this city has been announced and the wedding will take place in the fall. Miss Drummond is a Wexley girl and is a talented singer and amateur actor.

There have been but few traveling buyers through this territory, as most of the orders have been made by mail.

A local dealer has adopted a plan which may interest others. He has organized an index system of manufacturers, arranged according to the articles they manufacture, such as tank builders, picture frame makers, box manufacturers, etc. When he has a surplus of a certain grade available for one of these branches he writes to all of them offering the stock. He believes that this is the best way of disposing of special lots for which there is no particular demand.

ASHLAND

William Nortrup, general manager of the General Lumber Company's mill and yards at this place, advises he is billing out several cars of stock from the yard here, and as well receiving stock into the yards from some of their lumber operations up Big Sandy. The company has not operated its double band mill at this place any this season, and very likely will not operate its mill in operation for some months.

The Licking River Lumber Company's large mill at Farmers, Ky., was entirely destroyed by fire Thursday afternoon, September 8. The fire was first discovered in the basement of the mill and its origin is unknown. The mill was operated at the time of the fire and by the use of the most modern fire equipment the company owned, including chemicals, hose and a large water tank near the mill, the employees were able to prevent the fire spreading

to the lumber yards and planing mill. The mill was a very valuable plant, being one of the best equipped in eastern Kentucky. Just a few months previous there had been a new band mill and carriage installed, taking the place of the large circle mill which had been in operation. The mill, building and machinery was a total loss, covered by some insurance. The company expects to rebuild at once on the same site and continue operations at that point. They have about 5,000,000 feet of logs in their log booms and ponds, which will warrant their operating for several months.

S. M. Bradley, the Morehead Lumber and tie dealer, is a business visitor in the city this week. Mr. Bradley states that business is improving in both lumber and ties and he looks upon the present outlook as very favorable.

The S. B. Reese Lumber Company of Farmers, Ky., which has been closed down for several weeks putting in new foundations and doing general repair work on its band mill, expects to resume operations this week. Having a good supply of logs on hand, the company will be able to operate for several months to come.

George H. Gearhart, superintendent of the Clearfield Lumber Company, Clearfield, Ky., was a business visitor in the city this week, just returning from an eastern trip. Mr. Gearhart reports the entire plant at Clearfield running steadily and expecting to continue doing so for several months. The laying of rails on the extension of the company's new railroad is nearly finished, which will complete a line of twenty six miles, taking in a very good territory of timber and mining interests. Mr. Gearhart is building himself a new house at Clearfield and expects to move his family there in a short time, which will enable him to have entire supervision over the plant. The company is one of the best equipped hardwood plants and is receiving a nice lot of orders.

The W. H. Dawkins Lumber Company states they are receiving orders for poplar, and that business is improving. The company's large band mill at Ironton is running steadily now and expects to continue in operation for some time.

R. H. Vansant of the Vansant-Kitchen Lumber Company has just returned from a business trip in the interests of his company. The company has not been operating for some time and will probably not place its mill in operation for several weeks to come. A large and complete supply of poplar lumber in all grades and thicknesses is carried.

The Farmers Lumber Company of Farmers, Ky., as its mill closed down and will probably not operate for some time, owing to general repair work.

B. E. Vansant, the Morehead lumberman, was in town on business this week, mingling with the lumbermen.

F. G. Eberhart Jr. of Mishawaka, Ind., president of the Licking River Lumber Company of this city, is a business visitor here this week. The total loss by fire of his company's mill at Farmers, Ky., necessitated some very important business transactions which demanded immediate attention. While here he will also spend a few days at the plant at Farmers, looking over some of the timber holdings and various interests of the company.

ST. LOUIS

The movement toward the conservation of Missouri's forest resources by establishing a forest preserve is well under way, and the prospects are that the steps taken by Governor Folk along this line will be carried to a point where the people of the state will decide whether they wish to set aside a tract of 25,000 acres more for this purpose. Since the first announcement of its possibility little has been heard of the project of a state forest preserve until the news of the appointment of Dr. Hermann von Schrenck as a member of the state commission

was received in St. Louis. Dr. von Schrenck is the consulting engineer of the firm of Von Schrenck, Faulk & Krammer. This commission will thoroughly investigate the timber resources of the state and will make an exhaustive report later, which will be presented to the people of Missouri.

Dr. von Schrenck is the first member of the commission to be selected, and it is not yet known how many other members will compose the commission or who they will be. Where an investigation is being made of like nature in other states the commission is composed of three members, and it is the general opinion that Governor Folk will select a like number.

Dr. von Schrenck was a member of the Forestry Awards Committee at the World's Fair. He was formerly in the Forestry Service of the government.

The plan outlined is to preserve 25,000 acres in the southern part of the state. There are wide strips of hardwood and pine in the southern counties and Missouri has long been one of the leaders as a lumber shipping state.

Fred Hofman, formerly with the Fred Heim Lumber Company, has bought an interest in the Cherokee Lumber Company, and will be its general manager.

A. R. Bell, secretary of the Millmen's Association, has started a new lumber company, the Commerce Lumber Company, and will be its manager. The offices of the new company will be in the old Third National Bank building. The company will handle yellow pine, cypress and sash and door lines.

Thomas E. Powe, vice-president of the Plummer Lumber Company, has returned from a trip through the North and Northwest and reports conditions as being much better than they were. E. W. Blume of the selling department of the Lottman Express Company has been north on a selling trip, sending in some good orders.

Charles Thomas, president of the Thomas & Preetz Lumber Company, says there is a very encouraging outlook. He further states that they are not pressing sales, for from present indications those who have the best supply of hardwood on hand are the ones who will make the most money. He bases his opinion on the fact that there is a continued upward tendency in the market. They are doing a right nice business, he says, in spite of their disinclination to push sales, and are well pleased with the business they are doing.

"Jake" Mosberger of the Mosberger Lumber Company reports a nice trade on all items on the hardwood list and says it is getting better all the time.

E. H. Luehrmann, vice-president of the Chas. F. Luehrmann Hardwood Lumber Company, reports quite an improvement in trade and a satisfactory demand for all hardwood items. The business that they have done thus far this month is far in excess of that of last month and is getting better every day.

A company was organized a few days ago by Theodore Plummer, president of the Plummer Lumber Company, to float his colonization proposition in Texas. Mr. Plummer has a large tract of land in Texas, near Brownsville, and is going to cut it up in farms.

Lewis Doster of the Hardwood Manufacturing Association was a recent visitor in St. Louis. He was here in the interest of the association.

W. W. Dings of the Garretson-Greason Lumber Company is well pleased with the way business is going thus far this month. His sales have shown a most satisfactory increase over the corresponding period last year. What is more pleasing to Mr. Dings is the fact that business is getting better all the time.

LITTLE ROCK

Now that the rainous have been given a temporary injunction against the freight and passenger rates at present in force in this state,

there is much speculation, particularly among lumbermen, as to what will be the effect on lumber rates.

It was only last fall, after one of the hardest fights in the history of the railroad commission, that the companies were brought to an agreement relative to what is known as the "rough lumber" rates. The roads, although having for many years maintained of their own accord certain extremely low rates, decided that the rates were not remunerative under the changing conditions in the manufacturing line in lumber, and gave notice that they would be abolished. The shippers appealed to the commission and that body interfered, finally establishing practically the old voluntary rates of the company.

All this was done on condition, of course, that the railroads should get a specified percentage of the manufactured product for reshipment, and on this product they were to charge regular commercial rates. Many of the roads complained that the mills did not keep this part of their agreement. That they took advantage of the low rate into the mill and then used their own discretion in shipping out.

Under these conditions it is feared that one of the first commodities to undergo an increase of rates will be rough lumber, and there is little doubt that a radical increase would mean much disaster to many small plants. The only hope is that the roads will abide by their intimated intention of making no radical changes. Their attorneys say they are now considering new tariff sheets, and that rates will be put in accordance with the decree of the courts, advancing the rates on many commodities, but that the advance will not be sufficient to embarrass the shipper.

Such, at least, is the hope of the hardwood shipper, many of whom in the eastern and northern part of the state would be seriously disturbed in their recovery from the recent depression in the market, should local rates be suddenly increased.

There is a noticeable resumption of work at the plants throughout the lumber belt since the middle of August. One of the largest to resume was the Sawyer & Austin plant at Pine Bluff, where three hundred men are employed. Last week saw the last of the long wait there and the wheels of the big plant were again put into operation. The manager is quite hopeful of a good winter's business.

There was some disturbance of the local lumber situation by the appointment of a receiver for the Ferguson Lumber Company, one of the largest and oldest concerns of the kind in the city, recently. The receiver was the result of a petition in involuntary bankruptcy by the Little Rock Trust Company, on account of an obligation of some \$20,000 alleged to be due it from the lumber company. The Phoenix Lumber Company, an auxiliary concern of the Ferguson concern, was also brought into the case. Mr. Ferguson, in his answer to the petition for a receiver, set up that it was not only the result of the depression in the lumber market, but, he declared, it was also largely because of a closing of credit by the trust company when it was most needed that had the most adverse effect on the company's prospects. The affairs of the concern are being adjusted, and it is thought the company will come out of the reorganization in good shape.

The American Hardwood Company of Sedgewick, Ark., is a new concern, with a capitalization of \$500,000, of which amount half has been subscribed. The company has just been chartered by the secretary of state. The incorporators are Kenneth McLeod, L. S. Huentigler, H. C. Potts, Leo Miller, R. E. Westfall, Ralph N. Harris, S. C. Dowell, D. Sloan and George Fowder. The company has a virgin territory to operate in.

The Buckeye Lumber Company will shortly install a hardwood mill a few miles east of

Ozan, in the southern part of the state. They have large quantities of hickory, gum, ash, oak and elm in their territory.

The Gates Lumber Company, at Wilmar has resumed its full schedule of ten hours per day after a shortened schedule of seven hours for the past ten months. This is one of the best plants in southeast Arkansas.

The Illinois-Arkansas Lumber Company is a new hardwood concern to enter the state, having recently been chartered by the secretary of state. Its capital stock is \$100,000, and J. M. Rose, of this city, is made state agent. The company is an Illinois concern.

The N. A. Webster Lumber Company, located at Malvern, in Hot Springs county, is among the new lumber concerns. The incorporators are N. A. Webster, president; H. L. McDonald, vice-president; W. J. Thrasher, secretary; D. W. Hudspeth, treasurer. The company has a capital of \$100,000, with \$8,000 subscribed.

Helena, Ark., is boasting two new industries, the O. H. Trook Hoop Company's plant and the plant of the Helena Lumber Company, both of which are to be constructed and in operation soon. The former is backed by \$25,000 and the latter by \$50,000 capital.

It is reported that the Gurdun Lumber Company will shortly remove its big plant to Graysonia, having operated twenty years at Gurdun. The plant will be combined with that already at Graysonia.

NEW ORLEANS

Lumbermen of this section are looking for the most serious car shortage they have ever experienced during the coming fall, and in sections the scarcity of rolling stock is already being felt in a marked degree. As business picks up at the mills the car stringency will, it is believed, become most emphasized, and everything at the present time points to a more serious car shortage than was experienced last year and the year before. It is pointed out that during the last several months many cars have remained idle and large numbers of these as a result are in a badly crippled condition. With a big cotton crop in sight and the demand for cars for moving the sugar crop already manifesting itself, it is entirely probable that the railroad companies will follow their usual bent and practically ignore the pleas of the lumbermen. Already cars that are used for lumber shipments are being converted into sugar carriers and will be used when the sugar crop begins to move. All of this means that the lumbermen are going to have a hard time getting cars, and the talk of resorting to the water routes is being revived on all hands.

This morning's advice from Monroe, La., stated that a location for the big plant which the Hardwood Lumber Company of Louisville will build there has finally been settled upon. It will be on the east bank of the Ouachita river, in Monroe proper. An effort was made to have the plant put in West Monroe, but no suitable site could be found. The mills will soon be erected and a 3,600-foot spur track will connect them with the Little Rock & Monroe railroad. Being on the river, the plant will have ample water transportation facilities and will have a line of barges to handle part of its output. It is understood that the company will ship considerable lumber to New Orleans by river.

The Bomer-Ferguson Company has been organized at Lake Arthur, La., with an authorized capital of \$150,000. The company has bought several large tracts of evergreen land near Lake Arthur and will establish a mill with 40,000 feet daily capacity. J. B. Ferguson of Memphis is president. E. J. Bomer is vice-president and J. O. Bomer is

secretary and treasurer. The Bomers are from Brownsville, Tenn.

Announcement is made that Smith Bros. will install sixteen portable the plants in the territory tributary to the Naches and Salinas rivers to fill orders for 6,500,000 ties for railroad building in foreign countries. Some of these mills are already in operation.

J. R. Buckwalter of Wingate, Miss., is considering plans for a steel lumber mill near Newton, Miss., that will have a daily capacity of 60,000 feet. He has 20,000 acres of timber land, containing considerable hardwood, which he expects to develop shortly.

MILWAUKEE

Forest fires in northern Wisconsin are assuming serious proportions and unless rains are received soon the damage resulting will be the greatest in the state's lumber history. Already the losses are reaching into the hundreds of thousands and extend not only to the lumbering interests of the state, but to hundreds of allied interests. The loss to the state forest preserves is estimated by State Forester Griffith to be nearly \$100,000, and less to one lumber company alone in the North Fork Lumber Company at North Fork. It is given at more than \$100,000. Here the entire plant was destroyed and the town itself was saved only by the most strenuous efforts. Rhinelanders has been in hourly danger of annihilation and fire apparatus from Milwaukee is still in the field to protect the city. The towns of Gage and Woodboro, near Rhinelanders, have been totally destroyed and 6,000 homeless refugees from the towns are being cared for at Rhinelanders. Fires completely surround the city of Mosinee. Nearly 200,000 feet of hardwood logs, the property of the Denison, Lives & Coe Lumber Company, have been sand feet of standing timber owned by the Joseph Dessert Lumber Company have been consumed and the Mosinee Land, Log and Timber Company has been a heavy loser. The city of Ladysburg is threatened with destruction and lumber and timber logs in the vicinity have been damaged. Wausau is again in danger and the property loss in Marathon county will be extremely large. Fires are raging north of Shawano and already considerable property has been burned on the Oneida reservation. The Upham Lumber Company is making great efforts to save some 3,000,000 feet of lumber at Medford, near Marshfield, and a big crew of men are in the field fighting the fire.

Following the second outbreak of forest fires in the Wisconsin territory, State Forester E. M. Griffith has announced that in his opinion much of the conflagration has been caused by carelessness, especially of settlers who are in the habit of burning brush while clearing land. Lumbermen, in their practice of leaving slash piles, and the railroads in allowing their locomotives to throw out the dangerous sparks are also condemned by the state forester. The railroads are being much to cooperate with the state department and are commended for their action in offering their section crews to fight fire, and by the appointment of inspectors. Many arrests for carelessness are taking place in the lumber country and a strict watch is being kept by the 13,000 special men located in the danger districts by the state. The state forester believes that the heaviest losses up to the present time have been in Lincoln, Douglas, Bayfield, Sawyer, Marinette and Marathon counties.

"The next legislature will be called upon to enact a law requiring logging crews to burn their slashings carefully as they proceed," said State Forester E. M. Griffith. "The State Forester's Department months ago proposed to the lumber companies that they form an association to establish fire patrols in the woods and this could be done at an insignificant cost. The lumbermen have been taken unawares."

Reports say that forest fires in the hardwood districts surrounding Houghton, Mich., are doing extensive damage and mills and yards which were considered out of danger a short time ago are again threatened.

Due to the prevalence of forest fires in the vicinity of Wausau, the efficiency of the city fire protection will be greatly increased. It has been found that the water pressure in the system is much too low, and this will be remedied and the department itself will be improved by added forces and equipment.

Lieut. Gov. W. D. Connor, millionaire lumberman of Wisconsin, was a recent Milwaukee visitor and expressed the opinion that the present forest fires of Wisconsin are much more serious than is generally believed.

Former Gov. Edward Schofield, another well-known lumberman of Wisconsin, called on Milwaukee friends last week.

C. M. Maxson, secretary of the Cooper & Maxson Lumber Company of Milwaukee, wholesalers and retailers, spent the past week in the Wisconsin lumber country.

Charles E. Tegge, president and treasurer of the Tegge Lumber Company, 684 Park street, and one of the well-known hardwood lumbermen of Milwaukee, reports a decided increase in business with an improved demand from manufacturers.

W. E. Allen, president of the W. E. Allen Lumber Company, Milwaukee wholesale lumberman, spent a few days at Wausau, Menominee and Oshkosh in the interests of his lumber business.

F. I. Tibbitts, president of the Tibbitts-American Lumber Company, and wife have returned from an extended trip to western points. Denver and several coast cities were visited.

C. S. Curtis of the Curtis & Yale Company of Wausau recently called upon the Milwaukee officers of the company under the charge of George Donald.

The recent Wisconsin state fair, held in Milwaukee, brought a large order of retail lumbermen into the city, and wholesalers say that orders were perceptibly larger.

Contracts for furnishing a total of 15,000 chairs for the new Milwaukee auditorium have been awarded. Unusually low figures were obtained and the orders were divided between three of the five competing companies. The concern failing to land the contracts later announced that owing to the low prices quoted into an agreement and they been considered favorably. The orders for opera chairs in the past were given to Heywood Brothers & Wakefield Company, represented by C. W. Fischer Furniture Company of Milwaukee, at \$1.25 each. The Superior Manufacturing Company received the order for the venerated opera chairs for the ball-say at \$1.75 each, while the portable chairs for the arena and the portable chairs for the banquet hall will be furnished by the same company at \$1.63 each and \$1.13, respectively.

The order for the opera chairs for the retail hall went to the American Seating Company, represented by the G. M. Barrett Company, at \$2.70 each.

The pulp mill of the Wolf River Paper and Pulp Company at Shawano has been started and the company expects to rebuild its plant destroyed by fire last May.

The plant of the Michigan Elm Hoop Company of Kuss, Mich., will be removed to Marinette, Wis. The company has secured a location on Witbek Island and will engage in the manufacture of barrels and kegs.

A. T. Wheeler, one of the older lumbermen of the state, was a recent Milwaukee visitor and recalled lumbering and forest fire fighting in the early days of Wisconsin's history.

The Stange sawmill at Merrill will be equipped with three additional machines and extensive alterations will be made.

The R. C. Wentz, loaded with 400,000 feet of

lumber, was one of the recent steamer arrivals at the Milwaukee port.

Sawing at the plant of the Merrill Lumber Company at Merrill will be completed by the latter part of October. This department will then be closed until after the opening of the new year. The lathe and finishing departments will be kept in continuous operation.

The Pond of the Lake Church Furnishing Company, located at Fond du Lac, has increased its capital stock from \$15,000 to \$30,000. Marshall O. Pillsbury is president and N. W. Sallade is secretary of the company.

The Kaukauna Lumber and Manufacturing Company at Oshkosh recently gave its employees a holiday at one of its club houses in the vicinity, where a fish fry was held.

Efforts work on the part of the Wausau fire department recently saved the plant of the Werheim Manufacturing Company from destruction. Loss to the company is estimated at \$1,000, covered by insurance.

That there is a great deal more lumber in the United States than even the best lumbermen think, is the opinion of Charles R. Smith of Neenah, president of the Menasha Woodenware Company, controlling the largest plant of its kind in the world. Mr. Smith was examined at Appleton recently before the congressional committee, which is investigating print paper and pulpwood conditions.

Word has been received in Wisconsin that the mill of W. H. Hatton and W. H. Dick of New London, Wis., has been destroyed at Phillips, Miss. The mill had a capacity of 50,000 feet daily. The loss is \$50,000, partly covered by insurance.

All the sawmills at Stevens Point are again in operation. The plants were forced to close down for a long time owing to the fact that the government had shut off much of the water supply for navigation purposes.

A planing mill is being erected at Eagle River by James Langill to be operated in connection with his sawmill.

The Foster-Lattimer Company at Mellen is making improvements on its establishment which will result in location at Mellen of one of the finest hardwood flooring plants in the United States. New buildings of large magnitude are being constructed of reinforced concrete and it is expected that the plant will be completed within two months. When completed the plant will have an annual capacity of about 10,000,000 feet of flooring.

Patrick Meehan, one of the early Wisconsin and Minnesota lumbermen, recently died at Milwaukee, aged seventy years.

What will be the largest sawmill in Wisconsin is being erected by the Meyerhauser Interests at Park Falls. It is estimated that the plant will crew out 30,000,000 feet of lumber annually. A crew of several hundred men is rushing the establishment to completion.

John Dietz was seriously injured recently by a premature explosion of dynamite on his land at Winter.

WAUSAU

Before the first of the year Mellen will be able to boast of one of the finest hardwood flooring plants in the United States. By that time the Foster-Lattimer Company will have completed the large additions to its plant. The company owns a vast tract of maple timber and it plans to use every available scrap of material. The new buildings are being constructed of reinforced concrete, and the roofs are of cement, so that they will be fireproof. The new factory building will be 76x150 feet in dimensions. The flooring of warehouse will measure 56x155 feet. The dry-kiln will consist of three rooms, each sixty-four feet long, and a cooling room forty-four feet long the full width of the kiln. A force of one hundred men is at work on the

buildings. When completed the plant will have a capacity of from 7,000,000 to 10,000,000 feet of flooring annually. All power will be electric and each machine will be supplied with an individual motor.

Eye, Lusk & Hudson of Stanley are preparing to move their mill, located at Eidswood, to either Polley or Gilman, where they have a ten years' run.

Wisconsin and northern Michigan have suffered greatly from forest fires in the past two weeks as a result of a drought which set in in July. Property of untold value has been destroyed or damaged, and the losses will foot up larger than they did in 1892, when the last fire swept over Wisconsin. Lumber companies have found it necessary to close their sawmills and set the crews fighting fire. Others shut down for fear of fire and are keeping a part of their crew at work with lines of hose wetting down mill, lumber piles and yards night and day. Hardwood men have no doubt suffered the most, and to save the timber killed they must log it the coming winter.

Patrick Meehan, aged seventy years, died recently at his home in Milwaukee after a prolonged illness. Mr. Meehan was one of Wisconsin's pioneer lumbermen and made a fortune in the business. He gave much to charity.

A. H. Stange of Merrill has purchased of the Sunborn Land Company of Ashland, one of the few remaining large hardwood tracts of land in Oneida county. The Stange Lumber Company will log and saw the timber.

James Langill of Eagle River is building a planing mill in connection with his sawmill. Besides handling his own products he will do custom work.

The Kaukauna Lumber & Manufacturing Company of Kaukauna is preparing to do a greater business this year than ever. New machinery, which will be operated by electricity, has been installed, and a large force of men will be employed.

Wright Bros. of Marinette have announced that they will rebuild the mill which was destroyed by fire some time ago. The new mill will be in operation the coming winter.

D. F. Daley's woodworking plant in North Menomonee is being fitted up with new machinery which will make it one of the most modern institutions of its kind. Machinery for making all kinds of columns, stove joints and spindles of all kinds and sizes is being installed, and when the plant begins operations within a short time a large force of men will be employed to catch up with orders on hand.

The R. Alden & Sons Novelty Company of Wausau, Ill., has moved its Waukegan plant to Ludwigsmith and merged it with one it previously owned there. The Waukegan plant was done away with principally to be nearer the base of raw material—lumber.

The Brooks & Ross Lumber Company, of Schofield, is expending about \$10,000 improving its planing mill, installing new boilers, machinery, etc.

The Schroeder Lumber Company of Ashland had a serious fire recently in its yards and dock.

H. F. Anderson & Son are about to start a carriage factory in Grand Rapids.

It is estimated that lumber concerns in Wisconsin will this coming winter cut about to ten per cent of their usual cut, unless conditions change.

F. H. Johnson, of the F. H. Johnson Lumber Company, Rhinelander, has disposed of his interests to other stockholders and with his family has moved back to Lansing, Mich., his old home. He got out of the lumber business on account of poor health.

The boiler in Bohneke Bros' mill in Park Falls exploded recently, killing three men and a team of horses. This the second acci-

dent of a like nature the firm has suffered. In 1906 the boiler in their mill in Holcomb, Chippewa county, exploded, killing seven men.

Dr. A. W. Truitt, W. H. Myhea, Davis Smith and Dan Healy, all of Wausau, have bought the interests of the Northwestern Lumber Company of Kenton, Mich. The deal includes 8,900 acres of hardwood lands located in the upper peninsula of Michigan. The sale was made by Norman J. Dolph of Spokane, Wash.

The Frost Veneer Company, whose plant in Antigo was destroyed by fire last June, has decided to rebuild and preliminary work is now under way. The new building will be of the same capacity as the old one and on an average fifty hands will be employed the year around.

The J. I. Case Company of Racine is constructing a complete fire protection system. This will include a tunnel five feet wide and six feet high under Root river, through which water service pipes will be run to the lumber yards. A steel water tower 100 feet high, capped by a 100,000-gallon steel tank, will be built to supply the sprinkling system in the factory building. The company will obtain its water through its own pumps.

The Bird & Wagon Lumber Company, of Wausaukee, has resumed operations after a shutdown of several months. It has been decided by the company to cut hardwood only for the present.

The Rhineland Manufacturing Company has started its factory with a full force. The plant was shut down for a few weeks while alterations and repairs were being made. The chief product of the company is refrigerators.

The J. W. Wells Lumber Company of Menominee, has commenced logging operations, to supply its mill during the autumn and winter. The mill is temporarily shut down because of the shortage of logs.

C. H. Worcester, formerly of Marinette, Wis., and T. A. Green of Ontonagon, Mich., have purchased the interests of the O. V. McMillan Company, of Chassel, Mich., and have formed the Greenwood Lumber Company. The former is president of the new company and Mr. Green is secretary and general manager.

The transaction is a large one, involving about 15,000 acres of timber land, sawmill and other property. The company has sufficient timber to keep its plant in operation fifteen or twenty years and it is more than probable that before the present supply is exhausted other timber will be secured. The output of the mill is to be materially increased. Work has been started extending logging railroads, etc.

The Perschke Manufacturing Company of Neelyville reports a prosperous business at present. The company's specialties are silo staves, church furniture, creamery packages, barrel heading, cattle stanchions, door and window casings and all kinds of mill work.

The Joens Bros. Manufacturing Company, which has been operating plants in St. Paul, Stevens Point and Sheboygan, is considering the consolidation of all of them either at Stevens Point or Sheboygan. The company manufactures tables and other stock of a like nature.

The A. H. Stange Company of Merrill is operating again on full time, after curtailing its output for several months.

A short time since the sawmill and about 2,000 cords of wood belonging to Stier & Zuehlke of Wood's Spur was destroyed by fire. By hard fighting the lumber yard was saved. A few days later a high wind fanned some dying embers into a flame and before it was discovered the whole yard was on fire. The yard contained upwards of 2,000,000 feet of lumber.

The Hatenberg Furniture Company of Sheboygan Falls intends to locate its plant in North Fond du Lac, providing it can secure certain concessions from the business men of the latter town.

About 200,000 feet of hardwood logs belonging to Denison, Liver & Cooper, near Moon, were consumed by forest fires this week. The North Fork Lumber Company's plant at North Fork was destroyed from the same source; loss \$100,000.

The Hamilton Manufacturing Company of Two Rivers has contracts to supply the fixtures for the federal buildings in Providence, R. I., and Key West, Fla.

W. H. Hatton and W. H. Dick of New London have lost their mill at Phillips, Miss., the same being burned recently. It was a new mill with a capacity of 50,000 feet per day. The loss is \$50,000, partly covered by insurance. As the firm owns a large tract of oaks in that section it is likely the mill will be rebuilt.

MINNEAPOLIS

L. M. Borgess, representing the Steele & Hillbrand Lumber Company of St. Louis has been spending a short vacation at Lake Minnetonka with his wife. He called on the Twin City Trade before leaving, and returned home September 18.

V. F. De Vinny, who has been purchasing agent of the Great Western railroad for several years and has been with that company since it began business in 1885, has resigned to go into the wholesale lumber business. He came from St. Paul to Minneapolis and will make a specialty of lumber used for railroad purposes and will carry a line of hardwood for car material.

He is also sales representative for the fir and cedar products handled by the Lumber Manufacturers' Agency of Centralia, Wash. The deal was arranged a few days ago at the time of the visit of J. G. Startup of Seattle, sales manager for the agency. Mr. De Vinny is a native of Pennsylvania and began work as a surveyor, helping to locate the original line of the Great Western in Minnesota.

P. R. Hamilton and W. H. Hill of the Minneapolis Lumber Company have returned from Ruby, Wis., the location of the Ruby Lumber Company's mill, which they control. They spent a week looking things over at Ruby.

H. M. Halstad of Halstad & Boornsen, the local wholesalers and representatives of the Fullerton-Powell Hardwood Lumber Company, is back from a vacation trip of two weeks' duration.

F. M. Bartelme, the local hardwood wholesaler, left last week for a rather extended trip to call on concerns that use material in his line.

C. F. Osborne of Osborne & Clark, the local wholesalers, is back from Erie, Ill., where he was called by the death of his mother, Mrs. Elizabeth M. Osborne. She passed away at the old family home in Erie, September 12, at the age of seventy-five, having survived her husband 58 years. The funeral took place September 16 and was attended by all of the surviving children, ten in number, six sons and four daughters.

SAGINAW VALLEY

No rain of consequence in two months, and the whole northern part of Michigan burned to a crisp by the drought and forest fires. The fires have swept over an area extending a few miles north of Bay City to within a few miles of the Straits of Mackinac and nearly the entire width of the lower peninsula. Many farmers lost fences and buildings and townspeople in many instances sustained loss. Several small saw and shingle mills burned. Some logs scalded up were burned. The injury done to hardwood timber is in killing it under the intense heat to which it has been subjected. Vast tracts of land have been burned over which contained heavy growths of young timber. Much of the fire swept over what is known as "cut over" lands. These are lands from which the pine timber has been taken,

but they contain large quantities of valuable hardwood and a great deal of this has burned. Where green timber stands well together the fires have not caused damage to any extent save, perhaps, at the edges.

There are more than one hundred small sawmills along the lines of the railroad and in the interior of northern Michigan, and these have been subjected to a severe test. On the South Branch L. A. Ewing's mill burned Thursday, involving a loss of \$5,000, with no insurance. Iverson's mill in Missaukee also burned with a loss of \$9,000. Other mills were saved only through hard work. It is fair to state that probably every mill crew in all that territory has been engaged in fighting fires the last three weeks. Frank Baell, who is operating seven camps and is sending sixty carloads of logs to the Saginaw river every twenty-four hours, had his entire force of over 500 men out the best part of last week fighting the fire back from logs and camps. The smoke was so dense the greater portion of the time that men could not find their way into camp.

The Stephens Lumber Company, operating a big plant at Waters, sustained considerable loss, but the two hundred men employed did splendid work in saving property.

The Garland Manufacturing Company at Bay City has been full of business of late, building four bond sawmill outfits. One is now being installed in the local plant of W. D. Young & Co., the firm increasing its single band mill to a double band mill; another goes to Boyne City for W. H. White & Co., who are adding another band saw outfit to their single band mill; another, a single band mill now being erected at Grayling by R. Hanson & Sons, and a fourth goes to Houghton Lake to be installed in the sawmill which the N. Michaelson Lumber Company is erecting at that place.

Mershon-Bacon Company's plant at Bay City has been busy of late manufacturing box shooks from hardwood lumber. Beech, maple and birch are used chiefly.

The Elve-Myer Company is to locate a plant for making veneer, baskets, etc., at Carrollton, just below Saginaw, and will employ thirty or more hands at the outset. Maple, birch, basswood, beech and other woods will be used.

The Batchelor Timber Company has shut down its West Branch mill a month while improvements are being made.

Lohdel & Churchill, at Onaway, have shut down their plant a few weeks pending extensive repairs.

The flooring trade is reported as picking up, both as to demand and the movement. W. D. Young & Co. have looked many orders and are shipping a good deal of stock abroad. The S. L. Eastman Flooring Company is doing a steady business. The Strable Manufacturing plant and the Bliss & Yau Auker plant are doing business and considerable business, too, and all report an improved trade.

The Kuehling-Bigelow Company is getting a trainload of logs by rail every day. This company is making sales every day and Mr. Bigelow says there has been a decided improvement in business the last sixty days.

The Richardson Lumber Company is running its sawmill at Bay City and bringing logs down by rail.

The Lufkin Lute Company has brought a consignment of hardwood logs from Venezuela to Saginaw.

Ed Gormalu every year brings a consignment of mahogany saw logs from Africa to Saginaw to be converted into veneer for his piano factory.

CADILLAC

Forest fires are still raging and the atmosphere is very smoky and cloudy all the time. The Cummer-Bigelow Company have been fighting fire for the last two weeks and there has been no rain to put a check on the fires in this

company. This firm has felt the loss and trouble on account of fires more than any other in the county and has had to take their men from planing and sawmills to their camps to help fight the fire.

The Murphy & Diggins Company have closed their mill temporarily on account of lack of logs, which come in over the Cummer-Diggins logging railroad.

Williams Brothers of this city have also had to fight fire east and west of Manton and have had considerable loss in wood logs, etc.

The Cadillac Handle Company is closed down temporarily for repairs to its mill.

Cobbs & Mitchell, Inc., and Mitchell Brothers Company are not bothered with fires as they were a couple of weeks ago. They are running close to normal and report orders coming in well.

The shingle and sawmill of N. E. Hathaway of Aral, Benzonis county, has been burned to the ground. It is not known how the fire originated. The property is entirely destroyed and there is no insurance.

The veteran lumberman, T. Stewart White of Grand Rapids, one of Michigan's pioneer lumbermen, says that most of the forest fires in Michigan are caused by sparks from locomotives or carelessness. The former seems to be the cause of most of the recent fires, as they were adjacent to railroads in many cases.

Mrs. Ellen C. Diggins, mother of Mr. F. A. Diggins of Murphy & Diggins, this city, and sister of Delos E. Budgett, the veteran lumberman of Grand Rapids, died Friday noon at the age of eighty-one years. The funeral services were held Saturday and the body taken to Harvard, Ill., for interment beside that of her husband. So one by one the old residents of Cadillac go to their long home.

A new chemical company has been organized in this city and is building a plant adjacent to the Cummer-Diggins chemical plant, the buildings of which will cost from \$4,000 to \$5,000. The company is known as the Northern Chemical Company and is promoted by Mr. Lester of Ohio. This company will use tar from the Cummer-Diggins plant, from which will be manufactured a binder for use in the construction of paving similar to the bitulithic paving now in Cadillac this summer. Other products will also be manufactured.

DETROIT

The steamer W. J. Carter brought a large cargo of hardwood lumber to the Forman Company from Alpena this week.

The Detroit Handle Company has filed articles of incorporation to do business in this city. The company is capitalized at \$5,000. B. C. Eby, C. N. Gray and W. P. Stevens are the incorporators.

The Restrict Lumber & Coal Company, capitalized at \$25,000, has filed articles of incorporation. The company is to manufacture sash, doors, frames, hardwood flooring and all kinds of dressed lumber. The company was organized by J. C. Restrict, C. W. Restrict, G. B. Wealthy, James Hanson and C. F. Meagher.

Forest fires in northern Michigan have destroyed acres of fine hardwood timber. The large tracts owned by White Brothers, Boyne City, and Kneeland & Bigelow, near Atlanta, Mich., were threatened but not seriously damaged.

The Rice & Meyer Manufacturing Company will remove its plant to Saginaw. The company manufactures boxes and wood veneers.

The plant of H. C. Hitchcock & Co. was damaged by fire to the extent of \$15,000 this week. The most of the damage was to fine seasoned lumber stacked in the company's yards.

The steamer Nations and her tow brought a cargo of hardwood lumber to Detroit from a northern point this week.

The regular fall rush of shipping has put many of the lumber boats back into commission. Local clearing agents report that a number of vessels have been chartered this week to go to northern points for hardwood cargoes for Detroit.

James M. Barnett, a pioneer lumberman of this state, is dead at Grand Rapids. For thirty years he had directed lumber operations over thousands of acres and amassed a fortune in doing so.

The will of William H. Loveless, the St. Charles lumberman who died recently, disposed of \$41,000 worth of property. His divorced wife is given an annuity of \$150 a month as long as she remains unmarried.

Trade remains rather quiet, although many inquiries have encouraged manufacturers and dealers to believe that better business is in prospect. Additional announcements of many new buildings to be erected this fall, winter and spring have strengthened this feeling and a fairly busy winter and lively spring trade is looked for.

GRAND RAPIDS

The death of James M. Barnett, a well-known financier and lumber man of this city, occurred at his home September 19. Paralysis was the cause. Mr. Barnett was seventy-six years old and leaves a widow and four children. He was president of the Foshburgh Lumber Company of Norfolk, Va., and a director of the Michigan Trust Company, Michigan Barrel Company, the Antrim Iron Company of Marcellona, and other business enterprises. In 1895 he was elected president of the Old National Bank of this city, holding that position up to his death.

John W. Budgett went to Harvard, Ill., September 20 to attend the funeral of his aunt, Mrs. Diggins, who died at Cadillac Saturday. Mrs. Diggins was the youngest sister of D. A. Budgett and her death leaves Mr. Budgett the only survivor of the family.

The Lake Superior Iron & Chemical Company of Elk Rapids lost 3,000 cords of wood during a recent fire in Rapid River township.

The Belding-Hall Company of Belding held its first annual meeting recently and a most prosperous year was reported in spite of the financial depression. A dividend of 7 per cent was declared. The old board of directors was elected as follows: J. S. Weidman of Mt. Pleasant, H. B. Webber and Geo. E. Nichols of Ionia, B. F. Hall, E. H. Hall, W. T. Hazard and E. E. Chapel of Belding. Brinton F. Hall was re-elected president and manager.

Wilbur Rogers started a stove factory at Oxford, in Oakland county, this month and is employing eleven men.

T. D. Hawks, resident of the Detroit & Mackinac Railroad, who has taken great interest in the reforestation movement, says that the state of Michigan is largely responsible for the damage done by fires in timber lands, and he scores state officials for their

neglect of duty in allowing the fires to run unchecked. State game and fire warden, Chas. S. Pierce of Lansing, concedes that many of the fires may have come from camp fires left by hunters and from sparks of traction engines, but in the northwest section of the state a good share of the fires are believed to have originated from sparks of passing railroad locomotives. It is said that a number of property owners have declared intentions of starting damage suits against the railroad companies. Mr. Pierce has advices from different sections of northern Michigan, telling of the critical condition of forest lands, which are the driest they have been in fifteen years, and in tinder-like condition, needing but a spark to turn them into roaring furnaces.

W. H. White & Co.'s shingle mill at Boyne City started on the season's cut September 14, giving employment to over 100 men.

An automobile containing a party of Traverse City people was overturned September 21 at the foot of a steep hill, near Lake Leelanau, by Mrs. Miss Julia Kelley sustained a broken collar bone, while Walter N. Kelley, Frank Kelley, John J. Corcoran and Fred M. Longnecker have severe bruises. The party was bound for the Kelley cottage at Lake Leelanau, where Mrs. W. N. Kelley lay critically ill. Mr. Longnecker was driving the car, the brakes did not hold, and it was due to his presence of mind and skill as a driver that there were no fatalities. Mr. Longnecker is one of the directors of the Oval Wood Dish Company, while W. N. Kelley is a well-known lumberman.

The Traverse City, Leelanau & Manistiquette Railway, which runs from Traverse City to Northport, was sold recently on foreclosure proceedings to Henry Russell of Detroit, J. H. P. Hughtart of Grand Rapids and other railroad men. The company has been reorganized, with \$75,000 capital. Mr. Hughtart, general manager of the G. E. & I. Railway, states that he is not personally interested in the new company and that its future has not been fully determined on.

The Charlevoix Lumber Company has sold its steam barge Pine Lake to A. Heckler of Sault Ste. Marie.

J. J. Sufer of Whitehall, the box manufacturer, has returned from a trip North where he purchased a large stock of lumber, to be delivered by vessel and used in filling a long-time contract recently closed with the Corn Products Company of Chicago.

Mrs. Wm. Beitner and daughter of Traverse City have joined Mr. Beitner at Sidnaw in the upper peninsula. Two mills have been erected on the Beitner holdings there and the Traverse City mill will be dismantled this fall.

The W. L. McManus Lumber Company of Petoskey has bought the Cadillac Lumber Company's yards at Marcellona.

Mrs. Walter N. Kelley, wife of the well-known lumberman, died September 23 at the Kelley cottage, Lake Leelanau, near Traverse City, after a long illness. She was forty-one and leaves a husband and five children.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

The feature of the local trade during the last fortnight has been the fact that a good many orders for railroad material, bridge plank, etc., have been placed by the railroads, and that there has been very liberal buying on the part of box makers, of the coarse end of both northern and southern woods. The main staple woods are in fair demand and trade is showing a slow but gradual improvement all along the line.

Lumber salesmen from abroad, who have visited Chicago during the last two weeks and called at the Ricco office, all report very fair to good trade in this market. Local dealers confirm this statement of conditions.

NEW YORK

While hardwoods in the local district are holding their own in general trading and are also enjoying their share of the slow but steady business improvement, the volume of trade is still

hampered to a considerable extent by the approaching election. While there is no great excitement or alarm as to the probable outcome, there is the usual hesitancy in the matter of anticipating business wants in the way of supplies to any large extent. On the other hand, there is a larger purchasing power to the market with the approach of fall than there was during the summer, and prices are ruling firmer in sympathy, but there is still "that something" still present which prevents a normal expression of trading in the retail and consuming lines, and as election is close at hand there is little likelihood that these features of the market will change much until that event is passed. But even under such conditions there are phases which indicate that things are making for a decided revival when the time comes. This is especially true in the matter of supplies in the hands of dealers and consumers. They have never been so low on the average as at present. Here and there a dealer has taken advantage of the low priced bargains during the spring and summer, but a vast majority are short to the limit. These are conditions which cannot help but provide a decided impetus to trade in the wholesale market when the change does come, and at the same time send prices upward by reason of lack of sufficient supplies at mill points to stock everybody up at once.

There is some business doing all the while and prices are today firmer and higher than sixty days ago on some items, and while the wholesalers could do more and the yards as well, there is a satisfaction and contentment present that there are good times and better things ahead and are not far distant, either.

Poplar, oak, ash, chestnut and basswood are firm on a fair sale and only medium supplies, while the balance of the list fluctuate slightly for lack of demand.

BUFFALO

The hardwood trade is doing a little more work by week and promises to go on steadily till the fall trade is back again, though it will take quite a while if there is no real stir more than is in sight now. The usual fall improvement is not in sight and it may be true that it is not to be looked for in hardwood lumber, but rather in lumber that is used to cover houses with.

Pine and hemlock are taking up most of the attention of the buyers, who say that it will need to be later in the year for the corresponding stir to take place in hardwood, but it will do so at the right time. For the need of the week is quite large and appears to be growing in a healthy way, but there is no speculative buying as yet.

The reports from the Southwest are very encouraging, so far as demand goes. It now seems that the buyers are really in earnest there and must have more stock at once. Such is not yet the case in the market here, but the demand ought to spread this way in a short time. There is not much effort here to increase stocks again, nor such a revival of trade, as there is stock enough as yet.

The relative activity of the woods is as before, with oak and poplar leading, plain oak being more plentiful than quartered, and other woods showing more or less improvement, chestnut, birch and white ash being slowest.

PHILADELPHIA

There is tangible evidence, from the reports coming in from all sides, that the turning point in trading has been reached at last and that a steady progression may be looked for from now on.

The Pennsylvania and Reading railroads, the Seaboard Air Line and several others are rushing repairs and placing orders for supplies and rolling stock. The furniture factories, though

somewhat cautious as yet, are buying. Millwork plants, interior finish and flooring concerns show activity with a promising outlook. The fact that John Wanamaker of this city has been able to create a mortgage of \$6,000,000 for building purposes is a sure sign that money is easier and that the trust companies are again seeking investments, which move has already given considerable impetus to building. A number of plans are now being consummated for opening new work to commence at once, and it is predicted that 1909 will see a prodigious activity in a line so seriously interrupted by the panic. Stocks at mill points, especially of the better grades, are scarce, and there is a stiffening tendency all along the line in values. It is predicted that in the near future available stock of high-grade material will command decidedly higher prices.

The hardwood situation, viewed from all points, gives general satisfaction. With one or two exceptions, in which there has been a move upward, the prices generally have held steady with every indication of an early rise. The prophecy of a possible scramble for stock is already being verified, and it is more than likely that some one is going to get left.

PITTSBURG

Extreme dry weather, had forest fires, no water for the mills, red-hot political fever and many absences on late vacations—these things are not strictly conducive to real prosperity in the lumber business. In spite of them the trade is beginning to smile. If the wholesalers of this market could be lined up to-day and each asked the question, "How's your business?" the entire class from A to Z would nearly get together. Some of them say, "A whole lot better." Everybody admits that the turn in the tide has fairly come and that everywhere—except, perhaps, in Pittsburgh—and in every line of manufacturing and industrial activity, a little lumber is being bought. These litted added together make enough business to more than pay expenses of the average firm. This is a condition which has not existed for months, and now that things are getting better nearly every big firm in the city is free to admit that it will be highly well satisfied if the books show a case of break even September 1.

Hardwoods are sharing in this general increase in trade, but not to the extent of yellow pine. In the hardwood market the gain in factory trade and with the furniture manufacturers is, perhaps, the best indication of returning prosperity. These concerns have very low stocks and they are now apparently getting the change to look up for next year's supply. Many of them which have been running only two or three days a week are now running from four to six days per week and are using more stocks accordingly. The demand for hardwood finish is still slow. Very little is to be expected from Pittsburgh proper along this line before January 1. While the building situation here is slowly righting itself, the projects will not be in shape to do the hardwood trade much good for a few months. In addition to the five big blocks which are now under way downtown, two more big business blocks have been announced this week on which work will be started this fall. Contracts have also been awarded lately for three residences to cost from \$75,000 to \$100,000 each. These straws show that among a certain class of builders confidence is pretty well established again, and they indicate, too, that the dealers in the hardwood lumber have something to hope for a little later on.

The call for hardwood mining stock is fairly good, but it is a case of every buyer hunting bargains. Purchasing agents seem determined to push prices down to an unprofitable point for the wholesalers, and as yet the stocks are large enough to keep the wholesalers cutting prices to meet this demand. Only a fair proportion of the hardwood mills are running for two reasons:

Those which usually run on special orders are down almost without exception. The other is that country mills have been unable for weeks to get sufficient water to operate with. On this account it is pretty certain that by winter hardwood stocks will be low, and if demand keeps on picking up as it has done since August 1 higher prices are bound to result.

BOSTON

The local demand for hardwoods continues gradually to increase. Sales follow upon inquiry more quickly than has been usual of late, notwithstanding the fact that sellers have in most instances adopted a rather firmer attitude as to prices, and the whole atmosphere of the market is more buoyant, or perhaps we had better say less enervating, for even the optimists are willing to admit that there is still great room for improvement. Buyers are not so timid as they were, but they can hardly yet be termed courageous. Their faith in a bright future is still at times of a wavering sort.

As to the character of the call for quartered oak, the testimony of the trade differs somewhat. Those who deal in such lumber merely as a side line say that customers are still few and indifferent, but merchants who make a speciality of it, and their evidence is naturally the most valuable, declare that buyers' interest during the last few weeks has increased perceptibly and is still growing. Plain oak is not yet active, but it is attracting more attention than in the early part of the summer, and purchasers in search of bargains have to look for them longer.

The better grades of whitewood are still held with great confidence. Holders are not in the least disconcerted by the rather slow demand, but seem to think that only a moderate quickening in the call would mean a further appreciation. There has been no decided change in the market for either brown or white ash since last report. In elm local trade is of very insignificant proportions. The northern Carolina pine is no doubt firmer. The furious slashing of price indulged in by some dealers here not so very long ago seems to be a matter of history. The weather in the producing districts has of late interfered materially with the operation of the mills and supplies are not so large. Some merchants here are disposed to complain that they cannot always secure as prompt delivery as they would like.

BALTIMORE

There is no change of special moment in the hardwood trade of this section beyond a gradual upward movement in both the demand and prices. The buying is characterized by somewhat greater freedom than has been the case, while the trend of values is toward a higher level. Nearly all the firms and corporations here report greater activity. This hesitancy is, perhaps, the outlook is very encouraging. Conservatism, however, still continues to dominate the trade. Yardmen are chary about placing orders and as a rule they go no farther than to provide for the more immediate necessities. An extensive restocking is still to come, although the range of prices holds out strong inducements in this direction. This hesitancy is, perhaps, attributable in part to the progress of the national campaign, which diverts attention from other matters and raises just sufficient uncertainty to impart a halting touch to the trade. The outcome seems to be in less doubt than in other election years, but the effect is, nevertheless, much the same. Hence the restoration of the former status will be slower than seemed likely earlier in the year. Progress, however, appears to be continuing and a feeling of hopefulness prevails throughout the trade. Some of

The larger consumers are again in the market and greater interest is being shown all along the line. Many of the mills have found it expedient to increase their output, and the small stocks at production points as well as along the railroads ready for shipment should encourage the placing of orders against possible shortage. The export situation is practically unchanged, the accumulations abroad, combined with the restricted withdrawal, tends to keep prices at figures which leave little or no profit and which are not infrequently productive of losses. The shipping on consignment is discouraged more than ever by those presumably in a position to inform themselves on all phases of the foreign trade as likely to cause disaster, and the dullness in business generally does not furnish ground for the expectation of an early improvement. While the forwardings are somewhat arrested, the quantity of lumber sent abroad is still much larger than it should be to end the demoralization that has prevailed. In proportion, however, as the domestic demand increases, stocks will be kept on this side of the Atlantic, and the foreign movement correspondingly lessened, which will do more toward the restoration of acceptable conditions than anything else.

CHARLOTTE

There has been unmistakable improvement in the hardwood situation in North Carolina. Not since the first of the year has there been a period of greater activity than during the past two weeks or a time when business showed more healthy signs. The effects of the panic are fast dying out, as is indicated by the steady increase in demand for goods and the constant picking up in market quotations. Quartered oak, ash, poplar and other grades have greatly improved in prices, and manufacturers are finding books filled with orders. Building operations were never being pushed with greater vigor than just now in this section. The correspondent of the *Hardwood Record* visited several of the largest hardwood manufacturing of this city and learned from them that business just now is better than it has been before this year, with still brighter promise of fall trade. Something like \$1,000,000 worth of new buildings have been commenced in Charlotte since January 1, and the factories are busy with orders for goods. The large hardwood concern of J. H. Wearn, manufacturers of office fixtures, tables, interior finish, etc., reports the best business it has ever had. The Carolina Manufacturing Company, extensive manufacturers of interior finish, sash, doors, blinds, office fixtures, etc., reports that its mills are now running full time. Mr. Fore of this company stated business has improved at least fifty per cent within the past sixty days, and that never in its history has the company booked so many large orders. The story is the same with the rest of the concerns in this city and in this section. During the month of September dozens of cotton mills in the South that had been closed down resumed operations, thus indicating the improvement in other leading industries in this section. The railroads report greatly increased freight traffic and a great diminution of the pile cars that a few months ago lined the sidings. With the promise of bumper crop business has taken on a decidedly active tone, and an industry reflects the general improvement more than the lumber business, as none suffered more severely from the panic.

NORFOLK

Conditions of the hardwood trade in this city exhibit signs of changes for the better, although no decided step in the matter of increased valuations has been noticed. It is believed that the trade locally, and from North Carolina and West Virginia, which ships for export through

this port, is finding the European market easier and more remunerative than was the case during July and August, there being an easing up of the congestion which was reported and an improvement in the demand. With the pine dealers of this port trade has improved wonderfully with their foreign connections, and although the improvement is not so noteworthy with the hardwood fraternity, it is, at the same time, sufficient to warrant comment.

The steamer Gatunne cleared from this port last week with a large general cargo, a good sized portion of which consisted of hardwood lumber and hardwood logs. The demand locally for hardwood flooring and other hardwood stocks, such as used in the making of desks, etc., is steadily improving, and it is thought that domestic trade is making long strides in the direction of normal business conditions. Oak and gum are being shipped in larger quantities just at present than are the other specie woods. Poplar and cypress are experiencing an exceptionally good demand, and have also felt the effect of this demand in the shape of better prices. The demand for walnut, hickory, red oak and ash is light and there is being little marketed. The exceedingly heavy rains which have recently visited this section and North Carolina have had a deterrent effect on the shipping of all kinds of lumber and hardwood material has come in for its full share. Cypress shingles, such as are manufactured by the John L. Roper Lumber Company, are being sold in large quantities and at values which are on an ascending scale.

CLEVELAND

Business remains at about the same volume as two weeks ago, according to prominent hardwood dealers of this city. The demand continues very fair, but it cannot be said to be much greater than during August. Dealers are very hopeful, however, that the demand will continue well on into the winter before in any way diminishing. Several big concerns which use hardwood quite extensively have resumed full working hours recently. Orders from this source of business are reported as being good. Some lines of building material are also good, notably maple flooring. Quartered oak seems to have the call, however, with plain oak second. Chestnut is moving good, but there is no demand for hickory and the other rarer hardwoods.

COLUMBUS

All good grades of lumber are advancing in this market and the lower grades show some weakness. The hardwoods promise to attract more attention from this on, because the building permits show that new buildings to be erected this fall will call mostly for the better grades of lumber and that but few cheap structures are contemplated. The oaks are on the upgrade and the better class of poplar holds steady and shows no tendency to decline. The market for chestnut is strong and the demand fairly active. Oak flooring is active and stocks are decidedly light. The best factor in the situation is that stocks of nearly all kinds of lumber are light and it is believed that the tendency of the market will be upward from this on. The condition of the market is regarded as very satisfactory for this time of the year.

CINCINNATI

Inquiries for hardwoods continue to increase, and incidentally orders are becoming more frequent than for some weeks past. The movement of wood during the past two weeks showed a healthy improvement over any other week of the year, and a great many of the local dealers here are of the opinion that

this month will be the best of the year in the hardwood situation. The box manufacturers are still buying a great deal of the lower grades of poplar and are also using some cypress where a cheap lot can be secured. However the prices are being held up very well on cypress and they are forced to pay higher prices than some weeks ago. Every item in the hardwood list has been held up well during the past weeks, and some dealers are asking higher prices on choice grades of poplar and quartered oak. The latter item developed added strength during the past two months and also plain white oak has gained materially during that period. The demand for woods from the furniture element has been very light, and they seem to be buying only what their urgent needs necessitate. However, they are soon expected to get into the market for larger quantities of lumber and then all hardwood lumber dealers will be jubilant. The output of mahogany has been about 75 per cent of that of last year, and despite that fact prices have not been reduced, but seem to be holding up more stiffly now than ever. Building material is in good demand with prices very firm.

TOLEDO

Local hardwood dealers report a decided improvement in business during the past few weeks. Factories are increasing their consumption considerably, especially the furniture, chair and vehicle plants. There has also been a betterment in the situation so far as building operations are concerned. There are numerous structures now under way which will consume considerable hardwood, a thing which scarcely happened during the early part of the season. Oak has been quite active. Several cargoes of oak timber which were gathered up in the surrounding territory recently cleared from this port, are being shipped. The lower grades of poplar have been in good demand and have held very firm, but there are some weak spots among the cheaper grades. No. 1 common and selects are now selling around \$35 to \$38. There is a good supply of poplar here, although there is no overstocking. Much of the hardwood trade done by the local retailers has been on the basis of wagonload lots from the local wholesale yards, the retailers preferring not to buy heavily under existing conditions, when they can purchase in small lots almost as cheaply and thus avoid tying up working capital to no advantage. The box plants are running in good shape and are proving good customers. Basswood is very scarce and hard to get, as well as some lines of ash.

INDIANAPOLIS

The local hardwood market continues fairly steady with a good demand for all lines, especially in oak. Building operations continue brisk and a good business is anticipated from now on, as manufacturing plants are operating on about normal conditions.

There has been little change in prices during the last month and no decided advance is expected for a few weeks. Owing to the long drought and the threatened destruction of the corn and other growing crops, conditions throughout the state are a bit unsettled at the present time.

Retailers are not insisting to restock their yards so heavily, and the wholesalers and commission men report that business is good with them.

EVANSVILLE

The hardwood market of this district remains about the same, however, taken as a whole, the month of September will show up better than

August in point of orders taken and amount of lumber shipped. Although business is not as brisk as it has been, local manufacturers have no kicking coming, as nearly all the mills are busy running full time and lumber is moving. The election is having very little effect on local trade conditions, as they are as good as could be expected considering existing conditions, and it is the general opinion that business will go right on improving until we get back to our former status. The demand for quartered white oak is still in the lead, although it seems that red oak is in good demand. Plain oak is getting better and it is thought this wood will be in much better demand soon. Logs are coming in more plentifully now than at any time during the summer, and it is thought will be plentiful from this time on.

MEMPHIS

Business conditions throughout the Memphis district continue to show improvement, and this is equally applicable to the greater part of the South. The demand for hardwood lumber, especially in the upper grades, is gradually getting better and practically every member of the trade is inclined to take a rather more optimistic view of the outlook. There is a marked increase in the number of inquiries and in some instances there is a request for low-grade lumber. The yellow pine mills say they are enjoying a very satisfactory volume of business. Certainly more mills are resuming in the yellow pine belt and some of those which were running on short time are returning to fuller hours. Hardwood mills, too, are resuming in some instances, though some manufacturers hold the view that the improvement has not yet become extensive enough to warrant any such action. Financial conditions generally are reported as encouraging and there is plenty of money for financing the movement of the cotton crop as well as the handling of the lumber and other business now offering. Rates for money are comparatively easy. Building operations throughout the Memphis territory are increasing and in Memphis proper the outlook is satisfactory to those engaged in the building trades. The steel and iron business has recently improved to such extent that some manufacturers have withdrawn from the market for the remainder of the year, having sold all they expect to make during the next three months. A good demand is reported for the first quarter of 1909 and all connected with the steel and iron industry are disposed to take an optimistic view of the future. The railroads are enjoying increased traffic and are put to the severest test to supply sufficient equipment to take care of the freight now offering. The car repair plants are being operated on full time and in some instances the railroad companies are finding it necessary, because of the early indicated need for more cars, to let out some of their repair work to private foundry companies. The lumber people are not yet confronted with any peculiar shortage of cars, but they realize that, with any appreciable increase in the volume of their business just at the time when the movement of cotton is of record proportions, a car shortage of a very serious character would be only a logical development. For this reason they are disposed to urge upon consumers of hardwood lumber the advisability of placing orders now for immediate shipment so that this trouble and the consequent delay may be avoided. The indications are for a smaller cotton crop than a short time ago, the best ideas of the trade being a crop of 12,000,000 to 13,000,000 bales, but the hot weather in the latter part of August and early in September has forced such rapid opening that receipts at interior towns and the ports are close to the record for this time of the year.

The improvement in hardwood lumber is less pronounced than some of the trade anticipated and there are not a few who hold to the belief

that the political outlook is a factor in this slowing. There is an element of uncertainty regarding who will be the next president that makes many important consumers of hardwood lumber disposed to remain close to shore, with the result that purchasers are as a rule confined to more pressing needs. There are few orders being booked for forward delivery. Export demand for hardwood lumber is rather quiet at the moment, though the same quarters say they are enjoying a very satisfactory outlet through foreign trade channels. The best demand in the hardwood line right now is for plain oak in the upper grades of both red and white, in which there is a rather pronounced shortage. There is some movement in common, too, but this is rather quiet as compared with that in the upper grades. Quartered oak is firmer and there is a fairly active demand for the upper grades and some for common quartered red. The supply of firsts and seconds is not large and some manufacturers are advancing their prices slightly. The demand for ash in all grades continues rather slow, while there is only a moderate call for cypress outside of shops and select. This lumber, with respect to the distribution of inquiries and demand, is rather the opposite of most other items for sale in this market. There is some demand for red gum in firsts and seconds and a moderate movement is noted in clear. The manufacturers of other heavy berry yet and the demand for these is comparatively quiet except at a price which most manufacturers are unwilling to accept at the moment. The production of upper grades is very light as compared with that of the lower, owing to the disappointing returns in the way of upper grades from the logs now being cut. Cottonwood is increasing in its movement slowly. Most of this, however, is in rather strong hands and there is absence of any dealers willing to sell. A canvass of the situation here reveals the fact that the greatest shortage in production is noted in cottonwood lumber, and those who are holding are taking this course because of this fact and because of their belief that better prices will be available later. The amount of cottonwood timber now being cut is strikingly light. There is some improvement reported in the demand for box shooks and the greater portion of the low-grade stock will be used in the box factories of the larger manufacturers of cottonwood. This leaves a comparatively light supply for the open market and prices show a slightly hardening tendency.

LOUISVILLE

The Louisville market may be described as being conservative and steady. There is a general feeling that business is to improve, though it is admitted that it will hardly be until after the presidential election is out of the way. Prices are being maintained by all dealers, and it is reported by some that the prices for red and white oak have shown a tendency to rise.

Another statement indicating confidence in the market was made by a local dealer who declared that he is sorry he made so many sales of his high-grade lots of lumber during the worst depression, since prices have now become strong again, and he has few lots of high-grade stuff, and much poor stuff, left.

The manufacturers appear to be ordering only what they need for immediate use, and they have apparently exhausted their stocks. They will have to begin buying shortly in large quantities, most dealers believe, and so they are getting their stocks in readiness to take care of all demands. The increase in inquiries is also an indication of a strengthening market, even though many of these inquiries do not result in sales.

Building is improving in Louisville, and this has had a tendency to increase local sales. In fact, Louisville dealers say that their sales

of lumber here have been larger than at the same period last year.

The veneering mills are operating with short forces, but the flooring outlook is improved owing to the increase in construction work. Sales of mahogany are slightly better than before. The dimension stock trade has shown some improvement, with inquiries numerous and more orders anticipated.

BRISTOL

The lumber trade is reported slightly better here, with indications that the steady improvement that has characterized the market for the past few weeks will continue through the fall and winter. It is the general opinion that trade will be much better during the coming spring and that next year business will be about restored to its former status.

The best feeling prevails among the lumbermen around here as to the outlook, and the prediction is unanimously made that things will soon be much better. However there is now much more body to trade than the statements of those in the trade would seem to indicate, notwithstanding the apparent dullness.

The railroads are taking advantage of the dullness and putting their rolling stock in better shape. They all expect to face another car shortage next year, though there has not as yet been any signs that the supply of transportation equipment will be short soon.

It is expected that many of the mills will run through the winter, despite the fact that the yards are pretty well stocked now. Shipments are being made right along and the export trade is said to be showing signs of substantial improvement.

ASHLAND

During the past two weeks there has been very little change in the hardwood situation in this market. Oak seems to be holding its own, especially in the higher grades. Some of the large construction and car building companies are placing a number of contracts for plain sawn and bill oak, making the demand a little better. On the other hand, the large furniture and implement factories seem inclined to withhold their large orders for some time, and it looks very much as though they will not place their large orders until probably the fore part of the coming winter. Rough poplar continues to be in good demand, and especially panel stock. Wagon-box boards are in no great demand at this time, as most of the large wagon manufacturers have on a reasonable supply, but as soon as they resume full operations the demand is sure to increase and prices get better. Ash, basswood and other hardwoods are about the same as they have been for the past month, prices remaining the same.

ST. LOUIS

The hardwood situation continues to improve. Because of the strong condition that hardwood is showing, the manufacturers and distributors are not inclined to sell as they did a short time ago. The distributors are thinking more of getting in stock than they are of letting go. They are anxious to get ready for the big business that they anticipate this fall. All are placing orders as fast as they can and several already have large stock of the yards in expectation of the trade in sight. First and second plain red oak is very scarce, and so is quartered white oak. These two items will be in good demand later and will bring good prices. The higher grades in all classes of hardwoods are scarce, and so are, in fact, the lower grades, but the demand for the latter is not so great. Consumers, while

they are buying liberally, are not buying quite as freely as they should and will later on. The majority of the hardwood dealers believe the bottom prices have been reached and that better prices will prevail from now on.

NEW ORLEANS

Heavy rains over Louisiana recently have interfered to some extent with the logging and the operations of the hardwood mills have necessarily been restricted. The advent of cooler weather will, in all probability, mark the end of this precipitation and the mills will no doubt be running on good time. The export movement is still slow. Several good shipments of oak lumber to Antwerp have been made recently, while staves continue actively. Generally, however, the export movement is quiet and indicates a passive condition on the other side.

MILWAUKEE

Milwaukee hardwood dealers are much pleased over the manner in which all manufacturing plants of the city are placing orders. This important phase of the business has been exceptionally dull throughout the season until the past few weeks, when demand from the manufacturers has been decidedly revived. It is generally conceded that, while manufacturing in Milwaukee has not yet returned to the stage which held before the financial crisis, the majority of plants are operating on at least 80 per cent of the normal. This, considering the state of affairs during the early part of the year, is most satisfactory. Producers in general seem to realize, say the manufacturers, that material will never again be lower than at the present time, and the natural result is that machinery and equipment of all kinds is being ordered, causing an increased demand for all hardwood which goes into the manufacture. Sash and door plants of the city are showing more aptitude for placing larger orders also. While it is somewhat early for the influence of the fall building to be felt upon the hardwood market, dealers say that inquiries indicate the fact that building will be extensive and that business in this line will be good. Box factories are calling for plenty of material and prospects are that business in this field will be even better.

All of the woods are moving, and prices, while not materially changed, are showing an upward tendency. Oaks are in the lead and with prices satisfactory. Maple and maple flooring are not showing the improvement expected, although a change for the better is looked for soon. Poplar remains about the same, birch is picking up and stocks here are not especially large. Basswood is showing plenty of life owing to the demand from the box factories.

MINNEAPOLIS

Improved demand from railroad car shops and from the furniture factories is the feature of the hardwood market in the Northwest. The volume of transactions is much better than a month ago, but is still light for the time of year, indicating that most of the large consumers are still of a mind to buy conservatively and not to stock up for winter and spring prospective needs. Business in most cases does not come to dealers. They find it necessary still to go out and canvass the trade to get orders. However, in most cases the results are a great improvement. Prices are firmer than they have been for several months. The market on oak is steady at \$48 and upward for plain oak delivered here, with advances registered by some of the leading dealers. Bass-

wood is also stronger, and birch is enjoying a demand that is gratifying. It is still off in price as compared with last year, but is at least \$2 a thousand better than last spring, which promises an advance before another supply becomes available. Other northern hardwoods are scarce, and, while there is little doing, they are being held at stiff prices.

Sash and door factories are buying sparingly, though they are using a fair amount of hardwood, and they should be good customers before winter sets in. Oak for switch ties has a good demand from the railroads of late. Dealers here are well satisfied with the prospect for business, though the present year will be the lightest on record for most of them.

SAGINAW VALLEY

The conditions governing the hardwood trade are steadily improving. There is a better tone to the trade all around, manufacturers and dealers say. Since the first of the month the industry has been getting upon its feet after the slump of October last. The mills have been running quite steadily and hence there are ample stocks to meet the requirements of the business. The market holds firm with no particular changes in quotations. Beech, maple, ash and basswood appear to have the call. There is also something doing in elm and birch. Dealers are in good form to do an extensive fall and winter business.

SAN FRANCISCO

The general tone of the hardwood market continues to the satisfaction of all parties interested in this line. Stocks are moving in and out right along, and the dealers all report bright prospects for the future. Prices are generally on a lower level and will no doubt so continue for some time, especially when it has been found that these lower figures are conducive to larger business. Competition is keener, but there is no desire on the part of the trade, to cut figures on an unprofitable basis. The softwood market is a little better, and we hear of higher prices in the near future.

The hardwood flooring market is fair and if present prices do not advance the demand will continue on the increase. Architects are realizing the advantage there is in using hardwoods for floors and are specifying them more generally.

The money market is much improved notwithstanding the extremely heavy movement of the California fruit crops. The confidence placed on the future of this city may be gauged by the competition there was last week to purchase the first lot of the municipal bonds (to the amount of \$3,250,000), which issue was subscribed many times over.

LIVERPOOL

The revival of trade at this port still continues, and quite a cheery aspect is taken of the conditions prevailing, considering the present time of the year.

Hickory and first growth ash are badly wanted and if shippers have any stocks on hand shipment to this port would bring a handsome realization. Second-growth ash logs are far too plentiful in supply. Some of the principal importers have decided not to increase their present ample stock by buying wood on contract for delivery next year. One firm, however, was induced to buy 30,000 feet at a price which is considered very high. This wood is not so popular—most of the consumers finding it has not the same hard texture of the British growth ash.

Poplar business is finding a more ready sale. Ash panels of all grades continue weak in price, and the lower grades are unsuitable at any price. Oak boards are better, but the wagon planks

are hopelessly overstocked. A good parcel of round oak logs would do a good market. Several good buyers are anxiously waiting an arrival of a few hundred logs. Satin walnut and hazel pine lumber continues weak, mainly owing to the low prices ruling for poplar lumber in all grades. Mahogany sales recently brought a good company of buyers forward and prices were on a higher level as compared with those ruling at sales before. The wood offered was of a high-class texture.

Under date of September 7, Farnworth & Jardine announce that there was a good demand for African mahogany at auction sales the last of August, and considerable quantities changed hands at steady prices. The stock of Honduras wood is light, consisting of a small parcel of prime quality, chiefly of large dimensions. Of Mexican wood no recent arrivals are reported. The stock of Cuban mahogany is moderate, and good sized wood is in demand, but small inferior stock will not sell, even at low rates. There is a fair inquiry for round and square cedar logs in good condition. There have been no recent arrivals of rosewood, and strictly first-class wood of rich, dark color is in demand, at good prices. Moderate shipments of good size satinwood ought to sell well. American walnut is light, and there is good inquiry for prime wood of large dimensions. The stock of planks and boards is very heavy.

DOSTER LUMBER GAUGE

A Few Styles of Teeth used in

ATKINS SILVER STEEL CROSS-CUT SAWS

We make an endless variety for all sections of the country and all kinds of wood.

THE MOST ECONOMICAL SAW.

Because—They are made of SILVER STEEL and tempered by our own secret Gas Process. Are **hard** and **stiff** (but not brittle). They hold their teeth and edge.

Segment Ground (our own exclusive process). They are thinnest at the center of the back and taper gradually **from tooth edge** which gives them ample clearance with but little set. They cut faster and easier.

Use **them this season** in comparison with any other Saw. You have always expected to try an Atkins sometime—why not now, when you are so anxious to economize in every way?

For Sale at your Dealers, Jobbers, or if not, write us direct or to our nearest branch listed below.

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding sticker of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular.

and ATLANTA

H. B. Smith Machine Co.
SMITHVILLE, N. J., U. S. A.

 Branches:
NEW YORK, CHICAGO
and ATLANTA

Our No. 180 Aut. Band Rip Saw

SHOWN HEREWITH

No. 180 Aut. Band Rip Saw.

is especially adapted for use in factories working in hardwood, such as furniture factories, cabinet shops, etc., because its thin blade (thinner than that of any other machine) saves a good deal of material which other machines waste in sawdust. Hardwoods are expensive and are becoming more so; this accounts for the growing demand for our line of Band Sawing Machinery. No matter what kind of a band saw you may be in need of, we can save you money—not only in the initial price of the machine, perhaps, but certainly in the saving of high priced materials which go into the making of your product.

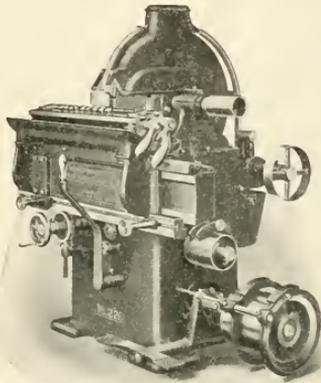

A talk with us along this line, if you are in the market for a band saw, may mean many dollars to your good.

Write for our Descriptive Circular.

414-434 W. FRONT ST.,

J. A. FAY & EGAN CO., Cincinnati, O.

KEEN, STRAIGHT KNIVES,

This Grinder, designated No. 226, was designed with the determination that it should have no superior in accuracy or ease of operation.

Knives that economize in stock and in time and in power, knives that insure the finest finish at the fastest feed, are given these qualities by the

WOODS AUTOMATIC KNIFE GRINDER

First of all it is made entirely automatic, even to the automatic stop that prevents further grinding when the knife has been brought to a proper edge. It's only necessary to place the knife on the bar, make the proper adjustments and set the machine going. When its work is done it stops; in the meantime it requires no attention whatever. When properly adjusted it is impossible to overheat the edge and throw it out of true. As a double guarantee water is constantly fed over the work, keeping everything cool.

Durability and continued accuracy are insured by so enclosing the sliding ways on the knife carriage and bed that no dirt or grit can possibly get on these guiding surfaces. This is a patented feature peculiar to these machines. This machine grinds straight knives of any kind, high-speed or common tool steel, small or large, straight or in multiples, up to its limit of capacity. It has a device for duplicating bevells and patent step gauges to insure parallel grinding.

You should see our catalogue "No. 226 New Automate Knife Grinder." Send for it.

VENEER DRYER

"The Proctor System Improved Apron Conveyor"

Objections to Roller Dryer overcome because no clogging can occur.

Objections to old style Apron Dryer overcome because no adjustment is needed.

Objections to "Girt Conveyor" overcome because the veneer is held throughout its surface which prevents the ends buckling as in the "Girt Conveyor" type.

Grain can be fed either way.

The "Girt Conveyor" type may be altered to the Improved Apron type at small cost.

The magnificent air circulation is maintained as in the old Apron Dryer and as in the old Girt Conveyor Dryer.

Operated by HORSEPOWER, GASOLINE or STEAM

(Patented August 23, 1904)

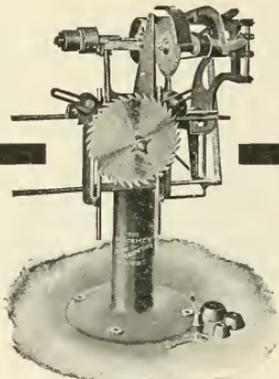

THIS is the first and only practical machine which is a money-saver for loading sleighs, trucks, etc. I place them on approval and with a guarantee to do the work of loading logs for less than half the expense of the ordinary way. They have given universal satisfaction all over the United States.

By using the Raymond Log Loader and the Phoenix Mfg. Co.'s Patent Stake Pockets, bunches of logs can be picked up and swung into the stakes by inexperienced men in one-third the time that almost a double crew of experienced men can do it in the old way. This is the first rear end swinging crane sleigh loader, in combination with a double pole sleigh, ever invented.

for
Flooring Factories

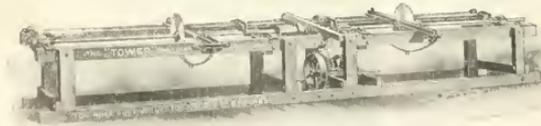

For cutting out defects and making square and smooth ends for end-matching machines. Used by the largest producers. Write for particulars and prices.

Manufactured by

Cadillac Machine Co.
CADILLAC, MICH.

The Trimmer that **Does the Most Work with the Least Fatigue to the Operator and Wastes the Least Lumber is the "Tower"**

TOWER One-man 2-saw Trimmer

IT DOES THE MOST WORK WITH THE LEAST FATIGUE TO THE OPERATOR because the crank that adjusts the saws is attached to one of the transfer blocks (whichever is preferred). Hence it is not necessary to go to the end of the MACHINE to shift the saws, as with all other trimmers. This saves, stress and time.

IT WASTES THE LEAST LUMBER because the operator is CLOSE TO THE BOARD, whether long or short, when he sets the saws, and can therefore see INSTANTLY how to trim it to the BEST POSSIBLE ADVANTAGE.

TWO FEEDS. Controlled by **ONE LEVER.**
MADE IN 10 DIFFERENT SIZES.

GORDON HOLLOW BLAST GRATE CO.

Greenville, Michigan

Manufacturers of the Gordon Hollow Blast Grate and the "TOWER" line of Edges and Trimmers.

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins are:

- Name of state and town
- Name of concern
- Name of buyer
- Line manufactured
- Kinds, grades and thicknesses of lumber
- Kinds and sizes of dimension stock
- Kinds and thicknesses of veneers
- Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber not used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

HARDWOOD RECORD, Chicago

Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawed Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

BUILT-UP PANELS FOR FURNITURE MANUFACTURERS

We can furnish you 2, 3, or 5-Ply Panels in Quartered Oak, Mahogany, Plain Oak, Ash, Elm, Birch, Maple or Basswood, and guarantee same in every respect. We use high-grade Glue in our work, and our Veneers are thoroughly dry and our Machinery up-to-date.

We manufacture high-class Panels for Commode and Dresser tops, Commode and Dresser end Panels, Drawer bottoms, glass backs, case backs, foot and head board panels for beds, etc.

If you wish to buy Panels that are **Right and Will Stay Right**, give us a chance to figure with you and submit samples and prices.

THE CORHAM BROS. CO.
MT. PLEASANT, MICH.

We do not claim to be lower in price, but we do claim our PANELS are cheaper in the long run as they

will not come to pieces after they are in the furniture

Do you see the point  Submit your wants and let us make you happy

The No. 2 Crescent Saw Table

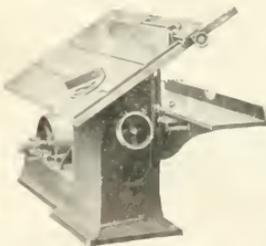

illustrated and described on pages 28 and 29 of 1908 catalog. It is a thoroughly substantial machine, well suited for general work. Can be furnished with boring attachment if you want it that way. Table tilts to 45 degrees, and may be made long enough so dado head may be used. Machine is self-contained, no countershaft required. It is complete with saw and endless belt when it reaches you. Send for 1908 catalog giving complete description and telling about our line.

MILLS AND YARDS IN TENNESSEE

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

A Suggestion for October

ONE THING

We have a much larger stock of ASH, BASS, BIRCH, CHESTNUT, CHERRY, CYPRESS, HEMLOCK, MAPLE, OAK, PINE, POPLAR and WALNUT piled on sticks at Philadelphia and various other shipping points, than we care to have on hand.

ANOTHER THING

This stock for the most part was picked up at bargain prices during the year just passed, but, we are now at a point where at least a part of it must be sold. If you are looking for something "soft" now is the time to buy for this stock **MUST BE MOVED** and we will name prices that **WILL TURN THE TRICK**. Let us quote you some of the prices.

G. W. Jones Lumber Co.

Appleton, Wis.

offer

The following in dry stock:

BLACK ASH

250,000 ft. 1 in. Log Run

TIMBER

WE OFFER TRACTS OF VIRGIN TIMBER IN LOUISIANA, MISSISSIPPI, FLORIDA, ALABAMA AND ALSO ON

PACIFIC COAST

We employ a larger force of expert timber cruisers than any other firm in the world. We have furnished banks and trust companies with reports on timber tracts upon which millions of dollars of timber certificates or bonds have been issued. We furnish detailed estimates which enables the buyer to verify our reports at very little expense and without loss of valuable time. Correspondence with bona fide investors solicited.

HARDWOOD RECORD, CHICAGO

There are REASONS

Why our rules are better than others

1. Every rule is made of selected second-growth white hickory.

2. The stock is air dried, thereby preserving the fibre of the wood, which is injured by the kiln process.

3. Every rule is fitted with a patented, oil tempered, tool steel diamond head, which is PRACTICALLY INDESTRUCTIBLE.

4. Other reasons next issue.

Second Annual Meeting Handle Manufacturers' Association of America.

The second annual meeting of this association will be held at Hotel Gayoso, Memphis, Tenn., at 10:30 a. m., on Wednesday, November 11, 1908.

Lunch will be served at 1 p. m.

All handle manufacturers, whether members of the association or not, are invited.

T. R. CLENDINEN,

President.

HENRY H. GIBSON,

Secretary and Treasurer.

General Market Conditions.

The country over a moderate improvement is noted, but buying is still being done on a very conservative basis. The only line that shows any marked increase of purchases during the last fortnight is the railroad trade. Railroads generally are buying to a considerable extent. What improvements are noted are distinctly in the Middle West. The trade in the East is still dragging.

There has been a good deal said during the season of the retrenchment of output in hardwood operations. Undeniably there has been a retrenchment in the North, but to no such extent as in the South. It is doubtful if there is a falling off of output over last year of over twenty per cent, while in the south-country it is doubtful if there is over fifty per cent of the normal production. In the North it is true that one-inch maple is in short supply, and a good many flooring factories which have deferred purchases are hustling to secure enough stock to carry them through to next spring. On the contrary, in the South it is equally true that there will be a manifest shortage in oak, ash, poplar and chestnut.

The hardwood flooring factories are from fairly busy to busy. In some instances two and one-quarter-inch face clear maple, and the same dimensions and grade in oak flooring, are oversold to a considerable extent. One important northern flooring factory is a million feet behind its orders on high-grade stock. This situation in the flooring industry is accounted for by the September building reports, which show a gain over a year ago in the chief cities of the country of seven per cent. Nearly every building now constructed employs hardwood flooring of some type.

Furniture people are buying only moderately, as their trade still fails to reach standard dimensions.

The foreign woods trade is only fair, but with comparatively short stocks as much profit should be made out of the holdings as was realized last year.

The handle trade is showing a little improvement, with good prospects for increased demand a little later.

There is quite an improvement in the veneer industry, but still plants are not yet fully employed. Prices are being very well maintained.

The Great Waterways Convention.

Chicago has been busy during the last few days over the third great convention of the Lakes to the Gulf Waterways Association. Meetings have been held in the Auditorium and have been largely attended. More than 3,000 delegates, representing forty-four states, composed the gathering, which, with its flags and delegation standards, bore a physical resemblance to a national political convention. The meeting opened on October 7, and after the introductory speeches and the appointment of committees on organization, the convention adjourned for the day, and the delegates spent the afternoon at the Drainage canal, the part of the lake to the gulf waterway which Illinois is asked to supply for the ship canal. The delegates were carried on four special Santa Fe trains as guests of the Association of Commerce.

The star speaker of the first day's session, and probably of the entire meeting, was Hon. Wm. H. Taft, republican presidential nominee, who as a practical builder of waterways like the Panama canal gave great force to the proceedings. The chief points made in the elaborate address on the subject of internal waterways by Mr. Taft were:

Transportation is the question of the hour. We must have resources to our waterways.

Internal commerce has increased 118 per cent, while railroad facilities have increased only 20 per cent.

The waterway being open and free for all, the danger of monopoly is much reduced and its carrying capacity, unlike that of the railroad, is unlimited.

Achievement of these great ends cannot be worked out without a radical departure from the course of procedure heretofore employed. * * * A policy which brooks delay is wasteful, if nothing worse.

We have the problem of making our forests outlast this generation, our iron outlast this century and our coal the next.

The secondary effect of waterway improvement will be a reduction in the increasing ratio of the consumption of iron and of coal. It will reduce the demand of timber for logs.

Experts estimate that the water power producible in the United States would suffice to drive every manufacturing and propel every railway train.

My own judgment is that every great improvement, like that of the Inkes to the gulf, should be treated as one great enterprise, just as the Panama canal.

Philadelphia Hardwood Conference.

A conference of minor association and exchange interests on the subject of the consideration of inspection rules of the National Hardwood Lumber Association was held at Philadelphia on September 24. A part of the gathering of delegates present unmistakably had a right in a conference of that sort, but the opinion of quite a portion should certainly have no weight in hardwood inspection matters, from the fact that they had no interest in hardwood inspection affairs.

The proceedings of the meeting as supplied by one of its officers is printed in this issue of the RECORD, but from a perusal of it nothing can be deduced save that a part of those present were not satisfied with the current rules of hardwood inspection and a committee was therefore appointed to report at a future meeting to determine in what particular the rules were not pleasing.

The attitude of this conference may very forcibly be epitomized by the old English distich:

I do not like you, Dr. Fell,
The reason why I cannot tell,
But this I know, and that full well,
I do not like you, Dr. Fell.

Lumber Fire Loss Increase.

Lumber fire losses, especially in the West, continue increasingly heavy, largely because of the long drought. Happily this period is at an end and copious rains have fallen all over the Northwest and a large portion of the South during the last few days. The losses from fire have not only been the moderate ones in the woods but have involved sawmills, lumber yards and various woodworking factories.

The big feature of this re-occurrence of fires just now is that they have occurred promptly after the promulgation of the new schedule by the Western Union, materially reducing rates on this class of hazard, based somewhat on previous experience, and largely on account of the strong competition forced upon them by the lumber insurance companies.

Critics of the change allege that the past five years have been unusually wet, or normal seasons, upon which it would be unfair to base a general average which would be offset by the past year of drought. It is to be hoped that the fire loss in lumber risks is only temporary, and that the good work so largely attributable to the lumber fire insurance companies will not be lost to insurers, and that the recent losses will not affect the splendid record made during the past few years by such concerns as the Lumber Underwriters of Kansas City and the well-known New York, Philadelphia, Boston and Mansfield companies. These lumber insurance companies have certainly made an immense saving for the lumber trade, and the very fact that rates have been forced lower with the old line companies during such times as have recently prevailed is a mighty good reason for the average lumberman to give the lumber companies as liberal a share of his business as they will accept.

Forest Census.

The National Conservation Commission has caused the first comprehensive attempt at a census of the standing timber in the United States ever undertaken. The forest service has for several years been eager to take such a census, and the bureau of the census has expressed its willingness to cooperate, but funds have never been available. The conservation commission, however, needs the information to help complete its inventory of the country's natural resources, which it will include in its report to the president, and since that report is to be submitted on the first of next year, it needs the information at once. In consequence, the work on the census has been started with a rush and is now under full headway.

It may be a slight exaggeration to speak of a census of timber, for of course it is impossible to count the individual trees in the forests; even the most ambitious plans of the forest service and the bureau of the census did not contemplate that. But a trained man can with great accuracy "cruise" a tract of forest and estimate the number of board feet it contains. Large portions of the forests of the country, including practically all the national forests, have been estimated at various times, but these figures have never been

brought together and no organized effort has ever been made to gather them into one total, nor to supply the deficiencies where hitherto no estimates have been made.

As a result, the guesses as to the amount of standing timber in the United States range all the way from \$22,682 million to 2,000 billion board feet—a difference of more than a trillion feet in the estimates of the best qualified authorities in the country.

In the opinion of the forest service, the most carefully prepared estimates yet made are those by Henry Gannett, published by the twelfth census in 1900. These placed the total stumpage at 1,390 billion board feet. Mr. Gannett, it so happens, has been chosen by the president to compile all the information gathered for the commission, and with his previous acquaintance with the subject of forestry, he is at work now enlarging the knowledge of forest areas at present available.

The importance of this census lies largely in the fact that it will give an accurate basis for computing how long our timber supplies will last. Through the cooperation of the forest service and the census bureau the country's annual consumption of wood is known with tolerable accuracy, although even here there are some discrepancies, because a large amount of wood is used for posts, fuel and domestic purposes for which no satisfactory data have yet been collected. But the consensus of opinion among those equipped to judge is that the present annual consumption is about 100 billion board feet, or something more than that. One leading authority has placed it as high as 150 billion board feet.

Assuming a stumpage of 1,400 billion feet, an annual use of 100 billion feet, and neglecting growth in the calculation, the exhaustion of our timber supply is indicated in 14 years. Assuming the same use and stand, with an annual growth of 40 billion feet, we have a supply for 23 years. Assuming an annual use of 150 billion feet, the first supposition becomes 9 years, and the second 13 years. Assuming a stand of 2,000 billion feet, a use of 100 billion feet, and neglecting growth, we have 20 years' supply. Assuming the same conditions, with an annual growth of 40 billion feet, we have 33 years' supply. With an annual use of 150 billion feet, these estimates become, respectively, 13 and 18 years.

It is apparent from these computations why the national conservation commission considers the census of timber so essential to the preparation of its inventory.

The chief difference between the methods now being employed by the conservation commission and those of the bureau of the census would use are, that while the bureau would send out enumerators to make personal visits to all parts of the country, the commission is aiming at the same results through a tremendous amount of correspondence. For instance, 3,100 letters have gone out to county clerks asking for statements of forest areas in their countries. Seven thousand lumbermen and timberland owners have been asked to supply similar information. In all nearly 150,000 letters have been sent. These letters also ask for a wide variety of information beside the area and capacity of forests. They touch upon all phases not only of the lumbering and milling industries, but of all others which are even indirectly dependent upon the use of wood. The purpose of the commission is not merely to learn how much wood is growing now, but how long it may be expected to last and how the supply may be prolonged by economy.

All government departments and bureaus which have any information about forests, as well as many large corporations, such as hand grant railroads which hold big forest tracts in some states and have cruised them carefully, have turned it over to Mr. Gannett.

The forest service naturally has the largest fund of information, and it is gathering more constantly, either independently or with the help of the census bureau. The departments of war, the interior and commerce and labor can turn over the amounts of timber standing on military, lighthouse and other reservations. The bureau of corporations of the department of commerce and labor has sent out an extensive schedule of inquiries to its special agents which, it is hoped, will add to the present information concerning the manufacture of wood. All the states of the Union are cooperating and will furnish statistics concerning state forest lands.

Pert, Pertinent and Impertinent.

The Star.

Twinkle, twinkle, little star,
How I wonder what you are,
At the footlights bright and gay,
Having all your own sweet way.

How I wonder if the paint
On your cheeks will e'er grow faint,
On your slippers, trim and neat,
Will look flabby on your feet.

How I wonder if that smile,
Which you use men to beguile,
Turns into an ugly sneer
When your patrons are not near.

How I wonder if your gems,
From your crown to fluffy hems,
Are but glass beads, cent apiece,
Borrowed on a broker's lease.

How I wonder if you feel,
After all, that life is real;
If you say, when you are free:
"Oh, what fools these mortals be!"

Twinkle, twinkle, little star,
While your assets are on par;
Soon you'll find some other orb
All your homage will absorb.

Soon you'll find your sweetest self
Snugly laid upon the shelf,
Make your hay while eyes are bright;
Twinkle, twinkle, all the night.

True Living.

Still in mutual sufferance lies
The secret of true living;
Love scarce is love that never knows
The sweetness of forgiving.

A Query.

June, they say, was "ox-eyed";
Now, don't you think it true,
Were she a dame of these times,
She'd be peroxide, too?

Hopeful Situation.

Now if the Political Game can be speedily ended, and the country gets down to business it will be a good thing.

True Manhood.

The hour is late, and I must leave the club;
Alone a woman waits for me at home;
Her anxious, care-worn face—ah, there's the
rub!—
Will not permit me longer, boys, to roam.

You bachelors may laugh and cry, "Don't go!"
Am I a brute? True manhood do I lack?
Without a maid what can a woman do
Whose waist is buttoned down the back?
—New York Times.

To the Good I May Do.

"I expect to pass through this world but
once; any good thing, therefore, that I can
do, or any kindness I can show, to any fellow
human being, let me do it now. Let me not
defer or neglect it, for I shall not pass this
way again."—Dr. Bedloe.

There Are Others.

B. is for Bounder blasé
Who likes to appear quite au fait;
He purses his lips
As his Rhine wine he sips,
Tho' he doesn't know Hock from Tokay.

To Courage to Wed.

Here is to the girl
With courage to wed,
Until she is dead.
Then to the place up above let her go,
For she will know in the end, what's down
below.
—Jennie Partlow.

Which?

A man who can live without work, go where
he pleases, and do what he likes must be
either a millionaire or a tramp.

To My Sweetheart.

"Before man parted for this earthy strand,
While yet upon the verge of Heaven he
stood,
God gave a heap of letters in his hand
And bade him make with them what word
he could.
Had I been there on that red-letter day,
And God given me an alphabet to try,
Two dozen letters I'd have thrown away
And spelled "life's happiness" with "U"
and "I."

To My Friend.

"God never loved me in so sweet a way be-
fore,
'Tis He alone who can such blessings send,
And when his love would new expression find,
He brought thee to me and He said,
"Behold a Friend!"

Philippine Public Forests and Possibilities For Their Exploitation.

The Bureau of Forestry of the Philippines has recently issued a report from Manila, which tells exactly what lumbermen looking for foreign timber propositions need to know. It is therefore excerpted and reproduced herewith. It covers the ground briefly and fully, and points out all the problems likely to arise in tackling timber enterprise in the Philippines, as well as relates the experience of companies already operating there.

Although the future prosperity of the Philippine Islands depends mainly on their agricultural development, yet it is generally recognized that the proper exploitation of the extensive Philippine forests will add exceedingly to the future prosperity and also aid greatly in agricultural development.

More than one-half of the land area of 120,000 square miles in the islands is covered with tree growth. Of the 60,000 square miles of forest, 40,000 square miles are in the more thinly settled islands of Mindoro, Samar, Palawan and Mindanao.

It must be admitted, however, that large parts of this timbered area can not be considered commercial forest by lumbermen. Scattered stands of small unmercantable trees and inaccessible mountain forests cover considerable areas. Estimating conservatively, there are 25,000 square miles, or 16,000,000 acres, of timber which can and will be exploited on a reasonably large scale. An average yield of 2,500 board feet of merchantable timber per acre on this area is a conservative estimate, giving a total supply of 40,000,000,000 board feet. The total annual cut in the islands is now less than 50,000,000 feet or only about one-eighth of one per cent of the probable supply. This cut is an insignificant item of the annual growth in these forests. The forests under conservative treatment should furnish an annual supply of at least 400,000,000 feet of mature timber and be improved by so doing.

The timbers in the islands include a great variety, ranging from pine and calantas, or soft tropical cedar, to the extremely heavy and hard dungon and manono. In general, Philippine woods are hard and heavy, yet there are not lacking abundant supplies of light and strong construction timbers which can well be substituted for the white pine, Oregon pine, and California redwood, which are imported. Lauan is a fairly soft, strong wood and can well take the place of Oregon pine and California redwood. Apitong, harder, heavier, and stronger than lauan, is equal to Oregon pine and longleaf pine for general construction. Lauan and apitong and the other species of the same family, *Dipterocarpacea*, are not only the most abundant timber occurring in the archipelago but they are very large trees. Timber up to ninety feet in length can be secured from them.

They are also excellent finishing woods, equal to most American woods used for interior finish.

Some of the finest cabinet woods in the world are found in the Philippines. Ebony, acle, narra, camagon and tindalo give the greatest choice in beautiful color and grain. These and other woods will make superior substitutes for the American cabinet woods which are so rapidly disappearing. For cherry and mahogany, narra, tanguile, balachacn, calantas and lumbayao, though differing somewhat in grain and hardness, can be used; for black walnut, acle and banuyo can be used; and so on, every American furniture wood having numerous Philippine substitutes. Valuable woods such as ebony, camagon and tindalo have no counterparts in the United States.

At present Philippine lumber is produced almost exclusively for the local demands. In the fiscal year 1904-05 the islands used about 75,000,000 board feet of lumber, of which they produced about 40,000,000 feet. The remainder was imported from the Pacific coast. It seems anomalous that a country so rich in timber should not produce more than one-half of the supply necessary for its own people. The reasons are that lumbering is generally on such a small scale and with such inefficient methods, and facilities for transportation of timber in the islands at present so poor, that Oregon pine is sold in Manila and other large cities cheaper than most native lumber.

Conditions demand the development of a modern lumber industry and the installation of large sawmills and suitable transportation facilities so that Philippine lumber can dominate in the Philippine Islands and penetrate to foreign markets. Large operations, well capitalized and efficiently managed, are necessary if the Philippine people are to receive a proper economic benefit from the possession of their valuable forests.

The company desiring to establish a large lumbering operation in the Philippines can not study too carefully the factors governing the lumber industry here. These factors are the character of the forests, the accessibility of the timber, transportation facilities, labor conditions, stumpage prices, and market conditions, which are herewith discussed.

A lumberman desiring to operate on a large scale demands in a commercial forest accessibility, comparatively few species per acre—most of which are merchantable, and enough merchantable timber per acre to permit the use of modern logging methods. Large areas of Philippine forest, although containing valuable timber, fail to answer these requirements.

In Benguet and neighboring provinces at an altitude of more than 2,000 feet are the open pine forests. Along the coasts, espe-

cially at the mouths of the rivers, are extensive salt-water or tidal swamps known as "manglares," from which come firewood, tannark and dyebark. The low coast flat is another forest type, characterized by scattered trees of ipil and a few other valuable species. The tangled forests of the deltas and river bottoms present the greatest variety in species but are not satisfactory for extensive lumbering. Finally, there is the extensive hill or upland type of forest which is the most suitable for lumbering operations.

On rocky, exposed and thin-soiled uplands the forest is thinner and is characterized by a smaller proportion of commercial species. Here the most valuable trees are found scattered through a stand composed largely of small, unmercantable trees, and other type of upland forest grows on the better, deeper soils. Here is generally found a fairly dense stand of large trees, principally members of one family, *Dipterocarpacea*. The best example of this type is the forest in northern Negros where a lumber company is now operating. Here these woods make up a stand of 32,000 feet board measure of merchantable timber per acre. This type of forest naturally answers best the requirements of modern logging, and upon it will largely depend the development of an extensive lumber industry. Both classes of hill forests are found throughout the islands.

The Bureau of Forestry is gradually locating and roughly mapping the best commercial forests of all these types. The information thus collected is available to all interested parties.

The commercial forests are found either along the coast where the timber can be skidded directly to the beach and loaded in suitable harbors, along navigable and floatable rivers where it is skidded directly to the rivers and floated or rafted down them, or at some distance inland so far from deep water that short railroads are advisable or necessary. As long as timber remains close to the beach and large rivers, logging is easy and cheap, requiring but little capital. In such forests there are a large number of operators, cutting small quantities of timber. But these forests are being fast destroyed by the farmer. Lumbering in the future will be in the extensive forests some distance from the coast, where carabao will not serve for hauling.

The difficulties and expense in transporting lumber to the markets are great. A lumberman who does not own his own boats is handicapped. Few of the inter-island steamers are adapted for carrying lumber, and freight rates are high and sometimes prohibitive. From the island of Palawan to Manila, a distance of about 300 miles, the freight rate for logs is about \$30, gold, per 1,000 feet board measure. Such rates are mani-

festly absurd. Only the good prices in Manila make it possible to ship native lumber under such conditions.

A company operating on a large scale should own its own means of transportation from the woods to the market. One lumber company which is operating more extensively than any other in the islands has a fleet of steamers and barges to transport the sawn lumber to the markets of Cebu, Iloilo and Manila. Freight from its mill in the island of Negros to Manila costs them less than \$5 per 1,000 feet board measure. It is reasonable to expect that lumber can be shipped between most points in the islands at a cost not exceeding this figure.

Freight rates from Manila to the Pacific coast amount to \$7, United States currency, per ton (logs), about 40 cubic feet, or \$12 to \$14 per thousand feet board measure. Freight rates from Manila to the Atlantic coast of the United States are \$14 to \$15, United States currency, per thousand feet board measure, or \$8 per ton of 40 cubic feet; light-weight material, \$5 per 40 cubic feet.

There are no export duties on timber or on the manufactured product. Logs imported into the United States are admitted free. The import duty at Manila on sawmill and logging machinery is 5 per cent *ad valorem*.

The oft-repeated saying that Filipino labor is inefficient does not apply in the lumber industry. Dollar for dollar of outlay, much better results will be secured both in the woods and in the sawmill from Filipino labor than from American labor. The Filipino has a natural aptitude for running machines and is easily taught. Given a good American foreman it is surprising how well a Filipino crew can handle a sawmill. They work for small wages—\$0.25 to \$0.75, gold, per day—and given fair treatment make fairly steady and permanent workmen.

In the thinly settled forest regions it is necessary to import labor from the more thickly settled districts. Yet there are tracts of commercial forest so located that there is an abundant and good supply of labor available in the regions themselves. One lumber company is located in the sugar-growing district of Negros where labor is abundant and cheap. It has found no difficulty in securing a force of several hundred men, to most of whom it pays \$0.25 per day. The laborers are satisfied and work well.

A lumberman will not find the labor problem a difficult one. He will find that he has escaped many of the vexatious labor difficulties of the United States to meet comparatively few in the Philippine Islands. Patience and fairness in treating the Filipinos will secure most excellent results.

The Philippine government sells its timber cheap. The government charges range from \$0.25 to \$1.25, gold, per cubic meter, or approximately \$1 to \$5 per 1,000 board feet. One dollar per 1,000 board feet is charged for luan which sells in Manila for \$35 per 1,000 board feet. Similar grades of California redwood for export are worth \$20 to

\$25 in San Francisco and stumpage at present can not be secured for less than \$2, gold, per 1,000 feet. The cheap Philippine stumpage is still more marked in the fine cabinet woods. For narra and the other most valuable woods, it is but \$5, gold, per 1,000 board feet, less than pine stumpage in many parts of the United States.

The lumberman, however, is not satisfied alone with a satisfactory forest, cheap labor and stumpage, and good transportation, but probably wants to know first what the market is for Philippine timber. Approximately 80,000,000 to 90,000,000 feet board measure of lumber are used each year in the Philippines; of this a large amount is imported, being mostly Oregon pine and California redwood. The imported timber is being driven out of the market by the cheaper and more abundant kinds of native timbers. About 5,000,000 board feet has recently been added to the consumption of native timber by the decision to use native lumber almost exclusively in construction for the United States Army in the Philippines. China and Australia used of American pine during the past year 85,000,000 and 63,000,000 board feet, respectively, a large part of which can be furnished by the Philippine Islands when their lumber has been introduced in those markets by large lumber companies properly equipped and capitalized.

A market for Philippine lumber should also be secured in the United States. Most Philippine timbers are unexcelled for cabinet work, interior finishing, etc., where beautiful hardwoods capable of high polish are required. Such woods are rapidly disappearing in the United States. The difficulty has been that there were no lumbermen in a position to supply a strong demand. Consequently the fine Philippine woods are still unknown in the United States.

It is very evident that a lumber company properly equipped and managed and operating on a suitable timber tract should be able to deliver many kinds of native lumber in Manila at a low cost. Cheap labor and low stumpage offset the increased expense of machinery and management in the Philippines.

There should always be an opportunity for small operators in supplying the local provincial demands, but the growth of a lumber industry worthy of the islands will depend on the investment of considerable capital. Such lumbermen should be prepared to handle the lumber in all stages from the forest to the market. In this way they can compete successfully, not only in the Philippines but also in Chinese, Australian and even American markets.

Lumbering at present is mostly carried on in a crude, inefficient way by numerous small cutters, few of whom cut a significant amount. There is also great waste in logging. Skidding and hauling are done with carabao, which are poor draft animals for this purpose. Several carabao are needed to move an ordinary log, and much of the timber is

too large to be hauled by them. In this kind of logging the requirements for cheap logging are lacking and the output is necessarily small.

Since the American occupation, the number of small sawmills has greatly increased, yet a large part of the native timber used in the islands is whipsawn. In all there are thirty-one sawmills in the Philippines. These do not manufacture more than 250,000 board feet of lumber per day. Of this, 90,000 feet can be cut by the five Manila mills. This indicates well the condition of the lumber industry at present. Extensive lumbering is only beginning in the Philippine Islands. Yet there are a few operations now being successfully carried on which indicate to lumbermen the possibilities in the Philippine forests.

The operations of a company in Negros Occidental are more extensive than those of any other company in the islands. It is operating on a tract of sixty-nine square miles, sixty square miles of which are covered with an unusually heavy stand of timber averaging about 32,000 board feet of merchantable lumber per acre. The mill, which has recently been completed, is a modern hand mill of the best type with a capacity of 100,000 board feet and should manufacture at least 60,000 board feet per day when a mill crew has been trained. This company is able to sell luan and apitong in Manila at a lower price than that prevailing for Oregon pine or California redwood. Its operation is an example of what can be done in the Philippines by a well-equipped company operating with modern methods. Donkey engines are employed to skid the timber to a logging railroad on which the logs are hauled to the mills. The company's steamers and barges carry the lumber to Manila, Iloilo and Cebu.

In pursuance of its policy to do everything possible to stimulate the forest industries of the Philippine Islands, the Bureau of Forestry, during the past two years, has located and roughly mapped timber tracts suitable for large operations. It is now in a position to give definite information regarding some such tracts to prospective lumbermen.

In northern Negros are sixty square miles of dense virgin forest, similar in species and equal in yield to the forest of the Insular Lumber Company, which adjoins it. This forest covers the slopes of Mount Silay, ranging in elevation from 200 to 4,000 feet above the level of the sea. About forty square miles lay below 1,000 feet and are an excellent lumbering proposition for a company with a large capital. The new railroad in Negros is planned to pass within three miles of the edge of the forest. A company would build its sawmill on the line of this railroad, run its own logging railroad into the forest, and ship its lumber to a port on the coast to be loaded for Cebu, Iloilo, Manila, or Hongkong and New York. On the forty square miles most accessible is a total stand of about 800,000,000 board feet of merchantable lumber, enough to supply a mill cutting 50,000 feet per day more than fifty years.

It is a *Dipterocarp* forest, that is, composed mostly of almon, lauan, apting and tangleum.

In the well-forested region of northeastern Mindoro is another suitable tract of some 200 square miles. It is located west of Lake Nanjan and about thirteen miles from Calapan, the provincial capital. This also is a *Dipterocarp* forest. A rough survey showed an average stand of about 20,000 board feet per acre. Logs may be rafted across the lake and down the river to the coast or a tramway built direct to Calapan, which is about twelve hours by steamer to Manila.

On the northern half of the peninsula of Bataan, across the bay from Manila, is another forest tract suitable for a large lumbering operation. Although logging is much more difficult here than on the other tracts mentioned, the proximity to Manila makes it a good proposition.

The public forests of the Philippine Islands are not sold, but are exploited under a license system. In the case of large operations involving the investment of considerable capital in permanent enterprises, exclusive licenses are granted for periods up to twenty years for definite large tracts of timber, which licenses are practically equivalent to concessions.

Applications for exclusive licenses on tracts not exceeding 2,500 acres in area are forwarded by the Director of Forestry, after due investigation, to the Secretary of the Interior with recommendations. The secretary may then grant an exclusive license if he decides that it is in the public interest. For an area

of more than 2,500 acres when the Secretary of the Interior is convinced that the granting of an exclusive license is in the public interest, proposals for bids to secure the said privilege are published in the Official Gazette and other newspapers. The license will then be granted to the highest and best bidder who offers to install the most complete and efficient plant most promptly and to do the greatest amount of annual development work and who furnishes the best bond as a guaranty of performance.

The right to reject any and all bids is expressly reserved, and in general it may be stated that no exclusive license will be approved except upon a reasonable showing that the licensee will be able within the period fixed in his license actually to exploit the resources of the forest tract covered by it. The man who means business must show the government that he really intends to develop the tract for which he secures an exclusive license and will protect the interests of the public in the concession.

The Bureau of Forestry is now in a position to assist lumbermen desiring to locate here. Some have recently made applications for exclusive licenses for large tracts and have found the maps and information furnished them by the bureau of great value. Trained foresters with two or more years of experience in the Philippine forests will be placed at the service of lumbermen to assist them in all that will be sent on application to interested finding suitable forest tracts.

The available publications of the bureau parties.

without friends or acquaintances, full of grit and belief in himself—but with no employment in sight and only a very little money.

Naturally his first move was to look for a sawmill, because by this means Mr. McLean had already decided to conquer in the business world, and sawmills looked like home to him. He found one at Flat Rock, near Escanaba, Michigan, owned and operated by the Ludington Company, since reorganized as the I. Stephenson Company, and went to work as a common mill-hand. There was no work around the yards and the mill that he did not find and do at different times. You see, he "liked the game," and was playing it just as scientifically as he knew how. When the sawmill shut down in the winter he went out with a crew cleaning out the river, looting and building camps. Later on he sealed for the company's camps, and also sealed their purchased product.

At this time he realized, if he would succeed, he must have more schooling, and he attended night school wherever the opportunity occurred, and he always studied nights if he got through his work before midnight. Mr. McLean was not worrying himself about the eight hour schedule and union wages, but he was buying a future which he knew would bring him great returns. When he had mastered every detail of lumber production, not only the woods work, logging and railway building, but also the handling of camp affairs, he went to work in the office, where, of course, his knowledge of cost of production and other practical details stood him in good stead, and soon he was given charge of the office and the merchandise department. This he handled with such great skill that soon he became the superintendent of the company's business, a position which he still holds, and perhaps no man in the country is better equipped for this office, as there is no work in the way of lumbering and manufacturing of lumber, from the tree felling to its manufacture into lumber or hardwood flooring, that he has not worked at. The I. Stephenson Company are manufacturers of white pine, cedar and hardwood forest products and have one of the largest maple flooring factories in the country, and all of the company's business is under the management of its secretary and general manager, Richard Earle McLean.

Mr. McLean married, in 1900, Miss Eva Roberts of Escanaba, and they have one son seven years old. Perhaps in all the Michigan lumber country there is no man better loved than Mr. McLean. He is very companionable and his smile fairly radiates a face which shows tremendous mental capacity and softens the contour of a very forceful chin, giving to the somewhat stern mouth an upward curve which speaks of a saving grace—a great sense of humor. He also has the power of being able to forget business, and he will play at sociability with enthusiastic good fellowship and jovial heartiness—only the next moment to be the hard-headed business man, whose judgment is as conservative as it is immense.

An honorable business reputation, a circle of true friends, a devoted wife and promising child; these are the things Richard Earle McLean wanted had enough to wrest from life, and who shall say that there is anything of greater worth?

Builders of Lumber History.

NUMBER LXXII.

Richard E. McLean.

(See Portrait Supplement.)

It is a well-tried aphorism that a man can have anything he wants in this world, provided he wants it badly. Those people who are weighing against the present order of things and arraigning class against class by their constant reference to the successful man as one favored by the gods, and the unsuccessful man as a failure through no fault of his own, are disappointed simply because they look for the things which bring discontent and warped judgment into their lives.

America is a country of self-made men. Only a very small proportion of the rich men of today have become so except by their own efforts, and it is a fact that has been demonstrated thousands of times that if a man wants wealth, fame, honor, or any other thing that the world holds of great worth, he can find it in America, provided he wants it bad enough to bend every energy, every waking thought and every talent that he possesses to that end.

The successful man in any walk of life is the man who "likes the game," who studies it from every point of view, and who plays it for all that it is worth. Such a man is Richard Earle McLean, a slight appreciation of whom the *HARDWOOD RECORD* is privileged to place before its readers in this issue.

Mr. McLean was born in the Province of New Brunswick, and perhaps some of his success may be attributed to his sturdy Scotch parentage, his father being one of New Brunswick's pioneer lumbermen, who brought to the new country all the canny Scotch acumen and dogged persistency of the race.

Mr. McLean attended school until the death of his father, which occurred when the boy was in his early teens. Then, with the ambitions of youth seething within him, the Province of New Brunswick began to look small, and he was seized with an unconquerable desire to see the outside world. He first went to Aristook county, Maine, and naturally, as his boyhood days had been filled with his father's talk of lumber and lumbering, he first applied himself to Hale & Murchie, where he took his initial degree in the great business school of life.

It seemed to him, however, that Horace Greeley's advice held the kernel of success for the young man of business without capital, and as soon as possible he decided that he would go West. It took him some little time to save enough money to make the journey, but in the eighties, after studying the various railroad maps, he counted his funds and decided that Michigan was about as far as his exchequer would warrant him going the first year, and soon after he arrived in Escanaba,

WELLS, MICH.

UTILIZATION OF HARDWOODS.

ARTICLE XIV.

Railway and Street Cars.

Pullman is so very near to Chicago that it is often spoken of as a suburb of the city by the lake; yet it has a life and government all its own, and is one of the famous model industrial communities of the world.

In a recent short interview with one of the busiest men in the United States, Superintendent Tinsley of the great car works, the writer learned something of the construction of railway cars of many types.

consists ordinarily of a framework, an outside covering called the "sheathing," and an inside covering known as the "lining." They are built this way not only with respect to the sides but also as regards the top and the bottom. From the passenger type, construction grows gradually simpler down to the flat car, and still more elementary logging car, and the rudimentary hand-car. Baggage and mail cars have much the same construction as passenger

play. Poplar is generally used as a base, and on this is placed the veneer. Among the fancy woods often used may be mentioned vermillion, Cuban mahogany, tiger-wood, Creassian walnut, oak, birch, etc. Passenger coaches are ordinarily of Mexican mahogany or native oak as to interior finish, the finer woods being reserved for sleepers, diners, private cars, etc. Weathered oak is now the most common finish for dining cars—a natural evolution, as weath-

and of the choice of woods employed in their construction. What Mr. Tinsley said forms the bulk of this article, with additional information from other experienced men, and from recent publications.

Any lad of twelve knows that railway cars differ very considerably in construction, according to their use. The points of similarity between a Pullman private car and a flat car, for example, are not very great, while even in cars of the same type the differences between a wooden and an all-steel vehicle are marked. All-wood cars would seem to be a practical impossibility, the nearest approach being the standard passenger coach of Great Britain, which has even the wheels made mainly of wood.

The body of the wooden passenger car

coaches, except that in the latter the walls are lined with pigeon-holes, which add considerably to the amount of lumber consumed. In freight cars there is a very wide variety.

The sheathing or outer covering of the sides of American passenger cars is usually of poplar. Formerly panels were used, but at present tongue and groove boards are the rule. In Cuba, where mahogany is cheap, this wood is often utilized for the sheathing, while primavera is common for the inside lining. The woods employed in European cars are not at all the same as those used here, climatic and commercial conditions being the causes of variation.

For interior linings of passenger cars a very wide variety of timbers is called into

ered oak paneling is more frequently seen in restaurants, saloons and dining-rooms in high-class modern residences than elsewhere. Pullman vestibules are finished in Mexican mahogany.

The use of teak is an idea borrowed from Great Britain, where this remarkable timber occupies the place of honor in car building. Not only is it much used for car bodies, but it is the wood out of which passenger coach wheel centers are made. British passenger car wheels consist principally of a teak center and a steel or iron tire, which latter is 2½ inches thick according to British standard practice. The teak disc comprises sixteen segments, with the grain running lengthwise. Apparently this wood, which has done such sterling service in

British car-wheel making, would not prove equally valuable here, as it is believed it would not stand up under the dryness of the American climate. The varieties of teak most largely utilized for car and wheel construction in Great Britain are the Moulmein and the Rangoon, of which the former is said to be the better. Teak is strong and durable, shrinks little, is moderately hard and generally easy to work. It has a strong, pungent, distinctive odor. Its only fault is that it takes paint badly, especially when new.

Other woods frequently used for interior work in Great Britain, but not much in America, are Central American or Jamaica rosewood, satinwood from the East and West Indies, gycamore and North American maple. Marquetry is a feature commonly seen in Pullman cars. White holly, tulipwood, satinwood, rosewood and ebony are drafted into this service.

Floors of passenger cars are of quartered pine, both in America and Great Britain. Common poplar is utilized for the roofing, except that the "lower deck" (a term which refers to the lower part of the roof) is properly of ash. Ash, poplar, oak, pine and basswood are used in the framework, standard practice giving to each of these timbers its particular functions. Basswood is employed for the "hoods" or curving ends of passenger car roofs, this timber recommending itself because of its pliability and toughness.

Trucks are mainly of oak, with yellow pine and basswood for certain parts, the naming of which would not enlighten the average lumberman. Wheels in the United States are of steel or iron, usually with no admixture of other material, though a wheel with paper center was at one time widely popular, and is still manufactured to some extent.

In freight car construction the prevailing woods are yellow pine, oak, Norway pine, white pine and Oregon fir. The last mentioned timber has come into extensive use for sills and sidings. It is also stained to imitate mahogany occasionally. Norway and white pine are generally made up into roofing stock when used at all.

In construction the freight car ranges from the quite elaborate caboose and horse car down to the logging car, which is hardly more than an underframe. The caboose and horse car follow the standard of the passenger coach as to the manner, though not as to the materials of construction. That is, they consist of an outer sheathing, a framework, and an interior lining. Refrigerator cars are very solidly built. Not only are the three sections above mentioned present, but also an intermediate lining, and between this and the sheathing is a heavy felt buffing, while between the intermediate and the inside lining is a buffing of paper. The inside lining is properly of cottonwood. The average "box-car" or full height freight with closed sides and top has an interior lining for only one-half

or two-thirds its height. Stock cars, on the other hand, are generally little more than a framework on the sides. From the point of view of height, freight cars may be divided into several classes, of which the most important is the logging car, which, as already said, is little more than an underframe; the flat car, underframe and floor; the "gondola," poetic name for an extremely prosaic thing! with sides going up to one-half the full height; and the regulation box car. The sides of the gondola car are much like wagon sides, with generally yellow pine instead of poplar or other wood for the material, and with supporters known as "stakes," just as the corresponding timbers of wagons are called. As a rule, the entire wood construction of the body of the gondola is yellow pine. Tank cars or "crocodiles"—as they are aptly nicknamed in England—hopper cars, hand cars, etc., are variations of one or another of these classes.

Street cars are of much simpler and cheaper construction. The woods used are poplar, yellow pine, oak, ash, maple, and some birch and cherry. Pine, oak and ash are employed in the framework; poplar for sheathing and interior lining; quartered oak, cherry and mahogany occasionally, for lining maple, quartered oak and birch for ceiling veneer. As a rule there is little elegance in these vehicles, though parlor cars are made for some roads and may be seen in operation at various points. The open or summer car naturally consumes the minimum of lumber.

No article on wood construction in rail way and street cars would be complete without some mention of the increasing favor being shown to the all-steel and the steel underframe car. The all-steel gondola is now a familiar sight on all American rail roads, while every New Yorker knows the steel electric cars in the subway. Hopper cars are often entirely of steel, while tank cars frequently have steel underframes, and in flat cars sometimes the only wooden part is the floor, all the rest being of steel, or steel and iron. Steel electric cars are now to be seen, and a recent event widely commented on was the installation of steel suburban cars by the New York Central. Steel passenger cars for regular service, and also Pullmans, have recently been manufactured, and the steel baggage and postal car is an accomplished fact. As a side issue, it may be mentioned that the copper sheathed electric passenger car has also acquired some vogue.

A number of advantages are claimed for the all-steel and the steel-underframe car. Worn or broken parts in cars of steel construction are easily renewed; while the lumberman does not need to be told the situation as to repair and renewal of wooden cars. Again, in case of a wreck, a steel car will successfully withstand punishment which would mean the destruction of wooden cars. Bent or torn steel can generally be put back into its original shape

or replaced at reasonable cost. It is also claimed by the friends of the steel car that the life of wooden cars built today must necessarily be shorter than those built fifteen years ago, for at present, they say, it is impossible to get lumber approaching in quality that which was required in first-class freight cars in 1892. The justice of this last claim the lumberman will know how to decide for himself.

But it is reasonably certain that, even if the steel car is to be the standard of the future, which is far from being a certainty, the lumberman will not be confronted with the loss of a market. In freight cars it has been demonstrated that the wooden floor is for most purposes better than the steel floor, while in steel passenger cars it is believed by experts that the interests of beauty will be best subserved, and those of safety not injured, by the use of wood wherever a decorative effect is desirable.

CHARLES KLAUBER.

New Hardwood Flooring Handbook.

The T. Wilce Company, Chicago, the pioneer manufacturers of hardwood flooring, are out with a handsome new booklet covering a good many facts and interesting particulars of hardwood flooring. The pamphlet is illustrated with a halftone portrait of the late Thomas Wilce Sr., founder of the hardwood flooring industry.

The introduction of the work tells of the splendid facilities that the T. Wilce Company has for the production of hardwood flooring. In addition to their splendid machinery equipment they have recently erected nine new dry kilns of modern type, which give them a total of fifteen kilns, in which all their hardwood is dried before being manufactured.

In the second part of the article is an analysis of the proper sizes and kind of nail to be used in laying all thicknesses of flooring, and many suggestions are made to the carpenter for the proper laying of the flooring.

The superiority of modern hardwood flooring is discussed in another article. This is followed by the grading rules governing maple, beech, birch and oak flooring. Weights of every thickness and kind are given.

In conclusion the booklet has a very interesting article on the finish and treatment of hardwood flooring. It is a work that should be in the hands of every lumberman, builder and contractor, and it will be supplied to them on application to the T. Wilce Company, Twenty-second and Throop streets, this city.

New Southern Concern.

The Dickson Lumber Company is the name of a new company at Dickson, Tenn., composed of John M. Smith and others. Mr. Smith is particularly well known in the hardwood trade.

The basis of the business will be the purchase of lumber on a commission basis—representing buyers only. Mr. Smith and his associates are well posted on southern stocks, especially in Tennessee hardwoods, and believe that by buying on the ground and knowing the locations of desirable stocks of lumber that they can make better deals and at a great saving of expense to the wholesale trade, than they could make for themselves.

Trusted employees will handle all purchases and individually supervise the loading of all lumber. Mr. Smith's associates are C. L. Faulkner, J. S. Sugg, J. R. Sugg and G. C. McMurtry.

HUGH McILVAIN, PHILADELPHIA, ACTING CHAIRMAN.

BENJAMIN C. CURRIE, PHILADELPHIA, SECRETARY.

FREDERICK S. UNDERHILL, PHILADELPHIA.

The Philadelphia Hardwood Inspection Conference.

The RECORD is in receipt of the following report from Hugh McIlvain of J. Gibson McIlvain & Co. of Philadelphia, temporary chairman of the meeting, covering the details of the conference of the hardwood trade of the East, held in Philadelphia, September 24:

What, in our opinion, was one of the most important conferences of the lumber trade ever held in this country was that which took place in Philadelphia on Thursday, September 24, at the Bellevue-Stratford, in pursuance of a call issued by Hugh McIlvain, acting chairman.

The associations present and taking part in the deliberations were as follows:

Lumbermen's Exchange of Philadelphia—Wilson H. Lear, C. E. Lloyd Jr., Joseph P. Hunswoody, Hugh McIlvain, Benjamin C. Currie Jr., Frederick S. Underhill.

Retail Lumber Dealers' Association of Philadelphia—Hugh McIlvain, Wilson H. Lear, Benjamin Stoker.

Lumber Dealers' Association of Connecticut—W. H. Judd, E. H. Barnum.

Pittsburg Wholesale Dealers' Association—E. V. Babcock, I. F. Balsley.

Lumbermen's Club of Cincinnati—B. F. Dulweber.

Lumbermen's Exchange of Washington—W. T. Galliber, president.

New Jersey Lumbermen's Protective Association—James M. Kelly, James Crowell, I. P. Vanderveck.

Building Material Men's Association of Westchester County—Charles H. Tibbits, John F. Dunkel, H. H. Todd.

Eastern States Retail Lumber Dealers' Association—Richard S. White.

Lumber Exchange of Baltimore—Richard W. Price.

Lumber Trade Club of Boston—Walter B. Chamberlin, Howard C. Morse.

Hardwood Lumber Exchange of Buffalo—Orson E. Yeager, I. H. Stewart, F. W. Vetter, Frank A. Beyer.

New York Lumber Trade Association—James Sherlock Davis, Waldron Williams, Patrick Moore, Robert W. Higbie.

The meeting was called to order by Hugh McIlvain, who called for a nomination for a chairman.

The unanimous choice of the convention falling upon James Sherlock Davis of New York, Mr. Davis took the chair.

Benjamin C. Currie Jr. was elected secretary.

Mr. McIlvain read the call for the meeting, which was as follows, and stated that this was sent to the twelve original associations participating in a conference, and, besides, to the Cincinnati Lumbermen's Exchange of Cincinnati, Ohio; Buffalo Lumbermen's Exchange of Buffalo, N. Y.; Hardwood Lumber Dealers of Norfolk, Va., and the Lumber Exchange of Washington, D. C.:

"Acting under suggestions and by the advice of a number of associations interested, you are hereby notified that all the associations represented at the conference on inspection rules which was held in Philadelphia March 6, 1908, are

C. E. LLOYD JR., PHILADELPHIA.

E. V. BABCOCK, PITTSBURG.

I. F. BALSLEY, PITTSBURG.

R. F. DELAVERBER, CINCINNATI

D. E. YEAGER, BUFFALO

I. N. STEWART, BUFFALO

urgently requested to reconvene in Philadelphia, Bellevue-Stratford Hotel, September 24, 1908, 11 a. m., to act upon such business as shall come before the meeting, and especially for the purpose of giving the inspection question their further consideration.

"This will probably be one of the most important meetings ever held by the hardwood trade, and your association should be represented. Send as large a delegation as you think proper, arranging to stay two days, if necessary."

"In the meantime kindly have your association defer consideration of the new National hardwood rules as adopted at the Milwaukee convention June 11 and 12, 1908, and recommend to the individual members of your association that they continue buying under the old National Hardwood Lumber Association rules of 1905 or the Northeastern rules, pending the action of the Philadelphia conference in September.

"Please let me hear from you promptly after receipt of this and oblige.

"Yours truly,

"HUGH McILVAIN, Acting Chairman."

Mr. McIlvain outlined the work done at the previous conferences, and particularly that which was held at Philadelphia, and the action which

had been taken by him as acting chairman of that meeting since the convention.

The rest of the morning was taken up with a discussion as to just how the vote should be taken on the questions which might come before the meeting, the eligibility of those present to vote, and it was finally decided that the vote should be by writ, each association represented having one vote and that no proxies would be allowed to vote.

The important preliminaries of the meeting having thus been settled, a messenger from the Lumbermen's Exchange announced that luncheon was ready and the entire party filed over to the Lumber Exchange banquet hall, where Philadelphia's hospitality was thoroughly enjoyed. Anybody who has ever had any participation in Philadelphia's hospitality knows how boundless it is, and this little luncheon was no exception to the rule.

The convention reassembled at 2:30 and was called to order by the chairman, and for the purpose of bringing something before the meeting for discussion a delegate made the motion that—

It is a sense of this meeting that the modifications of the Rules of 1907 as made at Milwaukee at the annual meeting of the National

Hardwood Lumber Association are not satisfactory.

After some discussion, however, it was decided to put this motion in the affirmative sense, and so the motion was changed to read—

Resolved, That it is a sense of this meeting that the modifications of the Rules of 1907 as embodied in the Rules of 1908, as adopted at Milwaukee at the annual meeting of the National Hardwood Lumber Association June 11 and 12, 1908, be accepted as satisfactory.

This led to a long discussion, which disclosed the fact there was an earnest desire on the part of every one present to have a national inspection which would be truly national, and that the meeting should resolve unanimously on some plan to that end. After several hours' discussion this point on finally came by way of a suggestion from a delegate which led to the appointment of the committee consisting of Richard S. White of New York and E. V. Babcock of Pittsburg, who were instructed to put the ideas heretofore outlined into proper form to submit to the conference. A short recess was then taken.

Messes. White and Babcock withdrew and in due course reported the following resolution.

"Whereas At a conference held in Philadel-

F. W. VETTER, BUFFALO

F. A. MEYER, BUFFALO

ROBERT W. HIGBIE, NEW YORK CITY

phia, September 24, 1908, to which have been invited the associations named below (here followed a list of all the associations invited), after a thorough discussion of the question to approve or disapprove the rules for hardwood inspection adopted at Milwaukee, June 11 and 12, 1908, by the National Hardwood Lumber Association, and before submitting the question of approval or disapproval to a vote, there seems to exist a marked difference of opinion on a few points and a desire to promote the adoption of a national system of inspection; therefore be it

"Resolved, That the chairman of the conference be, and the same is hereby, instructed to appoint a committee to consist of two delegates from each association invited, as aforesaid, to attend this conference, such committee to confer with the National Hardwood Association if the latter so desire, and that a copy of this resolution be transmitted to the National Hardwood Lumber Association forthwith."

This motion was received with strong approval. We think it can be truly said that it seemed a solution of a most trying situation. And so, on being put to a vote, it was carried unanimously.

The president then announced that he would appoint to this conference two delegates such as the associations might recommend themselves. A subsequent motion provided that the names of these delegates must be submitted to the chairman within thirty days from this date. Another motion provided that all suggestions for changes in rules must be submitted to the committee through the chairman within sixty days from this date.

In order to relieve the conference of as much detail work as possible, on motion, a committee of five was authorized to take charge and tabulate the recommendations as to changes that the delegates of the conference desired to have considered in the National Rules of 1908.

"Carrying out these instructions, the chairman appointed the following committee:

B. F. Dulweber of Cincinnati.
Hugh McIlvain of Philadelphia.
I. F. Haisley of Pittsburg.
Patrick Moore of New York.
Orson E. Yeager of Buffalo.

Methods of Selling Lumber

On Tuesday, September 15, the St. Louis Lumbermen's Club resumed its regular monthly meetings. Dinner was served and a business meeting held afterwards. President J. H. Freeman occupied the chair.

After some interesting discussion of business conditions two very excellent addresses were delivered, one by Julius Seidel on "Methods of Selling Lumber," and one by F. Waldstein on "Is the Commission Man a Detriment?" Both addresses were replete with good ideas well worth the attention and consideration of not only St. Louis lumbermen, but all the readers of the RECORD, and they are herewith reproduced in full:

METHODS OF SELLING LUMBER.

The subject assigned to me tonight is one of such broad scope that it is possible to touch but superficially upon some of its many phases. Our club is composed of all branches, namely: Hardwood mill and yard interests, yellow pine manufacturers and retail interests. While the methods of placing the product of the respective interests in the market may, in some ways, be radically different, still there is much in common. It could not be otherwise, because a yellow pine mill must be compelled to interest in retailing in oak, because there is some oak amongst their timber, and a hardwood mill may be interested in yellow pine for similar reasons. A hardwood yard must, perhaps, keep some soft-

On motion duly seconded, a vote of thanks was enthusiastically given to the lumbermen of Philadelphia for their hospitality.

On motion duly seconded, Hugh McIlvain was requested to continue as acting chairman and also Benjamin C. Currie Jr. as acting secretary, until the meeting. We are of the opinion that there may be no confusion arising because of this motion, we are authorized to state that all communications in reference to delegates to this conference, and all communications in reference to changes in the rules as provided for at this conference, should be sent to James Sherlock Davis, chairman of the conference, care New York Lumber Trade Association, 18 Broadway, New York, who will give them the proper attention.

We can but say that we believe that the action of this conference at Philadelphia sustains optimistic views so far as national inspection is concerned. We presume that it will be readily admitted that it is not nearly so important that we have national inspection at once which is not altogether satisfactory, as it is that we have it ultimately and that it is satisfactory to all concerned a national inspection which all can work for and shout for earnestly and enthusiastically, and such, we honestly believe, will be the result of this conference. The present conditions make delay of very little importance, to our mind. It will work very little hardship, and the end achieved will justify the pains taken. In the meantime each section will no doubt continue to buy and sell as heretofore. We are optimistic enough to believe that the officers of the National Association will make it possible to do business easily under these waiting conditions. The whole convention, as we have said before in this article, emphasized to a marked degree the desire of all for a real and true national inspection. We have never before witnessed at any convention as much was shown at this one, an earnestness which sometimes seemed as if it might lead to disaster, but which, owing to the rare good sense which permeates the lumber trade as a whole, brought about this consummation so fraught with interest and good to all concerned.

woods to fill trade requirements. The thought, however, has often occurred to me that the retail lumberman, and especially so when doing a yard business in a big city, must be better posted as to the "methods of selling lumber" by manufacturers and dealers of all branches of the lumber industry, than any other of the foregoing branches of the lumber business. He should know the sources of supply, terms, grading rules and prices of all the various woods that enter into building construction, or are used for factory purposes.

Take, for instance, a staple article like bevel siding. We are certainly interested in conditions concerning value and otherwise, because we handle yellow pine, white pine, spruce, Oregon fir, cedar, redwood, cypress, poplar and sugar pine siding. The same applies to other standard products. The methods of selling yellow pine, white pine, cypress, poplar and west coast lumber products is certainly of the greatest concern to those who must at their own risk and hazard, at all times and under all conditions, keep a full supply of such woods and sizes that are commercial. The methods of selling adopted by the manufacturers are therefore of the utmost concern to those who market the product to the consuming trade.

A manufacturer can reduce his output and can almost discontinue keeping any stock, if to his disadvantage, so to do, as we have experienced during the recent panic, but to keep a broad stock in the retail business after having built up an established yard trade would be commercial suicide.

A mill can quit producing any kind of stock that is unprofitable to make, and the trade accepts the conditions without a prejudice. A yard cannot do this. While some have profited by mistaken methods, one-day policies and erratic ideas of individual concern, I am a strong believer in the stability of things. It is an old current belief that a buyer wants to get his goods for cost or less. Perhaps some do, but the average of buyers want to get their goods only at the lowest price that they are sold for to the "other fellow." The banding together of business men into local and even national associations to discuss and do what is best for the common interest of all concerned has been of amazing benefit in the lumber business. We are vitally interested in the affairs of the wholesale lumber manufacturer from whom we get our supply and know that he has an equal interest in every yard that he has on his books that he is supplying. Yards generally rely upon certain sources or mills for their supply, and in course of time a feeling of friendly interest springs up if their methods blend and are of the same sterling kind that last.

Some believe that the object in business is to be slick and outwit somebody. Some think one of the main objects in business is to be clever in deception. Some may think that business is a matter of manipulation and perhaps intrigue. But this is all a fallacy, and the winner is always the one that has demonstrated his right to be trusted by sterling worth and integrity. The reliable mill is wanted by the buyer as much as the reliable customer is wanted by the mill.

We hear so much of the ills of our trade placed upon our salesmen—the commission men—for instance. Unfortunately this can only be laid at the door of the heads of concerns. You can get out of the commission man as you can salesman, by paying for them. It is elevating to your business and the lumber trade in general, to get the best in that direction.

The trend appears to be for cheap salesmen, however, and one of the most persistent fellows in that direction is a very cheap lad that will pay you a visit for two cents. He's the "Sunny Jim" sent by the mail-order houses and he puts his in the pants of the retailer that people put so much trust in the "retailer" and "retailer" do this. This then is the "new method" of selling lumber—one of the darkest clouds on the horizon for the manufacturer or dealer to dispel. It is a big and momentous question and one which is worthy of intense discussion. Does the wholesaler want many customers creating a competition for the purchase of his lumber, or does he want few? The mills have always sold all their lumber through the legitimate or retail yards. Can you do more than this by the new method? A firm may have but ten cars of lumber two boards to sell at a low price, but his method of sending out the news to a thousand buyers, however, creates demoralization. Wholesalers have told me that the "circular method" is wrong. Retailers say that the new or mail-order method is wrong in that it creates the idea in the minds of the public that the margins on lumber asked by the yards are excessive and always have been. Broadly speaking, every foot of lumber sold through the mail-order house is taken away from your customer—the fellow you induce O. K. for pay, and who is honorable in his business transactions with you.

Has the old method of retailing lumber out-lived itself? If so is the new method the proper remedy? I certainly think that on the average the retailer makes only a nominal per cent on his investments.

The mail-order house concerns the country yards mostly, but an equally aggravating and annoying disturbing is the question of the new cities. Should they be rated as lumber yards? Are they not similar in methods to a mail-order concern? By filling out with new cut lumber do they not demoralize the prices of yards that sell standard grades? Should they not be con-

find to their own field, and would it not be better for the wholesale and retail trade alike, if they were held to their field of wreckage material?

I have briefly outlined some of the methods of selling lumber that ought to be discussed before an organization of this kind. We are organized for a purpose. That purpose is mutual progress and advancement in our respective lines of the lumber business. We can learn from one another and by comparison of the various methods adopt those ideas which are best adapted to do the greatest good to all of us. I respectfully submit the paper for your earnest thought and consideration.

IS THE COMMISSION MAN A DETRIMENT?

No one here tonight will suspect me of overstating the case when I say that among you there is not one, or hardly one who does not hold a biased view of the question under discussion. There is good reason to believe that the majority have a very decided opinion on the subject, and that this opinion is an adverse one. Your answer to the question, Is the commission man a detriment? would be an emphatic yes. But, to judge of the merits of the case, one must look at it from all points of view. We must place ourselves on the standpoint of the utter outsider; for only by a careful, unbiased consideration of all the facts can one arrive at a trustworthy conclusion. Perhaps this is best done by looking upon the commission man as one of that vast army of enterprising spirits, who at all times under the leadership of the captains of industry, have chosen the North American continent for their battle ground. We will then study the evolution of the commission man.

On the earlier pages of our history there is written, in large letters, the name of the Hudson Bay Trading Company. In emulation of the East India Companies of Western Europe, it sought to acquire a monopoly of an infant trade in an empire as vast, yet so unknown, that with the exception of the coasts, no white man's feet had trod the land. Its agents, or, as they were called, factors, who were employed in the North, not only developed the trade, and with it the country, to an enormous size, and by their organization the Hudson company within a few decades became a power so strong that not only was it able to fight and defeat competition in open battle with armed men, but also prevent the settlement of what is known today as the state of Oregon and the provinces of Manitoba and British Columbia. It became such a detriment to the country at large that the Canadian government, finally submitting to the wishes of the people, bought some of the company's rights and grants at the enormous price of \$300,000 and 50,000 acres of the most fertile land. About the same time, but less than fifty years ago, petroleum was discovered in this country. Although the Indians had known and used naphtha before the discovery of America, it never had been found in sufficient quantity to become a commodity. A large number of enterprising men went at the time into the oil mining business, but, owing to the lack of demand for the product, they dragged along for fifteen years until one man, seeing the great opportunities, founded the most gigantic commercial enterprise in the world, founded it on a strict commission basis, developing the coal-oil trade and its by-products to an unlooked-for magnitude. When, later this same enterprise drifted from being commission dealers to owners of oil wells, and, by its large investments all over this country, on its frontiers, not only oil, but also railroads, life insurance, banks, and legislatures, it became a detriment to the welfare of the people at large. And now to the lumber business. Twenty years ago cypress lumber was practically unknown to the large majority of consumers of lumber, until through the efforts of the Cypress Selling Company, an agency representing a number of manu-

facturers, the good qualities and possible uses of cypress were extensively advertised, its trade developed and made profitable to both manufacturer and dealer. I think these three of many examples that I could name were it not for the time allowed me, will prove sufficiently that the commission merchant was an absolutely necessary factor in the development of trade, when the business was still in its infancy and crude methods prevailed.

The commission man was the logical forerunner of the present jobber, which is proven best by the fact that a number of lumber dealers of the present day started business as commission men. I shall go back to the original subject: Is the commission man a detriment? But before doing so, I wish to state that what we erroneously call commission men today covers three distinct classes: The commission man, the broker and the scalper. The first named, who received and sold lumber on consignment, and who was not only a necessity but a benefit to the trade, is a thing of the past, and has in a sense been superseded by the broker or agent. This broker, of course, is often a most useful instrument to the jobber, who through his agency is not only able to secure large lots of lumber for his stock, but also is able to sell some of his surplus stock through the same agency. The broker, however, must be confounded with a scalper, who, without capital, without business expenses, sells here and there a carload of lumber at the smallest possible margin to users of lumber, thus establishing his cheap price as the standard market price for

at least the next two or three weeks, and who, for this reason, is, in my opinion, a most disturbing factor in the trade. I am afraid gentlemen, that I have not answered the question under discussion to your satisfaction, not calling the broker who is the only commission man to be considered today, a detriment, and I wish to state in explanation that I am well aware of the fact that the broker will not sell only to the dealer, but often he will sell to the consumer of lumber, becoming thereby a new and unlooked-for competitor; but if in this case you consider him a detriment to the trade, you must not overlook the fact that for the same reason the large manufacturer of lumber who has either a sales office in any lumber center or sends out his traveling men to solicit orders from consumers of lumber, would also have to be called a detriment, while I only consider him a strong competitor, who has come to stay, and has to be reckoned with. The lumber business has, during its short existence, undergone great changes. The commission man has disappeared and has been superseded by the broker. The broker will also disappear in time when he will have outlived his usefulness. I can see this time coming, and in fact we are drifting towards it. It will be the time when jobbers of lumber will be manufacturers and when manufacturers of lumber will act as sell direct to consumers.

In conclusion, I will ask those who hold different views, particularly the yard dealers, which of you have not in recent years bought or sold lumber through a commission merchant or through a broker?

Hardwood Record Mail Bag.

In this department it is proposed to reply to such inquiries from HARDWOOD RECORD readers as will be of enough general interest to warrant attention. Every lot of mail paper is invited to use this department freely, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade in a succinct and intelligent manner.

Seeks to Purchase Handle Plant.

PITTSBURG, Pa., Oct. 4, 1908. Secretary HANDLE MANUFACTURERS' ASSOCIATION. If you know of any tool handle machinery of a full equipped plant or of a partly equipped plant that we can buy reasonably, I wish you would advise us. There are probably some handle works that have quit business, and if you know of any we would thank you very kindly to furnish us their address.

Thanking you in advance for this information, we wish to re-anal.

COMPANY. The secretary of the Handle Manufacturers' Association, believing that he could best serve the above correspondent by publishing this letter, does so—and invites any one wishing to sell their handle works to advise him of the details and the matter will be placed before the Pittsburg inquirer.—EDITOR.

Wants Ash Bolts.

HAVANA, Ill., Sept. 20, 1908. Editor HARDWOOD RECORD: We are contemplating buying ash lumber in short bolts and wish you would advise us, if possible, where we might be able to secure ash lumber in this shape. We could get along with orders as short as 18 inches.

Any information you can give us on the subject will be greatly appreciated, and if you think necessary please make mention in the next column of your paper what our needs are in this line.

MANUFACTURING COMPANY.

Readers of the RECORD interested in supplying a prominent Illinois manufacturing concern with the ash bolts they wish to secure

will be supplied with the address of the concern on application to this office.—EDITOR.

Figuring on Handle Business.

MERIBENSBURG, TENN., Oct. 5, 1908. Secretary HANDLE MANUFACTURERS' ASSOCIATION: We expect to erect a plant for the manufacture of handles for brooms, rake, hoe, fork and hook. We shall be pleased to have you advise us what kind of woods are used for this stock and send us through an sell direct to consumers information you think would be beneficial to us in deciding this matter.

COMPANY. The foregoing letter has been received by the secretary of the Handle Manufacturers' Association, and though he has given considerable specific information to the inquirers, he has also taken the liberty to advise them that it is his belief that they had better investigate the handle situation very carefully before they start a new plant in this line of production.

As a matter of fact, the handle supply of the country is in excess of the demand at the present time, and there is very little money to be made out of the business even by experienced producers.

There are scores of other lines of manufacture that promise better financial results for the next few years than does a new handle factory.—EDITOR.

Large Timber Purchase.

D. M. Farris, acting for the newly organized Cherokee Lumber Company of Nashville, Tenn., has recently purchased from Sharpe & Henry, real estate firm of that city, several thousand acres of fine oak and poplar timber located in Colbert county, Ala. The consideration while not disclosed, is said to be a very large one. The Cherokee Lumber Company, it is stated, will develop the trade at once, and a big sawmill and other improvements will be installed.

News Miscellany.

Something Concerning the Talge Mahogany Company.

The demand by the public for new, high-grade, artistic and substantial lines of furniture, pianos and novelties which will appeal to the full sense of appreciation and satisfaction, has called for increased activities among the various manufacturers, and a delving, as it were, into fancy foreign hardwoods with a vim that is in itself, surprising.

With the increased demand for fancy lumber and veneers, a serious inconvenience of inadequate production of strictly high-grade material has been keenly felt. Buyers are often compelled to great exertion in an endeavor to find and procure quality of mate-

By keen intuition this concern has forged to the very head of the mahogany lumber and veneer industry, and the force of its existence is being felt in every spot where foreign hardwoods are in use.

The manufacturer requires the very best material at a reasonable and just price, and therefore the company's representatives have penetrated the heart of the immense forests where grow the mahogany trees of both hemispheres, and during the year 1907 they were the only concern in the United States who were able to operate successfully on the west coast of Africa, buying in person from the natives and shipping direct to their plant a cargo of fine, large African veneer logs. That the Talge Mahogany Company believe

consumer, certainly make it the most logical base of supplies.

An efficient corps of representatives, paying particular attention to the requirements of the trade, together with the low cost of production, have enabled this company to present the finest quality of manufactured product in hardwood lumber and veneers. A glance at the exquisite line of mahogany and Circassian walnut is enough to demonstrate to the manufacturer that his interests are carefully considered and his desires can be fully gratified in making his selections.

The slogan of the company is "Satisfied Customers," and strenuous efforts are put forth to accomplish this end.

Personal invitation is extended by the Talge Mahogany Company to manufacturers and users of lumber and veneers to call and inspect its plant and product at Indianapolis.

JUST ONE OF THE MANY COMPLETE CARGOES OF MAHOGANY LOGS IMPORTED BY THE TALGE MAHOGANY COMPANY

rial necessary to keep the beauty and attractiveness of their lines in the foreground. In this progressive day and age, amid the turmoil of strenuous competition, the foreground is at all times the seat of active operations; those who, through force of circumstances, are compelled to use the flank movement, soon find themselves in the background with very little opportunity of regaining their former position.

To meet the urgent demands of the manufacturers and to supply them with the necessary stock by which they can make good and retain their standing, is the serious problem which confronts the producer. This problem has caused at least one enterprising company to "sit up and take notice"; climbing rapidly to the front, leading many other competitors.

In the prosperity of the times is fully indicated by the fact that they now have en transit a complete vessel load of logs from Axim, Africa, to Indianapolis through New Orleans, in addition to numerous cargoes of logs coming at all times from their source of supply in Mexico. John H. Talge, the president of the Institution, is now in Europe making extensive purchases of fine Circassian walnut, rosewood, ebony, coco bolo, and other logs of value, which are shipped to Indianapolis and manufactured into the finest quality of lumber and veneers.

Situated, as it were, in the very center of the wood-working industries of the world, the Talge Mahogany Company, with its splendidly-equipped plant and excellent shipping facilities at Indianapolis, coupled with the fact that the company deals direct from stump to

Building Operations for September.

According to official building statistics from forty-five principal centers of construction throughout the country, reported by the American Contractor, Chicago, building operations for September, 1908, show an increase in the aggregate of 7 per cent as compared with substantially the same cities for September, 1907. Greater New York, which presents about 25 per cent of the total construction, shows an increase of 14 per cent over the same month last year. Twenty-eight cities show a gain of from 1 to 50 per cent and seventeen show a loss of from 1 to 57 per cent. The principal increase occurs at: Birmingham, 137 per cent; Cleveland, 52; Denver, 113; Kansas City, 47; Louisville, 38; Milwaukee, 56; Mobile, 23; New Haven, 39; Paterson, 201; Salt

PLANT OF THE TALGE MAHOGANY CO., INDIANAPOLIS.

Lake City 61, St. Paul, 56; Syracuse, 75; Worcester, 76. The indications are that henceforth an increase in building operations may be expected, and, current therewith, a gradual increase in the price of building material. Parties who contemplate the erection of buildings of any sort whatever will profit to the extent of from ten to twenty per cent, by taking advantage of the present low prices and starting operations at once.

New Rule Manufacturing Company.

The American Rule Manufacturing Company is a new organization at Nashville, Tenn., which succeeds the B & M Rule Company.

The head of the new company is E. R. Winkler of Nashville, and associated with him are Thomas R. Thornberry of Nashville and J. W. Winkler of Springfield, Tenn. Its offices are located in the First National Bank building of Nashville, and the plant at 1308 Church street.

While they make a full line of lumber rules their specialty is the "Ideal." This rule is made exclusively of the butt cuts of second-growth hickory and has an tempered foot steel head. The steel is so treated and plate that the rule can be bent into a knot without injuring it. The scale on the rule is done by a patent process which in no way injures the fiber of the wood as it does when the figures are burned into it. The wood is chemically treated so as to cause it to retain its toughness and capacity for years. It is also guaranteed by the makers to be superior to any other rule ever before produced.

This company also makes a folding rule which comes in the center and can be conveniently carried in a case. This is for the special con-

venience of traveling inspectors. The fold is accomplished by a patent blige and when the rule is straightened out it locks and forms an excellent and convenient device. They also make loggier rules, and are at all times prepared to make any special rule or order.

The company's plant has been completely overhauled since it assumed control, new ma-

lumber yard at Grand Rapids. The officers of the new company are: David Wolf, Grand Rapids, president; Gus Kitzinger, Manistee, vice-president; Robert Duncan, treasurer, and George F. Becker, secretary.

Chicago Hardwood Man in Trouble.

W. A. Davis, with offices in the Marquette building, who has been trading in this market in his own name for some years, has sent the following letter to his creditors:

"It is with extreme regret that I beg to call your attention to the fact that I think best not to try to continue business any longer. No such action on my part has been brought on through various conditions, namely, through the failure of some of my customers, who have caught me very heavy, and a heavy loss by fire. As a result I consider good will amount to about \$20,000. The liabilities are about \$65,000. You can very readily see from the above estimate that I can pay about 30 cents on the dollar to each and every one of the creditors, and for your own information I beg to say that the assets are in such a condition that I could agree to pay every one of the creditors at 25 cents on the dollar in six months. In full of the assets, that is, of course, without any more cost being added in the liabilities.

"If this is taken into the hands of a receiver, it will, in all probability, take them at least six months to a year to wind up the affairs of this business, and at a great cost to the creditors.

"Awaiting your advice in this matter in which you are interested, I am, yours very truly,

"W. A. DAVIS."

Within the last day or two at the instance of Mr. Davis and some of his creditors, the Lumbermen's Credit Association of this city has offered to take over Mr. Davis' affairs and straighten them out in the best way possible. If this offer is accepted, it will probably be the very best thing the creditors can do. It will secure them their treatment and a relation on every dollar of the assets. William Clancy, president and treasurer of the Lumbermen's Credit Association, has sent out the following letter to Mr. Davis' creditors:

"With his approval we write you with reference to the financial condition of W. A. Davis, a wholesale lumberman of this city.

Mr. Davis has been operating here for quite a while, and has made money, but he has made "hard money," as he terms it, during the past few months, which have caused him to suspend business entirely. Among these losses are included two of \$60,000 each and one for \$100,000, amounting to approximately \$7,500. He claims these items do not cover all of his losses, however; that the same have curtailed his working capital to such an extent he finds it impossible to go further, so he has decided to close up and settle with creditors, either in a lump sum or in installments about 25 per cent, or will make such other arrangements as may seem possible to keep him out of bankruptcy and enable him to fully discharge his indebtedness.

Following is a copy of the statement, which is submitted to us, purporting to show his present financial condition.

ASSETS.	
Good notes on hand	\$ 1,015.15
Office furniture	100.00
Lumber on hand	1,300.00
200 acres tract land	3,000.00
Accounts receivable, less contingencies	10,000.14
Total assets	\$16,615.29

Total assets \$16,615.29

LIABILITIES.	
Notes payable (including banks)	\$40,200.34
75,000	18,518.92
For merchandise due open account	

Total liabilities \$58,719.26

The foregoing speaks for itself. We have looked over his list of accounts outstanding and believe they are mainly good. The value of the other assets listed only shrinks some in process of realization, and the showing itself would seem to indicate the advisability of having all creditors join together to effect a settlement with the least possible delay and expense. If bankruptcy proceedings ensue the estate can hardly pay very much, and we believe it would be to your interest financially and otherwise for you to give us power of attorney to look after your claim, as we already represent other and the majority of the claims and the cooperation of Mr. Davis we can, without doubt, take charge of the matter ourselves and effect a settlement without any great loss of time or amount of expense to you and the other creditors in general.

Thanking you in advance for your favorable consideration and hoping to hear from you in this connection by mail, we are,

Yours very truly,

LUMBERMEN'S CREDIT ASSOCIATION

E. R. WINKLER, NASHVILLE, TENN.

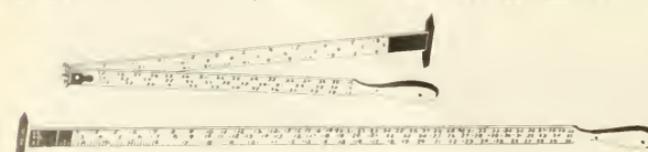

pany added and they are now making plans to cover the entire lumber field of the country with its new product. Catalogue and price list can be secured by any lumberman on application.

New Vener Plant.

The First Vener & Seating Company, which recently lost its vener plant is actively engaged in the erection of a new and modern factory at Antioch, Wis. They expect to have the plant completed about December 1. The company is sparing no expense in making a model institution. They have purchased the most improved and latest tools for every department. The buildings of the installation are all one-story in height and are a total space of 25,100 feet. They are finishing entirely on concrete foundations and of semi-tropical construction, having concrete fire walls at frequent intervals. The boiler and engine rooms are of complete concrete construction.

Reorganized Lumber Company.

The Green Lumber Company is the form of a \$200,000 corporation, just organized at Traverse City, Mich. It succeeds the bulk-buying Kelley Lumber & Siding Company. The new company takes over all the assets of the old company from J. J. S. Ryan, the president, and will operate the mills near Traverse City and at Frankfort, and also will carry on a big

IDEAL BOARD RULES

About the Licking River Lumber Company.

The Licking River Lumber Company, Inc., has an important sawmill and planing mill plant with general offices at Ashland, Ky. The company's mills are located at Farmers, Rowan county, Kentucky, on the Lexington division of the Chesapeake & Ohio Railway.

The company owns several thousand acres of standing timber, of which oak, poplar, chestnut and walnut predominate. At the present time it has about 10,000,000 feet of oak and poplar logs cut and in the river and log ponds for next year's supply, and is engaged in securing a considerably larger quantity.

The company's operating plant consists of an eight-foot band mill complete with planing mill and timber sawker. It controls about five miles of booms on the Licking river and owns at Farmers its own hotel and store buildings, and also a large number of houses rented to its employes. It has a large stock of dry lumber on hand and has good shipping facilities to the markets in Ohio, Michigan, Pennsylvania and New York.

In September, 1908, the Licking River Lumber Company's band mill was destroyed by fire. In order that they might take care of their customers promptly a deal was closed whereby it succeeded in purchasing the large band mill, planing mill, logs, booms, etc., of the S. B. Reese Lumber Company of Farmers, Ky. The Licking River Lumber Company promptly added to the plant's facilities, equipped it with electric lights, and contemplated operating nights until such time as they have made a double band mill out of the present one.

The company produces oak and poplar lumber, and also makes considerable pine and hemlock. It specializes in export oak, car timbers, bridge timbers and ship oak timbers. They report a good volume of orders on hand and consider the outlook for business excellent.

The personnel of the Licking River Lumber Company is: F. G. Eberhart Jr. of Mishawaka, Ind., president, who is also secretary

supervision of the entire operations and takes personal charge of the sales department. Mr. Page was born at Elkhart, Ind., in 1876, and has been active in the lumber business since he was eighteen years old.

Mr. Eberhart and Mr. Page are also interested in the R. G. Page Lumber Company of Ashland, Ky., a well and favorably known lumber house. Of this company, C. E. Wilson has charge of the sales department and offices of the company.

Change in George D. Emery Company.

On account of advancing years and failing health, George D. Emery of Chelsea, Mass., has disposed of his stock holdings in the George D. Emery Company and has permanently retired from active business.

GEO. D. EMERY, CHELSEA, MASS.

Mr. Emery has been prominently identified with the most important mahogany, Spanish cedar and veneer house in the United States for many years. He has made a reputation second to no one in this great industry and it is a sincere regret to his friends to note that it has become necessary that he should retire from business.

His interests in the George Emery Com-

pany have been purchased by Samuel Seger of London, England, the head of S. Seger, Ltd., mahogany dealers of the British metropolis. For many years Mr. Seger has been the European representative of the Emery company and has kept in close touch with its affairs. He succeeds Mr. Emery as president of the corporation, and while he will retain his residence in London and continue to look after the affairs of the English agency, he expects to spend the larger portion of the time in the United States, and will take up the active direction of the company's affairs.

Miscellaneous Notes.

The lumber yard of the Kelly Brothers Lumber Company at Cairo, Ill., was destroyed by fire on September 25. They carried insurance of \$46,700. The warehouse and office building of the Three States Implement Company were also destroyed; insurance \$31,000.

The American Creosote Company has purchased a twenty-acre tract of land adjoining Madison and Venice, Mo., where they will erect a plant for treating lumber. Millions of feet of lumber will be shipped in each year, and after being treated with the creosote preparation will be shipped to all parts of the world.

The Illinois-Arkansas Lumber Company, incorporated under the laws of Illinois, is capitalized at \$100,000. J. M. Rose of Little Rock, Ark., is the Arkansas agent.

The Crawford County Tie & Prop Company of St. Louis, Mo., has been incorporated with a capital of \$2,500 by J. William Taylor, L. P. Craigler and W. S. Scott.

The Jamestown Hardwood Trim Company of Chautauqua, N. Y., has been incorporated with a capital stock of \$40,000 by Ward H. Wadsworth, Randolph, N. Y.; Joseph P. Turner, 209 Dyckman street, New York City, and George Hagemeyer, 209 West 128th street, New York City.

The plant of the Southern Hub Company at Sheffield, Ala., recently purchased by W. N. Conwill, D. R. Evans, R. A. Strickland and W. C. Evans, was put in operation September 14. The new owners are all Sheffield men and will enlarge the output of the factory and extend the market.

The Foster-Lattimer Lumber Company of Melton, Wis., is erecting a large addition to its hardwood flooring plant, which is expected to be completed before the first of the year. The company owns a large tract of maple timber and it plans to use all available material. When completed the plant will have a capacity of from 7,000,000 to 10,000,000 feet of flooring annually.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

CHICAGO

The J. Stephenson Company of Wells, Mich., a good portion of whose lumber and hardwood flooring output reaches the Chicago market, has just purchased an additional 40,000 acres of hardwood land in Marquette county, Michigan. This timber holding will supplement the already large timber section owned by the company to an extent that will perpetuate their timber operations for many years.

W. B. Judson, formerly one of the owners and manager of the American Lumberman, Chicago, who within the last few years has resided at Seattle, is spending a month at Chicago. He is accompanied by his wife and one of his sons. The son will enter the Chicago University. Mr. Judson expresses himself as delighted with the Pacific coast.

The Ripon had the pleasure of a call on October 6 from A. L. Parker, secretary of the S. A. Woods Machine Company of Boston, Mass. He was accompanied by Joel Ettinger, Chicago

manager of the company's business in the Middle West. Mr. Parker says the big woodworking machinery house with which he is connected is doing a very fair business and anticipates a speedy revival and increased demand in his line of machinery.

John M. Diver, general manager of the Cleveland-Sarnia Saw Mills Company of Sarnia, Ont., was a Chicago visitor on October 6. Mr. Diver states that lumber trade conditions in Canada are better than the sales in this country, although the demand is very fair on this side of the border. He says his company has about 15,000,000 feet of lumber on hand and 18,000,000 feet of logs in boom ready for sawing.

William J. Wagstaff, a well-known Oshkosh lumberman, made a call on the RECORD October 1. Mr. Wagstaff was on one of his frequent Chicago visits. He considers business gradually improving.

On October 2, W. H. Bower, a well-known lumberman of Kurtz, Ind., was a HARDWOOD RECORD caller. Mr. Kurtz reports improved conditions in his section of Indiana.

R. G. PAGE, ASHLAND, KY

of the Mishawaka Woolen Manufacturing Company of that city, and is connected with other large financial institutions; William Eckman is vice-president of the company, and manager of the Farmers plant, as well as having charge of the timber purchases; and R. G. Page is secretary and treasurer of the company, residing at Ashland, where the sales offices are located. He has general

Among the welcome visitors to Chicago on October 2 was J. V. Stimson, the hardwood manufacturer of Hattingsburg, Ga. Stimson is always optimistic as he is conservative and reports a very satisfactory business.

W. G. Collar of the Collar-Stange Lumber Company, Merrill, Wis., was a Chicago visitor on October 2. Mr. Collar's company has an excellent stock of northern hardwoods, which he is making plans to market.

The Record is advised by the Albion Handlery Company of Albion, Mich., that it is going out of business.

H. B. Leavitt, president of the Leavitt Lumber Company of this city, is spending a week at the company's band mill at Hollywood, Miss., and will also visit various sawmill centers in Arkansas.

The Record is advised that W. H. Dalley & Co., a corporation at Grafton, W. Va., has gone into involuntary bankruptcy. The first meeting of creditors was held at Grafton on October 7. No statement of assets and liabilities has as yet been supplied by the trustee, who is O. E. Wyckoff.

John C. Spry, the well-known ex-Chicago lumberman, who during recent years has built up a big business in timber lands, recently returned to Chicago from an extended trip through the timber area of the Province of Quebec. Mr. Spry is very much interested in the timber of that region and it is very likely that he will invest some money in that section.

Miss Emeline Wilkie Spry, daughter of John C. Spry, the Chicago lumberland merchant, was married, September 30, to Rollin Webb Keyes of Chicago. The ceremony was performed at the First Baptist Church of Evanston. They are the bride and groom are prominent in Evanston social circles. The wedding was a very elaborate one and was attended by numerous friends. After the honeymoon Mr. and Mrs. Keyes will make their home to Evanston. They have the congratulations of the Record.

Receipt is acknowledged of a very handsomely framed panel, consisting of fifteen sections of various varieties of mahogany and African hardwoods at the hands of J. F. Müller & Sohn of Hamburg, Germany. This house is an important dealer in fancy woods and specimens make a very handsome advertisement. The panel is on exhibition in the sanctum of the editor of the Hardwood Record, who will be pleased to exhibit it to anyone interested in the beautiful handling of some splendid foreign hardwoods.

Frank F. Fish, secretary of the National Hardwood Lumber Association, has been out of town the greater portion of the last month. He spent several weeks on an eastern trip, returning late in the past September and has since spent a week in Michigan. He makes a good report of association affairs.

John E. Williams, editor of the New Orleans Lumber Trade Journal, accompanied by his wife and daughter, is here on his annual visit to Chicago. Mr. Williams paid the Record an agreeable call on Thursday.

BUFFALO

G. Ellis & Bro. have bought two acres of land adjoining their yard and are putting in a new locomotive crane for handling heavy timber, of which they have always made a specialty.

The yard of I. N. Stewart & Bro. has been handling quite an amount of oak and cherry lately and the firm seems to be satisfied with the trade. Poplar is also moving out very well.

Seutcher & Son have a pretty good stock of summer-saved lumber at Memorial park oak, but the demand here all along has been good enough to keep them from too vain of it.

E. W. Vetter did not come back direct from Philadelphia, but stayed there a day or two and then went to New York, looking into the prospects of the hardwood trade.

Pitting up the addition to the yard of the Standard Hardwood Company has kept A. W.

Krelsheder back from his trip to the south side of the Ohio, but lumber is coming in freely and business is very good.

A. Miller does not like to brag of his trade, but he is getting it just the same, and when he does not the other dealers might as well lay down, for he keeps a good assortment always.

T. Sullivan & Co. call trade very much better, and F. T. Sullivan reports the same state of things in New England. Both hardwood and Pacific coast stock are coming in freely.

A very much improved state of business is reported by O. E. Yeager in pretty nearly all places, and it is believed that this will last right along until people begin to buy for increasing stocks.

The Buffalo Hardwood Lumber Company is getting ready for increased shipments from the South as well as by lake, and has sent an office man to Memphis to look after things in that direction.

The oak mills of the McLean interests in the Southwest are running rather slowly yet, as logs are not so plenty, but there is more need of lumber now and they will soon be in full swing again.

Now that the great danger from forest fires seems to have passed, President Beyer of the Pascola Lumber Company will soon be starting his mills in Missouri, for he has plenty of need for the stock.

NEW YORK

The regular annual meeting of the New York Lumber Trade Association will be held October 14, at the association rooms, 18 Broadway, preceded by a Delmonico luncheon. The usual large turnout of the members is expected by reason of it being the twenty-second anniversary of the organization, as well as because of the fact that the reports to be presented will outline a year's work replete with many accomplishments in the departmental work of the organization.

George K. Towle, for the past four years traveling representative for the Lumbermen's Credit Association of Chicago, has resigned his position, effective October 1, and concurrently therewith Charles D. Chase, manager of the New York office, at 116 Nassau street, also resigned to engage in other lines. Mr. Chase will be succeeded in the management of the local office by H. H. Tuttle.

The lumber trade of nearby New Jersey figured prominently in the recent republican primary election results in that state. W. W. Smalley of Hound Brook, president of the New Jersey Lumbermen's Protective Association, was nominated for the state legislature by a handsome plurality. Clarence G. Meeks of the Gardner & Meeks Company, Weehawken, was also nominated for the assembly on the republican ticket.

F. J. Cronin, who has for several years pastably represented the Yellow Pine Lumber Company out of Grove, O., in the metropolitan district and eastern trade, has severed his connection therewith to take up the representation of the Dimension Lumber Company of Herkimer, N. Y., large producers, with mills at Foley, W. Va., Catskillburg, Ky. and Herkimer, N. Y. Mr. Cronin has many friends who will be glad to welcome him in his new connection.

The Robert Lloyd Company is the style of a new concern just organized to take over the retail business of F. B. Whitney & Co., 522-524 West Fifth street, Manhattan. The new company is composed of Robert Lloyd, proprietor of the well-known hardwood house of William Gibson, Inc., West Fifth street, Manhattan, and David Milligan, who for the past twenty-one years was associated with F. B. Whitney & Co. The business of the Robert Lloyd Company will be entirely separate from that of William Gibson, Inc. and the new corporation will handle a full line of heavy hardwoods suitable for carriage and automobile trade, as well as a general line of lumber.

J. F. Murphy, for seventeen years with the late firm of G. J. Schuyler & Co., and for the past seven years with the John C. Orr Company

of Brooklyn, has organized the J. F. Murphy Lumber Company with a capital of \$10,000, to conduct a hardwood and general retail business at 522 West Thirty-fourth street, Manhattan, where the company is arranging up-to-date premises for such business. During the past year or two Mr. Murphy has been conducting a commission lumber business at 1 Madison avenue, which has now succeeded to devote his undivided attention to the new company.

The local selling staff of the Ironquois Door Company has just been enlarged through the appointment of W. A. Roppas as assistant to Manager B. P. Salmon to the solicitation of the local trade. Mr. Roppas has had a long and successful experience in the wholesale saw and door trade, which eminently qualifies him for his new connection.

Secretary F. F. Fish of the National Hardwood Lumber Association, Chicago, spent several days during the fortnight visiting leading firms in Boston, New York, Philadelphia and Baltimore in the interest of association work.

C. H. Moberly of the Cummings-Moberly Cypress Company, Moberly, La., arrived from an European trip during the fortnight after an extended trip abroad. Among other leading cypress manufacturers also in town during the fortnight were Capt. E. B. Madison of Patterson, La.; John Elbert of Donner, La.; W. J. Burton of Burton, La.; and J. A. Bruce of Strader, La.

H. I. Downman, the prominent cypress manufacturer of New Orleans, passed through the city last week accompanied by his family en route home after spending the summer at Loon Lake in the Adirondacks. J. C. Turner of the J. C. Turner Lumber Company, 1123 Broadway, is just back from a visit to his various southern manufacturing interests in a tour of inspection.

George E. Downing, who was formerly in charge of the local sales office of Hittipenny & Hamilton, Philadelphia, which was recently discontinued, has formed a connection with the Mahan Lumber Company, hardwoods and spruce, Mahan, W. Va., and will hereafter represent them in the local market, together with several other high-class mill connections.

M. W. Towel, manager of the Dayton Lumber Company, 1 Madison avenue, has just returned from a visit to the extensive interests of his company at Bridgewater, N. S. He reports matters as decidedly better and the outlook promising for a still further improved domestic and export demand.

E. J. Hollowell, who a short time ago purchased the local branch business of the Indiana Veneer & Lumber Company of Indianapolis, Ind., then located at Thirty-first street and First avenue, Manhattan, has removed the business to 216 West Forty-second street, Manhattan, where he has commodious quarters and a full line of all classes of hardwood veneers for the local trade.

George D. Burgess of Rusee & Burgess, Memphis, Tenn., spent several days in town last week en route home with his family after a six weeks' stay at Atlantic City, N. J.

The West Twenty-ninth street yard of the Dunbar Box & Lumber Company, Manhattan, suffered a fire damage of \$2,500 on September 24, loss fully covered by insurance.

The United States district court on September 23 granted a discharge in bankruptcy to J. I. English and English & Co., wholesale hardwoods, 1 Madison avenue, Manhattan, who failed some months ago, with liabilities of \$121,031.

The annual meeting of the Building Material Men's Association of Westchester county, New York, occurred at White Plains, September 21, with a large attendance. The report received showed the organization to be doing good work for its members. Officers of last year were re-elected. The leading feature of the meeting was a full discussion of business conditions, the consensus of opinion being that business was slowly but steadily improving, and the hope was expressed that the same be encouraged and could be encouraged by sane action on the part of the whole

sale and manufacturing trade in keeping prices for the near future on a basis commensurate with present values.

On September 24, William E. Uptegrove & Bro., large wholesale and veneer house of Brooklyn, were petitioned into bankruptcy by Johnson City, Tenn., banking and lumber interests, and thus the affairs of the corporation will be wound up in the bankruptcy courts. Concurrent with this action is the Standard Oil Co. Veneer Company, the Interior Hardwood Company, and the Allen Panel Company, allied corporations of Johnson City, Tenn., were also placed in the hands of receivers, in all of which companies William T. Uptegrove and his associates were indirectly interested.

As will be remembered, during the panic of last October it was necessary for William E. Uptegrove & Bro. to secure the protection of the courts for the reason of money stringency, and at that time J. F. Dinzy, Charles E. Decker and William E. Uptegrove of New York were appointed receivers. Since that time business has been operated under the receivers and at first reports assets and resources of the corporation were such as to indicate that under such management it would, in the course of time, be enabled to liquidate all of its indebtedness in full. It would seem, however, that the adverse business conditions which have existed during the past year have made impossible this hopeful outcome and have resulted in the aforesaid bankruptcy proceedings. When the receivers were appointed in October last the assets showed as \$1,273,394, of which \$593,190 was stock in the American Ligar Box Lumber Company of Johnson City, Tenn. The liabilities were placed at \$618,007.

The allied companies were not affected in the October last troubles of the Uptegrove interests, but have now been entangled under this latest proceeding.

The New York Lumber & Storage Company of 531 West Fifty-seventh street made an assignment on September 24 to James Kilpatrick. At a meeting of the company held last June trustees were appointed to wind up the business, which showed liabilities of \$30,500 and nominal assets of \$26,000. Two days after the assignment a petition in bankruptcy was filed against the company by creditors, alleging that the trustees who had been liquidating the business for the last sixteen months had realized \$3,000 over expense, which has been in their hands since October, 1907, and remains undistributed. Creditors asked for a distribution of these funds as well as an accounting from the trustees.

On September 25 the Mercantile Lumber Company, 1 Madison avenue, assigned to Louis H. Strouse. The company was incorporated in February, 1907, with a capital of \$10,000. Isaac B. Levy is president. No schedule has as yet been filed. The company was a small one and practically succeeded the retail business originally organized on the upper east side by Seelar & Levy.

A petition in bankruptcy has been filed against Charles and Jacob Rosenberg, composing James Rosenberg & Son, manufacturers of cabinet trim and grill work at 250 East 139th street. F. H. Griffin has been appointed receiver with bond at \$500. The firm began business in 1901 and was incorporated in May of this year with a capital of \$15,000.

A petition in bankruptcy was filed on October 1 against the Mutual Woodworking Company, 70 DePuy street, Manhattan. The company started in August, 1904, with a capital of \$10,000. Statement of June last showed assets \$13,997 and liabilities, \$3,343. The court has appointed J. F. McNaboe receiver in bankruptcy for the company with bond at \$500. The Mann-Caven Lumber Company pronounces favorably upon the prospect for a steady advance in trading. It reports things moving along in good shape, inquiries increasing, good orders being booked, prices better, and the volume of sales growing right

along. O. J. Mann was recently in Pittsburgh looking after the company's interests.

Uptegrove & Beckwith state recovery in trading gradual. They are optimistic as to outlook and believe in a full revival of good times by the first of the year.

Uptegrove & Polhemus report a more cheerful tone in the market. They are receiving their share of business and regard the outlook as promising.

The McClave Lumber Company is stalemated meeting conditions as they arise. Things are livening up a little, but the improvement will be gradual, they think, until spring, when business undoubtedly will receive new impetus. Major S. Wood McClave is one of the most popular lumbermen in Cliffside, Bergen county, New Jersey, his residence section, and his name has been placed on the Republican ticket as a candidate for Congress from the sixth congressional district of New Jersey.

The C. O. Shearer Lumber Company is placidly awaiting developments. It is not inclined to force the market, as Mr. Shepherd is of the opinion that things will right themselves in due time.

W. S. Dunn & Co., mouldings, report things moving steadily, and while the improvement in trading in their line is slow, it is more recognizable from day to day.

PHILADELPHIA

The Fenwick Lumber Company is keeping the mills active, getting out stock. Inquiries are coming in more lively and business generally is looking up.

The Kirby & Hawkins Company is getting a fair share of trade at present, with prospects of future expansion. Mr. Hawkins, after a trip through eastern and western New York, reports that the railroad companies are not inclined to buy extensively at present—probably are waiting for election developments.

The Righter-Parry Lumber Company, as usual, is optimistic in its statements. C. M. Hamlin of this house is in Ohio getting business, and the salesmen in Maryland and New Jersey report favorably of general sentiment in those fields.

The Owen M. Bruner Company is accepting conditions philosophically. Its men are always busy and seldom fail to get what they go in pursuit of in the way of trade.

A. Hankey & Co., Inc., machine knives, accedes to a better look for returning prosperity. Joseph B. Rogers, secretary, is spending some time at the company's plant at Rockdale, Mass., studying conditions. He states that the manufacturers are more successful than heretofore in securing loans from the banks, which will naturally conduce to renewed activity in all lines.

Charles L. Meckley says that the August trading was much better than one has learned to expect of this usually sterile month for business.

H. C. Magruder, Philadelphia, representative of the W. M. Ritter Lumber Company, reports activity in the mills getting out stock. Things look better all around, he says, than for some time.

The Miller & Miller Lumber Company obtained a charter under Pennsylvania laws on September 18, with a capitalization of \$40,000. Officers are: I. R. Parker, president; J. Clark Miller, vice-president and treasurer; G. H. Van Gunten, secretary. This company successively handles hardwoods and pine. It reports satisfactory trading and is sanguine as to rapid improvement of conditions.

Samuel H. Shearer & Son are getting a reasonable share of trade and realize that it is better to abide in patience than to waste valuable time in useless imprecations against the times.

Among the recent visitors to the trade were Mr. Snodgrass of the Buck-Snodgrass Lumber Company, Johnson City, Tenn.; Frank F. Fish, secretary of the National Hardwood Lumber Association; J. B. Purcell, of the Welch Lumber Company, Welch, W. Va.; J. E. Lineback of the L. H. Goodwin Lumber Company, Butler, Tenn., and B. B. Burns of the Tug River Lumber Company, Bristol, Tenn.

It is announced that the Compagnie J. G. Brill of Paris, France, recently organized, intends to establish a plant where Brill trucks will be built by French workmen and with French machinery.

The lumber sheds and coal yard of A. S. Heffner of Topton, Pa., were destroyed by fire on September 21.

On September 23 a large sawmill, storage house and four other buildings, with their contents, on the premises of William B. Reidenbach, near Gechtelsville, Pa., were consumed by fire. Loss estimated at \$10,000.

The carriage and wagon factory of George W. Garrett & Son, this city, was destroyed by fire on September 28; loss, \$10,000.

On September 30 fire completely gutted the box factory of the Keystone Box Manufacturing Company, 225-25 Wood street; loss is estimated at \$20,000.

The large lumber and planing mill of Elisha K. Kane, at Kushega, Pa., will close down permanently, the available timber supply having been exhausted. All mill hands will receive free house rent for one year.

Cramp's Ship & Engine Building Company of Philadelphia and the New York Shipbuilding Company of Camden, N. J., have been awarded contracts to build four torpedo boat destroyers, each company to build two boats.

The Canadian Cedar Timber Company, New York City, was incorporated under Delaware laws on September 21; capitalization, \$175,000.

The Wollison Planing Mill Company, Lancaster, Pa., was chartered under Pennsylvania laws on September 30; capital, \$50,000.

On September 30 the Fay-Within Car Company was incorporated under Delaware laws; capital, \$100,000. Incorporators: Frank R. Shattuck, Horace M. Schall and John E. Walsh.

The Lumbermen's Exchange held its monthly meeting, preceded by the usual luncheon, on October 1, President Frederick S. Underhill in the chair. Concerning the recent conference on hardwood inspection of the eastern associations, held at the Bellevue-Stratford hotel on September 24, the report of the committee representing the exchange was accepted and the committee discharged. The following resolution was then adopted:

"That the secretary of the exchange notify all the exchange members, after they make a test of the 1908 rules as adopted by the National Hardwood Lumber Association in Milwaukee, to state their grievances, the name of the rule and page where to be found, and mail same to the secretary of the exchange, who will forward to the committee representing the exchange, composed of Wilson H. Lear and Benjamin C. Currie Jr. This committee will hand them over to the chairman of the conference held at the Bellevue-Stratford on September 24, when the matter will, in due time, be a subject of consideration with the National Hardwood Lumber Association."

It was also resolved at this meeting that the retail yards close their places of business on the afternoons of Wednesday, Friday and Saturday during Founders' week, in order to allow their employees to view the parades, etc. A committee composed of Robert G. Kay, John N. McLean and Robert C. Lippincott was appointed to draft and have engrossed a set of resolutions appropriately expressing the sympathy of the exchange in

regard to the death of its late member, Samuel Miller of Miller, Robinson & Co., who died September 15, said resolutions to be presented to his family.

PITTSBURG

The E. M. Diebold Lumber Company had a splendid float in the Sequoi-Centennial parade last Thursday. This was the only big retail concern of greater Pittsburg which was thus represented.

The Reliance Lumber Company announces little improvement in the hardwood situation and has been driving hard at the trade in the East.

Fred H. Babcock of the Babcock lumber interests is one of the national committee which has issued a call for another car stake and equipment conference to be held on October 13, in Chicago. Pittsburg had a front rank in this agitation and is much interested in the result of this meeting.

The Webster-Keasey Lumber Company has shut down its big mill in Indiana county, Pennsylvania, but is still keeping up the operation in Butler county where the company is getting out a good supply of trolley and railroad stock.

William R. Cornelius has been keeping in very close touch with the lumber manufacturers of West Virginia and Kentucky, and finds it possible to buy good stocks of lumber from the mills at a reasonable figure. He has had a good trade with standard customers and has had little difficulty in getting good stock to fill his orders.

E. H. Holden of the Pardee & Curtin Lumber Company of Clarkburg, W. Va., was calling on friends in town last week. This company produced about 50,000,000 feet a year and is the largest manufacturer of poplar in West Virginia.

The C. P. Coughley Lumber Company is landing some fine white oak at its mills in Washington county this week. This will be used in government work on the Monongahela and Ohio rivers.

W. E. Townall, president of the Colonial Lumber Company, missed the Sequoi-Centennial on account of a relapse from a hard attack of the grip.

E. H. Schreiner, hardwood manager of William Whitmer & Sons, Inc., is pushing hard for trade and as a result is getting more concerns to figure on spruce and poplar. He spent four weeks this fall in Canada, Illinois and Wisconsin.

The German Company finds the market confined chiefly to timbers. Its officers look for slightly higher prices on lumber but do not expect any great improvement before January 1.

The McDonald Lumber Company reports most of the West Virginia mills running, cutting spruce and hemlock. The situation there is much improved according to Robert McDonald, president of the company, who has returned from his vacation.

The American Lumber & Manufacturing Company is creeping up toward its usual volume of business and is finding no chance to get what scattering trade there is going. Its cottonwood business is more encouraging than any other line at present and President Johnson says that other hardwood consumers who have not bought a car for months are beginning to take stock again.

J. J. Mond, president of the Mond & Spear Company, is looking after lumber matters in West Virginia and Kentucky this week. The company has its mill running and is getting its full share of the hardwood business.

The H. V. Curll Lumber Company will shortly start up its plant again at Glen Ray, W. Va. It reports the poplar market in fine condition and looks for higher prices.

J. J. Linehan of the Linehan Lumber Company is spending the week at the company's

mill at Ashland, Ky. For a few weeks this concern has had quite a run on white oak flooring but reports the demand for other hardwood rather quiet.

Hemls & Vosburgh say that the market is "boiling its own." The best features of their report concern yellow pine and hardwood, especially oak. They also announce that clear spruce is oversold and is creeping up in price.

J. L. Lytle Lumber Company is pegging away hard for business in the nearby states. W. H. De Voss of this company is going after the Ohio trade this week and J. L. Lytle is calling on the Pittsburg district. Poplar is the best seller on their list and bids fair to command higher prices before long.

The Valley Lumber Company, capital \$75,000, has been formed by a number of capitalists from northern Somerset county, Pennsylvania, by the following officers: President, Elsworth Lins; vice-president, A. L. Cobo; secretary and general manager, W. N. Yates. The company has purchased a tract of 9,000 acres of hardwood and hemlock timber near Pulaski, W. Va., which will probably cut 75,000,000 feet. It will start operations this fall.

The Newell Brothers Lumber Company is rushing its plant at Braucher, W. Va., on the Coal & Iron railroad to fill an order of 1,000,000 feet of ash, cherry, maple and oak which it sold in Buffalo recently. The lumber was nearly all common and better and brought about \$3 per M less than last year's figure.

The Pilot, Erving & Stoner Lumber Company is running its plant at Haxthorne, Miss., steadily and is also running operations at its Dunleville plant in West Virginia. From the latter mills it shipped 222 ccrs of lumber in September. It is running its planing mill day and night. Last week the company secured an order for 500,000 feet of spruce for Philadelphia delivery at \$1 more than it would have brought, Aug. 1.

The Greater Pittsburg Lumber Dealers' Association showed 600,000 people last Thursday, the tremendous growth of the lumber industry in Pittsburg within the last hundred years. The two floats which it had in the Sequoi-Centennial parade represented an old-fashioned river raft coming down the Allegheny and a modern well-equipped flat car loaded with fine lumber. The most significant point in the exhibit was the statement that in 1828 only 8,500,000 feet of lumber was consumed in Pittsburg while in 1900 over 500,000,000 feet was used.

The Babcock Lumber Company estimates its loss at Ashtola, Pa., at about \$200,000, this having been caused by the recent forest fires. Over 1,200,000 feet of lumber and logs were burned and practically the entire camp was gutted by fire.

President Nelson Bell of the Furnace Run Sawmill & Lumber Company is pounding away at the hardwood trade diligently but is not overenthusiastic about immediate prospects of a big business. It looks for some gain after the election but thinks that during the inventory season trade from the yards will be light.

The F. W. Crane Lumber Company is considering the project of installing a modern electric light plant at its operation at Cloverlick, W. Va. Its mill at that point and also the mill at Rohr, W. Va., are running full and Mr. Crane notes a quickening in the call for all grades of good hardwood. F. F. Smith of this company spent last week at Chicago, Grand Rapids, Mich., and South Read, Ind., and sees some improvement in the furniture trade.

The Clay-Schoppe Lumber Company is in the hands of a receiver, and J. F. Schofield of the Pittsburg Hardwood Door Company will act in that capacity. It will be remembered that A. G. Breitwieser was prominently identified with the Clay-Schoppe concern and was supported by the bank in its financial backing. He is also largely connected with the

Pittsburg Hardwood Door Company. The Clay-Schoppe Company had a good tract of timber in southern Pennsylvania and was cutting it off with portable sawmills. According to street rumors the Broad Top Lumber Company of Clearfield, Pa., will take over this portion of the Clay-Schoppe concern and will also probably secure the service of W. A. Clay who has been managing the Pittsburg office. The Kendall Lumber Company has increased its railroad equipment by the purchase of a new Shay locomotive. It is also planning to erect a new mill. On account of dry weather it has been forced to suspend all railroad logging at Crullin, Md.

BOSTON

Pope & Cottle, Chelsea, Mass., were visited by five September 21. All of the sheds with the exception of the stable and one house were destroyed. George F. Cobb, manager, has made plans to take care of the trade.

Andrew F. Leatherbee, the Boston retailer who made an assignment a few weeks ago, made an offer of settlement of 25 cents at the first meeting of the creditors. The latter asked for 35 cents. At the second meeting, held September 30, Mr. Leatherbee stated that he could not pay over 25 cents. The creditors then voted to have the assignee sell the property and settle all claims as fully as possible.

William E. Litchfield returned last week from a trip to his mill at North Vernon, Ind. This mill is operated under the name of Litchfield Bros. George A. Litchfield came East with his brother and will stay here for several weeks.

Howard C. Morse of Blacker & Shepard Company, and Walter Chamberlain, were the delegates from the Lumber Trade Club at the meeting in Philadelphia, September 24, to discuss the rules of the National Hardwood Lumber Association. William E. Litchfield was the delegate appointed by the Massachusetts Lumber Dealers' Association. The latter association feels that the rules are as good as could be expected and instructed their delegate to vote in favor of them. Mr. Litchfield did not attend, but sent a telegram showing the sentiment of his association.

F. W. Vetter, a large hardwood dealer, Buffalo, N. Y., has been visiting the trade in the East. He spent several days in Boston.

D. A. Lacey, salesman for Harry C. Philbrick, Boston, is in Maine on a hunting trip.

Horace M. Bickford of the H. M. Bickford Company, Boston, returned during the past week from a southern trip. Frank B. Witherbee of the same company returned from the South late in September.

J. D. Henderson of the Henderson Lumber Company, Sanford, Ala., was a visitor in the Boston market this week.

Mitchell & Hargis, Lawrence, Mass., have sent out notices announcing the formation of a Massachusetts corporation and the taking over of the assets and liabilities of the old co-partnership.

The brush handle factory of the F. B. Pierce Company, Keene, N. H., has been destroyed by fire.

Among the recent visitors in this market was Charles Este of the firm of Charles Este & Son, Philadelphia.

The New Hampshire Lumbermen's Association held a short business meeting at Manchester, N. H., September 18. A notice has been sent to all of its members asking that they send to the secretary the amount of timber cut and sawed by them for the years ending July 1, 1907, and 1908; also figures for the amount of lumber on sticks during these periods.

Marcus L. Foster, president and treasurer of the Stone & Foster Lumber Company, Worcester, Mass., has purchased the property occupied by this company. The estate was formerly owned by the late Lucius W. Pond.

Harry B. Ellis is now representing the James & Abbott Company as a salesman. He was formerly with the United Lumber Company.

A new department is to be added to the chair manufacturing business of the Heywood Brothers & Wakefield Company, Gardner, Mass. The company will manufacture school desks. In the past they have only supplied the iron fittings and have purchased the wooden parts from regular desk manufacturers.

BALTIMORE

The inspection rules of the National Hardwood Lumber Association continue to stir up agitation and unrest. It was thought that at the question would be definitely disposed of at the conference in Philadelphia, September 24, but the discussion there at times developed a decidedly acrimonious tone, and a split was averted only by the diplomacy of various lumbermen, who, realizing that matters had gone too far, poured oil on the troubled waters. The only delegate to attend from Baltimore was Richard W. Price of Price & Heald, who is a member of the special committee appointed by the Baltimore Lumber Exchange to deal with the matter. John J. Kidd of the Kidd & Buckingham Company, another member, was to have gone, but found it impossible to leave, and John L. Aleock, a third member, is out of town. President E. P. Gill of the exchange was asked to appoint a substitute but declined to do so, saying that was unnecessary, in the first place, and that no good could be accomplished in the second place, for the reason that the new member would be unfamiliar with the subject and of no use in a debate. As stated at the time, the hardwood men here are disposed to support the new inspection rules of the National Association, but the managing committee refrained from instructing the committee, out of courtesy to the eastern organizations, which had conducted an energetic fight and had been instrumental in obtaining various important concessions.

In view of this fact it was thought best to leave the committee a free hand, though it was felt that the national association had gone about as far as it could be expected to, and that the new revised rules embodied every vital point contended for. The delegates from New York and other cities, however, were not in a very conciliatory mood, but rather disposed to hold out flatly for the restoration of the rules of 1905. The first motion was the question of voting proxies, and Mr. Price, with others, threatened to bolt. He pointed out that it was a most extraordinary and unparliamentary proceedings to admit proxies voting on a deliberative question, proxies being designed solely for specific purposes. The threatened bolt was averted by the withdrawal of the motion to admit proxies, and by way of a compromise the conference voted to adjourn until a future date, the national association being meanwhile invited to name a committee to meet the opponents of the rules. Mr. Price is not at all sanguine as to the outcome of this move. He points out that such a committee would have no power to modify the national association rules, which can be done only at the annual meetings or at special meetings of the body itself, and that therefore the committee is not in a position to make overtures, but must stand by the rules as approved at Milwaukee. He will question the motion to invite the committee of the Lumber Exchange at the next meeting.

Baltimore has a new hardwood firm, this being Frank Price & Co., with offices in the Phoenix building, German street, near Charles. The members of the firm are Frank Price and Charles E. Stewart. Mr. Price has been with the firm of Price & Heald about ten years,

starting with that firm a long time ago and afterward becoming a member of the firm of Price & Welch, which dissolved. He has traveled extensively over West Virginia and the South, and is familiar with the hardwood business in all its divisions. He is a brother of Richard W. Price, the senior member of Price & Heald. Mr. Stewart is a young Baltimorean who has just begun to establish himself. The new firm opened offices last Monday.

Hoiver A. Koppel, a hardwood exporter and Danish vice-consul in this city, has returned from a trip to Europe, of about two months. In the course of which he visited his old home at Copenhagen and took in the English markets, among them London and Liverpool. He found business everywhere very quiet, with stocks big and the trade greatly congested. The general business conditions were anything but promising, and there was nothing to encourage the exporter.

George W. Green, ninety-two years old, a former lumberman, died September 28 at the home of his daughter, Mrs. Ogden A. Kirkland. Mr. Green was born in Concord and engaged in the lumber business in Delaware until about thirty years ago, when he came to Baltimore. He was a descendant of George Calvert, first Lord Baltimore.

John L. Aleock of the hardwood exporting firm of John L. Aleock & Co., Baltimore and Gay streets, has gone on a flying trip to England to look after some business matters there which seem to require his personal attention. His stay will be limited to the disposal of the problems that have come up.

The case of the strike question, which is to come up in Chicago this morning, is being looked upon with interest here, and has been mentioned after for the Baltimore Lumber Exchange by Lewis Dill, who has been following the discussions ever since the controversy arose, and E. P. Gill, president of the Lumber Exchange. Mr. Dill will go individually, and also as a member of the exchange.

The Eastern Land and Timber Corporation has been incorporated at Alexandria, Va., with a capital stock of \$5,000. Officers are: J. L. White, president, Washington, D. C.; D. C. Eager, vice-president, Alexandria, and Charles Martinson, secretary and treasurer, Washington, D. C.

S. V. Petersen, representing Laurence O. Petersen, a timber broker of Copenhagen, Denmark, and Hamburg, Germany, came over with Mr. Koppel, and after staying here several days, started on an extended tour of the States, going as far west as Chicago and then turning south to continue his travels, visiting New Orleans and various other sections in the South. Mr. Petersen is not a stranger in America. He spent several months here some time ago, and is familiar with conditions, besides speaking English fluently.

L. Palmer, who was formerly with the Mexican Steamship Company at New Orleans, has been chosen assistant secretary of the National Lumber Exporters' Association, with headquarters at New Orleans, to succeed J. O. Elmer. The selection was made by a special local committee and has been confirmed by the directors of the association.

Among visiting lumbermen here two weeks ago was H. G. Bradley of H. G. Bradley & Co., Abingdon, Va.

CHARLOTTE

A report from Wilmington, N. C., just received, states that Federal Judge Waddell has refused to set aside the sale by the receivers of the Tunis Lumber Company of the extensive James River timber lands and property of the company disposed of at private sale to the Cumberland Lumber Company of Baltimore, Md., for \$62,500.

A ten per cent bid has just been made by J. W. Harrison on the property of the Greensboro Table Company, bankrupt, of Greensboro, N. C., and accordingly the property will be resold October 19. Referee R. C. Hood recently sold the property to E. P. Wharton for \$11,300.

A very interesting suit has just been filed in Cumberland county Superior court, at Fayetteville, N. C., against J. Edward Cox, republican nominee for governor of North Carolina, the well-known hardwood manufacturer, by L. M. Andrews, who lives in Western Cumberland, for non-fulfillment of contract. The complaint alleges that Andrews contracted with Mr. Cox to manufacture for the latter a quantity of shuttle blocks according to specifications, and that although he has fulfilled his part of the contract in every particular, the defendant has failed to do the same. Andrews claims that after finishing the shuttle blocks according to specifications he has been unable to secure an inspection of them and is forced into court to protect his rights.

The Atlantic Coast Lumber Corporation, whose mills are located in the Georgetown, S. C., section, is now running full force. Three of this large concern's mills at Georgetown has just resumed operations, and a fourth will start up soon. Managers of this corporation report a good demand for upper grades. The corporation owns three large steamers and a barge, all of which are now busily engaged transporting their lumber to the northern markets. Other lumber mills in that section of South Carolina that were compelled to close down during the recent depression in the lumber business have resumed operations and report a steadily increasing demand for goods, with parallel increase in prices.

In the Florence section of South Carolina, where the prosperity of the people depends largely upon the lumber industry, and where the Atlantic Coast Line Railway does its principal business in hauling lumber, there is a decided improvement. Mills that had closed down are now running again full time.

The Williams-McKethan Lumber Company of Darlington, S. C., is now doing a normal business.

The Lumber Securities Association of New York is said to be making inquiries of the Chambers of Commerce of Washington, D. C., and other towns in this state relative to the advisability of locating a number of large lumber vulcanizing plants in North Carolina towns. The various town boards of trade, etc., are taking the matter up and it is likely a number of these large plants will be landed in the state.

Mr. Browder, manager of the new furniture factory recently established at Wadeboro, N. C., reports the concern is finding a ready market for its product. The company makes a fine grade of chairs.

Isaac Andrews and Y. J. Boozer of Spartanburg, S. C., having leased the property of J. C. Rigby at Spartanburg, opened up a lumber business in that city, October 1, under the name of the Carolina Manufacturing Company. Machinery is to be installed for the manufacture of builders' supplies. The managers have already contracted to supply a large amount of lumber to the contractors of the Carolina, Clinchfield and Ohio railroad, to be built soon.

A new lumber and woodworking concern for Spring Hope, N. C., is the Nash County Manufacturing Company, recently chartered at a capital of \$50,000. The principal incorporators are J. J. Sanders, M. H. Privett and others of Spring Hope.

R. E. Lee, who owned an interest and had been manager of the Walker-Mulligan Furniture Company of Durham, N. C., for several years, has sold his interest in and retired from the concern. W. G. Thomas of Washington, D. C., bought his interest and J. A. Hoffer of Washington is the new manager. Mr. Lee has gone into the insurance business, having connected himself with the Jefferson Standard Life of Raleigh, N. C.

The Automatic Bed Company of Greensboro, N. C., which recently began operating a factory in that city for the manufacture of automatic beds, is so roused with orders that night work will soon be started. The plant is now being stocked with an electric lighting system, and a force of hands will soon be put on to work until midnight. Other woodworking concerns of Greensboro report greatly improved business conditions.

There has been a decided building boom experienced in all the larger cities of the Carolinas. A prominent dealer in building supplies at Greenville, S. C., says August marked the biggest month's business for his concern, and that there is no let-up in building activities. In a recent interview he said: "In August we supplied twenty building contracts for houses ranging in cost from \$500 to \$5,000. Our contracts for the month will aggregate \$70,000 to \$80,000." This is the report for only one of Greenville's six large concerns engaged in the manufacture of builders' supplies. It is estimated these concerns have handled contracts aggregating \$300,000 during the past three months. The report for Columbia, S. C.; Greensboro, Winston-Salem, Asheville, Durham, N. C.; Spartanburg, S. C., and other leading cities of the two Carolinas, is equally encouraging. Here in Charlotte it is conservatively estimated that over one million dollars' worth of new buildings have been contracted for since the first of the year. The consequence of this revival in building activities is that lumbermen throughout this section have all the orders on their books they can handle, and few of them are suffering any longer from the effects of the recent panic. Prices on the different grades of hardwoods reflect heavy gains over quotations a few months ago, the increase on some grades ranging from \$1 to \$5 per thousand feet.

The improvement is again shown in the marked increase in shipping. An official of the Southern railway at Spartanburg recently said, in an interview: "Freight business on the Southern has almost doubled in the past few months. We are handling nearly twice as many cars, and every thing on this line is moving. I think the Norfolk & Western and other roads operating in this section are also doing a largely increased business."

A gentleman prominently connected with the industrial progress of Georgia speaks of the improvement in the lumber industry in that state: "Many sawmills in southern Georgia had to close down a year ago. Railroad construction had stopped. Building operations had ceased. Railroad crossings are piled high beside the roads. Today new lines of railway are being projected; new freight cars are being built; new railroads are under construction. The result is marked by a great increase in activity among the mills. One of the largest concerns in Georgia states it is now running on a basis of ten hours a day, with about eighty-five to ninety per cent full force, and reports constantly improving conditions. In the northern part of the state great syndicates are buying up virgin timber lands; tram roads and flumes are being built throughout that section."

The same story may be told of the changed conditions in the Carolinas, for equal depression was felt several months ago to that recounted in Georgia, and equally rapid strides have been made towards improvement in the lumber industry, which is one of the leading industries in both states. Lumbermen were hard hit by the panic, but they are living now in a new season of prosperity.

A very large new lumber plant has recently been established at Willow Springs, near Raleigh, N. C., on the Raleigh & Southport railway, and at the Durham & Southern railway.

H. Green, a gentleman prominently identified with the lumber business at Wilmington, N. C., states that millmen of that section have entered into an agreement that on and after October 15 they will pay \$7 and \$5 per thousand for pine

logs. For several months logs of this variety have been bringing \$6 and \$4 per thousand, so that log getters and land owners note with pleasure the increase. Increases in prices of other timber have been made recently.

CLEVELAND

Bids will be received November 5 for the completion of the interior of the new postoffice, on which \$2,250,000 has already been spent. The sum of \$775,000 was voted by Congress at its last session for the completion of the structure. This will include the marble and bronze work and the interior hardwood finishings in both flooring and furniture. The plans are available at Washington at the office of the supervising architect of the treasury department, J. J. Knox Taylor.

Guy and Ralph Gray of the Guy & Ralph Gray Lumber Company have been at the bedside of their father at Port Huron, as he is critically ill.

Among visitors to Cleveland the past week were R. I. Akers, president of the Akers Lumber Company, Lynchburg, Va., and T. T. Crenshaw of the Missouri Land and Lumber Company, Columbus, Ohio. Both report business as rapidly improving. Another visitor was Lee Bennett of the Cincinnati Poplar Company of Cincinnati.

H. C. Christy, general manager of the Advance Lumber Company, who was ill for several days, has recovered and is again at his desk. He reports that the company has closed a contract with a big furniture manufacturing concern for half a million feet of gum foot furniture purposes.

There will be no advance in lumber freight rates on the lake boats for some months yet. If present indications count for anything, many vessels are lying idle in the lake ports, with little prospect of getting cargoes until next spring. It is usual for rates to advance as the stormy season approaches.

E. G. Prasse of the Prasse Lumber Company and W. H. Teare of the Potter-Teare Company have returned from trips in Wisconsin and the West, where they were looking over the lumber fields. They report the ravages by forest fires as being very severe, and look for a big boost in lumber prices, particularly hardwoods, next year.

A new lumber firm at Hattiesburg, Miss., has claimed a Cleveland lumberman, W. B. Follansbee, for several years with the R. H. Jenks Company, has associated himself with the Follansbee Lumber Company of that place. With him are his brother, H. K. Follansbee, and H. S. Hagerty, the well-known hardwood man. The company has been incorporated with a capital of \$50,000. The new company will deal in all hardwoods. The northern sales agency will be at 506 Chamber of Commerce Detroit, Mich.

James A. Mahaffey of Akron, Ohio, a large furniture merchant, has filed a petition in bankruptcy at Cleveland in which he alleges that his liabilities reach \$21,365, while his assets are only \$2,864. Hard times and poor collections are blamed for the failure.

The suit brought by the Cleveland Lumber Company to restrain the city from enforcing that portion of the building code prohibiting the piling of lumber within 100 feet of any dwellings has been taken to the supreme court by the lumber company. The company declares the 100-foot rule to be unreasonable.

The Ohio Sash & Door Company, which for years has had its place of business on Merwin street in the flats, has fallen into line with several other big lumber concerns and has moved up town. A fine office building opened in the Stricklanger block on Prospect avenue just west of Ontario street. A unique feature of the office is a complete frame cot-

tage about 12x20 feet in size and one story high. Hardwood doors and finish and attractive furniture used throughout have produced a pretty effect. J. J. Wemple, secretary of the company, was one of those who accompanied the Wholesale Merchants' Board of the Chamber of Commerce through eastern towns and cities last week, calling on the trade in Erie, Ashtabula, Conneaut and other points. W. A. Cool, the well-known hardwood lumber man, was another dealer who accompanied the party. At Westfield, N. Y., Mr. Cool deserted the party and went to Rochester on business.

Will Martin of the Martin-Burriss Company, dealers in hardwoods, reports that trade continues fair, though no very large orders are being received. Factories using hardwoods continue to extend their operations, and the spring promises to see a great revival in trade. Mr. Martin says his company is in receipt of an especially fine lot of African mahogany logs which will be at once worked up for the trade.

C. M. Lewis, who has been traveling salesman for the Ohio Box Company, has become connected with the Smeed Box Company in the same capacity. Most of the Cleveland box concerns report business as being much more lively than thirty days ago.

Coopers are buying very little hardwood stock just now. A prohibition wave is sweeping Ohio. In two weeks twenty-two of the eighty-eight counties of the state have voted themselves dry. Many more are scheduled to follow the same course. As a result the brewery interests are badly frightened and the coopers are getting few orders. Slack cooperage is also quiet. Ohio coopers have been furnishing few barrels for apple-packing in New York state. Coopers have invaded the apple district and are selling slack barrels delivered for 35 cents. This sort of competition cannot be stood here, and the concerns are not trying to stand it.

COLUMBUS

Improvement continues in the local lumber trade and conditions are very satisfactory, compared to what they were prior to September 1. The Columbus lumber companies say that new orders are being received with better regularity and that values are well maintained throughout the list. It is generally admitted that the uncertainty of the outcome of the election is hindering business somewhat in check, but after the choice for the president has been named it is believed that financiers will then know what the policy of the government will be during the next four years, and they can then make their plans accordingly. With the presidential election so near at hand, the local lumber trade is showing excellent form, and no complaints are heard from any source.

At the offices of the Kile-Morgan Lumber Company it was announced this week that the company will start its mill at Earle, Ark., about October 15, and expects to run full time. This company will give its attention to the manufacture of hardwoods, of which timber it has a large tract in the Arkansas district. S. D. Morgan of this company left Tuesday evening for an extended trip through the timber districts of West Virginia for the purpose of looking over the lumber business in that locality and visiting the mills of the company, which are now in operation. The Kile-Morgan company reports business as brisk and conditions very satisfactory.

H. W. Putnam, manager of the General Lumber Company, returned several days ago from Huntington, W. Va., where he made a thorough investigation of the lumber trade. He says that there is a decidedly good feel-

ing in the trade at that place and business is in excellent shape. His company has several mills in that state and a part of them are running full time. Stocks are fairly liberal and the outlook favors good business at that place up to the close of the year.

The Schleyer Lumber Company reports business very good and the outlook favorable to increased activity. This company started business about September 1 and has enjoyed a good trade since that time.

The M. A. Hayward Lumber Company is doing a good business in oak flooring and has an excellent trade in poplar. This company has no fault to find with the trade, and expects to see better times in the near future, or as soon as the election is over.

Mr. Ely of the American Column & Lumber Company of Albans, W. Va., has decided to make his headquarters at Columbus and will bring his family to this city in the near future.

The C. T. Nelson Lumber Company reports trade as fair but nothing sensational in the situation. The company expects to see gradual improvement in the trade as soon as the election is over.

The W. M. Ritter Lumber Company continues to receive a good volume of orders, and the total for September was very satisfactory.

According to several of the local companies, the shorts have about covered their orders in yellow pine, and as a result the market has been rather quiet during the past week. It is believed by some that the market advanced too rapidly and that a slight reaction is due before the close of the year. Building operations are showing improvement, and work on a residence costing \$100,000 was begun this week. Several other large structures are being erected, and work on new homes seems to be fairly plentiful. It seems as if many are disposed to take advantage of the low cost of material and will build this fall instead of waiting until next spring, when prices of material will likely be higher than they are now.

For some time retail lumber dealers have been complaining that falling prices have been advancing and their list has remained unchanged for many months. Among some of the dealers there has been vigorous competition for new business, and that has helped to keep retail values down.

CINCINNATI

The regular monthly meeting of the Cincinnati Lumbermen's Club was held October 5 at the Stage Cafe, the attendance being the largest of many months. The meeting proved a great surprise to many of the members, for something they had never thought of turned up. The inspection rules of 1905 have long been the topic of conversation among the lumber dealers here and their efforts of the past to have the 1905 rules readopted have proved futile. At the inspection conference held at Philadelphia nothing definite was done in favor of the readoption of the rules, and now the local dealers are going to use more drastic measures to see if their task cannot be accomplished. President B. F. Dulweber of the club attended the meeting held at Philadelphia September 29, and submitted his report to the members, after which a lively discussion took place and after much comment William A. Bennett moved that the secretary issue letters to all dealers of other cities favoring the 1905 inspection rules to attend a special meeting to be held here on November 19. This was overwhelmingly received, and the meeting will be held here on date specified. There was also some talk of the local members withdrawing from the National Hardware Association in a body. It need be, and they will get other large cities interested in the movement and possibly form an entirely new organization. The Cin-

nati dealers have long been trying to get a return of the 1905 inspection rules and will now use every means to have them restored.

Letters will be mailed to all cities for the meeting of November 19, and a general big time is expected. A committee will be appointed to make arrangements to accommodate a large crowd, and there seems a strong possibility of a new organization being formed.

The banquet took place at 6:30 p. m. at the Stage Cafe and was of the most delightful kind. Congressman Herman P. Goebel addressed the members on "Politics and Merchants' Marine." Perry Brenner, J. A. Bolser, and Charles Dues, A. B. Ideson, C. H. Pease, C. J. Walker, W. A. Bennett, A. Howard, Edward Barber, P. E. Radina, A. E. Hart, J. A. Van Osdal, E. J. Walker, S. E. Giffen, R. L. Gilbert, E. J. Thuman, J. H. Wehry, George W. Hand, H. K. Dickerson, B. A. Klpp, W. A. Earle, T. P. Scott, C. F. Shlets, P. Richardson, H. J. Pfeister, W. J. Eckman, W. S. Sterrett and W. C. Gabeneshch.

President R. F. Dulweber then heard reports from the various committees present. A communication from the widow of the late M. B. Farrin was read thanking the members for their kindness in her bereavement.

The following new concerns were admitted to membership: Perry Radin Lumber Company, J. M. Kennedy & Co. Ltd., and the William H. Fryer Lumber Company.

The next monthly meeting of the Lumbermen's Club will be held on Tuesday, when an effort will be made to receive the election returns. Among those present were: Hon. H. P. Goebel, B. F. Dulweber, W. E. Talbert, P. V. Shore, A. Heider, Joseph Buckley, George M. Morgan, Joseph H. McEntee, J. D. Serena, H. K. Willing, J. S. Zollar, J. Watt Graham, Ben Bramlage, Perry Brenner, J. A. Bolser, Charles Dues, A. B. Ideson, C. H. Pease, C. J. Walker, W. A. Bennett, A. Howard, Edward Barber, P. E. Radina, A. E. Hart, J. A. Van Osdal, E. J. Walker, S. E. Giffen, R. L. Gilbert, E. J. Thuman, J. H. Wehry, George W. Hand, H. K. Dickerson, B. A. Klpp, W. A. Earle, T. P. Scott, C. F. Shlets, P. Richardson, H. J. Pfeister, W. J. Eckman, W. S. Sterrett and W. C. Gabeneshch.

Mr. and Mrs. Henry Fredelake celebrated their fiftieth wedding anniversary at their residence at 1023 Fifth street. Mr. Fredelake has been connected with the Wilborg & Hanna Company for a number of years. He arrived in Cincinnati about fifty years ago and has lived here ever since.

The local members of the Business Men's Club and Cincinnati Chamber of Commerce left in a special car for New Richmond, Ind., to attend the Manufacturers' Day at that place. The affair proved a most successful one. The local delegation was led by a brass band and made a very good impression. The town was beautifully decorated.

The Buckeye Handle & Lumber Company of New Bremen, O., increased its capital stock from \$10,000 to \$35,000.

The M. B. Farrin Lumber Company has elected H. J. Pfeister president; W. J. Eckman, vice-president; A. L. Metcalf, secretary and treasurer.

The quarterly dividend of one and one-half per cent on the preferred stock of the Globe-Wernicke Company has been declared, payable October 15 to holders of record of September 30.

The Greenwood Street Lumber Company of Marion, O., with a capital stock of \$50,000, was incorporated last week by J. A. Schroeter, W. W. Wilson, E. A. Issleb, Charles A. Schroeter and D. R. Crislinger.

The regular quarterly dividend of one and one-half per cent has been declared on the preferred stock of the New Liver Lumber Company. The Pfau Manufacturing Company of Hunt street will build a \$100,000 plant in Norwood next year. The present lease on the quarters does not expire until next July and until that time they will be located on Hunt street.

The Middle Lumber & Tile Company of Cincinnati, with a capital stock of \$10,000, has been incorporated by W. S. Sandifer, P. N. Simon, J. P. Green, I. B. Bullock and Fred Frazee.

"Both pine and hardwoods are doing a great deal better than months ago," said W. W. Stone,

of the T. B. Stone Lumber Company. "We have been doing a much better business so far this month, and last month was the best of the year. I have just returned from a business trip East, where I found things rather quiet. The middle and extreme western sections, however, are doing a fair volume of business, but not as good as that of the Queen City merchants."

J. W. Darling of the J. W. Darling Lumber Company left this week for a trip to the South.

R. L. Gilbert of the J. W. Darling Lumber Company has returned from a business trip North. He said that the local trade with them was very good. In fact it compared very favorably with that of last year, although the prices realized were not as good. The carriage and implement manufacturers are getting into the market for larger quantities of lumber, but the box manufacturers have restricted their demands to a certain extent.

The month of September in the hardwood trade was the best on record so far this year and the figures just issued by the Cincinnati Chamber of Commerce show that trade has almost equaled that of the year previous. The past month exceeded the month of August by nearly 200 cars, and that speaks fairly well for the situation. The receipts of lumber last month were 5,615 cars, as compared with 6,075 cars for the same month of the year previous. The shipments last month numbered 4,280 cars, while the year previous 4,866 cars were shipped. The month of October, it is generally thought will equal and possibly exceed September.

J. Pease of the Holloway-Pease Lumber Company of Johnson City, Tenn., was the visitor among the local lumber dealers during the last fortnight.

The baseball contest between the Cincinnati lumbermen and the furniture dealers resulted in a glorious victory for the lumbermen—score 17 to 2. It was a good game on the lumbermen's part but they seemed far too aggressive for the old timers. It is possible that the baseball games will be an annual affair with the Lumbermen's Club, and 4,800 fans will be out on team tents. George M. Morgan and L. W. Radina had charge of the lumber boys.

L. W. Radina of the L. W. Radina Lumber Company states that trade in poplar and oak showed a much better tone during the past month. "As a general rule, I think the best of the year in trade is yet to come," he said.

G. M. Morgann of the Nicola, Stone & Meyers Company reports trade with them is about the same as that of a month ago.

Thomas J. Moffett of the Maley, Thompson & Moffett Company says trade seems to be getting better in all grades of hardwoods, although the election still is a disturbing factor. Furniture dealers are buying mahogany more liberally, but prices have not changed materially.

Harry A. Freiberg of the Freiberg Lumber Company states he found trade picking up considerable. The demand for mahogany and other high priced woods has much bettered a plan a month ago, due to the more liberal purchases of the furniture dealers, interior finishers and planing mill men. The mill of the company will be started up within the next month.

W. B. Dunn of the Body Lumber Company of Abingdon, Va., was a visitor among the trade during the past week.

Oscar Tretschelke of Joseph Ross & Co., Philadelphia, Pa., was registered in the Queen City during the past ten days.

J. A. Streck of the McLellan Lumber Company, Buffalo, canvassed the town for trade for his concern during the past week.

W. E. Johns of the William H. Perry Lumber Company has returned from a business trip to the mill of the company at Alabama. He said things in the South were getting better and that within a month he expected to resume operations with their mill. W. Wolfe of the company reports the local trade is better.

Max Kosce of the K. and P. Lumber Company says the foreign trade is much better for quar-

tered oak and the better grades of plain white oak and walnut. The mills of the company are all running and the outlook for trade is very good.

W. B. Hays of the Wiborg & Hanna Company says the month of September was the best on record of the year with them. The demand for gum, cypress and poplar has been much better and prices realized were very firm. The demand is on the road and is securing much trade. W. B. Hays also has just returned from a business trip to Chicago.

E. O. Robinson of Mobraj & Robinson has returned from a business trip to the South.

H. D. Miehle of the H. D. Miehle Lumber Company reports trade as much improved, with prices firm. O. D. Hagemoer, also of this company, returned from a western business trip. W. Coburn of Richey, Halsted & Quick says that trade with them is only fair.

J. A. Bolser of the Blackburn & Bolser Company says trade with them is very good and prices firm.

W. E. Delaney of the Kentucky Lumber Company says that trade with them is fair, but that he does not expect to see any real change until about February, when he believes conditions will be more settled. He left this week for a business trip to the mill at Williamsburg, Ky.

Ferd. Brenner of the Ferd. Brenner Lumber Company has just returned from a business trip to Norfolk, Va. He said that a slight improvement was noted in the local trade.

L. G. Banning and a party of friends have returned from an auto jaunt to Cleveland. The trip was made without a breakdown.

Charles A. Ault, one of the founders of the Thompson, Ault & Co. and later of the Ault Woodenshire Company, died at his residence in Wyoming after a lingering illness. He was well known in business circles.

Thomas J. Morrison, a trustee of the Southern railroad, died suddenly while attending the meeting of the Spring Grove cemetery lot holders, October 5.

William A. Bennett of Bennett & Witte has returned from a business trip to New York.

TOLEDO

The so-called Toledo lumber trust case has broken out in the present political campaign and promise to become overshadowing issues before election day. Prosecutor L. W. Wachenheimer is a candidate for reelection, and Judge Morris, who became notorious through his bitter arraignment of the lumber dealers at the time of sentence, also desires to succeed himself on the common pleas bench. Bitter opposition has cropped out and a battle royal is in progress as a result of the trust busting record of these officials. What the final outcome will be is hard to conjecture, but that former records will swing many votes against the aspirants for the people's favor is thought certain.

A deal has been closed whereby the Chatfield Lumber Company of Chatfield, O., will remove its plant to Bucyrus, O. The company employs a large number of men and manufacture wheel stock. Work is already under way on the new buildings and the removal will be made as soon as possible.

The four-year-old daughter of J. W. Parker, a timber buyer of Delaware, O., was recently burned to death as a result of her clothing catching fire from a gas grate. In attempting to extinguish the flames, the mother of the child was also badly burned.

A fire of unknown origin recently caused damage amounting to \$1,000 at the planing mill and carpenter shop of Charles Culbertson, Dayton, O. The two-story frame structure was a complete loss. It was covered by insurance.

The Fosteria Stave & Barrel Company of Fosteria, O., has been consolidated with the Falls Lumber Company of Durham, N. C. Charles

A. Gribble, president of the concern, has resigned his position as cashier of the Commercial Bank & Savings Company, to remove with his family to North Carolina, where he will become president of the consolidated companies. As a token of esteem Mr. Gribble was presented with a solid gold watch by the Presbyterian congregation, he having been connected with the choir for the past twenty-four years.

INDIANAPOLIS

Henry C. Murphy, bookkeeper for the E. H. Eldridge Lumber Company, has returned from a vacation trip to Michigan.

W. W. Vawter, representing the Northwestern Lumber Company and the Port Bakely Mill Company of Minneapolis, called on the local trade a few days ago.

The Indianapolis Lumbermen's Club will not have a meeting until after the election next month, due to the fact that many of the members are interested in politics.

Building permits during the first eight months of this year in Indianapolis amounted to \$1,859,192.50, as compared with \$5,230,987.30 for the same period last year.

The Mainland Manufacturing Company, a local hardwood concern, has just sold a strip of ground at Twenty-fifth street and the Mason railroad tracks, to the Brannum-Keene Lumber Company, who will establish a new yard and planing mill.

John Shurman, driver for the Igrigg Lumber Company, was instantly killed a few days ago when a load of lumber upon which he was riding was struck by a Big Four passenger train at Keystone avenue.

The planing mill and part of the lumber yard of A. N. Holloway at Cloverdale were destroyed by fire October 3, with a loss of \$5,000, upon which there was only \$1,000 insurance.

At the special session of the Indiana legislature, which adjourned September 27, the contract of Pulse & Porter, lumber dealers of Greensburg, for building the new "Southeaster Hospital for the Insane," was legalized.

A loss of about \$3,000 was caused in the planing mill of the W. F. Jungelaus Company on Massachusetts avenue at the time of several buildings adjoining were burned.

The Michigan City Sash & Door Company and the A. R. Colborn Company of Michigan City have been combined and the business will be continued under the former name. The company will reorganize with \$100,000 capital.

Louis G. Buddenbaum of the Buddenbaum Lumber Company has joined the Columbia team in the Indianapolis bowling league for the coming season. He is regarded as one of the best players in the city. In the report that Maley, Young & Cutsinger will build a new hardwood mill at Jasper at an early date to replace the one destroyed by fire some months ago. At the present time the company is shipping logs from Jasper to its Evansville mill.

J. A. Thompson of Ealnburn, a member of the firm of Thompson, Thayer & McCowan of Evansville, is spending a few days in the latter city looking after his business interests.

The pattern department of the Studebaker Brothers Manufacturing Company at South Bend was badly damaged by fire on October 2. The loss was about \$6,000.

The hardwood mill and handle factory of James Horn at Hillsboro was burned on October 5. The fire started in the engine room and the plant was burned to the ground with a loss of about \$8,000. It will probably be rebuilt.

A list of corporations paying taxes on more than \$10,000 worth of property has just been compiled by County Treasurer E. F. Robison.

Included in the list are the following identified with the hardwood industry: Advance Veneer & Lumber Company, \$17,540; F. M. Bachman Company, \$40,000; Balke & Kraus Company, \$66,200; Eaglesfield Stewart Company, \$10,500; Indiana Veneer & Lumber Company, \$58,100; Long-Knight Lumber Company, \$18,000; Mainland Manufacturing Company, \$20,000; National Veneer & Lumber Company, \$16,680; Talge Lumber Company, \$37,800.

The Indianapolis freight bureau is preparing to make a fight against the railroads for a reduction of freight rates. An investigation reveals that some of the largest manufacturing concerns are being driven from the city because of the excessive rates, and the Indianapolis board of trade has contributed \$2,000 to aid in the fight. Among the members of the Indianapolis freight bureau are: Standard Dry Kiln Company, National Dry Kiln Company, Indianapolis Handle & Manufacturing Company, Interior Hardwood Company, Indianapolis Chair & Furniture Company, Western Furniture Company, Emrich Furniture Company, Adams & Raymond and the Cabinet Makers' Union.

EVANSVILLE

T. J. Christian, sales manager for Maley & Wertz, South Bend, Ind., is in the city for a few days. Mr. Christian is very optimistic and is well pleased with business of the past two months.

W. M. Weston of W. M. Weston Company, Boston, Mass., was a business visitor here last week. Mr. Weston has many warm friends in this market and there is usually something doing when he visits the trade here.

W. H. Cornell of the Nichols & Cox Lumber Company, Grand Rapids, Mich., was in the city recently on business. While here Mr. Cornell called on several of the lumbermen in view of buying some lumber.

C. E. Davis, representing the Perkins Lumber Company of Grand Rapids, Mich., was in the city this week calling on the many manufacturers of this city and looking after business interests of his firm.

Henry Stolz of the Stolz-Schmitt Furniture Company, formerly the Stolz Furniture Company, passed away at his home at Kratzville, a suburb, on October 5. Mr. Stolz retired from active business about thirteen years ago and has since lived the life of a farmer at his home in Kratzville.

Young & Cutsinger recently received a consignment of twenty-eight cars of logs in one train. They have a big stock of fire logs on their yard.

MEMPHIS

The production of hardwood lumber in the Memphis territory is increasing and is now larger by considerable odds than a month ago. Some of the mills in Memphis proper have resumed operations within this period, while many of those in the territory tributary to Memphis have taken a similar course. Inquiries today among prominent manufacturers and wholesalers who have been over this territory recently elicited the information that probably not more than fifty per cent of the productive capacity of the Memphis hardwood lumber district is engaged. More mills are making preparations to resume at an early date and probably by the end of this month, a considerably better showing with respect to production will be made.

The L. H. Gage Lumber Company has resumed operations at its band mill at Earle, Ark. The company has been logging for some time preparatory to resumption and it is supplied with a liberal quantity of timber.

Russe & Burgess, who closed down their mill here for a portion of the summer, resumed op-

erations about the first of October and propose to continue running steadily for an indefinite period.

The Three States Lumber Company has closed down its cypress mill in Louisiana and has also ceased operations at Hollywood, Miss., where it has a hardwood mill. It is not doing anything at its big mill at Burdette, Ark., with the exception of getting out timber on a tract of land which contains about one million feet. The present intention of the company is to resume at Burdette only for the purpose of cutting up this timber. The management does not believe that the improvement in hardwood lumber conditions has been extensive enough yet to justify operations on an extended scale.

The Neal-Dolph Lumber Company has not yet resumed at Greenville, Miss., but Mr. Dolph, secretary and general manager, is authority for the statement that such action will be taken in the near future.

It is understood that C. L. Willey will begin operations in North Memphis in a short time, but so far no definite step in this direction has been taken. The McLean Hardwood Lumber Company is also scheduled to begin soon and there are other companies in this city which expect to put their plants to running again in a very short time.

The movement of cotton is on a very liberal scale and is taxing the capacity of the railroads. Lumber traffic is lighter than usual for this time of the year and, because of less business, there are practically no complaints from lumber interests regarding shortage of cars. The railroads are taxing their utmost capacity at their machine shops in the hope of keeping their cars and locomotives in sufficient repair to enable them to take care of the large volume of general traffic now offering.

George D. Burgess of Russe & Burgess, who spent a greater portion of September at Atlantic City, New York and other eastern points, has returned to Memphis and is now cooperating with Mr. Russe in the management of the business of the firm.

The various committees which looked after different features of the ball game between lumbermen of Memphis and Nashville, played here August 22, have not yet completed their reports and it is still impossible to determine the net proceeds of the game. These, it will be recalled, are to be applied to the Memphis Foundlings' Home.

The Three States Lumber Company is authority for the statement that there is a considerable increase in the demand for hardwood lumber and for the additional statement that in some lines there is a very pronounced scarcity. It points out the active call for high-grade plain and quarter-sawn oak and lays particular stress upon the lax grades of cottonwood. The company believes the production of cottonwood has been curtailed more than any other item on the hardwood list and it further points out that most of the producers of cottonwood lumber are also consumers of their lower grades, making use of them in their box factories. It believes that there will be a marked shortage in the supply throughout the fall and winter and it also declares its conviction that there will be a decided improvement in the general hardwood lumber business as soon as the national election is a thing of the past.

A special train consisting of seven Pullman coaches left over the Illinois Central Monday evening for Chicago, bearing about seventy-five delegates from Memphis and a number from Arkansas, Mississippi and Tennessee to the annual convention of the Deep Waterways Association. It was one of the finest trains that ever left this city to carry delegates to a gathering of this character. The Memphis delegation was headed by S. M. Neely, third vice-president of the association, and James S. Warren, member of the board of governors. Among the delegates were the following lumbermen: E. E.

Goodlander of the Goodlander-Robertson Lumber Company; W. R. Barksdale of the Barksdale-Kellogg Lumber Company; J. W. Thompson of the J. W. Thompson Lumber Company; C. J. Wagner, member of a prominent contracting firm, and P. R. Friedel, one of the prominent retail lumber yard dealers here. It is safe to state that no objection to attending the convention in Chicago will be more enthusiastic in its support of the measures advocated than the Memphis one.

J. P. Price, forty-five years old, and a prominent sawmill operator of Beebe, Ark., was found dead in the Fransliol hotel here a few mornings ago, in company with a friend of his from Arkansas. The gentlemen took rooms at that hotel and it is supposed they blew out the gas instead of turning it out and that they were asphyxiated. It has been shown that neither of the gentlemen had been drinking. They came to Memphis to attend the Tri-State Fair. J. A. Phelps, the companion, was a well-to-do merchant of El Paso, Ark. The bodies were shipped several days ago to the home of the deceased.

The stockholders of the Mississippi Western railroad have just held a meeting at Meridian, Miss., at which directors and officers were elected and at which plans for the immediate building of the road were effected. It will run from Meridian to Natchez, Miss., and will serve a country rich in timber and agricultural resources. The capital stock is \$2,000,000 and the treasurer and secretary have been authorized to issue \$500,000 in bonds immediately. Subscriptions have been liberal and there is sufficient money in the treasury to begin building at once. K. Threefoot of Meridian is president, and the other officers are prominent men of that city and section. It is the intention of these gentlemen to push this line through to as rapid completion as possible.

F. E. Stonebraker, one of the best known lumbermen of this section, has recently returned from abroad and announces that he has accepted the American agency of Brants, Franck & Co. Mr. Stonebraker will not let his new work interfere with the other enterprises in which he is interested. He is president and general manager of the Crittenden Railway Company, which operates a line of railway from Eads to Hart, Ark., connecting the Iron Mountain and Rock Island. He is also interested in several other enterprises in the Memphis territory. He will maintain his headquarters in the Seimlar building, this city. Mr. Stonebraker only recently sold out his interest in the Lansing Wheelbarrow Company, for whom he was general southern manager. Prior to his investment in that company he was vice-president and general manager of the Watson office of the Iron Mountain Lumber Company. Until he sold out his interest in that company he had been engaged steadily in the sawmill business for twenty years. He is receiving the congratulations of his friends upon the splendid foreign connection he has made.

A. G. Fritchey, who was some time ago connected with the W. M. Ritter Lumber Company, Columbus, O., has been appointed sales manager of the Lamb-Fish Lumber Company of this city. Mr. Fritchey succeeds Earle Sweet, who resigned a short time ago and who, it is understood, will engage in business for himself. The Lamb-Fish Lumber Company has made several additions to its staff lately, including J. V. Hill, formerly chief inspector of the Hardwood Manufacturers' Association of the United States, and John Dwyer, for many years assistant general freight agent of the Illinois Central at Memphis.

Building operations in this city were on an active scale and the report of the building commission shows that the total value of permits issued for the month was \$23,400 in excess of the corresponding period last year. The total was \$363,685. This is the third month this year which has shown an increase over the corresponding one last season, and it may be noted that the gain is cumulative. The increase for

September was larger than that for August, while that for August exceeded that for July. Plans and specifications have been drawn for a number of large buildings for October and the outlook is for a new record for the current month. Building is not only active in Memphis proper but throughout the entire Memphis territory, with the result that there is a decided increase in the volume of business in building material of every kind.

A conference was recently held here between the Memphis Freight Bureau, prominent shippers of lumber, cotton and other commodities, and officials of the St. Louis, Iron Mountain & Southern Railway. Shippers protested against the alleged discrimination in favor of Little Rock, Pine Bluff, Helena and other Arkansas points, as against Memphis, and asked that the officials so adjust rates that there would be no further cause for complaint on this score. There was some talk of threatening the company with forfeiture of its franchise here on the ground of alleged discrimination, but the officials assure the shippers that rates will be equitably adjusted and that there will be no further cause for criticism of the action of the road with respect to Memphis. The rates complained of were announced by the Iron Mountain September 1 and covered the tariff on shipments of lumber and other commodities into this city.

The Gulf & Magnolia Railroad Company has recently been granted a charter under the laws of Arkansas. The capital stock is \$1,000,000, of this amount \$100,000 has been subscribed. The company is formed for the purpose of building an extension thirty-five miles in length from Magnolia to Hope, Ark. It is practically a subsidiary corporation of the Louisiana & Arkansas Railroad Company, which operates a line of railway from Natchitoches, La., to Magnolia, Ark. The road will run through a splendid timber section and will afford excellent facilities for its development.

The Cincinnati Hardwood Lumber Company, according to advice received here, has purchased 2,280 acres of hardwood and pine timber land near Green Forest, Ark. It is further stated that it is the intention of the purchasers to establish mills for the development of this property.

The Frisco System has recently resumed the enlargement of its yard and terminal facilities here. This work which began last year and was suspended during the financial depression. It is the intention of the road to complete it as quickly as possible. When all improvements are finished the road will have practically double the facilities formerly enjoyed at this point. The Frisco System has been badly handicapped here for some years because of inadequate terminal facilities and shippers of lumber are particularly pleased that the management is correcting this trouble.

The Springfield Cooperage & Lumber Company, which has its headquarters at Springfield, Mo., but which operates two mills, one at Truman and the other at Corning, Ark., has opened sales offices in Memphis. These are in charge of I. B. Brawley and are located in the Randolph building. This company is controlled by B. F. Hobart and son.

It is semi-officially announced that the Warsaw Southern Lumber Company will immediately proceed with the erection of a large double band mill at Laurel, Miss. The company owns about 100,000 acres of yellow pine timber land near Laurel and proposes to begin the development of its resources there as soon as possible. The company asked for a site for its plant and a committee of citizens raised \$21,000, purchased the property and turned over the deed to the company. The latter has now authorized a committee to draw on it for this amount, stating that when it asked for the bonus it was simply testing the spirit of the citizens of that place.

A heading factory and two abingle mills will be started at an early date by the Freeman

Lumber Company near Gleason, Ark. This announcement is made by H. H. Beckman, secretary and general manager. The company will give employment to about 400 men. The company is already operating its hardwood mill at that point.

Judge Duffie, according to information received here, has succeeded J. C. Ong as president and general manager of the Ong Chair Company of Malvern, Ark. The plant is now running on full time and giving employment to more than 100 persons. It has recently made a large purchase of gum to be used in the manufacture of its output.

The Hickers Lumber & Coal Company, DeQueen, Ark., has resumed operations at its big hardwood mill at that point, which had been closed down for some time as a result of the financial depression. It is understood that the company has gotten out considerable timber and that it proposes to continue in steady operation.

The Gates Lumber Company of Wilmar, Ark., has also recently resumed on full time. The company has been running on a seven-hour schedule for nearly a year. Increase in volume of business under way is responsible for the decision to enlarge the output.

NASHVILLE

Sharpe & Horn, well-known Nashville real estate men and timber dealers, have disposed of valuable holdings in Alabama timber lands to the newly organized Cherokee Lumber Company of Nashville. The tract embraces several thousand acres of valuable oak and poplar timber located in Colbert county, Alabama. The Cherokee Lumber Company will at once set about developing the tract and a big sawmill will be erected in the near future.

Andrew H. Gennett, formerly of Nashville, but who moved to Seneca, S. C., several years ago to engage in the lumber business with his brother Nat, is visiting friends and relatives here now. The Messrs. Gennett have been unusually successful in their venture. Starting out with small capital and small holdings, they have built up a big business.

A special from Bristol, Tenn., announces that a large tract of timber in that section has recently been sold to eastern capitalists for \$15 an acre. This same property, the dispatch says, was on the market a year ago at \$10 an acre.

Fairison county has recently been treated to a visitation somewhat akin to night riders. The trouble was at McLain & Russell's big stove mill near Bellevue, about fifteen miles west of Nashville. On two nights, shots were fired into the camp from the surrounding darkness and the fusillade was also accompanied by showers of rocks. Sheriff Sam Borum was summoned from the city, but was unable to locate any of the marauders. The tract was occupied by a number of timber cutters. Fortunately no one was injured. No cause for the attack has been learned.

One of the most important steps ever begun in the way of protecting the timber resources of the state of Tennessee, has originated at Dickson, Tenn., at a meeting of the Dickson County Farmers' Association. The association unanimously adopted resolutions to memorialize the next legislature, who made the first Monday in January, to enact a general forestry law that will afford sufficient protection to the forests of the state against the present rate of timber slaughter that threatens soon to lay waste the state's forests. The leaders in the movement declare that the farmers of the county have awakened to the alarming fact that at the present price of lumber, which is continually advancing, they can not make necessary improvements on the farm except at extravagant and profitless expenditures, and that if conditions continue as they are, it will soon be out of the question for the farmer to at-

tempt to build. The farmers declare they are now paying timber dealers from \$20 to \$30 a thousand for what was a few years ago only ordinary culls. The Dickson county farmers believe that by taking this advance step they will win the hearty cooperation of other counties in this, a most laudable and necessary movement.

E. J. Faber of Nuremberg, Germany, only son of Johann Faber, the noted Australian pencil manufacturer, was a visitor to Nashville during the past week. Mr. Faber has traveled extensively through America and is now making a tour through the cedar regions, and at the same time making investigations concerning other woods that might be adapted to the manufacture of pencils. He expresses regret over the waste the early settlers committed in handling their cedar. He declares that if the cedar wasted by our forefathers would today be worth millions of dollars. The Johann Faber Pencil Works are just now engaged in building their first American factory at Newark, N. J. Young Faber may be placed in charge of this factory. While stopping in Nashville he was accompanied by W. H. Parrish of the Gulf Red Cedar Company.

A special from Columbia, Tenn., announces that a larger mill than its predecessor is to be erected on the site recently occupied by the Riverside planing mills, destroyed by fire two months ago. The building and machinery will cost about \$12,000, and the plant will also include a chair factory. The plant will begin operations about January 1.

Progress that is quite satisfactory regarding the work of improving the Cumberland river with a view of making it navigable all the year round. The report is that work has been pushed both up and down the stream during the low water of the summer. President Bryan suggests that the best way to stimulate interest in the matter of improving this waterway is to hold annual conventions. Steps are now under way to hold a convention for the lower river in the near future, probably at Clarksville. The great bulk of the lumber that reaches Nashville comes down Cumberland river in rafts.

The middle span over the new Cumberland river bridge at Nashville has been swung, most of the false work has been taken out and traffic is now possible up the river. It will be possible now to get lumber through to points below the bridge when the first tide materializes.

A special from Knoxville announces the death there of W. E. Senbrook, a tie and lumber man inpector of the Southern Railway. He got off one train and stepped in front of another. The Nashville Builders' Exchange has been organized here with H. W. Burtoft as president; T. L. Herbert, first vice-president; R. T. Creighton, second vice-president; John Oman Jr., treasurer, and Haynes McFadden, secretary.

An incendiary act that is a little out of the ordinary is reported from Wartburg, Tenn. Riley Woods of that place left a load of lumber by the roadside while hauling it in to the plant of Sexton Bros. from Greasy Creek. During the night some one set fire to the wagon and burned it, together with its 1,100 feet of timber.

A special from Martin, Tenn., announces an important lumber deal as having been consummated at that place. The consolidation of the Martin Lumber Company and the J. A. Vowell Lumber Company is announced. The consolidated concern is said to be an unusually strong one, both financially and from the standpoint of equipment.

BRISTOL

Attorneys S. C. Williams, J. N. Powell, C. B. Allen and J. Fred Johnson, who went to New

York last week to confer with the creditors of the several lumber corporations headed by Mr. Allen, for which receivers were appointed a few days ago, returned this week and as a result of an agreement entered into by the majority of the creditors, the plants of the Allen Panel Company, Standard Oak and Veneer Company and the Interior Hardwood Company at Johnson City, Tenn., were again put in operation.

It was the desire of the majority of the creditors to have the plants continue operation if possible, and through the efforts of Mr. Allen and J. Fred Johnson, the latter representing the City National bank of Johnson City, one of the creditors, the agreement was effected and the mills again started. It is said that the companies have been doing a profitable business, even up to the time of the appointment of receivers, which was due to entanglements with eastern interests and following which a receiver was appointed for the well-known hardwood firm of William E. Epigroves & Bro., of Brooklyn, N. Y., and Johnson City, Tenn. There is much gratification among the lumbermen here at the outcome.

Adams, Payne & Gleeves of Lynchburg have just purchased all the property, including mills, yards, etc., of the Magic City Lumber Company, situated at Ronoke, Va. The deal is a very important one and includes a large amount of property and will give the new concern added facilities for the conduct of its large business. The transaction is one of the most important that has been recorded in this section for some time. The mills will continue to be operated as heretofore.

The Carolina, Clinchfield & Ohio railroad will be completed as soon as possible and will open up a vast area of timber land that has hitherto not been accessible. Norman B. Ream of Chicago, a well-known capitalist who is associated with Thomas F. Ryan in the \$100,000,000 syndicate that has purchased the timber and coal lands and building the railroad, was in Bristol this week, in his private car. He will spend several days going over the properties in which he is interested in this section. Mr. Ream expressed great hope in the industrial future of the South and declared that he believed with the recovery of the mining and lumber industries from the recent slump that this section was entering upon an era of unprecedented prosperity.

The railroads here continue to report heavy traffic. The business of the Norfolk & Western has increased so that it is expected that the reduction made in the wage scale of several thousand employes a few months ago will be restored next month. The statement made by President Johnson at that time, that as soon as the gross earnings reached \$5,000,000 a month again, the reduction would be made good. The statement just issued by the comptroller shows net earnings for last month of \$1,850,000, which is little below normal. The lumber industry has contributed its share to the increase in tonnage.

The Altoona Lumber Company has just been organized at Pulaski, Va., and incorporated under the laws of Virginia. The company will do a general wholesale and manufacturing lumber business.

The Stone-Huling Lumber Company has leased the four-story brick building it is erecting on State and Third streets to the Virginia-Tennessee Hardware Company for a term of years.

R. P. Barc, the well-known Baltimore hardwood man, was buying lumber on the Bristol market this week and went South on business.

Wesley Paine, a well-known lumberman, and for forty years a prominent sawmill operator of Spotsylvania county, Virginia, dropped dead at his home at Mountain View a few days ago, while engaged in cleaning a gun, preparatory to a squirrel hunt.

C. H. Smith Jr., representing R. A. & J. J. Williams, Philadelphia, has returned from a trip in western North Carolina and reports the lumber business in that section picking up and some recent heavy shipments of stock.

W. M. Pitzer of Pitzer & Lindsay, wholesale lumbermen of Ioanoke, was here this week on business and reports business growing better in the Pacific City.

W. H. Yates, a well-known east Tennessee lumberman and manufacturer, has gone to Pulaski, Va., to spend several weeks shipping out a large amount of hardwood stock he has recently purchased.

R. E. Wood of the R. E. Wood Lumber Company, Baltimore, was a visitor here last week.

LOUISVILLE

Louisville hardwood lumber dealers are enjoying better trade than they have done in months, and the flying fingers of stenographers recording large and juicy orders have resulted, with the aid of the bright October sun, in lending an appearance of cheer to their offices. It is beginning to look, after all, as if the lumbermen will have enough money to permit Santa Claus to make his annual call next December, not to mention the possibility of investing in a Thanksgiving turkey.

The improvement of kindred trades has, of course, been largely the cause of improved conditions. The report of the building inspector of Louisville, for instance, shows an increase in both the number of permits taken out in September and in the amount of money spent on building. Last month the number of permits issued was 282, representing an outlay of \$255,315, as against 220 permits in the corresponding month of 1907, with \$71,900 less money involved. Most of the increase was due to the activity in building dwellings, a class which offers opportunity for the use of hardwoods.

C. C. Mengel & Bro. Co. reports an increase in business and a holding up of prices for mahogany lumber and veneers, which seems to augur well for the immediate improvement of business along that line. C. C. Mengel, the head of the company, is a member of the delegation which went from Louisville to the deep waterways convention in Chicago. He is also a member of the executive committee of the Louisville commercial bodies which have in charge the arrangements for the convention of the Ohio Valley Improvement Association, which meets in Louisville, October 22 and 23.

The Norman Lumber Company reports a good demand for first and second plain oak and a fair demand for quartered white oak, though red oak is not being sought. The wagon factories are buying to some extent as their busy season is now at hand and will probably extend throughout the winter. The business of this company in September was greater than it was in the same month in 1907, which is doing pretty well, in view of business conditions. Eighty per cent of its business is out of town, though, owing to the picking up of the building trades, business with dealers in that class of lumber has grown. Mr. Norman says prices are stiffening, with an advance in plain oak and a considerable rise in the price of yellow pine.

Speaking of the diminishing supply of lumber, a local dealer states that a decade or so ago a big profit was made by floating saw-mills, which piled up and down the rivers, cutting the logs which were pulled out of the timberland along the streams. Now, he said, such a thing would be impossible, as the streams have been stripped of their surrounding timber for miles back into the interior.

The W. P. Brown & Sons Lumber Company

reports that all of its jovial members are feeling happy; business now is only twenty-five per cent less than it was this time last year. They find quartered and plain oak furnish the chief demand just now. The reopening of the furniture factories on full time and the starting up of numerous planing mills which have been idle help and to improve the demand. The salesmen of the company are finding orders much more numerous than they had expected.

W. Geiger, treasurer of the Kentucky Veneer Works, finds business improved. Manufacturers are starting up again on a normal basis. The only problem connected with the situation now is delivering immediately. The manufacturers had allowed their stocks to run so low that, when they finally ordered, getting the lumber was an immediate necessity. As a result one big eastern house had an order expressed to it at a very high rate in order to be able to continue without interruption. The furniture manufacturers are doing much more ordering than they did during the summer, while the piano and automobile industries did not reduce their output appreciably during the summer.

"I am advising the manufacturers," said Mr. Geiger, "to order what they want now if they expect to get it. There are only a couple of months left in which we can get logs from the timber districts, and there is no surplus stock on hand, owing to the depression of the past few months. I believe that in a short while manufacturers will be up against a serious proposition—that of not having enough stock to run them—unless they make haste to stock up now. My company and others that I know of are having difficulty getting what we want. For instance, I have been endeavoring to secure a supply of maple logs, but it was only after a long search that I was able to get a curload, with which I filled a pressing order. If any more come I shall have to turn them down."

W. A. McLean, vice-president and general manager of the Wood Mosaic Lumber Company of New Albany, has returned from New York, where he went on business connected with his firm. Orders from the East are increasing just now, for New York, Brooklyn, Boston, Buffalo and other eastern cities appear to have caught on to the mosaic flooring idea quicker than the cities of the West. Business with this company is fair, both in hardwood flooring and veneers. Prices are holding up well, and in fact were never raised in the principal lines, like quartered oak.

Gamble Bros., who are operating their Highland Park plant about five days a week now, as compared to four days a month or so ago. Conditions generally have slightly improved, according to Mr. Gamble, who believes, however, that it will be April of next year before normal demand is restored. There is a better class of inquiries, he said, which is regarded as a favorable indication. September was a good month with the firm, and prices are holding up all right. The chief orders now are for dimension lumber, popular weather-boarding and beveled siding. The increased amount of building is the chief factor in the improvement.

J. F. Gamble is spending three weeks in the East. Though his mission is chiefly pleasure, it is expected that on his return he will be able to give some pointers regarding the eastern market.

A big consolidation of interest to the lumber trade was that of the Lexington Lumber & Manufacturing Company, which combined with the Combs Lumber Company under the title of the latter organization. The office and plant of the Lexington Lumber Company will be used by the consolidated company. J. W. and J. M. McCormick retire from the business

and W. R. Cockrell, O. E. Lyons and V. K. Dodge will represent them. Thomas A. Combs is president of the combined companies.

ASHLAND

Ashland, besides being one of the largest yellow poplar producing centers, has considerable to do with the coal and iron trade. There are located here various steel and iron plants, sheet mill, nail mill, and rod mill, all of which are in full operation, running day and night, with the exception of one furnace. This city has not felt the depression in business that most others have. The coal industries with headquarters in this city advise they have more orders for rush shipments than they have had for some time. The motto "Build Now" seems to have taken firm hold of the people here, and the retail lumber operations are considerably rushed in supplying the demand for building material.

The Wright-Saulsbury Lumber Company of this city, whose chief owners are Giles Wright and E. L. Saulsbury, and whose big mill was destroyed by fire at Sandy City, has decided to rebuild the plant on the same site. For some time the general opinion was that they would locate in this city. Various inducements were offered them by the city council, and negotiations were on for some time for a site on East Greenup avenue on the Ohio river above the sheet mill, but owing to some unsatisfactory conditions connected with this purchase, they finally decided to locate on the old site. One of their principal objections to the site in this city was lack of additional room for future extensions they are planning, such as furniture factories, etc. Their new plant will be much larger and more modern than the former one. The main building will be 140 feet long by 42 feet wide, equipped with an 8-ft. single band mill, 12-in. saws, with equipment to cut timbers as long as 45 feet in length, having the capacity of about 50,000 feet per day, employing fifty men. The modern and up-to-date machinery comes from the Allis-Chalmers Company of Milwaukee, Wis., one of the best manufacturers of mill equipment. Work has begun on the new construction and they hope to have the plant in full operation by January 1, 1909.

Frederick Pischel of the Pischel Lumber Company of Salt Lick, Ky., was a business visitor in the city this week. Mr. Pischel was returning from a three weeks' stay up in the mountains, where his company has a large stove mill in operation. He reports very good business in the stove line, and his company is so well pleased with the present situation and future outlook, that they expect to build another stove mill in the same vicinity at once, thus doubling their present capacity. Mr. Pischel expects in a few days to leave for Chicago to attend the regular family reunion to be held at that place the first week in October.

W. E. Berger of the W. H. Dawkins Lumber Company is on a business trip to Indiana and Ohio this week in the interests of his company.

William Eckman, vice-president of the Licking River Lumber Company and who has charge of the company's plant at Farmers, Ky., spent Sunday in the city. Mr. Eckman states that the Licking river is very low and that the mills at Farmers would be unable to run were it not for the dams the company have at that place for splashing their logs out during exceedingly low stages of the river. There is considerable expense connected with these dams, but rather than be idle, they have adopted this plan. Mr. Eckman expects to move to Farmers in a very short time, thus enabling him to give his entire time to the management of the company's operation at that place.

The Park City Lumber Company and Standard Planing Mill & Building Company, both of this city, report a very good business, in fact,

the best of this season, with an outlook for a good fall business.

Leon Isaacson, vice-president of the Yellow Poplar Lumber Company, at Coal Grove, O., after spending several days in this vicinity, has returned to his home in Brooklyn, N. Y. Mr. Isaacson reports business looking a little better and advises they are operating their entire plant steadily and will have sufficient log to continue so for a few months. Their plant will likely be operated but a very small part of the time next season, as none of their log operations are in process and have not been for some time. Mr. Crawford of the same company is on a business trip to Pittsburg and several other eastern cities.

T. N. Fannin of this city, connected with the Keys-Fannin Lumber Company, Herndon, W. Va., leaves this week with his family for Phoenix, Ariz. Mr. Fannin has purchased a large farm in Arizona, and expects to be there for some time. He also has extensive mining interests in gold and copper mines of that vicinity. Mr. Fannin has for years been associated with his company, and is one of the most prominent pioneer lumbermen of this section.

The Farmers Lumber Company of Farmers, Ky., has completed repairs and general overhauling of their mill and are now sawing. They advise they have enough logs to operate for several months, and with about six or eight feet of water in Licking river they will receive another large supply of very fine oak and poplar.

W. R. Vansant of the W. K. Vansant Lumber Company of Rusch, Ky., was a business visitor in the city this week. Mr. Vansant was formerly located in this city and had his headquarters here until about a year ago, when he moved to Rusch, where he erected a band mill and is now operating a large tract of oak and poplar timber. He reports business looking a little better and feels confident that it will be only a short time until operations will again be normal.

Y. W. Kitchen of the Vansant-Kitchen Lumber Company has disposed of his stock in the company to his father, Chas. Kitchen, and has embarked in the lumber business under the firm name of the J. W. Kitchen Lumber Company. Mr. Kitchen has opened up an office here in the city and advises that he has already received some very desirable orders and is buying lumber and shipping it direct to his trade. He is on a business trip this week through Ohio, looking after the interests of his firm. Mr. Kitchen is also connected with the Kitchen Lumber Company, who own a very large tract of timbers, oak, poplar and chestnut, in Tennessee. He expects probably within the next year to take charge of their operations, as they are now contemplating putting two large band mills in this tract of timber. The tract includes a very large lot of virgin forest, which will enable the company to operate for several years.

The Ashland Lumber Company of this city continues to have its band mill closed down on account of very low water in the Ohio. They advise that they are having a very good run of business in their planing mill, and are furnishing building material for several large contracts for buildings to be erected in this city and surrounding vicinity.

H. C. Fager, secretary of the Licking River Lumber Company of this city is on a business trip to Columbus, Cleveland and Toledo, calling on the purchasers of lumber and oak timbers. His office is in receipt of advice from him, stating that he has some very desirable orders, and with assurance of one or two very large orders for oak. He also advises that the buyers are becoming more concerned as to their future requirements and he feels very much encouraged over the change in the markets from thirty days ago.

D. Reese Lumber Company of Farmers,

Ky., has just closed a deal wherein they dispose of their entire operation at Farmers, consisting of one large band mill, planing mill, several acres of land, yards and equipment, several houses, store buildings, log booms, etc., to the Licking River Lumber Company of this city. The Licking River Lumber Company began operating the plant this week, also buying from the Reese Lumber Company several million feet of logs which they had in the river, log booms and ponds. Owing to the fire that the Licking River Lumber Company experienced September 17, they were obliged to take prompt action so as to supply all their customers as promised. The company will equip the mill, yards and some of the log booms with electric lights. In fact, they are now putting in an equipment which will enable them to work full time and if necessary, to work two shifts of men. S. B. Reese, who had general management of the plant at Farmers, has not definitely decided as to his future plans, but will very likely retire from the lumber business, returning to his former home in Pennsylvania.

ST. LOUIS

The report of the St. Louis Building Commissioner for September shows a decrease of nearly \$500,000 in the aggregate cost of buildings for which permits were issued. The aggregate of the permits issued was \$1,483,016, against \$1,966,956 for September, 1907. New brick buildings authorized by the permits increased in number and aggregated \$1,201,400, a decrease of \$1,720,822 for the corresponding month last year. Brick additions increased one in number, but decreased about \$63,000 in the aggregate cost, the permits numbering 138 and the cost aggregating \$82,198. New frame buildings aggregated \$97,075 and old frames \$12,253, against \$88,810 for new and \$16,515 for additions last September. The total number of permits, including old and new brick and old and new frame, was 816, a decrease of six.

The figures as compiled by the building commissioner indicate an unhealthy condition in the building line, but such is not the case. It is simply that there was not so many expensive structures under course of construction last month as there were the same month last year.

The receipts of lumber reported as having been received by rail during September this year were 11,190 cars, as against 11,637 cars during September, 1907, a loss this year of 447 cars. The receipts of lumber by river during September this year were 214,000 feet, as against 449,000 feet last year, a loss of 235,000 feet. The shipments of lumber by rail during September this year were 8,212 cars, compared with 9,573 cars September last year. This shows a loss this year of 1,361 cars. The shipments of lumber by river during September this year were 300,000 feet. September last year the shipments by river were 280,000 feet. This shows the gain in shipments by river this year to have been 20,000 feet.

According to A. H. Bush, secretary of the Lumbermen's Exchange of St. Louis, the lumber inspected and measured during September this year was as follows:

	Feet.
Popular	37,528
Quartered oak	74,441
White	136,709
Cherry	972
Walnut	1,196
Gum	73,749
Yew	21,813
Ash	24,141
Chestnut	217,128
Cypress	22,534
Cottonwood	22,534
Elm	10,092
Yellow pine	24,781
Total	601,350

The Lumbermen's Exchange at a recent special meeting sent the following telegram to F. S. Underhill, vice-president of the National Hardwood Manufacturers' Association: "This exchange

stands squarely for the present national rules and asks your support for their continuance.—Lloyd G. Harris, president." The meeting at which this telegram was formulated was held the day previous to the Philadelphia conference in Philadelphia.

Mrs. Mercy E. Barnes, wife of G. H. Barnes of the G. H. Barnes Hardwood Lumber Company, died here recently. She was sixty-eight years of age. The burial took place at Elmira, N. Y.

George E. Watson, secretary of the Southern Cypress Manufacturers' Association, New Orleans, spent a week here recently. He had been North to get his family and take them home.

Charles E. Thomas, president of the Thomas & Proetz Lumber Company, has returned from a couple of weeks' visit to his mills at Belzona, Miss. He says the weather has been bad for mill operations.

W. W. Dings, secretary of the Gacetson-Greason Lumber Company, reports an improvement in business with prices satisfactory.

George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, says trade is better than it has been, but still it is far from satisfactory. High-grade lumber is very scarce and he says that those who have a stock of it on hand are able to get pretty nearly the price they ask for it. They are not seeking business to any great extent, as Mr. Hibbard thinks by holding on to the present stock of lumber they will realize a handsome profit later.

The G. H. Barnes Hardwood Lumber Company reports a most satisfactory business. September was a particularly good month for them as to business.

Business has been quite good, Theodore Mummer, president of the Mummer Lumber Company, says. He has been particularly well pleased with the trade that has come from the North. Thomas E. Lowe, the vice-president of the company, who has been up in that section, is responsible for most of the business. Mr. Lowe writes that it is easier to sell lumber in that territory this season than ever before.

W. A. Bonsack of the Bonsack Lumber Company reports condition much better than they were and that his company is well pleased with the present and future outlook.

MILWAUKEE

Plans that were widespread over Wisconsin territory quenching the extensive forest fires and effectively dispelled all danger in the fire districts.

It is estimated that the rain was worth \$2,000,000 to the people of Marathon county alone. While total losses have not been reached as yet, estimates place the damage at thousands of dollars, much larger than usually caused by forest fires of late years. Cities and towns that were sorely threatened for a fortnight are now out of danger and work of rebuilding the many destroyed villages is now progressing. Lumber companies were heavy losers, among them the Alexander Stewart Lumber Company of Wausau, which lost 1,000,000 feet of lumber at Grandfather Falls; the Barker & Stewart Lumber Company of the same city, which lost \$8,000 worth of logs at Dewitt; the North Forks Lumber Company at North Forks, which suffered the destruction of its entire plant, entailing a loss of \$100,000, and others. Losses to the N. Ludington Company, Senator Stephenson and the Sawyer-Goodman Company of Marinette in standing timber will also be large. Conservative estimates place the loss to lumber companies operating in Marathon county at about \$750,000.

Considerable difficulty was experienced by the railroads running through the danger belts during the forest fires. Pilots were generally sent out ahead of the regular trains to inspect the tracks and report upon the progress of fires. Much credit is given to the present State Forester E. M. Griffith for the admirable assist-

tance in fire fighting which was offered to the state.

Negotiations are being carried on between the Edward Hines Lumber Company of Chicago and the Cooke and O'Brien people of Duluth for a large timber transfer. The amount under consideration is nearly a billion feet of white pine and Norway, together with several miles of railroad and numerous sawmills.

The Hamilton Manufacturing Company of Two Rivers has received several substantial contracts recently from the postoffice department for furniture to be used in postoffices in various parts of the country, among them offices at Key West and Providence, R. I.

The recent cold weather has increased applications at the Milwaukee labor bureau for work in the lumber country, which begins as soon as the weather gets cold enough.

Laur O. Peterson, well-known foreign lumber dealer and extensive importer of Copenhagen, Denmark, recently called upon the Johnson Lumber Company of Milwaukee. Mr. Peterson reports that trade is fairly good in the foreign lumber fields.

W. E. Allen, president of the W. E. Allen Lumber Company, with offices at 1411 Majestic building, made a recent business trip to Chicago.

President Roddiss of the Roddis Lumber & Veneer Company of Marshfield, Wis., recently called upon Milwaukee dealers.

L. M. Borgess, secretary of the Steele & Hibbard Lumber Company of St. Louis, and Thomas Poe of the Plummer Lumber Company of the same city lately called upon the Milwaukee hardwood lumber dealer.

The C. L. Colman Lumber Company of La Crosse, operating fifty four yards about the state, is now located in its new office building. The new structure is a model for everything that is novel and up to date. The area is 58x96 feet and the location is 111 Fifth street. The company, since its organization in 1854, and its incorporation in 1899, has made remarkable progress in the lumber field.

Judge R. P. Salter of Colby, Wis., a recent visitor in Milwaukee, recalled the forest fires of 1892, when his mill and 8,000,000 feet of dry lumber were completely destroyed by fire.

Fred W. Hornbrook, well-known lumberman of Ontario, Can., who made Milwaukee a stopping place recently, called attention to the fact that the lumbering industries of Canada instead of traveling westward are moving straight north, where extensive operations are being carried on.

The Sawyer-Goodman Lumber Company at Marinette has finished the work of rebuilding the trawlers destroyed by the disastrous fire experienced by the company some weeks ago.

Among the recent steamer arrivals at the Milwaukee port were the Susie Chipman, Robert C. Wenzel, the Stagline and the City of Grand Haven, all loaded with lumber.

A local mill fire department has been organized among the employes of the Hird & Wells Lumber company at Wausau.

The Jacob Morkenson sawmill at Wausau is again in operation despite the fact that the yards of the company are well stocked with finished lumber.

The sawmill of the Rice Lake Lumber Company at Rice Lake, Wis., will be remodeled extensively and will be operated in connection with the hardwood mill of the company. The plant will be kept in operation steadily throughout the coming winter and summer.

The big mill of the Northwestern Lumber Company at Stanley has been closed down for a time. It is expected that as the winter logging of the company progresses the plant will again be put into operation.

A new office building, 28x40 feet, will soon be erected by the Heineman Lumber Company at Heineman, including private and general offices. The mill of the company at Heineman is again busy after the shutdown made necessary because of forest fire dangers.

Fire destroyed the yards of Hollister, Amos & Co. at Oshkosh, recently, to the extent of \$5,000. Some 200,000 feet of planks and hemlock timber was destroyed. The origin of the fire is unknown.

The Appleton Hub & Spoke Company is engaged in shipping its winter cut of white and red oak logs from Kaukauna, Wis. Some forty carloads of the finest spoke and hub timber ever purchased will be forwarded to the plant at Appleton. The company will continue buying oak and birch in the Kaukauna district throughout the coming winter.

Work on the new plant of the Frost Veneer & Sash Co. to replace the establishment destroyed by fire some weeks ago is progressing rapidly and present plans are that everything will be in readiness for operations to be resumed some time in November. The new structure will be 66x250 feet and will offer 23,100 feet of floor space. The machinery and equipment will be entirely new and up to date and a much larger force of men will be employed.

The Michigan Elm Hoop Company is busy erecting its new plant at Marquette, the new location of the company. The Witbeck site is being made use of and the company will be able to secure shipments by both rail and boat.

The Wall-Spalding Lumber Company, which owns the water rights at Big Falls, is replacing the present dam with a new \$20,000 structure. It is understood that the company will furnish electrical power to several surrounding towns.

The Peabody Box and Lumber Company of Menominee, Mich., with a branch at Critch, Wis., has filed articles to operate in Wisconsin. The capital stock is given at \$25,000, of which \$10,000 is represented in Wisconsin.

MINNEAPOLIS

E. Payson Smith of the Payson Smith Lumber company has gone South to look after the company's hardwood and yellow pine interests. He will spend most of the time in Missouri, where the company has a good output of oak for the northern and eastern market.

W. H. Still of the Minneapolis Lumber Company is back from a visit to Ruby, Wis., where the mill of the Ruby Lumber Company, in which they are interested, is located. There were some bad forest fires around their property and two of their camps were burned, also a stock of ties. The fire was a bad one in the open cutover lands and along the railroad, but Mr. Still is convinced that it did not get into their green timber to any serious extent.

The sash and door factories of the Twin Cities are still hustling to get out special quality, a good part of which calls for hardwood materials. There is fine activity in building circles, and Minneapolis in September issued 539 permits for a total estimated cost of \$861,200, compared with 420 permits last year for that month, with a total cost of \$758,525. The record for the year will be somewhat behind the bonanza figure of last year, but in nine months 4,461 permits have been issued, totaling \$7,455,660, while in the same months last year there were 3,998 permits, totaling \$8,059,625. The smaller average cost of building operations this year indicates a greater proportion of medium-size residences, taking hardwood stock in a good share of them.

Osborne & Clark, wholesalers of hardwood lumber here, are interested in the State bank of Ladysmith, Wis., which was burglarized September 29 and about \$5,000 taken from the safe. Insurance covered the loss.

H. M. Halsted of Halsted at Boraema, the local wholesale dealers, has been over in Wisconsin calling on customers and looking into the condition of stocks.

L. Britt Craven, Minneapolis representative of the Radford Sash & Door Company, Oshkosh, Wis., has moved his offices from 1119 to 1014 Lumber Exchange, to share quarters with Charles Van Pelt, eastern representative of the Perry-Baker Lumber Company of Everett, Wash.

Local box manufacturers report that concessions are being made by the mills upon oak basswood, which can now be had for \$2 to \$2.50 a thousand less than in the summer. This is attributed to the fact that the box business has been quiet and the mills have an unusually large stock of low-grade lumber on hand which they have become anxious to move.

Minneapolis lumber receipts for September were 11,764,000 feet. Last year they amounted to 17,929,000 feet. Shipments for September were 18,864,000 feet, while last year they totaled 17,968,000 feet.

SAGINAW VALLEY

The Michigan Central is hauling from five to eight train loads of logs every day, of which seventy-five per cent come to the Saginaw river.

The N. Michaelson Lumber Company, which recently erected a sawmill at Houghton lake, is being reached by a spur of the Grand Rapids & Indiana railroad, starting in from some point in the vicinity of Cadillac, and the cut of the mill will go out that way.

Mr. Bigelow, manager of the Kneeland, Buell & Bigelow Company's plants at Bay City, is very much impressed with the improvement in trade. One of the mills is being operated day and night and the other ten hours a day. The firm has started camps in Lake Montmorency county and is putting in logs which are railed here. The other mill is stocked by Wylie & Buell Company, who are running seven camps. Wages for woodsmen are some lower this winter, but the cost of supplies for feeding men and teams is higher than usual.

There is a good volume of business in maple flooring and the plants in the valley are all in operation, but values are unsatisfactory.

Heavy rains in the northern part of the state last week smothered the forest fires, but they are breaking out again here and there. There was very little rain in the valley.

Mershon Bacon Company at Bay City have had a very good run for some weeks on hardwood box shooks. W. E. Mershon and a party of choice companions, all lumbermen or concerned in timber property, left Wednesday for a jolly outing and hunt in the Saskatchewan country. These parties have been annual events since 1884. Some proficient hunters and story tellers are in the party.

T. E. Douglas & Co. have started their new sawmill at Lovell's, north of Bay City. It is modern in make-up and takes the place of a mill burned early in the season.

Lewis Johnson is making extensive improvements to his mill plant at Sullig. He is erecting a plant 48x60 to be rigged with machinery for dressing lumber, and an addition to the sawmill which will be fitted out with a band saw and resaw. He has at least a ten years' stock of timber available.

S. F. Derry is rebuilding his sawmill at Millersburg, and will operate a number of camps putting in 4,000,000 feet of hardwood logs which will be cut into lumber for manufacturing concerns at Flint.

Prescott, Miller & Co., operating a sawmill near Rose City, seventy-five miles north of Bay City, have extended their logging railroad three miles to reach 1,000,000 feet of timber. The mill was shut down some time ago, but the entire lumber cut of the season was sold

before manufactured. The plant will resume operations in the near future.

C. F. Bach's hardwood sawmill, on the Michigan Central Owendale branch on Bach's Siding at the Tuscola and Haron county line, burned last week. The mill, \$60,000 feet of lumber, cut last year, and 1,500 cords of wood were destroyed, involving a loss of \$20,000, partially insured.

CADILLAC

Manufacturers of lumber here give an optimistic report on recent orders and outlook for trade during the coming months. Both hardwoods and hemlock are moving freely.

H. Hanson & Sons of Grayling, Mich., are building a town of considerable proportions about one mile north of Grayling, which will be known as "J's Town," where will be located one of the largest sawmills in Michigan, having a capacity of 400,000 feet per day. This mill is adjacent to the timber to be cut and it is estimated it will take twenty years to complete the cut.

Forest fires in Michigan have been practically put out by the heavy rains of the past week. Cummer-Diggins Company and Murphy & Diggins, who were shut down temporarily on account of fires, are running again as usual.

The secretary of the Michigan Hardwood Manufacturers' Association is busy compiling reports for the coming meeting of the association, which will be held at Ludington as soon after October 15 as is possible. Due notice will be given as to exact date.

Mr. and Mrs. W. W. Mitchell are expected home soon from Washington, D. C., where they have placed their daughter Marle in school.

M. E. Thomas, sales manager for Colbs & Mitchell, Inc., and Mitchell Bros. Company, and wife have returned home from a two weeks' vacation in the Middle West.

S. E. Kirk, general agent of the Wheeling & Lake Erie Railroad Company, with headquarters at Detroit, and M. C. Kimball, district freight agent of the "Moo Line," with headquarters at Grand Rapids, Mich., are among the railroad men visiting in Cadillac. They both have many friends here.

GRAND RAPIDS

Michigan shippers of maple and other hardwood lumber to the Pacific coast are communicating with R. H. Countiss, representing the Transcontinental Freight Bureau in Chicago, requesting him to use his influence in securing a restoration of the flat rate of 75 cents per 100 pounds, in effect four years ago. The rate at present is 85 cents, which amounts to \$4 per thousand on maple. Mr. Countiss promises that the matter will be given consideration at a future meeting.

J. A. Inank of the Haakwood Lumber Company, Portland, Ore., was a Grand Rapids visitor recently. Mr. Inank is an old-time Michigan lumberman and at present is interested in timber lands in northern California.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

CHICAGO

The bulk of hardwood trading shows moderate improvement and a special element is the purchase of large quantities of hardwood mills by the box and crating factories. There is no particular activity in the market, but on the whole the sales have been very fair. One or two particularly large transactions have transpired involving a million feet or

A. C. White of White Brothers, San Francisco, was a Grand Rapids and Cadillac visitor this week. White Brothers have been in the lumber business in San Francisco for the past forty years and have used many carloads of maple shipped them by the Gibbs, Hall & Allen Company of this city. Mr. White went East from here.

J. L. Barrett, who operates a mill at Missaukee, was in the city October 7.

B. W. Ackles, secretary of the Alton Lumber Company of Buckhannon, W. Va., made a business trip to this market last week.

The Van Keulen & Wilkinson Lumber Company reports that business is picking up right along, one very good feature being that the furniture manufacturers and others are anticipating their wants to some extent now. The policy in the past has been strictly hand-to-mouth buying.

The Gibbs, Hall & Allen Company is leading four-quarter maple near Manacelona for the flooring mill of the Kerry-Hanson Flooring Company at Grayling. A. Gibbs is looking after the shipment.

H. F. Sands of Pentwater and W. N. Kelley of Traverse City were visitors in the city early this week.

The furniture manufacturers of Grand Rapids and Michigan report a steady revival of trade. Spencer & Barnes Company of Benton Harbor started up October 1 on full time and with a full force. The Woodward Furniture Company, Owosso, also the Estey Manufacturing Company and the Robbin Table Company of that city, report a gratifying increase in orders. The Verity-Caswell Table Company of Portland is running its factory to its full capacity, and has leased an additional building for the manufacture of coat hangers.

"We have had a most pleasing increase in our business of late," said I. Preston Rife to the HARDWOOD RECORD correspondent; "that is about the best bit of news that I can give you."

The death of Julius Berkey, president of the Berkey & Gay Furniture Company, occurred at his home in this city October 5. Mr. Berkey was a pioneer furniture manufacturer having opened a factory here in 1860.

Grand Rapids and Saginaw are represented this week at the deep waterways convention held in Chicago. An organization has been effected of the Grand-Saginaw Valley Deep Waterways Association, with a view to enlisting the aid of the government in dredging out a 20-foot channel for boats across the state from Grand Haven to Saginaw bay, following the Grand, Maple and Saginaw rivers.

The woodenware factory of the Rex Merritt Manufacturing Company at Constantine, Mich., has been destroyed by fire; loss \$10,000.

The forest bureau, United States department of agriculture, will send men into Michigan soon to canvass the fire losses and causes of same. Professor Roth, state forest warden, says that this work will be completed by the end of November and that a close estimate of the total losses can then be made.

more. All the dealers regard the situation with a good deal of optimism, and it is fair to assume that there will be a pretty good trade for the remainder of the season at reasonably satisfactory prices.

NEW YORK

The hardwood market at New York does not show any material change from that as last noted. Trade is holding its own both as to

demand and prices, but buying still continues of the hand-to-mouth order. There does not seem to be any special surplus in any line except, perhaps, in maple. In view of the general firmness to the market, and the very potent fact that supplies in the hands of large and small consumers, as well as the average yard, is at a minimum, gives every promise of a good volume of trade just as soon as election is over, and the normal opportunities begin to assert themselves.

The poplar and oak market holds up very nicely and while prices do not show a tendency to fluctuate either way, such business being booked is at very fair figures. Ash is holding up very well in view of marked scarcity, and basswood is very firm, but birch, beech and maple are a little off by reason of surplus supplies.

BUFFALO

Hardwood lumber dealers are talking up a little. One of them said the other day that he could see a nice improvement, and that was before there was time for any change to come from the fall weather. September kept up red hot almost to the end and yet business improved. Nobody doubts that there will be a fair trade from this time on, unless we go to comparing it with the rush of last year.

There is quite a general starting up of oak mills this month all through the West and Southwest, though it will take a bigger movement yet to set them running at full capacity. Prices are not strong enough to warrant anybody to hold more than a good assortment. When the speculative buying comes in the mills can go faster.

Here and there a mill owner reports a good stock of poplar, but as a rule it is scarce, so that it still takes rank with quartered oak, and these two seem to lead other woods as regards steady price and demand.

The other woods size up a good deal alike, some of them selling very well as to amount, with comparatively little of chestnut, birch and maple as not being very high in price. White ash in some quantity is reported here and there, but is mostly dull, with black ash selling more steadily.

Dealers are laying in elm and basswood where they can lay them at fair prices. Cherry is a pretty fair seller and walnut is strong and in light supply. There seems to be more doing in hickory than usual.

The news of this market hangs on the Philadelphia hardwood conference. President Hoyer of the Hardwood Exchange sent Messrs. Yeager, Stewart and Vetter down there with quantities of oil to pour on the troubled waters, going along himself to keep the oil from getting ablaze. Without pretending to cover the meeting, it may be said that the Buffalo committee is quite well satisfied with the showing made in favor of the present inspection rules of the National Association and will not be disappointed if the proposed second meeting is not held.

The Hardwood Exchange meetings have been broken in upon by the Philadelphia matter and none has been held for some weeks. It will now give way to the regular exchange meetings and then go on weekly as before. No further special business is reported in sight.

PHILADELPHIA

While there has been no startling acceleration of trade during the last fortnight, there has been no declination of the comparatively brisk business which has opened up this fall inquiries are coming in satisfactorily, and on account of a possible climb in values in the near future, some of the consumers are laying in stock others, not so sanguine are

still buying on a conservative basis. To all appearances a steady progression in hardwoods may be looked for from now on, the only impediment recognizable at present being the discretionary hesitancy, as they regard it, in buying on the part of the heavy investors, who are waiting to see how the election goes, before taking any decisive action. The furniture factories of eastern Pennsylvania are gradually resuming activity, but, being fairly well supplied with goods, they are in no hurry to add to their stock. Millwork concerns continue busy; interior finish and flooring houses maintain a fair activity, and in the box factories a much more cheerful tone prevails. The past fortnight has created no positively new quotations in hardwoods. Poplar apparently heads the list; quarter-sawed oak is a close second; plain oak retains good reputation, and basswood is receiving more attention of late. The other woods are running along evenly. The repair shops of the railroad companies in this section are showing more life, and trade is proceeding without interruption. The consensus of opinion is that the hardwood conditions are most encouraging.

PITTSBURG

All things considered, the hardwood men of greater Pittsburg have reason to feel by far the best of any dealers. It is true that yellow pine has shown quite a tendency to "hike" up toward its old-time quotations, but this is the only wood out of the hardwood list that has "stood" for a raise in price. The hardwoods are nearly all coming up in demand steadily enough to enable dealers to quote full lists and in a few cases a little more. Local trade is very quiet. The yards are buying only what they absolutely need, and with the exception of the box factories and glass plants practically no hardwood is being sold to manufacturers in this immediate district. The bulk of the trade comes from the Middle West at present, where, both retailers and manufacturers seem to have resumed buying on a larger scale than in the eastern states. The demand for building lumber, generally speaking, is light. Hardwood flooring and fine hardwood finish is selling in some localities quite well, but this is only occasional. The dry weather has played sad havoc with the country hardwood mills of western Pennsylvania, eastern Ohio and West Virginia, and even with the recent rains many of them are still idle. A good number of the West Virginia plants which have enough water power are running nearly to capacity, which shows that stocks of marketable hardwood are rapidly getting down to bottom. The peculiar thing about the market is that buyers all seem to lack courage to purchase the lumber which they actually need. Large factories which have a large stock, considering the rate at which they have been running, absolutely refuse to buy any more at present. Small concerns and retail yards buy a car now and then only when they have to fill an order. The state of affairs is decidedly disappointing to the wholesalers, who had a right to expect a fairly brisk trade this fall.

Clear spruce is oversold and prices are edging up. Prices are also a little better for spruce bill stuff. White oak flooring is a good seller at good prices. Poplar lath are scarce. Chestnut and spruce lath are not in large supply. No. 3 box spruce and boards are selling fairly well, but bill stuff drags hard on the market. Factories are taking some ash and hickory, but in very small quantities, and in an irregular sort of way. Cottonwood is in good demand from the wagon factories. Basswood is selling better than it has for months and at higher prices, most of it being used for furniture stocks, picture frames and

moldings. Four and six quarter log-run maple are good sellers and all better grades of white and red oak are in good demand.

BOSTON

The Boston market for hardwoods is gradually showing improvement, but there is still a lack of snap to the demand. Dealers are asking higher prices in some cases and indicate an intention to hold, for their large buyers, while in the market more frequently than two or three months ago, still hesitate to buy far ahead of nearby needs. The consensus of opinion is that business will resume normal proportions after the first of the year and possibly after election. Manufacturers of interior finish are only moderately busy and slow to place orders for lumber. Furniture manufacturers are doing a larger business and several salesmen report it has been easier to keep the buyers' attention.

The demand for veneers is larger and manufacturers are holding larger stocks. There is a fair export call for white oak. Mahogany is very well held. Buyers are not operating in primary markets to any extent at present, but all dealers have fair sized stocks. Quartered oak is not in large offering and prices are firmer. The best western one-inch one's and two's are held by some manufacturers as high as \$86. There have been sales at \$85. Some lots of quartered oak can be purchased down to \$83. The call for plain oak is quiet and prices are quiet in some cases. White pine is in moderate call. Cypress while not active, has sold in larger lots during the past few weeks. Some mills are said to be asking higher prices. Chestnut is in quiet call and offerings have been made to Boston dealers at concessions. The market for North Carolina pine is more or less unsettled. A few dealers are well filled up with orders and are asking firmer prices, but there are several large mills that still cut prices when running near the end of their orders.

BALTIMORE

The hardwood trade of this section shows a steady improvement, the demand from consumers undergoing a gradual expansion and prices manifesting an upward tendency. The reality of the recovery is now generally admitted. Even the most conservative firms freely concede that the inquiry is decidedly better and that dealers show a disposition to place orders at figures which leave the seller a fair margin of profit. This condition has been developed, notwithstanding a disinclination on the part of the yard men to lay in large stocks, and a determination to limit themselves to current requirements. It may therefore be assumed that whatever quickening in the movement has taken place is the result of the revival in trade and of the return of normal conditions. To have an appreciable effect upon the hardwood situation, the improvement must have been all the more positive, because it has obtained no support whatever from the export trade, which remains very quiet, even dull, and has so far manifested no indication of a better state of things.

Stocks abroad are still very heavy, and brokers continue to encourage consigning, in the face of the fact that they may be loaded up with lumber of the very kind which they call for. This would suggest a studied purpose to keep the market congested, so as to demoralize the quotations, and should make the exporters all the more resolved to be drawn into no transactions except upon a basis which leaves them a fair margin and gives reasonable guarantees of being lived up to. The domestic business shows a gratifying responsiveness to the better feeling, the only retard-

ing factor being the national campaign now in progress, which causes just enough uncertainty to make many persons hesitate about entering into arrangements to supply probable future needs. The aggressiveness of the campaign, especially in the past week or two, has tended to increase this feeling of uncertainty and has done much to divert attention from ordinary pursuits, with consequent injury to the interests involved. This, however, means merely a detourment of business, which may be expected to set in all the more actively as soon as the doubt-producing factor has been removed.

CLEVELAND

The hardwood market continues to have an upward trend, and the dealers say they are satisfied with the way business is holding out. With the building industry giving some hint of letting up, more factories are opening up, so things are about as encouraging as they have been at any time this year. Hardwood merchants do not look for a normal resumption of business until next spring, when it is believed that old prices will be restored and the volume of trade creep to a higher point than for many months.

Red oak, quartered oak, poplar and chestnut, especially the better grades, are in good demand. Birch is showing better form than for some time past. Hickory continues very dull.

Building permits for the first nine months of this year indicate that the year's volume of building will about equal that of 1905, but will be exceeded somewhat by the past two years.

Prices on all lines of hardwoods are firmer, with some advances in a few instances. Prices are not expected to sag much this winter.

COLUMBUS

About the Columbus markets there is but little new to be said. Prices remain firm all along the line, but there has been no material advances during the past week. High-grade oak is in excellent demand and the seconds are selling well. There is an active demand for poplar, especially the rough grade and siding. Prices for poplar are firm and show no tendency to go lower. With several of the local companies, stocks are unusually light. Hemlock is holding its own and selling fairly well. Yellow pine is steady but not active. If anything, the demand for all hardwoods shows slight improvement, compared with the market of two weeks ago. In nearly all lines stocks are light and will have to be replenished in the near future in order to meet local requirements. It now looks as if there would be a good demand for nearly all the hardwoods throughout the winter months.

General business is improving. Collections are good and bills are being paid promptly.

CINCINNATI

The hardwood situation during the month of September was never better and some firmer prices were realized on several of the desirable items. The demand for the higher grades of hardwoods especially, showed a much better tone, which was due to the more liberal purchases of the furniture dealers, interior finishers and plating men. Other hardwoods developed a better feeling, due to the absorption of the carriage and implement manufacturers. Cottonwood, gum and cypress have been in better demand during the past thirty days than for several months, especially so on the latter item, and higher prices were realized. The building material of cypress has been in fair demand for some

time, but the thick stock is very quiet. The month of October promises to be as good as the past month, as a great many desirable orders have been received during the past ten days. After the election a much better demand is anticipated for all hardwoods.

TOLEDO

September proved the best month of the year for the hardwood people and the improvement has carried well over into October thus far, with a prospect of continuation for some weeks. Most hardwoods have held firm with the exception of poplar, which has shown some weak spots recently. While the better grades of poplar have been steady as a rule the lower grades have been in poor demand. No. 1 and No. 2 common and select, as well as siding, have moved very slowly and at considerable concession in price. The condition is due to slow demand rather than overstocking, as there is no large supply on hand. Oak has been in good demand and fair quantities are being consumed in building construction. Building operations have been more extensive recently, and structures of a better class using more hardwood lumber. Factories are not reducing their consumption, the furniture plants, chair factories and vehicle works proving very good customers. Prices are holding up well all along the line, with the exception of poplar. Shipments are coming in promptly and there is no evidence of car shortages. Dealers will go into the winter with stocks reduced considerably below what they were last year, owing to a policy of buying largely for present use only.

INDIANAPOLIS

The hardwood market is fairly active, as though not so much so as it was two or three weeks ago. Retail yards are now getting fairly well stocked, and while there is much building under way, few new contracts are being let.

Furniture factories continue to make a good demand for hardwoods, but vehicle concerns are not as active as they were a few weeks ago, as it seems to be a quiet season. On the whole, however, the situation is very encouraging and a decided improvement is expected within the next two weeks.

Logs have been a little scarce owing to the fact that the rivers are lower than they have been for many years. The six weeks' drought recently broken made the roads so bad that hauling was almost impossible.

MEMPHIS

Business conditions South continue to show improvement and there is a gradual return to normal in many directions. The hardwood lumber industry is giving signs of greater life and activity and manufacturers and wholesalers alike are disposed to take a more cheerful view of the outlook. The yellow pine people are enjoying a very satisfactory volume of business, as evidenced by the fact that they are resuming operations on a constantly larger scale and are receiving a better margin of profit on what they are placing on the market. There is much activity in building lines as shown by the figures for Memphis, published elsewhere in this issue and as further illustrated in the returns from other important centers South. The steel and iron business continues to be good and the demand is so large that some manufacturers have found it impracticable to accept any more orders calling for delivery before January 1. The railroad situation is certainly much better. Car service reports for Memphis, Birmingham and other districts indicate a very large increase in freight traffic for September, while the general reports indicate

decided decrease in the number of idle cars in the United States. Railroads are running their repair and finishing plants on a longer schedule while, at the same time, it may be noted that some railroad car resuming construction work dropped when the financial depression of last year made suspension absolutely necessary. New lines of railway are being projected, and bond issues are being placed without great difficulty. The southern banks are well supplied with funds and they are going ahead with the financing of enterprises of every character as if nothing had happened to mar the business situation during the past twelve months.

Not only is there an increase in the demand for hardwood lumber but prices are higher in some directions, with promise of still greater strength as soon as the election is out of the way and buyers begin to anticipate their wants instead of buying from hand-to-mouth. The price position occupied by plain and quarter sawn oak in firsts and seconds is an excellent one. The supply of this class of material is relatively light and holders, realizing this fact, are disposed to be more independent when it comes to placing their stock on the market. Some are holding plain oak at \$43 per M. f. o. b. Memphis, and insist they will not sell for less. The lower grades of plain and quartered oak are slow and the price on these has shown little if any appreciable improvement. There is a better demand for red and clear saps gum in the general run of stock of this character, with the preference given in some instances to thick stock in the former. Prices, too, are rather better. The lower grades of gum, however, are meeting with so much competition in yellow pine that the demand is somewhat restricted and prices are rather unsatisfactory. Some holders believe an improvement is due on this class of material and they are disposed to go rather slow in sacrificing their present stocks. Cottonwood is showing a better tone. There is more demand for the higher grades, including box boards, while there is but a limited supply of the box grades available in the open market. The lower grades are important manufacturers of these grades do not operate box plants in connection with their mills, which is only another way of saying they are consumers as well as manufacturers. They have no box material to sell, but rather play the role of buyers when they find anything desirable offering. It is pointed out here that the production of cottonwood has been on a relatively smaller scale than any other item in the hardwood list, and it is also conceded that the amount of cottonwood timber cut out is the smallest on record. Improvement is looked for by box manufacturers after the election and they declare with positive belief that there will be a most marked scarcity of box grades within the next few months and consequently a higher range of values. There is a good demand for poplar and all offerings are taken readily. Prices, too, are quite satisfactory. There is some demand for shop and select cypress, but the upper grades are generally reported slow. There is but little demand for ash in any grade or description. Production of hardwood lumber is not more than fifty per cent of an average for this time of the year and as sales are increasing a general reduction in stocks of dry lumber is anticipated as one of the almost certain developments of the winter.

EVANSVILLE

The hardwood market continues to improve in this district, though not as much as was expected the past two weeks. It is thought the election is diverting business to some extent, and that when the election is over business men will turn back to business with renewed interest and everybody will get busy. The worst feature at present is collections, as

money is tighter now than at any time since last October, and with two or three recent failures in the consuming market, the outlook in this respect is not the best. However, it is thought money will get easier after the election with satisfactory results. Quartered oak is still in best demand, especially in the better grades, although common is in good demand. Plain oak is still improving in demand and price. Poplar and ash are a little slow although thick poplar used extensively for car building is looking up. Local mill men continue to receive plenty of logs of good quality.

NASHVILLE

Considering the fact that this is the eve of a presidential election, as it were, and that business conditions are as usual quite unsettled by reason of such fact, the lumber business in and around Nashville is regarded as being very generally satisfactory. While there are not, and have not been, many buyers in the city, still a good deal of business is being transacted through mail, telegraph and by telephone. Most of the orders are rather small, yet they have been fairly numerous. With many of the big concerns business has wellnigh reached normal conditions, and this is more than can be stated in many other lines of business just at this time. White oak is a trifle quiet just now, but plain red is reported to be in unusually good demand. Quartered oak is bringing good prices and is very much in demand. The better grades of poplar are in excellent demand. Ash and hickory are a little quiet. Prices are reported to be stiffening a bit, however, in all the better grades of timber.

BRISTOL

While there is not a great amount of actual improvement to report from this section there is an infinitely better feeling among the lumbermen, and the indications are that the betterment will continue through the winter and the business will be restored to normal by the early spring. However, there has been considerable activity recently, despite the dullness on the surface, and shipments have been fair.

The majority of the large mills will continue to run through the winter, though the yards are still well stocked. Better prices and a heavier demand in all lines are expected to develop during the fall, and the best of feeling now prevails.

LOUISVILLE

It is possible to be more optimistic regarding the lumber situation in Louisville now than for many months. In all directions the outlook is improved and while in some lines the improvement is only that which comes with increased confidence and more numerous inquiries, there is not an exception to the general statement that all dealers consider the situation vastly better than it has been since the second period of a year ago. In a good many quarters, in fact, there is a belief that the difficulties well known to be a thing orders, but a shipping trade. The small supply turned out in the producing districts because of the season as the market months ago must now be looked after carefully unless a remarkably large lot is turned out in the next few months. As soon as winter is fairly here, of course, roads will become impassable and it will be impossible for dealers to improve their stocks.

Veneer men in this part of the country complain because prices on veneers have not risen as much as they should have done in the past several years. Since the prices of oak from which the veneer is sawed cost from \$2

to \$1 more now than they did at that time, they argue that the veneers should have a proportionate increase. On the other hand, however, they find dealers in the South offering to northern manufacturers veneer at prices lower than the Louisville men with an advantage in the freight rates, are able to make. An organization which will go over the situation and determine what would be an equitable price for veneers is what is needed now, they say.

Another interesting feature of the veneer situation has developed. During the boom times last year, manufacturers, in order to get enough of what they wanted, placed their orders several times over with different veneer companies. When the slump came it was not possible to countermand all of these, and as a result some of the manufacturers of furniture, for instance, were so badly overstocked that they had to build new sheds to hold the material which flooded in upon them. That is why the market in this direction was so slow responding to generally improved conditions—the overstock had to be used up first. Now that new orders are beginning to come in again, however, there is danger that the old crowded situation will be resumed.

In the dimension stock, trade inquiries are more numerous and the output is considerably larger. There is a good demand just now for plain oak of the better grade and for yellow pine, which has risen in price perceptibly. Prices in general are stiffening, and a sharp advance will not be surprising in the next few weeks. The flooring trade, along with the dimension stock dealers, is profiting by an increase in building operations, which in this section have taken on unwonted activity.

As an indication of the interdependence of the various branches of trade, the short supply of oak at present is cited. During the slump in the market, when the demand for lumber was small, the lumbermen in the producing districts did not get out their usual supply, believing that it would be a waste of time and, in addition, would help to demoralize the market. Now that business is assuming a more favorable aspect, dealers are finding it hard to get a sufficient supply of the lines they want, and there will necessarily be a good deal of cutting and sawing in the next few weeks in order to get ready for the anticipated demand.

In general, it can be said that the situation at present and the outlook for the immediate future are better than they have been in a long while.

MILWAUKEE

Increasing demand from manufacturers is still the leading and hopeful feature in the Milwaukee hardwood situation. Dealers are expecting that business in this line will not materially expand until after the uncertainty of the fall election is over. Plenty of improvement has taken place already and warrants a stationary period for a short while. The railroads are demanding considerable stock and indications are that this phase of the trade will steadily improve. Practically all of the rolling stock for the Pacific extension of the Chicago, Milwaukee & St. Paul Railway is being turned out at the West Milwaukee shops of the company, and this fact is doing much to brighten up the hardwood trade. An average of twenty-four stock cars are being built daily at the Milwaukee shops and are being sent West. Demand in the building field is beginning to make itself felt and dealers are preparing their stocks in readiness for a good fall trade in this line. The long drought in Wisconsin territory has at last been broken and dealers say that this will do much to increase fall building in the country districts. Confidence is being restored and

dealers in general have been impressing the fact upon the trade that prices will never again be lower in general building material.

The market is presenting a healthy outlook. Prices are gradually rising in some lines, but in general few changes have taken place, although a firmer tone is evident. The oaks are steady with the better grades in leading demand. Maple, birch, ash and basswood are still being sought. Panel stock of poplar is also in demand. Stocks in general are showing greater movement.

ST. LOUIS

While the improvement in the hardwood trade is slow, it is sure. There is a noticeable increase in the consumers' trade. Buying on railroad account is also better. Business is not yet up to the normal, but because there is a slow, continued increase dealers think it has come to stay. Reports from the mills show that production is increasing, but on a limited scale only. The manufacturers do not seem inclined to accumulate any considerable amount of stock. Oaks, both red and white, are the best sellers and are the best in demand here. There is a great scarcity of first and second plain oak. Little is to be had. This is particularly true as to much plain red oak. Quartered oak is also very scarce. White oak in first and second is particularly scarce. Poplar is moving fairly well. Cottonwood is in increased supply. Prices on all the better grades of items on the hardwood list are firm.

MINNEAPOLIS

Renewed activity on the part of the railroads is reported by concerns in the Twin Cities, and this is an encouraging feature. Owing to the extreme dullness in this class of business prices are badly off on material which the railroads use and have not begun to recover yet. However, the roads are getting into the game and have placed some big orders for oak ties and timbers. Others are hanging fire, with bids just going in. They are also beginning to call for more car stock. The factory trade in the Twin Cities is off a little as to volume, and the leading consumers continue their policy of buying only for immediate needs, but they are placing small orders with regularity, and have no material accumulated. The sash and door concerns are all busy and the furniture men report a good season, so they will be in the market for something right along.

Country demand is somewhat better, though not heavy yet. Flooring and wagon stock are the principal sellers. Oak is holding up well, and plain oak is quoted here at \$46 to \$48. Quartered is worth \$77 and upward. Birch is quiet and about the same, with prices on firsts and seconds ranging from \$28 to \$30. Basswood uppers are still, but there has been some cutting on the box grades of basswood, which have not been much in demand for some months. Other northern woods are quiet, but stocks of them are so light that the condition does not cause any worry.

SAN FRANCISCO

Business locally continues very good and, to the surprise of everybody, hardly a day passes but that new buildings are planned and started. Values of building contracts reported are running much below those of last year, but if you take into consideration cost of building has been reduced about thirty to forty per cent. It is readily seen that the boom which total figures are less, actual construction is equal, if not really a little larger.

The interior trade keeps up about as usual and collections are good.

The coast crops have been abundant, and with the exception of the grape crop have sold at good figures. The money coming into the interior generally finds its way into the large cities, particularly this one, and helps that line which is in most need of funds at the present time—real estate, values of which are high. The lower section of the city, where the wholesale and retail districts are located, are well held, and the many owners are planning improvements.

Some large jobs in birch are on the market, also quite large quantities of flooring are in prospect, all of which will naturally find their way East sooner or later. Local hardwood sawmills are busy, although they are not running overtime. They report plenty of work ahead, especially for the spring. Junisero, mahogany, oak and Spanish cedar logs are coming in quite satisfactorily.

SAGINAW VALLEY

There is more volume to the trade than sixty days ago, but during the last month the trade has been steady and a little more than holding its own both in the matter of prices and quotations. The buying has been of the hand-to-mouth brand for some weeks and there is hesitation expressed to hold off until after election. There is enough stock in hand to meet all the requirements of the trade. Prices are holding up strong.

LIVERPOOL

The trade at this point has distinctly improved during the past month, having made rapid strides towards normal conditions. Prices, too, have shown some improvement, and several consignment parcels have met with good success. Wagon oak planks which a month ago could not be sold at any price, have been cleared in considerable volume the past few days; in fact, if shippers have any parcels of good specification on hand, they could not do better than to send them forward. However, the future is not regarded with much optimism, as the cotton strike in Lancashire promises to be a long one and it is feared that the rally in prices is only temporary. Shippers are strongly advised to take chance of enhanced prices at once, as the general opinion here is that values will go lower again.

Hickory stocks are almost entirely absent, and if shippers have any wood on hand they should send it to this market, as values are very high. Prime wood could easily bring 2/6. Prominent consumers assert every day that they do not know how long their present stocks will hold out unless new woods come forward early. Many have to refuse orders owing to the lack of supply on hand, and the position will be really serious for the large consumers if large quantities do not come to hand at once. Ash is weak, both in log and plank, the former particularly so, though large wood if prime and white, would find some sale. Oak boards are weak and should not be shipped. Maple logs of large size are wanted, but the import of manufactured flooring has been overdone and is unsalable. Birch is firmer, owing to stoppage of the import, but there is not much real demand for it.

PRACTICAL BUSINESSMEN USE

The Writerpress

BECAUSE IT PRODUCES ACTUAL TYPEWRITTEN WORK IN

CIRCULAR AND FOLLOW-UP LETTERS

BECAUSE it is so simple in construction and easy of operation that ordinary office help with a few minutes instruction will prepare a 30 line letter for printing in less than an hour and will print as fast as 100 typewriters.

The machine has few parts, adjustments or confusing movements heavy and steady work without

none complicated. There are no difficult adjustments for the operator. Every part is built to stand breaking or becoming disarranged.

Above we show **A BUSY WRITERPRESS** with which your help can prepare one form, distribute another, print another—all at the same time. This is a valuable asset for Writerpress users when confronted with "rush" work.

OTHER WRITERPRESS ADVANTAGES ARE—

In addition to producing form letters, is used in printing order blanks, price lists, card index supplies, or other office forms at one-half the expense charged by the printer.

Any size or style of type, cuts, electros or ruling may be used.

Any number of forms may be held intact, ready for instant future use, 30 seconds only being required to change one form for another on the machine.

Printed sheets are automatically removed, piled and counted.

Each outfit consists of the Writerpress, combination type and operating cabinet, type and accessories. Send your name for samples of work and complete information.

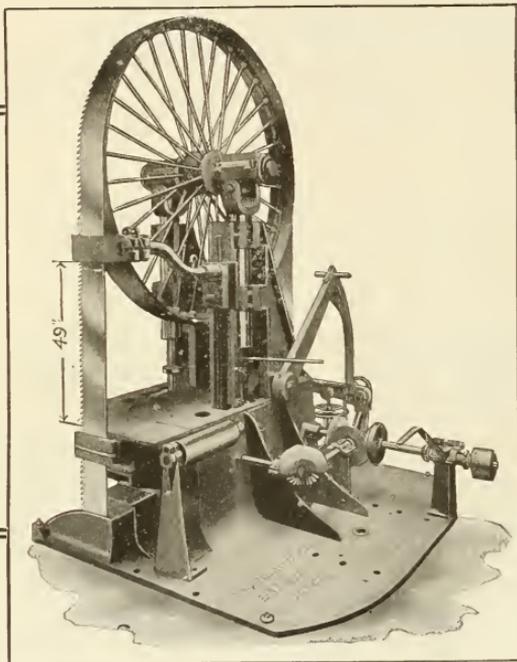

The **Writerpress Company** 528 WHITE BUILDING, BUFFALO, N. Y.

No. 133-A. SEVEN INCH, FOUR SIDE HARDWOOD MOULDER

HARDWOOD manufacturers are constantly demanding machine tools of a more sturdy character. Many attempts have been made by machine builders to meet this need, resulting in added complications, with very slight improvements. We have, however, developed a moulding sticker of the 7-inch type that is both sturdy and simple, a machine that contains all of the elements of a very heavy large size moulder, yet it is only a seven-inch machine. Write us today for a special circular.

YOU BUY THE BEST PLANER

You give it floor space, belt it up, provide power and—then what? Do you get out of it every ounce of work, every foot of lumber that it is capable of turning out? Ten to one—experienced manager though you are—there's reserve capacity in the machine that could be gotten out if you only did one thing. And that "one thing" is to set the knives so accurately and to keep them trueed so perfectly that not every other one or a single one does the burden of the work—but that every one cuts an equal amount of stock. This you can do with the

Woods Radial Knife Setting Gauge and the Woods Truing Devices

When you have done this you have brought the knife marks two to four times closer at the same feed. And what does this mean?—simply that you can feed faster and get the same finish as you usually get when only one or two knives cut. That is, you can, if the machine will stand up to the work.

The Woods Machines speak for themselves; they were designed with a view to accurate knife setting and truing and to faster feeds than the ordinary operator ever dreamed of.

The Radial Gauge and Truing Devices give them a fair chance to show what they can do. There is no practical limit to their speed except the power to drive and the ability of the man to feed the stock.

Band Resaw and Rip Saw

Berlin No. 341 Band Resaw

Berlin Band Sa

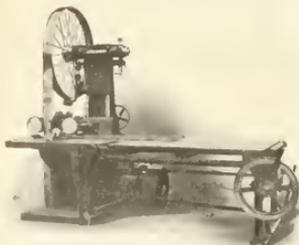

*"The man who whispers down a well
About the goods he has to sell
Won't reap the gleaming golden dollars
Like one who climbs a tree and hollers."*

Sounds logical, doesn't it? But we don't think it's necessary to "holler" very loud about the line of Band Resaws, Rip Saws and Pony Band Mills we are showing here—it speaks for itself.

About five years ago, we built our first Band Resaw, which was designed along lines radically different from any machine in use. It was a success from the start. The line we are now building is the result of a careful study of the demands of modern mills and factories.

THE BERLIN MACHINE

Berlin No. 285 Band Resaw

Saws on all Sides

A recent purchaser of our No. 285 Band Resaw was very skeptical about the machine before buying, because he said he understood we had been building band saws only a few years. He made a very thorough investigation and after buying said to our representative: "The fellows who are using them ought to know whether they are better than the others and I'll have to admit that I found Berlin Band Saws on all sides of us—all of them producing good results."

If you are a user of a Band Resaw, Rip Saw or Pony Band Mill, or if you are interested in any of these tools, we would like to send you **postpaid** our book on Band Sawing Machinery. It contains an illustrated treatise on "Fitting and Operating" which is a better work than you can buy at any price.

Hardwood Manufacturers

at the present time are more interested than ever before in the new improvements in wood-working machinery that tend to economize time, labor and lumber.

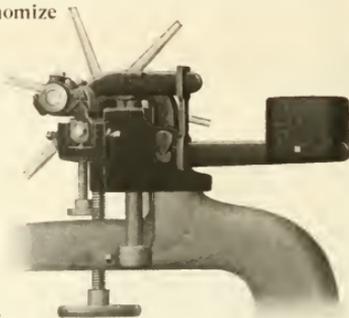

No. 180. AUT. BAND RIP SAW.

That is the exact reason why our No. 180 Aut. Band Rip Saw is in demand. Not only is it a time and labor saver over old methods, but its thin gauge blade takes out less kerf than any other machine in the market. This is owing to the fact that the machine has the most sensitive straining device known—that Patent Knife-Edge Straining Device for the upper wheel.

High Speed and Thin Blade

make large output and little kerf.

VENEER DRYER

"The Proctor System Improved Apron Conveyor"

Objections to Roller Dryer overcome because no clogging can occur.

Objections to old style Apron Dryer overcome because no adjustment is needed.

Objections to "Girt Conveyor" overcome because the veneer is held throughout its surface which prevents the ends buckling as in the "Girt Conveyor" type.

Grain can be fed either way.

The "Girt Conveyor" type may be altered to the Improved Apron type at small cost.

The magnificent air circulation is maintained as in the old Apron Dryer and as in the old Girt Conveyor Dryer.

SPECIMEN STATE GUIDE CARD

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town
Name of concern
Name of buyer
Line manufactured
Kinds, grades and thicknesses of lumber
Kinds and sizes of dimension stock
Kinds and thicknesses of veneers
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

HARDWOOD RECORD, Chicago

Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawed Oak a specialty.

We do not make any 2-ply stock or do not use alic cut quartered oak in any of our work. Our quartered alic is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
 in February and August

It contains a carefully prepared list of the buyers of lumber
 in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of
 meeting obligations. Covers the United States, Alberta, Mani-
 toba and Saskatchewan. The trade recognizes this book as the
 authority on the lines it covers.

A well organized Collection Department is also operated and
 the same is open to you. Write for terms.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow locked, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.
